VIII. THE CONSTITUTION OF THE PRIESTHOOD.—1. The general term for 'priest.'—In ancient Egypt purgity was considered to be essential in all persons and things associated in any way with the service of the gods (see art. PURIFICATION [Egyptian], § V, I, 5-8). Accordingly the general term for 'priest' is *w3b,* 'pure person.' The word was retained in Coptic to denote the Christian priest, and is written *γυμνος*; hence *w3b* is to be vocalized *w3eb.* The vernacular, *collocate as *w3eb,* is also used to denote the service of the highest grades in the hierarchy. 4

2. The two main classes of the priesthood.—The priesthood consisted of two main classes—the prophets, *hiry,* to be higher and the *w3eb-prtis,* "the lower." (a) The word *wm-nfr* (Coptic *z3nty,* which, after the Greek custom, is usually rendered 'prophet,' literally means 'servant of the god;') (b) *w3eb,* besides being the name for a member of the lower class of the hierarchy, was, as already stated, a general term for 'priest,' which the Greeks also employed. (c) D'Amman (above, 59) asserts that he is the son of a *w3eb* like each one of them, though D'Amman's father and the fathers of some of the members of the *k3mm* priesthood must have belonged to the higher order of priests. 6

3. From the time of the New Kingdom onwards the members of the priesthood were roughly classified as 'prophets, fathers of the god, and *w3eb-prtis.' 12 The 'fathers of the god' are to be regarded as belonging to the same class as the 'prophets,' the title 'prophet' being reserved for the higher members of that class. As Gardiner 13 points out, the rare titles, 'first father of the god' and 'second father of the god,' are synonymous with 'first prophet' and 'second prophet.'

4. Egyptian Deity (Greek or Latin text, line 2, =. Sethe, Urkunden, ii, 125) gives the following correspondences between the Egyptian and Greek titles of priests: 1 'the superintendent of the temple,' *ekeb.* 'highpriest,' 14 'the servants of the god,' *wm-nfr* = *prophet;* 15 'those who are over the mysteries,' *hrym-w3b,* = *prophet,* 16 'the learned scribes of the sanctuary,' *hrym-w3b,* = *scribe.* 17 Each of these classes of priest was divided into grades, *mry,* *h3sn,* and *r3r,* the last two being subdivided into grades. 18 Also with the higher and the *wm-nfr,* the priests of the god's temple. 19 The *hrym-w3b* or 'shrine-bearers' 20 were the *wm-nfr,* the *wm-nfr,* who were the members of the class of *wm-nfr.*

6. A priest had to begin his career as a *wm-nfr,* becoming a

17 ib. ib. 33; the *crochotah* could act as prophets, and they clearly did so in the case of the monarch. (For a similar use of the word, see *ib. ib. 33*; cf. Gardiner, *Greek and Egyptian Grammar,* p. 165.)
18 ib. ib. 33; cf. *ib.* ib. 33; cf. Griftith, *Demotic Papyr. iii. 2, 2*; cf. also ib. ib. 33.
19 Gardiner, *ZL xiv,* 105.
The subscription of the temple apparently often was iden-
tical with the high-priest (cf. e.Paraua aP a.Paraoua), who also
acted as the high-priest and to the chief lector orector. 4
Minor officials, such as the door-keepers and the
temple-sweeper (k,pst), 5 were also permanent. 6
(c) The governing body.—(I.) During the Middle
Kingdom no specific structure of the Egyptian temple at this
time seems to have been in the hands of a small committee.
The temple of Up-
vawet at Asy'ût, e.g., was administered by a body of ten priests called the k.nbt n h, a't, 'governing body of ten priests,' 7 at whose head was the best man in his
capacity of high-priest or 'superintendent of the prophets.' 8
(I.) The members of this governing body are given their
administration, not as their titles, so that we do not know whether they were priests, or whether included among
them were priests of the rank of sekh only. But they were
certainly members of the priesthood. Compare the list of
members of an incoming phyle, 9 in which each individual is
denoted not by his priestly rank, but by his special priestly
function.

The governing body of the XIIIth dynasty might be com-
pared with the P.B. committee of councilor priests (bdw.m r m)-
ners, 20 of the Ptolemaic period, 21 who assisted the superinten-
dent of the temple or high-priest (e Паропаоа и.в.Паропаоа) in the
administration of the temple. The priests who changed every
year, belonged to the phyle of priests, by whom they were
allocated in the reign, and who probably had no information as to how the governing body of the temple was
chosen in the Middle Kingdom.

(ii.) The New Kingdom.—During the New King-
dom the high-priest had supreme control of the whole great
wealth of the temple, and was responsible for the administration of its estates, for the care of its buildings, and for the erection of new ones. He had a great host of officials of all grades
serving under his almost autocratic rule. 22
(iii.) In the Roman period.—Though there were still
superintendents of the temples (e Паропаоа в), the temple administration generally was in the hands of
the lepeus, 23 or, like the e.Paraua aP a.Параoua, changed
every year. After A.D. 202 the temples lost all that still remained of their once specially
privileged position and were placed under the administration of the municipal senates. 24
(d) Priestesses and the position of women in the
temple.—Women played a by no means unimportant part in the Egyptian divinities, and the assertion of Herodotus 25 that
no woman could serve as a priestess is incorrect, and indeed, many believe that he does not agree with his own statements
elsewhere. 26

(1) Musician priestesses.—All temples, apparently, had a number of priestesses mentioned, but it is possible that these were a chief priestess with a special title, 27 followed by the at-
tribute 'playing with the sistrum in front of him (her),' i.e. the

Liturg., ii. 35. 15 II. fii. 54, 56, 171, 182; cf. i. 182. 16 The antiquity of these titles is attested by the fact that the title of the chief priestess of Hathor of Cusa was the same
in

divinity. 17 The chief priestess was doubtless in most cases the wife of the high-priest. 18 Evidently the principal duty of these priestesses was to sing and to sing in honour of the deity whom they served. 19 The musician priestesses in the Middle Kingdom were called lepeus, var. hiru, but from the New Kingdom onwards gener-
In Roman times the temple estates became Crown property, which the priests could hold on lease from the state. The temples were also supported by taxes and voluntary contributions.

2. The offerings.—The offerings, or, as in the temple of Amun at Iltihû (see below), a portion of them, seem to have been divided every day among the priests proportionately according to their status. On this principle the chief prophet of the temple of Ḥatsjof of Reônet (Telneh) received as his share a tenth of ‘all that enters the temple.’

The temple’s daily rations consisted of bread, beer, and meat.

According to Herodotus, they included ‘a great quantity of beef and geese’ and also wine. With this agrees a document of the saite period. In the above-mentioned temple of Amun at Iltihû the greater part of the daily offerings of bread and beer, ‘after the gods were satisfied with them,’ was handed over to the ka-servants (see § XIV. c)—of course in return for adequate remuneration— for presentation to the dead, the priests getting what remained over.

3. Other sources of income.—The priests could increase their incomes by performing periodical or daily services for the dead.

4. Special perquisites of the high-priest.—In addition to receiving the largest annual stipend and daily rations, the high-priest of a temple evidently had special perquisites.

At Assyût, e.g., the superintendent of the prophets of Upawet was entitled to a roast of meat for every bull slaughtered in the temple. Also a cask of beer for every de-vessed of beer offered on a day of procession.

5. Stipends of the wives and daughters of priests.—According to the Decree of Canopus (line 35 = Sethe, Urkunden, i. 192 1.), an allotment from the temple revenue was due to the daughters of priests from the day of their birth. The same authority also informs us that the wives of priests received an allowance of bread.

Priestly Privileges.—1. Immunity from taxation and from military service. — In the Old Kingdom the temples were liable for imposts, such as the furnishing of governmental officials, soldiers, masons, and farmers. In contrast, the priests were exempt from taxes and military service. This immunity was extended to the daughters of priests, who were considered part of the temple hierarchy.

2. Immunity from taxation and from military service. — In the Old Kingdom the temples were liable for imposts, such as the furnishing of governmental officials, soldiers, masons, and farmers. In contrast, the priests were exempt from taxes and military service. This immunity was extended to the daughters of priests, who were considered part of the temple hierarchy.

3. Immunity from tax and from military service. — In the Old Kingdom the temples were liable for imposts, such as the furnishing of governmental officials, soldiers, masons, and farmers. In contrast, the priests were exempt from taxes and military service. This immunity was extended to the daughters of priests, who were considered part of the temple hierarchy.

4. Right of asylum. — All temples possessed the right of asylum in the later Ptolemaic period. Under Roman rule this right was severely curtailed.

V. ADMISSION TO THE PRIESTHOOD.—I. Tendency of the priesthood to become hereditary. — The priestly status, i.e., that of wếb, seems in some cases to have been hereditary as early as the XIIth dynasty. But there are no grounds for supposing that, as in Roman times, the priestly wealth was concentrated in the hands of priestly descent.

(a) In the Middle Kingdom numbers of wėeb-priests appear to have been the sons of non-priestly parents. As late as the XXth dynasty we find that out of six sons two are priests and the rest officials or servants.

(b) It is not till after the XXth dynasty that the purely priestly families seem to have begun to come into being.

(c) By the time of the early Ptolemaic admittance to the priesthood seems to have been restricted to persons of priestly descent. Possibly this restriction was already in force in the Saite period.

2. Tests for admittance to the priesthood. — In Roman times these were very strict. In the New Kingdom a man could be admitted unless he was satisfactorily demonstrated to the applicant belonged to a priestly family; he had to show that both his father and grandfather were priests. It may be here noted that a priest the purity of whose birth had been challenged was considered to have satisfactorily proved his claim by being able to read a hieratic book produced by the scribes.

(ii.) An aspirant to the priesthood had to be free from all bodily and mental disabilities. The object of such testing was to prevent the admittance of individuals of the priest class who were unable to perform the necessary duties of the office in order to obtain permission to circumcise, get married, and perform the duties of a priest.

(iii.) By law of Hadrân only priests might be circumcised. If a candidate proved his priestly descent and his freedom from all disabilities he was granted to circumcision. Until he had been circumcised, no person could exercise the priestly office. The precise regulations of the procedure to be followed in order to obtain permission to circumcise are given in Griffith, Hunt, and Goodspeed, no. 292, p. 581. See also art. Circumcision (Egypt).

(iv.) It is probable that admission to the priesthood entailed circumcision as far back as the Old Kingdom, for even ka-servants, who probably were not as a rule wėeb-priests (see

PRIEST, PRIESTHOOD (Egyptian)

PRIESTHOODs.

1. High-priesthoods seem regularly to have been appointed to their office by the king. See below, 2 (f), and above II. i. (a) When the central power was weak, the high-priests, along with the local governors, (i) undertook the responsibility of the priesthood; and (ii) in all periods, too, the high-priests of certain famous temples seem frequently to have become vested in one family, but often the recommendation or recommendation to the high-priesthood seems still to have rested with the sovereign. (b) We have two instances of the high-priest of Amun of Thebes being chosen by an oracle of the god himself. In the first case, our inscriptions say, ‘Amenemhet (b) priest of the god’; and in the second we may presume that the king ratified the choice, as the new high-priest was his son.

2. Priestly offices below the rank of high-priest. (a) Certain duties, which (a) naturally pertained to (b) his representative, the local governor and (c) purchased, (d) conveyed by deed of transference, (e) bequeathed to descendants. (b) The general or high-priest, as Pharaoh’s representative, seems to have appointed persons to vacant priesthoods. (c) Priesthoods were bought and sold from the earliest times onwards. Appointments to priestly offices in Roman times were usually obtained by purchasing them from the government. (d) Priesthoods could be conveyed by the holder while living to another person by deed of transfer.

Priestly offices were frequently obtained by inheritance. In the case of mortuary priesthoods it is often specifically stated in the deeds of appointment that the offices are to be transmitted to the children. In Roman times a person, on entering upon a priestly office, would advance an oath upon himself or a relative to pay to the government a tax called rá teate.takó. This tax suggests that perhaps even in the dynasty periods all such credentials had to be ratified by the State—i.e. the king (cf. [a], [b]).

3. Investiture and installation of priests. — Remesses II., on appointing Nebwemem to the high-priesthood, says, ‘Anuin, invested him with two gold signets and a gold (d’u) staff. At the installation of the chief priestess (hiaf) of Amun of Napata a silver pail for libations of milk was placed in her right hand and a silver sistrum in her left. Perhaps on his appointment or at his installation the high-priest of Ptah of Memphis was invested with his curious chain of office. At the installation of ‘the god’s wife’ and high-priestesses of Amun, ‘Enkhentsheribet, ‘the prophet, fathers of the god, sed Osiris and Horus, the staff (teau) of the temple of Amun were behind her and the great companions were in front of her. Thereafter, perhaps the usual offices and all the customary ceremonies of the induction of the god’s votaries of Amun into the temple. The god’s scribe and nine sed Osiris priests of this house fastened on her and all the other high-priests of the god’s wife and the god’s votaries of Amón. The newly-appointed prophet of Amun of Thebes had to ‘anoint the hands’ at his induction.

9. In daily activities the priestly service the god was sprinkled with water—a ceremony derived from servants bathing their master—furnished him with offerings of food, and anointed him in his applied cosmetics to his eyes, and arrayed him in his various ornaments.

1. Priestly offices were frequently obtained by inheritance. In the case of mortuary priesthoods it is often specifically stated in the deeds of appointment that the offices are to be transmitted to the children. In Roman times a person, on entering upon a priestly office, would advance an oath upon himself or a relative to pay to the government a tax called rá teate.takó. This tax suggests that perhaps even in the dynasty periods all such credentials had to be ratified by the State—i.e. the king (cf. [a], [b]).

2. Priestly offices below the rank of high-priest. (a) Certain duties, which (a) naturally pertained to (b) his representative, the local governor and (c) purchased, (d) conveyed by deed of transference, (e) bequeathed to descendants. (b) The general or high-priest, as Pharaoh’s representative, seems to have appointed persons to vacant priesthoods. (c) Priesthoods were bought and sold from the earliest times onwards. Appointments to priestly offices in Roman times were usually obtained by purchasing them from the government. (d) Priesthoods could be conveyed by the holder while living to another person by deed of transfer.
PRIEST, PRIESTHOOD (Egyptian)

be his beard, and performing the ceremonies for him with the sacred crook. (c) Another duty of the priest was to carry in procession the image of the god, *kher-hey[b],* which denoted their rank in the hierarchy, bore a number of attributes which could vary, including the very high title of 'King of the gods', meaning to us or are quite unintelligible. These additional titles denote special administrative or religious functions.

Very important function in each phyle was the scribe of the temple, who, during his term of office, kept all the temple accounts and made all the entries in the temple day books. (a) A priest also served as a scribe, and keeping the temple registers, was often referred to as a 'sacred scribe'. (b) Lector (or ab-ab).--There were 'ordinary lectors' (or ab-ab 24) and a 'chief lector' (or ab-ab bry-an). (c) A lector ranked third on the staff of the Middle Kingdom temple of Abydos, the only phylarch coming between him and the superintendent of the temple, i.e., the high priest. (d) The high priest was often combined with that of lector or chief lector. (ii.) The priestly grade of the ordinary lectors seems generally to have been that of 'chief'. A lector could also be a phylarch. (iii.) The duty of the lector was to recite the formulae, to the aural perception of which the rites in the temples were performed. (iv.) For the lector as a mortuary priest see under § XVI. (c) as a scribe for the 'Old Kingdom', (5.) and Gardiner, PSBA xxxvi. (1917) 31; as a physician, see under § XVI. (5.) Deniers and musicians.--Probably male as well as female deniers ('high-priestesses') seem to have been functions, but they do not appear to have been a role specifically assigned to women. (6.) Lectors seem to have figured especially as scribes. In the Middle Kingdom many of them were foreigners—chiefly Aamu—(7.) and perhaps slaves. (7.) Door-keepers, etc.—The temple staff included minor functions of door-keepers and 'sweeps'. In the temple of Abydos at Ilahun these were permanent functions, not members of phyle. (8.) But a temple door-keeper could be a first and second prophet of the endowment of the altar.

IV. THE MORTUARY PRIESTS.---The cult of the dead in many respects resembled that of the gods (see above, § XIII.). The officiants most commonly represented as performing the services required by the dead bear the title: 'chief servant', 'enamroller', 'lector', 'chief lector', 'treasurer of the god', sem, tiny-khant.

Memphis they and the antecedents were united in one large group and certain others at the time they were separated. For the embalmer's impersonation of Anubis see § VI. a. (f) Treasurer of the god.—These offices were almost entirely in the funerary as in the temple services. As mortuary officials their duty was to direct the ritual of the embalmer's workshop and to carry out the religious and funerary ceremonies. The functions of the lector and embalmer were not sharply differentiated. Thus a chief lector is described as being 'of the mysteries of the good house,' and an ordinary lector is entitled 'Anubis in the good house, chief of the lectors of the god, Amen, Anubis.' This explains, perhaps, why Diodorus calls the chief embalmer a scribe, paygemonere,2 and why the Greek rendering of ryp-hb, 'embalmer.'

(o) Treasurer of the god.—The presence of a functionary bearing this title at funerary ceremonies is a legacy from the time when Amenemhet I was restored and he became the 'treasurer of the god' who was closely associated with the acquisition of funerary monuments.8 Rich as a turquoise,9 the produce of Byblos and Punt,10 alone from Haumnaut for monuments,11 incense, etc., from the Sudan;12 he would naturally, therefore, play an important part in the royal observances, for he would have to supply many of the articles required for the embalming and burial of the king. 'Treasurer of the god,' as a mortuary office, could be combined with those of 'lector' and 'Anubis the embalmer.'

(9) Superintend—The funerary official with this title represents, of course, the high-priest of Tuthmosis III. That ecclesiastical naturally pronounced the offering formula,16 and handled the libations at the funerals of early times. As was to be expected, the sam was the chief official in the 'Opening of the Month'13—a rite originally performed by the priest of a temple. In early times a function of the Memphite high-priest in his capacity of chief 'superintendent of the temple' was to—great in number,14 mean 'festival priest.' Connected with the Osiris cult at Abydos there was a 'great imp-hanu' who was also entitled 'superintendent of the temple.'

XV. PRIESTS OF THE REIGNING KING.—The word 'priest' and priests of the reigning Pharaoh15 were a prominent feature of the Old Kingdom priesthood. We also meet with them later.21

VI. PRIESTS AS DOCTORS.—The professions of physician and priest (weh and lector) were often combined.22

A weh who is also a physician can pronounce the sacrificial victim pure.23 Priests of the goddess Sekhmet were regarded as especially skilled in the art of medicine.24 The business of the priest of Sekhmet depicted with cattle in a scene in the tomb-chapel of a certain Kheperwy at Abydos has thus evidently to decide whether they were fit for such important purposes or not. There was apparently a medical school at Sais attached to the temple of Nebt. It was restored in the reign of Darius

poems, which, while admitting the claim of, e.g., Kalchas to special mantic endowment (II. i. 72), and indicating the high honour in which priests of various deities were held (ii. v. 78: θεοὶ δὲ τοῖς σημαίνοντας μόνον τὸν πρεσβυτέρον, ὁ καθίσαι, ὁ μόνος τὸν πρεσβυτέρον λέγει). Nestor, in the Iliad, speaks of the priest being mentioned, and none, so far as we can see, finding any place in the ceremony (Od. iii. 430 f.). This accords with the facts of historical times. Priests and priestesses alike throughout the Hellenic world considered social and civic distinction, which tended to increase rather than to diminish as Greek civilization develops, yet Isocrates can say, with but slight exaggeration, that any man might be a priest (ii. 7: οὐδ' ἀλλ' ἄρετας ἐγείροντο πάντως ἀδόξοι εἶναι om.)

Whatever may have been, among the Greeks, in the ages below the historical horizon, the relations existing between priest, king, and community, in all times, in the history of the priesthood, like everything else, has had to submit to the all-embracing sway of the idea of the State, and has become, to a very considerable degree secularized and is regarded almost purely from the politico-social point of view. This is clearly and explicitly stated on one of the earliest administrative acts of the priest, but also in regard to his purely sacred functions (Xen. Mem. iii. 18: δικαίως δὲ νῦν πρώην ἐπὶ τῶν πολιτικῶν ἀποκαθίστατος, τέκνης κ.τ.λ.κ.), for instance, and cf. Dem. in Navir. 116; Plut. Quinct. Gr. 38). Only the actual sacred duties of the priests are invested in this second control, simply because, being traditional, they dated from an age anterior to the birth of the historical State itself, and owed, much of their force to that very fact. Hence the so-called ἱερά σακρά are found to be confined to regulations touching qualifications for office, priestly qualifications, the establishment of additional ceremonies, etc.—just such details as fell to be regulated in connection with purely secular offices; they were nothing of the duties themselves. In this second stage, therefore, it is not incorrect to describe the Greek priest as in some sort a State official. The ultimate authority in a question concerning the sacred was the synod of priests, but the council and the assembly (Ar. Ath. Pol. 43.)

The Greek priest or priestess, then, is one who is charged with certain specific religious functions or ritual acts, directed godwards, in the due performance of which the State, either as a whole or through its organic groups (gentes, phratries, families, etc.), is vitally interested. These functions, as they were invested upon the traditional priest, demanded a certain, often a high, degree of professional or technical knowledge, just as did many other departments of civic life: the priest is simply one who is skilled in these particular duties, and who is pre-eminently such. Practically, therefore, the priest implied the existence of a temple or some form of holy place dedicated to the particular deity in whose service he ministered. For the Greek priest was always the servant of a particular deity, and that at a particular shrine, and at none other. There was no such thing as a priest with a general competence of sacred functions at any and every shrine, or as minister to any and every deity, simply by virtue of his priesthood as such. For the functions, legal or quasi-legal, or general or applied, were all invested upon the priestly person or persons as such only.

1 This is true even in cases where reference was made to an oracle, for such reference could be made, in a matter of State, only if the question referred to a known person or persons, as reference absolute essentially, though it was in harmony with Hellenic, and especially Athenian, sentiment to refer such matters (Dem. in Ixion. 20, 427 C) to the oracle. E.g., τοὶ τεσσαράς πᾶσιν ἀδένοις πάτρως ἐξηρτήθη ἐν μέσῳ τῆς γῆς ταῖς θείαις ἐκείναις (cf. Plut. Pomp. 546 B.).

2 Stob. Ed. Eth. v. 170: τὸν θεὸν οὐδὲν δὲν ἔκτρωμεν νόμῳ τῶν περὶ θεῶν καικείων καὶ καθηματών, καὶ ἀλλὰ δι' ἡμῶν καθήμενος. The same is given in Plato, Pol. 530 C; and καὶ νῦν τῆς ἱερών ἀλλοι τέλεοι, ὡς τὸ νοοομένον, παρὰ μὴν μονόν ἠμὲς θείας τούτους ἐκείνους ἀποκαθίστηκέναι (Dem. in Phoc. 40). It is true that the ceremonies observed at the shrine did not affect the κακά κακαίας και θεοῦς ἀνθρώποις, ταῦτα δέ ἐσσαι πείθομεν 

3 Cf. Plut. Lesb. 759 A: ἀληθέντως μὲν θὰ τοῖς μὲν ἱεροῖς ἐνεχθέντως τε καὶ ἱεροῖς καὶ ἱεραίς δεῖ σκεφθεῖν. Large temples would have more than one priest, but one was the rule; cf. I. Diod. i. 72. 8: οὐ γὰρ, ἄσπρως παρὰ πόλεις Ελληνομελῶς, εἰς αὐτὸ ἡ μὲν γενὴ τῆς ἑμετερᾶς ἑλληνικῆς, ηὗτος.
and had their special deities, rites, and religious observances.

Perhaps this very multiplicity of individuals invested with priestly or quasi-priestly functions did as much as anything to check the rise of a definite priestly class, the priestly class of exceptional sanctity being too inextricably intertwined with that of civic life in general. Undoubtedly, also, much was due to the general sanctity of Greek institutions, from which it resulted that the rites performed by such officials as existed were looked upon to such a sort as to enthrall the intellect by extravagant claims to a specially recondite or mysterious character. It was, in fact, partly by way of reaction against this somewhat threadbare simplicity that Orphic and Dionysiac mysteries won such vogue. A further powerful factor making against the rise of a priestly caste was the fact that temple funds were, as a rule, not controlled by the priests of the temple itself; and at the same time the interpretation of sacred law was almost entirely in the hands of a special secular board of interpreters (Euaggelai, cf. Ehrmann, De iuris sacrati interpretationibus Atticis, Giessen, 1906). The significance of the last feature can hardly be overrated in this connection, in the examples of school or course of training for priesthood could arise.

2. Qualifications for priesthood.—Plato, following, doubtless the universal requirement, lays it down for his ideal State that a priest must be sound and perfect in body, and of pure and genuine civic pedigree (Lanoc, 759 C: δεικτικάς δέ τόν δε λεγάνθων πρώτο μὲν θλησκών καὶ γυνώσκοντον, τ.τ.λ.). No alien could hold an Athenian priesthood or perform its rites—a rule that was probably general.1

The tendency was not to be content with this, but to put priesthoods into the hands of men of leisure and substance (just as, in Athens, the State services, or leitourgies, naturally fell to the same class). So Aristotle would have no husbandman or mechanic appointed, but only citizens, who, in his scheme, would be the sole landed proprietors (Pol. lv. vii. 9. 1319 A: ὀστεί τὰ γαρ γενόμενα ὀστεί διατάγματα ἐν τῷ γὰρ τῶν τριτίων τιμαθοὶ τοῖς θεοῖς. Cf. Plut. vi. xxvii. 5.). The difference is that the ἐκδόται δὲν γένον μὲν μέλαντα αἰσθένειται, at Pelleon; D. 594. 10: ὀνεῶν δέ ἡ καὶ ἡ διαλέζας καὶ ἡ διαμορφώσαται, τ.τ.λ.). At Halicarnassus the priesthood of Artemis Peirgaia must be of full citizen rank, and on both sides, for at least three generations (D. 601. 6: αἴσθητ' ἐν ἀκόμα ἀμφότεροις ἐπὶ τρεῖς γενεὰς γενεείμενοι καὶ πρὸς πατρὸς καὶ πρὸς μητρὸς). Good looks were a recommendation, in some cases an essential (Paus. vii. xxiv. 4 [the boy κοινὸν κλημα, priest of Zeus at Alai]; cf. Ix. x. 4 [Thebes]). Notorious vice naturally disqualified, and Plato insists upon purity from the stain of blood and the grosser offences. On the whole, the insistence is upon somewhat external or formal qualifications, identical with those demanded of candidates for purely secular offices; no great stress is laid on moral, and none at all apparently.

1 Cf. Dem. lex., 189: οἷον δέ καὶ προερχομένα καὶ καλόν καλόν ήσσον; W. Dindorf, Scholia in Iambicam Cyniciam Graecorum, vol., Leipzig, 1888-1901 (henceafter cited as D., followed by a number to indicate the running number of inscriptions quoted).—2 Dindorf, loc. cit. in scholiis to Herod. vi. 81. 1: ἐνδούματα καὶ αὐτίκοι θεῖοι ήσσον τὸν θεοὺς ὁμοιοῦσα, τ.τ.λ.; cf. Lys., 23. 2: διδακτόν τῶν τριτίων τιμαθοῦν τῆς θεοῦ μοῖρας τοῦ τίμητα τῆς ἑαυτοῦ καὶ τῆς μνήμης τιμητικῶς καὶ τῶν τεκνίτων (την).—3 L. Schleierm. i. 185. 1: καὶ αὐτής ἀτέχνης ἀφέω ἱερωτὴν μεν ἀνθρώπου θεοῦ ἐπιτίθεται, ὥς ὦκ θ' ἐκ τῶν νυμφῶν καθαρὸν τοῖς θεοῖς, τ.τ.λ.—4 Cf. P. de Conlanges, La Cité antique, Paris, 1855, p. 196: 'La doctrine était peu de chose; c'étaient les pratiques qu'il s'agissait de conduire et c'est, sans doute, à l'opinion de ces pratiques que l'on doit surtout attribuer l'assimilation de la religion païenne à l'idée religieuse moderne.'
4. Modes of access to priesthood.—(a) Inheritance.—Originally, perhaps, all cults were family worships, whether or not they were all cults of the gods. It can be safely assumed that the gods which have come to be national are demonstrably still closely connected with particular families,

which retain their priesthoods as a hereditary possession guaranteed by an appeal to legend. Some, perhaps, the more remote, cases of offices, however, belong to several families or clans maintain their representatives side by side, though not all on the same level, as hereditary cult officials (cf. Paus. iv. xvii. 1.

Such hereditary national priesthoods can be seen in the making. Thus the family of Seleus of Syracuse claimed to be hereditary hierarchs of Demeter and Persephone at Gela because their ancestors had originally possessed the sacred titles (tadn) of the cult (Herod. viii. 172). So Malanarios of Samos proposed to lay down his sovereignty on condition of being allowed to retain the right to perform the priesthood of Zeus Eleutherios, whose cult he founded and endowed (ib. iii. 142; cf. the Battalians at Cyrene [ib. iv. 103]). Inscriptions furnish us with cases of disputed foundations of the cult type (e.g., the will of Epiktete of Thera [CIG ii. 2415, § 5]: τὰ τῶν ἀναγεννητικῶν 

περὶ τῶν ἀναγεννητικῶν ἐπίταξεν εἰς τὸν θυρεόμενον καθολικὸν ναὸν τοῦ ἀναγεννητικοῦ καθολικοῦ τοῦ Ἀθηναίων),\n
and the speculations in its favor (the latter daughter).

How succession was arranged within the family itself in respect of these hereditary priesthoods is not always clear. Obviously, the ordinary rules of inheritance might sometimes give way to local custom. An inscription of a priestess of Halicarnassus (D. 605) shows us that the priesthood of Poseidon had passed from brother to brother, thence to sons, and then to the grandson of the brother, succession according to seniority, and so to sons of the next brother, and back again to grandsons of the eldest brother. Nothing is said about the rule of succession in which the hereditary succession was just as liable to any other property to give rise to disputes. Such in Athens were settled in the court of the king (Paus. ii. 20. § 10; cf. Del. col. 57. § 1): the succession was always determined by the agreement of the parties, and the priests who had been admitted previously, in the opinion of the city council, to enjoy the rights of the priesthood, were admitted to fill the place of the deceased. Such succession is probable in all cases connected with the festival cycle of the particular deity, as is expressly asserted of the priesthood of Demeter at Eleusis (Paus. iv. xiv. 1; ὂν 

ἠραξάντης ἐν τῶν μεν πάντων ἀναγέννητων, καθα 

τοῦτο καθαρὸν διά τουτο διασκεδώτωρ, τότε διὰ μισθὸν 

τοῦτο διά τουτο διασκεδώτωρ, τότε διὰ μισθὸν 

τοῦτο διά τουτο διασκεδώτωρ), the celebration taking place ἢν τῷ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφῳ τοῦ τάφω

(b) Election.—Possibly the earliest example of this method occurs in Homer, where it is said of Thetan that the Trojans had "made" her priestess of Athene (Il. vii. 300 τῇ ἡδῷ ἱερᾷ Θυάς Ἁθηνῆς Ἀθηναῖος ἱεραῖας): but the inference is not very rigid. The mutilation of the inscription D. 911. 5

5 instituting a priestess of Athene Niko (460–446 B.C.), ἐκ Αθηναίων ἀντάξων does not allow us to say whether pure election was employed in that instance. More commonly the practice of election is to be referred to the lot (cf. D. 559. 9: ὡς ἐκ νόμων ἱερεὺς Ἀρτέμιδος καὶ Αθηναίων, at Athens; and often in inscriptions). Mixed often, a method of election, and lot, is used, the lot preceding being selected from among the candidates (cf. Dem. i. 1312: ἐκ

305

PRIEST, PRIESTHOOD (Greek)—305

Ziehen, para altera, facs. i., Leipzig, 1906, no. 133); 1 αὐτὸς ὁ κοσμόν θεός καὶ ἄδελφος καὶ μίδι 

neuter οἶκον ἥλιον ἰδέα τοῦ θεοῦ ἢ ἠμέραν: cf. 132, also of Kos, where the minimum age is laid down at forty years. It seems as if the title was not a matter of caprice, but that in many cases youth, and sometimes extreme youth, on the part of the priest or priestess was demanded by the cult itself (cf. the demand for a παιδὸς ἁμβλαδέυσας as priestess in certain ceremonies). Often, no doubt, the temptation was high to violate such regulations, but these legends have mostly perished. Plato, naturally, has no patience with all this, and, going to the opposite extreme, would have all priests to be not under sixty years of age, and, upon New Year's day, to hold office for a year only (Leyes, 750 D).

1 Hereafter cited as L.S., followed by the number of the inscription.

1 An excellent example of the process involved is afforded by L.S. 161, ἱερεύς τοῦ Ἴππος, a priestess of the temple of the Klibitidai of Olympian Zeus, the title of which was hereditary. The inscription shows the turbulence of the age and the changing fortunes of the Hellenic world, the vicissitudes of the temple and its priestess. The inscription is that of a priestess of the temple of the Klibitidai of Olympian Zeus, the title of which was hereditary.

2 The inscription given by Otto, in Hermes, xiv. (1909) 594 f., from Marathon, is interesting in view of the beginning of the 4th cent., and certainly refers to the purchase of priesthoods. Nor is this the only example to be referred to a date before that of Alexander. Whether the source of this traffic lay in Eastern, non-Hellenic influences cannot as yet be determined, but it seems likely.

3 Proved, by inscriptions, for Erathol, Milesis, Spone, Chios, Rhodes, Olympos (T. 5143, Mylesis, T. 5144, Rhodes, Kos. It is to be observed that the vendor is always the state itself, which consequently takes a certain percentage (εἰσπορεία) of the price according to the size of the payment.

4 The inscription given by Otto, in Hermes, xiv. (1909) 594 f., from Marathon, is interesting in view of the beginning of the 4th cent., and certainly refers to the purchase of priesthoods. Nor is this the only example to be referred to a date before that of Alexander. Whether the source of this traffic lay in Eastern, non-Hellenic influences cannot as yet be determined, but it seems likely.
5. Duties of priests.—These were partly liturgical, partly administrative. The Greek priest was in no sense a teacher, or exponent of dogma. His duties for the most part began and ended within the precinct of his own temple. Firstly, he must have sacred vessels, or at least superintend the sacrifices and other ceremonies offered by the State or by private persons, making or indicating the proper prayers and invocations as being the duly appointed expert (cf. the parody in Aesop, 229). His duties included: the conduct of the sacred animals (cf. D. 594, 601. 9: τίπα τηε λερα τα δησητα κα τα ινωτηκα). Secondly, the priest, like the dean of a cathedral nowadays, was personally responsible for the care of the fabric of the temple and its cult images and contents of the shrine, and for conservation of the precinct (cf. D. 594. 24: κοσμευε δι την λερα των κατ αμεραν ἐπιμελεθαι δε αυτον κα τα στοιχαι τω τω Λασπελλατον) (supra c. 5— at Chalkedon). Where there was a neophyte priest, his duties were comparatively slight (cf. D. 550. 6, 9: ἐπιμαγαζηετων του νεοφυον τω τε λεροι ἐπιμελεθαι). Illicit use of the precinct by tresspassing stock, and mutilation of the trees within it, evidently caused much trouble (cf. D. 508. 5; Pyth. 157. 12). The neophyte priest was responsible for decent and orderly conduct on the part of visitors to his temple, and for observance of its special regulations (D. 592. 24: ἐπιμελεθαι δε κα της εκκοιμησις τη γατα τω λεροι παντος την λεροι αν αυτον κατακερυκευεν). Thirdly, the priest had to perform official ceremonies in connexion with the act of sacrifice and worship.

In historical times his participation does not appear to have been essential on purely religious grounds, so as to make the sacrifice ritually effective; for many inscriptions specifically guard against the practice, not infrequent on the part of the supplicant, or of the officiating priest. There are, however, some illogical passages which would make the priest resume his primitive character as magus, or even sacerdos, for ritual purposes (cf. D. 594. 9 and infra). Sometimes also, he appears to have been present at funerals, and sometimes to have conducted the accusers and the% .

A similar gradual narrowing of functions is observable when we consider more definitely what it was that the priest actually did. He was an expert, and in connexion with the act of sacrifice and worship.

6. Privileges of priests.—Greek priests do not seem to have been able to claim any special privileges simply by virtue of their office, but such were freely bestowed. The inscriptions on the extant seats in the theatre of Dionysos (Athens) illustrate the granting of seats for special places in religious processions (cf. D. 653. 29: θεται τημετα των θεον ανε εν τω θεον την θεον και θεον της θεον) or in connexion with the act of sacrifice and worship.

1 In Homer the two designations of a priest are ἄρτοξειος and ἄρχον. The former, as an act of hospitality, was a matter of great importance; see W. S. Ferguson, Helenistica Athenae, London, 1911, p. 340 ff. of particular cults to don the garb and mask and to impersonate the divinity (cf. Paus. viii. xvii. 12 [Priestess of Artemis], protomachos in the procession in honour of Artemis Laphria at Patras— ἡ ορεχοσκοποι αντικειμενη της κοιμησις ἐπιτραπεζων τον νεφον τον την περιοδον της κοιμησις ουκ επιτραπεζων (Homer. 492. 11, 18; 874. 3 [priest of Demeter at Pheneos]). Sometimes the priest would be required to perform the functions of the priest of Delos with his vast accumulations of cultal, was a matter of great importance; see W. S. Ferguson, Helenistica Athenae, London, 1911, p. 340 ff. of the particular deity, 

2 In Homer the two designations of a priest are ἄρτοξειος and ἄρχον. The former, as an act of hospitality, was a matter of great importance; see W. S. Ferguson, Helenistica Athenae, London, 1911, p. 340 ff.
Even more substantial, and more universal, were the rights of perquisite (ιερωπόμονα, γέρας).

These are carefully defined and enumerated in a large number of inscriptions. In general, the priest had a right to a portion of the sacrifices paid for at public expense, and to the produce of the temple lands, but these were usually restricted to skin; to the skin not always, even in private sacrifices (cf. D. 601.14), and in the case of the great state sacrifices, in Athens at least. In Athens, the priest was also entitled to a share of the imperial income of State slaves (cf. D. 620). In some instances the priest receives also from the temple treasures, a small fee for each sacrifice, probably at the suggestion of the god himself. This was the case, for instance, when Herodes Atticus endowed a temple at Olympia; D. 734.20 [Kos]; περιεύθυνα δι' αυτοῦ τός τις τῆς ληφείας. The priests of certain cults also had the right of διώρυγα, street collecting of alms (D. 696 ἐκ τῆς περιακής ἑλέους τοῦ θεοῦ οὐκ ζύγαλον; διὰ τὸ δήμου τοῦ τῶν ἄνθρωπος παρείται αὐτὸς τις), but we know nothing further of any ceremony of consecration or institution.

PRIEST, PRIESTHOOD (Hebrew).—1. Date of institution.—Those portions of the OT which are most priestly in tone are latest in point of time. When we lay these aside and try to get a historic view, we discover that the earliest legislation, noticed in the books of Leviticus and Numbers, may be said that where firstfruits and festival offerings are spoken of, a priest is implied; but this is not necessarily the case. The earliest offerings, including tithe and firstfruits, were brought to the sanctuary for the Divine use and not allotted to Him in a feast in which the worshipper and his family, with their invited guests, consumed the whole. For sacrifice it was not deemed essential to have any officiant. Many passages of the OT show that the ritual was familiar to every adult male of the clan, and that any man could perform the ordinary acts of worship.

It does not follow, however, that priests were unknown even in the earliest stages of Israel's religion. For other purposes than sacrifice a priestly type of function, mention of which may be, is implied even in the earliest documents. When the Covenant Code provides that cases of dispute shall be brought before God, it thinks of the sanctuary as a place where the will of the Divinity is made known. But this clearly implies that there was a person to whom the access was given to men. When the narrator speaks of the perplexed Reuben going to seek Jahveh, he has in mind an oracle and its interpreter. From this point of view we understand the primitive priestly caste, however, is designated by the Hebrew word for 'priest,' which is kōhān, and the corresponding Arabic word (κόνα) means 'a soothsayer'—more exactly, as we learn from the Arabic lexicographers, one who has a familiar spirit to tell him things otherwise unknown. This 'priest' is the familiar friend of a god or demon, and his interpreter to those who seek him.

The priestly caste, however, is designated by another word, which in Hebrew, the explanation of which is not so easy. To understand its meaning, we think of the many sacred places in the land which offer an asylum to fugitives or criminals. It would easily happen that the broken man, who was outlawed by his kin, one who had survived the massacre, was in a position to seek the sanctuary and take up his residence under the protection of the god as his client. Gradually he would become acquainted with the customs of the place; if susceptible, he would receive intimations of the god's will in dreams of the night or visions in the day, whether as guide to strangers who resorted to the place. Thus the man would become an attaché of the

1[1] 1 So in Sparta the kings receive as perquisite the alms of all State sacrificial animals. The priest has nothing but the share of the victim to which he is entitled (τοῦ κυρίου τοῦ ἐν τῷ κύριῳ λατρεύοντος). Cf. Hom. Od. iv. 49.

2[2] In D. 591 (Kos) certain categories of worshippers apparently receive the privilege of paying a lump sum of five obols for certain sacrificial charges (παντί δήδακε διώχθην αὐτοῖς τῶν ἄνθρωπων πάντων."

5[5] The occurrence of tithes in the story of Bethel (Gen 28:22) is parallel.
place, a slave of the god, as he would doubtless delight to call himself. The Hebrew word for 'one attached to another' is  בְּרֵית, which we translate 'Levite,' but which originally meant one 'joined' to a person or place. The Levite is the priest viewed as an attached to a sanctuary; the kohen is the same person ministering as the interpreter of the oracle. We may illustrate the state of things in Israel 3000 years ago by what is found in Syria to-day. That custom we—speak—of Levitical is full official strings dedicated to saints—Christian or Muhammadan. Each shrine has one or more attendants who are supported in part at least by the sacrifices, generally receiving the hide and one of the quarters of the sacrifices. The office is one which has been hereditary, and those who may have succeeded to the priestly office had the sanctuary not been destroyed. At the same time he developed prophecies which made him the vehicle of the divine will, though not bound to any one place.

Of the two Hebrew words בְּרֵית and קֹהֶן, one came to designate the man qualified to act in divine things, the other described him as officiating at a sanctuary. This is well brought out by a narrative in the book of Judges (ch. 18).

Here we read of a man named Micah who had an idol of precious metal. At first he set apart one of his sons as his attendant, but one day a stranger came, whom Micah appointed Levite from Bethlehem. Micah recognized his opportunity and engaged him. The way in which he congratulated himself in having a Levite for priest shows the extent to which professional was looked upon. There was nothing illegal in the ordination of the layman who had first undertaken the office, but it was in every way better to have a man who belonged to the gild.

If we may argue from this case, the Levite was often obliged to seek his living by entering the service of strangers, and we can see how the duties in the sanctuary of a sanctuary might force its attendants, or some of them, to emigrate.

3. Functions.—The earliest priests, then, were not sacrificers, but guardians of the sanctuary and its treasures—gold or silver images or utensils with which the sanctuary was furnished. The last point must be borne clearly in mind. It comes out in the story of Micah, for, when the Danites came to the house of Micah, they asked a response from Jehovah. So favourably were they impressed by the experience of image and priest and settled them in their new possession. In the history of Saul we find a priest with an ephod in the camp, and no step was taken without the approval of the oracle. When the priests of Nob were brought to the house of Jehovah and asked why they escaped the house of Jehovah, they mentioned that which brought the priest David gave him counsel in the same way. Whatever theory we may adopt concerning the ephod, we must recognize it as the instrument by which the priest ascended to the divine will. The ephod remained the property of the priest down to the latest time, as did the Urim and Thummim, which we know to have been the sacred lot.

The technical name for the instruction given by the Levites to the ephod of the Levites. From the earliest to the latest period of Israel's history, it is assumed that ephod is the word used by the Hebrew word for the gild, or tribe of Levi. It is clear in the current of Israel's thought that the word is used to denote the priest, and the severance of the Levitical from the priest. The severe arraignment of the priest by the Levitical prophets, as well as the prophet's counsel as the most serious crime. The priests of other nations were supposed to have the same duty as those in Israel. When the Philistines were at a loss how to treat the Ark, they consulted their priests, who told them the Ark must be carried by the Levite; and, when Haggai wants to know about a matter of ritual cleanliness, he seeks tìrah from the priest. 2 Even the Priestly documents, which lay stress on the sacrificial duties of the priest, speak of imparting tìrah as one of his offices. The activity of the priest at the examination of the leper and at the ordeal of jealousy is therefore in line with his earliest duties. From giving responses in answer to such legal questions as were brought before him, the priest easily assumed the office of judge. Both Deuteronomy and Ezekiel indicate that the Levites act as judges, and the earliest picture drawn of Moses shows that he was as much priest as prophet in making known the decisions of Jehovah.

4. Priestly and prophetical ideals.—The Levites early traced their origin to a common ancestor. Whether there was a clan or tribe that bore the name Levi or another name, it is the rise of the question on which scholars are not agreed. (a) In the Testament of Jacob 3 we find such a tribe spoken of in terms used of its brother tribes. It is coupled with Simeon in a denunciation which reads with the threat to scatter them in Israel. Of Simeon we know that he was ground to pieces in the struggles between Israel and the frontier Bedawin. It is natural to think of Levi as scattered in a similar way. But this is not a necessary inference. The author of the poem, living in the time of Simeon, may have inferred the threat from the scattered condition of the gild—a fact which must attract attention from its singularity.

(b) The next mention of Levi shows a considerable advance in the esteem in which the tribe was held. It is contained in the poem called the Blessing of Moses. Here we read:

'Thy Urim and thy Thummim belong to the man of thy friendship
Whom thou didst prove at Massah,
For whom thou didst strive at the waters of Meribah;
Who says of his father and his mother: I have not seen them.
He does not recognize his brothers and does not know his sons.
For they keep thy word
And they guard thy covenant;
They teach Jacob thy judgments
And Israel thy korah.
They bring blessing to thy nostrils
And whose-blessings-offerings upon thine altar' (De 33:8).

The change of tone between this and the preceding must be evident. Here the tribe or gild is said to be isolated because its members have chosen to ignore father and mother, brothers and sons, for the sake of Jehovah. The priesthood is the reward of this disregard of the ties of kindred. And the great leader and prototype of this calling is Moses, who was tried at Massah and Meribah. We recall that Moses was an outcast for the sake of his decision to come to life, and that he was priest as well as prophet. One thing more comes into view in this poem. This is that the Levites are now the ministers of the altar. They not only teach the korah, but also burn the sacrifices. It is not asserted that they have exclusive right to do this, and in fact it is very doubtful whether an exclusive right could have been established in the face of early history. The earliest legislation makes it the duty of every Israelite to erect a

---

plain altar of earth or unknown stone in every place where he discovers traces of God's presence, and there to offer his sacrifices. The exclusive right to furnish the necessary alabaster without which this law was distinctly in mind. But it is clear that at the more conspicuous sanctuaries the ritual would, as it became more complicated, fall more and more into the hands of the official ministers. (c) The Levite was, however, in some sense an Israelite. After the division of Israel into two kingdoms. It shows that at that time the Levites were regarded as an organism, and that to them belonged preferential rights to minister at the altar as well as to the sanctuary. The sanctuaries are represented as centres of moral corruption, and the priests are active fomoters of what by their calling they ought to oppose. The people perish for lack of knowledge, because the priests, whose business it is to teach the will of God, neglect their duty. This state of things is not confined to the northern kingdom. In Judah also we hear of priests who are drunken, ignorant, profane, violent, and addicted to lying. 1 Hosen, Isaiah, and Jeremiah are the witnesses to these charges.

The author of the book of Deuteronomy was a practical man. He was in sympathy with the prophetic ideas, but he saw that the cultus could not be dispensed with. Vested interests were on its side, and the craving of the heart for religion needed the traditional ordinances. His book therefore represents a compromise between prophets and priests. We learn from him that all priests belong to the class of Levites and that they are entitled to the same rights and privileges. In fact he usually speaks of them as 'Levite-priests.' 2 Although in some cases he uses the simple term 'Levite,' he nowhere intimates that there was any difference of function between a Levite and a Levite-priest. Levite-priests were the called carriers of the Ark (the carrying of the Ark is elsewhere assigned to the priests); the Levite-priests have charge of the curious expiatory rite over the body of a man found slain; disputes are to be brought to the central sanctuary, there to be decided by the Levite-priests, such decision being, as we have seen, a distinctively priestly function. In a passage in Jeremiah, which is in the tone of Deuteronomy, we learn that the Levite-priests shall have the privilege of offering burnt-offerings and of performing sacrifice for ever; and in the same connexion we find the Levites described as the priests who minister to Jehovah. 3

The thing that comes prominently into view in regard to the Levites as the priestly class is the class. While we may suppose that the great sanctuaries, especially those which had kings for their patrons, gave an adequate support to their officials, the mass of the Levites connected with the ordinary services both in the sanctuary and in the charity of their neighbours. They are mentioned along with the widow and the fatherless, and commended to the benevolence of the people.

3 Cf. Dt 31:22, where the Levites are called carriers of the Ark, with Jos 3:1 8 64, 2 3 1194; further, Dt 21, Jer 33:17-22, and 15.
demanded that the Levites from the country sanctuaries be admitted on an equality with those already in possession. But the most that the instructions do is to provide for the official admission to the lower offices. Ezekiel gave the stamp of his authority to this arrangement and thus introduced a new period of ecclesiastical history.

(c) What took place in Jerusalem in the time of Daniel 10-12 can only be conjectured. We are well aware of the political view of the righteous and the wicked: Daniel is the most prominent among the righteous, and Jeremiah is the most important among the wicked. They are purged by the triple rite of sprinkling with holy water, washing of clothes, and a purificatory sacrifice. Thus prepared, they are ‘waved’ by Aaron in imitation of the presentation of a sacrifice. The significance of the whole is to indicate that the Levites are given Jehovah by the Israelites, and by Him in turn given to Aaron and his sons to assist in the service.

The priesthood is the prerogative of Aaron and his sons. How Aaron came to take the place of the Levites, as Ezekiel has supposed, is still a mystery. Earlier indications are that Aaron was connected with the calf-worship of Bethel. Between Ezekiel and the time of the Priestly writer some influence of the northern kingdom must have made itself felt in Jerusalem. The fact stands out quite clearly that in the Priest Code Aaron and his sons are fully established in the priesthood. The whole responsibility for the service is theirs; they bring the blood of the sacrifice to the altar, burn the fat, offer the unbloody garments, and in their duty in the sanctuary, to eat the ‘bread of the presence,’ and to burn incense within the Dwelling. For them the ritual of the great festivals and of the daily offerings is laid down. For them also the author included his book, the called Hebraistic Code—a body of regulations drawn up in the Exile for the government of the priests in their daily life.

It will be seen that the office of the priest has now become mainly sacrificial. But the old theory of his duty as interpreter of the will of God still remains in such cases, e.g., as the inspection of leprosy. Here the priest appears as examiner and judge of the kind of infection, and director of what is to be done for the ritual restoration of the afflicted person to the community. The difference between the present system and the earlier administration of the oracle is that now everything is laid down in a book by which the official must be guided. The result of thus formulating the cultus is to deposit a unitary character, as an expression of joy and gratitude on the part of the worshipper, and to emphasize it as an opus operatum by which alone the relation between Jahveh and His people is kept intact.

The predilection of the chief priest in the post-Exilic community has already been spoken of. In the Priestly document his position is made sure by divine appointment. In him, in fact, the culmination of the sacerdotal system is found. It is he who represents the people before God, and whose ministration secures them the divine grace. He it is who once a year goes alone into the Most Holy place to restore the purity of the dwelling and of the people. No part of the OT is more familiar to Christian and Jewish students than the ritual of the great Day of Atonement. Its solemnity indicates the intercessory value of the high-priest. But the sacerdotal head of the community is also in this writer’s mind the political head. His vestments are regal, and he is made to look like a king, which cannot be distinguished from a kingly crown, a robe of royal purple, gold and gems of untold value. In the theory of the code there is no one above him in rank. Moses, indeed, may be distinguished as the true head of the community in which the king-maker is above the king. But this is because Moses was the necessary inaugurator of the new state of things—a special organ of divine grace, who has to have no successor. The civil ruler in his relation to the high-priest is represented by

1 Zec 3 and 4; cf. G.L.
2 Lev 1 and 2; Nu 26 and 29.
3 Lev 17-26, based on doubt on earlier tradition.
Joshua in his relation to Eleazar, and it is plainly one of inferiority. Book of Chronicles is wholly of the mind of the Priest Code in recognizing the difference between priests and Levites. But the author, who was perhaps himself a Levite, takes great interest in the lower clergy. In a part of his work we find (perhaps under the influence of tradition) the post-Exilic community divided into Israel priests, Levites, Nethinim, and the sons of Solomon's servants. In another place the door-keepers and singers are found between the Levites and the Nethinim. The Nethinim (p. e.) we know to be descendants of the Temple-slaves to whom Ezekiel objected, and the sons of Solomon's servants were one particular class of the same order. Ezekiel's regulation had not been able to overcome the traditional claim of these men to a place in the hierarchy. What actually took place was the absorption of all classes of lower clergy into that of the Levites. The Chronicler shows a purpose to defend this absorption and establish its legitimacy. This he does by dating the organization of the Levites (into the office of Levitical priests, judges, scribes, and priests) in the time of David. His desire to magnify the office of the Levites leads him to vindicate for them the function of teaching the Law. He pictures them also as having in charge the sacred vessels, and to such an extent as preparing the show bread and the sacred ointment. The Levites never assumed the importance in actual life which they had in the system of the scribes. The inferior offices fell into the hands of the Levites, and this has been historically formed an aristocracy which arrogated the higher functions to itself. In Maccabean times and later we hear of higher and lower orders of priests, but scarcely any mention is made of Levites. The reason for this is not far to seek. The income of the Temple was never sufficient to support the large body of attendants provided by the Law; and what came to it was seized by the higher orders of the clergy. The economic situation is revealed by the list in the book of Ezra, which gives one in seven of the priests and Levites who were restored, as priests. It was impossible for a poor people, who had to pay taxes to the Persian power, to support so large a body of Temple-servants.

5. Revenues.—In conclusion a word must be given of the sources of priestly income and support. In the earliest times there was no fixed income for the priest. Some portion of the sacrifice was given to him by the offerer, and the hide of the slain animal came to him from the nature of the case. Deuteronomy says so far as to legislate on this as on some other subjects. It gives the priest the shoulder, the cheek, and the maw of the sacrifices. In this book we also have mention of the firstfruits and the tithe. These were not given to the priest directly but were brought to the sanctuary, where they were consumed in a joyful feast by the one who brought them—the priest being invited to share, no doubt. Every third year, however, this author directs that the tithe be distributed to the needy classes, among which the Levites were counted, as we have seen.

The advance in ideas is seen in the Priest Code, which ordains distinctly that a tenth part of the produce of the land is to be given the Levites for their support. The firstfruits and the tithe are also specified. In the same way, the sin-offerings and trespass-offerings become the property of the priests, and a yearly tax of half a shekel is laid upon each male Israelite for the support of the sanctuary. In fact the provision, if carried out, would have given ample support to the whole sacerdotal class. But the difficulty in collecting a tax must be evident. The theory of the Law gave the priests a tenth of the tithes collected by the Levites, and logically the high-priest would receive the tenth of what came to the priests, but this too was not enforced. A purely ideal construction is the assignment of cities with pastureage, though without farms, to the Levites, a certain number of them going to the priests. Almost all the towns of importance treated in this manner were given to the Levites, and possibly were to the Priest writer. The earlier historical writers know nothing of any such arrangement, and in fact to them the most striking mark of Levi is that he received no territory at the conquest and settlement of Canaan.

HENRY PRESERVED SMITH

PRIEST, PRIESTHOOD (Hindu).—I. The Rigveda.—As a collection of sacred poetic covering in all probability the period from about 1500 to 1200 B.C., the Rigveda cannot be expected to afford any complete picture of the actual position occupied by the priests in the age in which the hymns composing it came into being. It represents only the priestly activity of a limited number of families among a certain body of Vedic tribes settled for the most part in the country later known as Magadha, and there is no probability that it completely mirrors that activity on all its sides. But the information it does afford is consistent and, so far as it goes, gives a clear picture of the sacerdotalism of the period.

The priestly function appears to have lain entirely in the hands of a special class, to which appertained the duty of acting as the instrument of securing the divine favour. There is nothing in any hymn of the Rigveda to suggest that it was composed by a man of other than the priestly class, though of course it is impossible to prove that the authors were all priests. Later tradition (indicated by their titles such as Dvapya (X. xxviii.) was Devapi Arsiṣeṇa, a prince of the Kuru family, but the hymn itself makes no such statement, and Devapi appears in it in a purely priestly capacity. The tradition seems to be that the Rigvedas are composed of royal origin great priests of the Rigveda, such as Visvāmitra and the more
PRIEST, PRIESTHOOD (Hindu)

mythic Prthvi Vaînya, and, still later, tradition ascribes several hymns to royal authorship, but none of these traditions has any support in the ancient texts. The list of hymn numbers in the Rigveda itself is full of references to the activity of the priests under the generic title of brahmanas, and to several different kinds of priests, and the hereditary character of the priesthood is attested by the well-known humble origin of the present high priest. Moreover, there is abundant proof in the Sàvatihit and elsewhere that, as in the immediately following period, the brahmanas worked in the service of kings or wealthy nobles, whose generosity in sacrificial gifts is celebrated in the anuvâdas appended to several of the hymns; the amounts of the gifts recorded are too great to be accepted as genuine records, but they at least prove that the priests already set upon their services the highest value. Side by side with these praises of the generosity of patrons and with broad hints to others to follow their example in the form of encomia on generosity, there are many proofs of the extremely good opinion of themselves entertained by the brahmanas, though it is not clear in what connection the hymns were appended and themselves the description of gods on earth which they claimed shortly afterwards. They seem to have adhered as strictly as possible to their own occupation; if priests like Vasiṣṭha and Vîṣṇâva- mîtra are to be credited with the priest's battle, doubtless it was by their irascible power, their prowess in arms. But the priestly sphere included in all probability medicine, for one poet declares (ix. 29.7) that his father was a physician—an occupation in which, to judge from all analogy, the use of spells would be of the highest importance. Naturally enough, the Rigveda contains very little of this side of priestly activity, but in its tenth and latest book there are found certain spells which touch on the medical art, one against the disease Yagṣma (x. 163), and two to preserve the life of a man lying at the door of death (x. 188. 1. 7. 11). These hymns, with a few others, containing spells to procure offspring, to destroy enemies, and to oust a rival wife from a husband's affections, constitute, in connection with the funeral and wedding hymns, practically the only sign in the Rigveda that the activities of the priests extended to the ordinary affairs of human life, the domestic ritual which is of so great importance, and the domestic, religious, political, and social achievements of the priests. In the next period, the activity of the priests was confined in the main to the greater sacrifices and to such only of the domestic rites as had begun to assume special importance; the wedding hymn (x. lxxxv.) bears clear marks of comparatively late origin and is not primitive in character, and the funeral hymns exhibit a decidedly complicated and refined religious belief.

It has proved impossible to trace to the Rigveda the full sacrificial liturgy of the following period, but the hymns abundantly prove that there already existed much complication of ritual and subdivision of function among the priests. The main subject-matter of the Rigveda is clearly the soma-sacrifice, and it was precisely in this sacrifice that the greatest number of priests was engaged. In the heaven sacrifice (ii. i. 2) to the god Agni are assigned the offices of hotṛ, potṛ, neṣṭṛ, agnīdhṛ, praksāṭṛ, adhvaryu, and brahmanas, as well as that of the lord of the house for whom the sacrifice is being performed. We have already had a reference to praksāṭa, who is doubtless to be identified with the praksāṭṛ, as his business is to give directions to the hotṛ, of an udāgrayāh, and a prāg-vidgātāha, and of two kṣatriyas. The latter are doubtless the slaves of the victim, who in the later literature of India are usually referred to as the sacrificer. The function of killing probably having tended to lower them in rank compared with the ordinary priests, while the two former, whose functions, to judge from their names, must have been the drawing of the water and the taking of the pressing stones required, have been absorbed. Further, among the priestly functions of the Rigveda, there is none that can be identified with the praksāṭṛ, a function that has the king in charge. The king was the actual sacrificer in the heaven sacrifice, even though he might act through a priest, the official service of Agni is both the hotṛ for excellence and the pruṣhita; the two divine hotṛs of the āpī litanies are also called (x. lxx. 7) the two priests—the pruṣhita. Unlike the other priests, the pruṣhita was not merely in the service of a particular god as was the hotṛ, but was devoted to the worship of the king, and he was closely concerned with the king in his more worldly functions. Vasiṣṭha, Ṛṣabhā, and others appear to have taken part in their priestly capacity in the wars of their kings, and the hotṛ, rather than the具体 priest, is Devā for his master Śantu and its successor. It was rather from the pruṣhitas than from the
ordinary sacrificial priests that the high claims of the brähmana to priority in the State proceeded.

Great as the position of the priests may have been in the brähmana, he does not claim as yet to be powerful enough to constrain the gods to his will; it is probably enough that in his own view and that of the people he was possessed of magic powers; we have indeed in the Rigveda (X. xxi. vi.) the mention of a maṇi, one of those divinely inspired ascetics who figure in all the life of India. But on the whole the relation of the priests of the Rigveda to the gods is that of devout worshippers who seek by skilful song and well-presented sacrificial gifts to win the favour of the god for the sacrificer, in whose service they are.

2. Brähmanas.—In the Brähmana literature, which covers the period up to the 6th cent. B.C., the priesthood appears quite definitely as a separate class, contrasted with the Ksatriya, or warrior class, the Vaiśya, representing the main body of the people whether engaged in agriculture or trade, and the servile Sūdras. The priesthood was normally hereditary, but the class system at this period did not present still the distinctions between priests and women of inferior castes, and, though priests might be despised, as were Kavaca Ailasa and Vatsa, for descent real or alleged from slave-girls, still they would not thus necessarily be excluded from the blessings of the higher classes. Nevertheless, much stress is laid on descent from a rṣi and on purity of origin, and certain ceremonies could be performed only by priests who fulfilled the prescribed condition of birth in a family which for a number of generations had practised the rite. On the other hand, there are assertions (e.g., Kathaka Svakhita, xxx. 1) that what matters is not descent but learning, and we actually hear in the Chhandogya Upanisad (iv. 4. 4) of Satya-kāma Jābāla, who was allowed to be taken as pupil, though his parentage was uncertain, his mother being a slave-girl who had been connected with several men. This evidence, however, merely shows that the class was not absolutely closed by the rule of heredity. Nor was the practice of priestly functions absolutely restricted to members of the priestly class. The legend which treats Viśvāmitra as a king of the Jahnus (Paśchawinda Brāhmaṇa, xxii. xii. 2; Aitareya Brāhmaṇa, vii. xvii. 2) is supported by the occurrence in the Vedas of the term dgnldhra or rdjan- (e.g., as in the Rg. trayas, or rdjan-ratr, a name of the Yajnopavita:) vās, referring to a seer of royal origin; all the stories which mention such kings are of a legendary character, but that does not alter their significance as evidence that the view of the priestly class of the time did not see any impossibility in kings composing poetry for the sacred rites.

As in the period of the Rigveda, the sacrifice is carried out for the profit of an individual, even in the case of the horse-sacrifice, which is formally an offering of the king alone, although intended to secure the prosperity of all classes of the people. To this rule the only exception is in the case of a sattrā, or sacrificial session, which might last from twelve days to any number of years, and of which the most important form is the gāvinduṣya, lasting a whole year; in that, whereas any participants must be consecrated and thus made for the time being priests, and the sacrifice is for the benefit of all and not merely of the sacrificer. The sattrā is known as early as the Rigveda, and it is possible that we may have it in the Rigveda. In an earlier period when the sacrifice was a clan sacrifice, but of that we have no proof. As in the Rigveda, the sacrifice is conducted by priestly families, but the separate traditions of these families, though they are often recorded, are of relative insignificance in comparison with the general uniformity of the sacrifice throughout the texts, which indicate that a steady process of assimilation of customary usage was in progress. This assimilation was doubtless helped by the temptations and by the presence of any close connection between king and the cult, such as is so marked in the growth of early Greek religion.

The number of priests mentioned is greater than in the Rigveda, and more specific information as to caste and others required for certain sacrifices is given. The adhvaryu alone is required for the agnihotra, the daily offering to Agni; for the agnyādhyena and the new and full moon offerings the agnihotṛ, the hotṛ, and the brāhmaṇ are required besides the aśvādhyena for the later of the prayājyaphā́, and for the anāgni, in addition to the kāstika, who does not rank as a priest in the full sense, the maitrivarṇa. In the soma-sacrifice the number rises to sixteen, classified in the ritual texts as hotṛ, maitrivarṇa, aśvādhyena, vās, and grañvast; adhvaryu, pratyrājāsthāni, etc., and un-maitrivarṇa; udāgī, prastotṛ, pārathā, and subhrahavya; brāhmaṇ, brāhmaṇa-kedkhan, pārata, and agnividhara. To this list the Kausitakas are added, and the sadasya, who was charged with the duty of general surveillance of the sacrifice. The arrangement of priests does not, however, correspond to their actual employment in the ritual, in which the lower priest, the adhvaryu, is usually the highest, and the brāhmaṇ and the nāra are merely assistants of the hotṛ, and not of the brāhmaṇ and the adhvaryu. Of the priests the maitrivarṇa is identical with the prā śā ṛ ṭ kā a or upavā ṣ kā of the Rigveda, and bears his name because of his reciting litanies to the gods Mitra and Varuna; the aśvādhyena is clearly a later addition, the Brāhmaṇas themselves (Aitareya, vi. 14; Kausitike, xxviii. 4-6) emphasizing his exceptional character. The functions of the udāgī and subhrahavya are unimportant. On the other hand, the brāhmaṇ is a priest of great importance, whose task it is to take charge of the whole rite and by his silent presence to make good any errors which may be made in the carrying out of the sacrifice. He is actually declared to be as important as the sacrifice itself by the imitation of the priestly functions which it is required of him in his appointment is curiously indicated by the addition by the Kausitakas of the sadasya, who would seem to have been originally the hereditary scribe for the friary, and as the priest of the brāhmaṇ. The existence of the brāhmaṇ in this capacity has been seen1 even in the Rigveda, but the evidence for this view is extremely doubtful, unless perhaps in one of the latest hymns (X. xiii. 3). On the contrary, the evidence of tradition supports the view that the brāhmaṇ as a special priest was an innovation of a comparatively recent period in the history of the ritual by the Vasishtha family, and that for a time only one of that family could perform the duties of the office, doubtless because such a priest alone would be in possession of the special knowledge which constituted the characteristic of the post.

At the same time, the purohita steadily increased in importance; even the Brāhmaṇas are helped by the lack of the higher priest, and matters the constant adviser of the king; in some cases at least the same purohana acted for two or even three tribes, which placed him in a position of quite exceptional consequence and influence. Indeed, the purohita is but an advanced type of the officiant, which is effectively described in the Aitareya Brāhmaṇa (viii. 27), where the formulae of appointment are given; they are based literally on those of the marriage ceremonial; the purohana thus becomes for practical affairs the alter ego of the king, and

1 See R. Pischel and R. F. Geldner, Vedische Studien, Stuttgart, 1858-1901, ii. 144 f.
the duty of the purohita is made out to be the defeat of the king's enemies and the securing of the prosperity of the realm. The importance of this part of the work is indicated by the fact that the gods in their struggles with the asuras repeatedly are worsted until they are able to summon to their aid Bhisapatip, who is por excellence the purohita of the gods. The Atharva-

The Brahma, is in the same manner engaged in the spell for success in battle. When a king, as often, is sent into exile by his people, it is his purohita who is expected to extricate him from his mis-

then sets over against them the abiding in brāhmaṇ, which is later developed into the fourth āśrama. The Kena (33) and the Katha Upaniṣad (i, 15) are equally clear in their recognition of the value of study and asceticism, and the Kena also mentions sacrifice expressly as a condition of true knowledge. The significance of these requirements is suggested by the fact that the day of the Brāhman is set aside for asceticism and to abandon the use of sacrifice, which indeed in the Buddhist literature is regarded with much contempt, the Brāhmans were anxious to find due place and room for the different sides of human activities, even if their doctrine made it the very tendency of the community with some distinctly original features. Such a community followed the lines of the preexisting system of pupilship; a formal initiation by a priest of the order acts as a preliminary to the adoption of the life of the Jain monk, who then becomes a homeless wanderer like the Brāhman ascetic, forbidden to possess any property, and compelled to beg his food, to live on what he thus obtains, to wear at most the rags that he can gather, and to avoid dwelling long in any one place; he must be always ready to move in search of fixed dwellings, and for the rainy season, the time for fixed dwellings during the three or four months of the rainy season gave the impulse to the development of the quasi-monastic life, more or less permanent dwelling-places, though of the simplest kind, and from all appearances the first idea of laymen. But the rule of wandering is still applicable. The essential duty of the monk is meditation and spiritual exercises, life being supported by begging, but in the course of its development, the practice of Begging, as it were, has become of less importance than the devotion of effort to avoid the destruction of life, and the provision of food. Moreover, from an early date, perhaps as early as the 2nd cent. B.C., a definitely Hindu element has been introduced in the form of idol-worship, accepted by both the Svetāmbara and the Digambara sects, but rejected by the reformatory sect of the Śānakavāsī from the 15th cent. onwards. The introduction of this new element has added to the duties of the Jain monk a temple worship, consisting in the main of mental devotion and contemplation of the idol of the Tirthankāra, accompanied by the singing of hymns in his honour. There has also arisen a temple priesthood, who in the case of the Digambaras must perform the Śvetāmbara Hindu rites of washing, dressing, and adorning it, the waving of lights before it, the burning of incense, and the giving of offerings of fruit, sweetmeats, and rice. The Jain priest does not, however, eat the food thus presented, differing in this from the Brāhman priest and the Hindu temple-priest. In the temples of the Svetāmbaras men who are not Jains, even Brāhmans, may be employed. Besides the monks the Jains recognize an order of nuns, subject to the same general rules of life as the monks, and, what has been of the first importance for the preservation of the faith, orders of lay male and female adherents, brīvākas and brīvākās. This recognition gives the laity definite duties and obligations, based upon but modified from the monastic rules. The regulations of the vows undertaken by the laity are those of from time to time observing for a brief period the full restrictions incumbent on the śādhu, and of constantly helping the monks by gifts of things of food and things of utility to be had, and the lending of such articles as they may not take for their own. Probably from the first these adherents have been largely of the mercantile class—a result contributed to by the fact that the Jain restrictions on the taking of life and many avenues of profession even to the lay community (cf. art. MONASTICISM [Hindu]).

1 See K. Glaser, ZDMG lxvi. (1912) 1-37.
Tradition, probably correctly, ascribes Mahāvīra to a Kṣatriya family, and the Buddha was undoubtedly not of Brahman birth. Moreover, in the Buddhist country in which he preached there is evidence that the Brahmanical system was much less rigidly determined than in the west, and that the practice of Kṣatriyas and Vaisya-s as ascetics was far more widely spread. But the Buddha in his various acts of asceticism shows essentially from Mahāvīra in laying stress on avoiding extremes of asceticism, such as the religious suicide encouraged by Jainism; greater freedom was accorded to the monks to receive the aid of the laity, and the personal and parochial connection was made to organize the laity into a community formally dependent on the order of monks. The admission of women as a special order of nuns was only grudgingly conceded, and subjected to such restrictions that the spiritual effect of the community of nuns can hardly be discerned. But from the death of the founder there entered into the duty of the pious monk the obligation of paying reverence to the four places of special importance in his life—that where he was born, that in which he obtained enlightenment, that in which he decided to set going the wheel of the law, and that in which he entered nirvāṇa. The actual reverence of the relics of the departed Buddha was perhaps at first reserved to the lay adherents, but it passed naturally enough into that idol-worship which assimilated the worship of Buddha to that of a Hindu god. Moreover, the doctrinal development of Buddhism in the Mahāyāna school displaced the historical Buddha as the centre of Buddhism by mythological figures essentially divine.

In one important point both Buddhism and Jainism agreed—the introduction of the formal confession of sin as an essential part of the duty of the monk and in Jainism also of the laity. In both cases the fortnightly gatherings and the great yearly meeting of the monks were the specially fit occasions for the confession, but great stress was laid in Jainism on immediate confession to the guru in order to avoid by repression the accumulation of Karmas. For such systematic confession there was no place in Brahmanical philosophy and these were defined tenets, though the importance of confession for certain ritual purposes was recognized. In these formal assemblies there was the possibility of the development of an ecclesiastical organization, but it seems that even in the first age of the religion, ascetics and laity were not united in any more than Hinduism has been able to produce a regularly organized hierarchy.

The Indian ascetic, whatever his religious belief, is credited with the attainment of magical powers of every kind, and this is true of both the Jain and the Buddhist—and indeed in even a higher degree of the latter faith, for one of the four rules for monks in that belief is not to boast of the possession of such powers as they do not enjoy. This is the better side of the magical powers which ordinary Indian belief ascribes to the priest, and of which so much is made in the Brahmanical literature.

4. Early Hinduism.—The two great epics of India, the Mahābhārata and the Rāmāyana, though in conjunction with the early law-books and with the Buddhist and Jain scriptures, present us with a form of religion and custom to which the name of Hinduism can fairly be given as distinguishing it from the Mahāyāna; the development of the religion of these texts is only in part the natural development of the religion of the Brāhmaṇas; it contains many elements of faith, doubtless as old as that religion, but appealing to different sections of the people; it is essentially a more popular faith than that which was concerned with the sacrificial ritual and the speculations arising out of it. Hence the priest of the sacrificial ritual is of lesser prominence, while the purūrakas come forward. The priests of the epic may be divided into the ordinary priests, whose life is spent amid simple surroundings in the performance of their functions, and the spiritual advisers of the kings, who are often also the actual governors of the courts of their youth. The office was one which tended to be hereditary in the same degree as the monarchy, and the mere fact that a priest might be at once the guru of the king and his purūraka naturally excluded it to an extraordinary degree of the latter office. The boast of the Brāhmaṇas was that the priests are the gods on earth is repeated with increased force; the gods are made out to be dependent on the priests, who, if need be, could create new gods. The power of the king is really derived from the priests, and they have the power to destroy a king who proves unwilling to meet their demands for gifts which have now grown beyond all measure; cows and land are expected as matters of course and even villages and districts, i.e. the revenues of which were taken to keep up the activities of the people, which is a real thing in the Rigveda and still seems to have lingered on in the age of the Brāhmaṇas, disappears in the epic, passing through the form of the council of warriors and the assembly of priests, and really becomes the conclave of the king and the priest, who gradually was able to persuade the king that his advice was worth much more than that of the people or even of the warriors. Naturally enough, this view of the complicated organization for the purposes of State affairs was not accepted always by the warriors; the legends of disobedient kings like Viśvāmitra and Nāhusa show, indeed, the terrible fate of those who were bold enough to question the position of the priests, but also indicate that there were kings impious enough to doubt the all-sufficiency of the priesthood.

Naturally enough, the claims of immunity to punishment made by the priests are of the most wholesale character; even for the gravest crimes they insinuated an exemption. This is a kind of life which can be inflicted on a priest, though, as in the Brāhmaṇas, kings seem to have felt themselves entitled to punish treachery by death. In return for this privileged position, the priests were expected to know, and on this point their knowledge was complete, that of the sacred lore, of the religious and liturgical duties of the people, of the law, of the organisation of the state, of the history of the world, of the life and actions of the gods, of the various processes of creation and re-creation, down to the intricate mysteries of the oracle and the divination which was not the least important part of the priestly duties.

Thus the priestliness of the Brahman was a set of duties combined into a beautiful and harmonious whole, which was not the less complete on account of the multiplicity of the elements. There is nothing more striking than the perfect division of the whole into parts, the whole Brahman class into different sub-classes divided by occupa-
tion, though probably as yet still theoretically and in feeling one. The Buddhist texts show as Brāhmāns as agriculturists, as engaged in pastoral occupation, in trade, and in the profession of the τοιούτους (Apastamba, i. vili. 20; Gautama, viii. 11 ff.) confirm this account to the extent of permitting these occupations, in certain circumstances of

pressure, to the Brāhmāns. It is possible also that in the eastern country, such as Magadha, the Brāhmāns went farther and undertook professions of a class never approved by the stricter schools: in the Jātaka texts (iv. 361 ff.) we find suggestions that they could act as hunters, and fulfill other menial tasks, which would be alien to their proper functions, put when they occupied themselves in these unpristinely functions at the same time devoted themselves to any priestly offices, whether sacrificial or intellectual; and we may therefore see in this adoption by priests of other than their appropriate functions the beginning of the breaking up of the unity of the castes determined in the main by hereditary occupation.

The attitude of the priesthood towards the gods as depicted in the epic is what one would expect from the doctrine of the theorizing of the Brāhmaṇa period. The priests then degraded the gods from all real importance except in their con

connection with the sacrifice, and the priests of the epic have likewise no real respect for belief in the minor deities of the pantheon, and to this rank even Indra and Varuna have sunk. The great gods of the epic are in the first place Viṣṇu, and in the second place, as the result of later working over, Śiva; both these gods are of essentially popular origin, but the epic that popular worship has been overlaid by the philosophic pantheism which is most congenial to the temperament of the Brāhmaṇa. Even the devotion of the worshipper to the divinity, which was clearly prevalent in some sects, as reproduced in the epic, is overlaid with pantheistic elements.

5. Medieval and modern India.—The priest of the middle age of India as revealed in the Purāṇas and in the classical Sanskrit literature presents essentially the same features as the priest of modern times. The chief distinction between this period and the epic age is that of the growing complexity of life and the progressive Hinduization of the centre and south of India. As a result the priestly castes have split up into many other different subdivisions which in effect constitute castes within the main class, between which there is no marriage possible and sometimes not even complete freedom of intercourse and commensality. The tendency of the Brāhmāns to adopt very diverse modes of life, of which there are only traces in the earliest period, becomes more and more marked, and, combined with geographic differences, this fact has contributed to the growth in the number of the castes. Further support has been given to the development by the practice by which aboriginal deities have been taken over bodily into the Hindu pantheon, doubtless, at least in some cases, together with the priesthood attached to the deity, just as the ruling family of the tribe was split up into the rank of the Brāhmaṇa. Hence arose innumerable subdivisions among the ten great divisions into which the Brāhmāns are popularly divided—the Sīravasats, Kanyakubjas, Gūras, Utkalas, and Mahālalas north of the Vindhyas, the Banas, the Mahārajas, the Malla, the Tailāngas, the Drāvidas, the Karṇātas, and the Gauras south of that range. But of these castes many have no priestly functions at all, and have devoted themselves to occupations of the most diverse type, ranging from the learned professions to the humblest duties of agriculture, and even trade.

Even within the sphere of religion the differences between the different classes of Brāhmāns is most marked. At the lowest level stands the village-priest, who is, however, of great importance in the life of the still illiterate mass of the people. He speaks for the due performance of the religious ceremonies which make up so great a part of the life of a Hindu; at initiation, at marriage, at birth, and at death his presence is essential, even if other priests are also present. He is, therefore, as important as these functions; and in return for his services he receives a fixed allowance of grain, with special presents on important occasions. The village-purusha is often also the astrologer, who, in the performance of the temple worship, though many of the functions of that worship are performed by men of lower caste. In its normal form the ritual of a great temple is mainly centred in the ceremonial treatment of the idol of the god whose temple it is. The functions performed are chiefly the washing of the god from slumber, his dressing and anointing, bathing, anointing, and painting, and frequent feeding; the priests partake of the food, which through its consecration by the eating of it by the god is holy, and which is therefore sometimes given or sold in part to the people. Further, if the sun is born, lights are arranged, bells are rung, and flowers and other offerings as well as food are presented. During these performances Brāhmāns often recite texts taken from the holy books of the religion of the god in question, mainly, in the case of Kṛṣṇa, the Bhāgavata Purāṇa, in the case of Śiva, the Linga Purāṇa, Śiva's most potent representation being in the form of a Linga. The priests, however, while they supervise and control the performance of the temple ritual, do not claim for themselves the sole power to perform the acts of which it consists. The layman, on payment of the due fees, may be permitted to perform most if not all of the acts of worship.

A great number of Brāhmāns who concern themselves with the temple worship, a far higher intellectual rank is occupied by those who are members of one of the religious schools, the abundance of which is attested throughout the period. Further, the religious and the social conditions have undergone changes in the course of time; the devo
tes of the sun, who appear to have flourished in the time of Sankara (9th cent. A.D.), have disappeared, and the Vaiśnavas have attained much greater prominence since the revival of Vaiśnavism by Rāmānādā in the 11th cent. A.D. In the Vaiśnava schools the traditional respect for the teacher, which is seen in the claim of the Brāhmāns in the Vedic age to be gods on earth, reveals itself in its highest form in the sect of Vaiśnābābārya, in which the guru is even in life treated as living embodiments of God, and receive the formal marks of respect which are accorded to the images of the god whom they serve. But, even in the sects that carry the process of dedication of the Vaiśnava sects, in which the guru is considered upon him, as he is the source from which alone the saving knowledge which will procure the heaven of bliss open to Vaiśnavas can be derived. The Sikh guru baptized the disciple and taught him the的道路 of the Sikh religion; he saved him from his own sin, and in return demanded and received the implicit obedience which raised the Sikh to so high a pitch of military power when its bent was definitely turned under Gobind to warfare with the Mahāmārs. Common again to all forms of Vaiśnavism is the stress laid on the sacramental meal, which is decidedly a development of the
PRIEST, PRIESTHOOD (Hindu)

giving or selling of the sacramental food by the temple priests to outsiders, and which is the most delinite sign of the belief, more or less clearly held by the Sikhs, who are in theory opposed to idolatry, making a sacrifice, and not ultimately in accord with the principles of their faith. Both in the practice of the sacramental meal and in the respect paid to the guru there has been seen the influence of Christian doctrines, but in the latter case at least the supposition is gratuitous, the respect being a natural Indian development.\footnote{\textcite{Carhe:1914}}

The teaching of the schools is not normally antagonistic to idol-worship, which it allows as a mode of approaching the divinity; even the Sikhs, who are in theory opposed to idolatry, make a fetish of the Granth, the sacred book of their scriptures, and guard it in a shrine, paying to it the same rites as are offered to Hindu idols. There is therefore no necessary incompatibility in the combination of the duties of priest in a temple and spiritual teacher, and the two functions are sometimes united. This is essentially the case with the priests of the Tantric rite, who themselves take an active part in ecstatic ritual. The sahas, or ascetics, who undergo severe penances of all kinds in order to produce ecstatic states, and many of whom are doubtless connected in origin with the ascetics of whom we hear in the Buddhist texts. The better side of asceticism shows itself in the persistence of the practice by which, after the performance of the duties of life as a householder, in old age the Brahmans, be he priest or politician, end his days in the meditation of the sannyasin.

In one respect there is a clear distinction between modern and epic and, still more, Vedic India. The Vedic sacrifice is all but extinct at the present day, and has clearly been moribund for centuries; in its place have come the temple worship on the one hand, and the Brahmanical marriage, on the other. These festivals, such as the Makarasankranti, the Vasantapachami, the Holi, and the Dipali, are of essentially popular origin, and traces of them can be seen in the Vedic ritual, but in that ritual they have been deprived of their original nature and brought into the scheme of sacrifices performed by and for the profit of the sacrificing priests and their employers only. Doubtless outside the Brahmanical circles they persisted in their simpler form, which can often be recognized in the ceremonies of the present day, though many elements of sectarian religion have found their way into these.

A certain distinction in the religious methods adopted by the priesthood may be observed between this and the earlier periods. In place of the schools of the Brahmanical ritual, on the word and retiring from the Buddhists or the Jains, we find the wanderers of the monk of the type of Sankara, Ramanuja, and Madhava, who go here and there challenging others to discourses on the theories of the Vedanta Sutra which they have to discuss. Time to time to a monastery for study and literary composition; these are obviously in spirit and in method a natural development of the philosophers of the Upanisads, but with their intellectual and doxographical definitely by the authority of the Vedanta Sutras and of the Upanisads. A very different method of religious propaganda appears in the Tamil south, at an unceasing but certainly early date. In shape of the itinerant, devotee, and musician, who wanders hither and thither with a large retinue, singing his own compositions in the vernacular in honour of the god whose shrine he frequents; this is a type of priest corresponding to the conception of bhakti and differing entirely from the type of theologian produced by the Brahman schools, and of more popular origin. Ramananda, to whom is due the spread in N. India of the doctrine of Ramanuja and the introduction of the Vedanta philosophy, introduced the type, at once intellectual and popular, of the wandering theologian who could dispute with the most learned opponents, but was anxious to preach in their own tongue to the people and to express in vernacular verse the tenets and principles which he sought to inculcate.

An attempt to strengthen this appeal to the popular mind was made by Chaitanya at the beginning of the 16th cent. by introducing from the south its method of expressing the divine in a more popular way, by an Ave of the bhakti cults from the Buddhists or Jains. Since the beginning of the 19th cent. the influence of Christianity has produced considerable effects in the Hindu conception of priestly methods and ideals. Apart from the effects on doctrine, the general result of this influence has been, on the one hand, to create for Hindues a feeling of unity and individuality hitherto not to be discerned; there has even been created a society, the Bhara Bhuma Mahamanjha, for the defence of Hindues. It is, however, characteristic of the nature of Hindues that no effort has been made to create a controlling spiritual centre, such as would assimilate Hindueism to the great Churches of the West. On the other hand, the minor religions have some conception of church organization, and in practically all aspects of Hindues a strong impulse has been given to the priesthood to undertake the direction and support of various forms of social service.

6. Animism. The primitive tribes have from the beginning of Indian history been continually falling under the influence of the higher culture of the tribes among them, and their conceptions of priesthood have been affected by the views and practices of these tribes. There are still, however, abundant traces of a more primitive view in which the priest is mainly a medicine-man, whose strength lies in his magical powers and his ability to become the subject of divine possession. In this view the priesthood is not, as in Vedic India, a hereditary profession based on sacred learning and knowledge of tradition, but a spiritual exaltation which betrays possession by the divinity. Thus among the Kolis, when a vacancy occurs in the office of village-priest, the next holder of the religious office is deemed the heir of the itinerant or wandering-fan with some rice is used, and the person who holds it is dragged towards the man on whom the office of priest is to be conferred. A similar practice is observed among the Orangs. In N. India in the offices of demned exorcists there are others who do not learn their work from a guru, as do the professional, but are naturally inspired by a spirit. In accordance with this view is the practice of the semi-Hinduized Dravidians in the Vedd or Veddah of the worship Gansam or Raja Lakham. The shrine of the god is in charge of the village-baiga, who is
invariably selected from among some of the ruder forest tribes such as the Bihils. Much of the work of the baiga is sorely pure and simple, and for this purpose no doubt of the station a person is the best adapted, as being in closer touch with the spirits in nature. Similarly the Kurumbas in the Nilgiri Hills are employed by the Badagas, who are much above them in culture, for the sake of these men. So it is in the ordinary axe carried by the dweller in the jungle that the victim is slain at the shrine, the baiga then taking as his share the head, while the rest of the meat is consumed by the male members of the tribe. When the baiga in villages south of the Ganges desires to exorcise a disease-ghost, he attains the necessary divine possession by beating himself with the iron chain which hangs from the roof of the shrine of the village-god, and which among the Gonds is considered to be itself divine. The same principle of divine possession is exhibited in the worship of Bhivásan, the regular Gond deity, who is identified with Bhimasa, one of the Pandavas; once a year a special feast is held in his honor, at which the god is represented by a man who, after leaping frantically round, falls in a trance. In an analogous manner throughout S. India priests in fantastic attire, often with masks human or animal, dance in order to cause the entry of themselves or some divinity by whom they can predict the future for those who make inquiry. Moreover, even the sacrifices in which the priests take part in large measure are obviously mere fertility-charms, as in the case of the famous human sacrifice by the Kurds. The cult which they performed was simple in the extreme; the elaborate temples and formal worship of the Hindu gods is unknown in aboriginal religions, where the temple is often of the simplest possible formation, consisting merely of a heap of stones, while even in more advanced communities at most a small hut forms the abode of the priest of the god, who is aniconic. Of the development of higher religious conceptions among the aboriginal priesthoods we have no clear proof, as the occurrence and appearance of what may be considered higher beliefs may easily be explained by borrowing from the surrounding tribes which have fallen under Hindu influences. Among the Kurds there are priests who have not the occupation of their sacred functions; others, again, can engage in other employments, but are forbidden in any event the profession of arms, just as in theory this profession was closed to the Brahman. The Todas in the south have a celibate priesthood, but it is uncertain whether this conception is borrowed from Hinduism or is merely one instance of the superiority of the celibate for the exercise of functions connected with divinity, of which there are traces in the Vedic period itself, though the principle is not carried very far. In many cases, however, the penetration of Hindu practice goes very far; thus the out-caste tribe of the Tiyas in Malabar have since A.D. 1500 created for themselves a temple worship modelled on the ordinary Hindu type but served by non-Brahaman priests. The much older example of the same principle is probably to be seen in the growth of the Lingayāti (q.v.) sect of Saivas in S. India, whose priests, āgamas, are not Brahmanis, but may belong to any other caste. The Vedic period the chief authorities are: J. Muir, Original Sanskrit Texts, 1, London, 1890; H. Zimmer, Altindisches Leben, Berlin, 1879; A. Weber, Jacobitische suche (V. 2), 1, 1890; 2, 1891; H. Oldenberg, ZDMG ii. Monier-Williams, Religion of Hindustan; and A. F. Evers, Hinduism and Buddhism, Eng. tr., London, 1897; for the early history of the sectarian office in Iran, the animistic tribes there are important notices in W. Crooke, PB, London, 1896, and E. Thurston and K. Rangachari, Caste and Tribes of Southern India, Madras, 1900.

A. BERREDALE KEITH.

PRIEST, PRIESTHOOD (Iranian).—1. Pre-Zarathushrian times.—That the religious beliefs and practices of the Iranians before the reform of Zarathushtra necessitated and actually commanded the services of a priestly class scarcely admits of any doubt, though, in the absence of direct records, the proof of this, as of so many other facts relating to the earlier life of the Iranians, rests upon indirect evidence. In the Avesta we find that the generic term for priest is athravan, clearly derived from atervar, ‘fire’—a fact which is significant alike of the early origin and of the primary purpose of the sacred office in Iran. That reverence for fire was a marked feature of the religious life of the Iranians in the most primitive period is well established1 and, when taken in conjunction with the fact that the word atharvan in the Avesta is used to express a term among other related senses, the same connotation as the Iranian form athravan, the inference is necessarily that both the office and its Avestan name are derived from Indo-Iranian days. Moreover, although athravan, as the common appellation of the priests, suggests that they had as their chief care the maintenance and guardianship of the sacred fire, nevertheless it can hardly be supposed that even in the pre-Zarathushrian period their duties were not more extensive. The old Iranian pashane enshrined other deities among their sacred divinities2 whose cults would naturally require the mediation of priests. The cult of Haoma, to name only one, involving, as in all probability it did, in the earliest times a somewhat elaborate ritual, would afford a special opportunity for the priestly function. Furthermore, the tradition also, as reflected in Ys. ix. 1.7., lends support to this contention. In that passage the poet describes Haoma approaching Zarathushtra in the morning while he was chanting the Gathas in the presence of the sacred fire, and entreating the prophet to pray to him, to consecrate his juice for libations, and praise him as the other sages or priests were praising him. Nor can there be any doubt that prayers, invocations, and sacrifices offered to all their gods at this period were mediated by their priests.3

Regarding the organization of the priesthood and the relation of the priests to the laity and to other classes in society at that period, we have but little data from which to draw any conclusions with certainty. Although Firdausi’s attribution of the establishment of the three orders of priests, warriors, and husbandmen to Yima belongs to the sphere of legend rather than to that of history, still the division into these serious service in the development of the Iranian commonwealth. Moreover, the position of the priests at the head in every enumeration of these orders in the Avesta, suggesting the venera-

---

2 See art. GOD (Iranian), vol. vi. p. 251.
3 Cf. Herod. i. 132.
tion in which they were held, is in perfect accord with what we know of the deep moral earnestness and marked religious susceptibilities of the ancient Iranians. The priests of Zarathushtra, like the priests of Iran, were considered as anticipating in some respects the various classes of religious officials which in the Greek world were termed dhravans. That priestly families existed at this period, who handed down to their descendants the secrets of correct sacrificing and the approved forms of invocations, may very well have been the case, though what in the nature of a close priestly caste resulted in Iran—at least during the period now considered. The high regard in which agriculture came to be held at an early period and the constant dependence of the community for its defence upon the warrior-class would in themselves militate against the development of castes in Iran. Moreover, the fact that, according to the Avesta, Zarathushtra was the first priest, warrior, and agriculturist indicates that tradition at least did not regard the gulf between those classes in the early Aryan period as impassable.

2. The Zarathushtraian reform.—In the nature of things it was very unlikely that the great spiritual movement which is associated with the name of Zarathushtra should leave the priesthood unaltered. What influence it actually proved to be, so far as it is ascertainable, must be learnt from its reflexion in the hymns, or Gāthās, of the Avesta. In these hymns the āthravans are not once named by name. In one passage, it is true, the property applies to himself another Aryan term for 'priest,' namely zaotar (Skr. hotar), which may serve to show that, however insignificant the sacerdotal element in the new movement proves to have been, he did not entirely renounce priestly functions. But the character of his reform helps to account for the recession of the āthravans into the background. It was a change in the basis truths of the religion more than in its external symbols. It was a question not of the manner of expressing their devotion to their deities, but rather of the object to whom their worship should be directed. It was a great prophetic and religious revolution, not a priestly transformation. New and more spiritual conceptions of deity were born, which were only afterwards to be clothed and wrapped up in forms of worship and ceremony. The āthravans of the old religion, at least those of them who yielded themselves to the great reform, found a place in the religious life and ministry of the new Mazdeism; for the sacred fire continued to burn and was jealously guarded during the new and more spiritual epoch, even if it found a higher meaning and significance in the reformed religion. That all the old Iranian priests did not conform, as might naturally be expected, can be proved from the frequent references to the latter opposition of the evai, waj, and evropans.

It should be observed that all that has been said so far has application, in all probability, to only eastern Iran, our knowledge of the religious institutions of the western part of the country being practically nil. On the other hand, in reference to the succeeding periods, matters are entirely reversed.

For other reasons supporting this contention see F. Spiegel, "Erzgebirge," Leipzig, 1867, pp. 87-242; also Gelger, ii. 76 ff.

See also Maclean, p. 118.

When we turn to Greek and Latin authors, the other important source for Iranian history, we find no evidence of any acquaintance whatsoever, on their part, with the priesthood under any equivalent of its Avestan name. According to all the classical writers from Herodotus to Agathias, the sacerdotal office in Iran was occupied by a tribe or caste of Medes called Magi (Ωρηστάριοι). But it is evident that the suggestion is given that any other sacerdotal class shared with them the priestly functions at that period, or that they were the heirs of an earlier order of priests. But it should be observed that these writers speak rather jealously of the priestly existences, in a purely religious rites as they existed among the Medes and Persians, or, speaking geographically, as they were found in western Iran. Furthermore, with the exception of Herodotus, the classical authors in question wrote of events and at a date posterior to the condition of things represented by the earlier part of the Avesta.

Nevertheless, an additional explanation of the difference of nomenclature in the Avesta as compared with post-Achaemenian times may be necessary when it is remembered that much of the so-called Later Avesta was written under the influence of, and probably by, the Magi themselves, and at a period contemporary with several of the Greek authors.

In this respect it is to be remembered that even in late Achaemenian times the Magi had not outlived the prejudice which had become associated with their name in the mind of Persians since the revolt of Gaumata, and hence they had a strong motive to avoid the use of the term magus under all circumstances; while the preservation of the old term ēthravan throughout the Avesta, besides being a convenient substitute for the offensive ethnic designation, may have been prompted by the desire to further establish the claim of the Magi to the succession of the ancient ēthravans in the Iranian priesthood.

That the Magi were the recognized priestly order in western Iran in the earliest Achaemenian times (and, probably, in the pre-Achaemenian days, i.e. during the ascendency of the Medes) cannot be doubted. What influence or authority they achieved and exercised later in eastern Iran as a result of the conquests of Cyrus in Babylonia we have no means of determining. From this article, therefore, magus and priest will be convertible terms,2 and Iran, in the main, coincident with Media and Persia.3

4. The organization of the Magian priests in late Avestan and post-Avestan times.—It is sufficiently established that the priesthood during this period possessed a more or less definite inner organization, though probably varying much in character and completeness at different epochs. Even in Achaemenian days the Magi seemed to have recognized a chief or head of their order, Diogenes Laertius,4 quoting Xanthus the Lydian, speaks of a long succession (βασιλεύος) of Magi between the time of Zoroaster and that of Xerxes, and names Ostanes, Astraspsychus, Gobryes, and Ninus. It is, however, certain that among the chief priests who stood at the head of the sacerdotal order during that period,5 in his succinct account of the Magi Annianus Marcel-
linus 1 says that the Magi tribe was at first a small one, and that the Persians, who were politically in a position to avail themselves of their services for the conduct of public worship, gradually increased in number and formed an exclusive class, with a special area for their dwelling-place and a proper constitution.

But the Later Avesta itself contains clear indications of the existence of a priestly organization, although there is much uncertainty as to the time to which they have reference. In Ys. i. 3–7, where the names of the gah, or divisions of the day, are mentioned, the priests probably avowed their purpose to bring offerings at each gah to a special divinity, and also to the frao-wari, or spirit of a chief or holy person. One of the priests whose spirit is invoked is the zarathushtrapatma 2, i.e. the one most like Zarathushtra, or the successor of Zarathushtra. Now, the zarathushtrapatma, as we learn from other passages, was the spiritual (and, in Raga, also the secular) head of the community, the Pahlavi commentators have inferred that the other chiefs whose frao-warishka are associated with the other gahs also represented members of the same organization. These were dagnyana, or lord of the province; zantuana, or lord of the tribe; visya, or lord of the village or clan; nemeniya, or lord of the house. The interpretation is no doubt correct, but it has no valuable purpose in that it has preserved for us some vestiges of the organization of the priesthood as it seems to have existed at least in Sassanian times. At the head, according to the tradition embodied in this interpretation of the Parsi passages, there have the zarathushtrapatma, who was a kind of supreme pontiff at Râi. Under him each satrapy or province (daggyana) had, as Darmestcter surmises, a superintendent of the cult, or andarapatma. 3

In each tribe there was a bishop — rat or ratu; in each borough (dage) a mobed or magapat. Beneath the mobeds, and yet belonging to the priestly race, were the civil judges (dâdibar, Mod. Pers. 1). We know that the priesthood underwent a thorough re-organization under the Sassanians and that at that period attained its fullest development. 4 Another classification of the priests is that of the Aerpatastdn, 5 who do not appear to have been part of the social ecclesiastical rank, but according to their functions in regard to certain parts of the Mazdaean ritual. On this basis they were divided into eight classes, and their names for the most part indicate their special functions. The zaotar (now called zot zoti) had the supremely sacred duty of reciting the Gâthas. The hâvânâmí, pressed out the juice of the haoma-plant, which was such a marked feature of the ritual in all ages. The dârevêkáhska had as his primary charge the nourishing of the sacred fire, but in addition he was responsible for the washing of three sides of the fire-alter and making the responses to the zaotar. The frâbârstrar, besides his duties of preparing and handing the utensils to the zaotar, washed the fourth side of the hearth, and to the zaotar was assigned the work of filtering and washing the haoma, while the râthwiskar made the mixture of haoma and milk. The aberet, in keeping with his name, brought the water necessary for all the priestly ceremonies. He bears also the name dânavazân. 6

The eighth was the emâdovarse, who seems to have superintended the whole ceremonies of the temple. At the present time the functions of these eight priests are all performed by only two: the zot, who has much the same functions as in earlier times (see below also), and the râpi or rathvî (Pahl. râpixpî), who is responsible for performing the devotions and charging the duties devolving upon the seven ancient assistant priests. Though taking his name from the Avestan râthiskarak, his chief functions correspond more nearly to those of the vâdâhikar 7 and adarapatma. 8

This great reduction in the personnel of the priesthood resulted, there can be little doubt, in the first instance from the Arab conquest in the 7th century. The change is reflected in the work of the Bahman Yâshd and the Dâdizâd-din, 9

5. The functions of the priesthood.—The principal functions have already been touched upon incidentally. Performing the sacrifices, so long as they were practised, 10 mediating the offerings and all public worship, constitute the most characteristic parts of the priestly duties. No sacrifice, Herodotus 11 tells us, could lawfully be made without the presence of a Mâgus. Still the extent of the priestly intervention at these sacrifices, on the one hand, and of the laymen at these and other parts of ritual, on the other, seems to have varied at different epochs in Iranian religious history. In the days of Herodotus the part of the Magus in the sacrifice was confined to merely chanting the theogony or hymn: the person who brought the sacrifice both prepared it and disposed of the flesh after the ceremony. In Strabo's days the priestly duties at such sacrifices were more extended. 12

The purification constituted another primary function of the priesthood, and formed the most fruitful source of their revenue. Duncker maintains that even the purifications could be performed by a layman. 13 It is expressly stated in the Vendidad, 14, however, that none could perform these rituals save a Mâgus, even if they had learnt the law from one of the purifiers or priests. It is scarcely probable that the priests would impart to many laymen the qualification which would enable them to share with themselves their already slender means of livelihood. It becomes more probable that the Aerpatastdn 15 that the priestly revenue did not suffice to maintain the whole of their tribe, and as a result the participation in secular pursuits was legalized. It is true, their fees were substantially augmented by what they obtained from the practice of medicine. The art of healing was a priestly function in very early times in Iran, and, if not originally, yet ultimately fixed dues were attached to such services. 16 The priesthood, as we have already stated, was intimately associated with judicial functions in the Iranian commonwealth.

13 To the Magians, Duncker says, 17 belonged the judicial power. It is quite legitimate to infer that the zarathushtrapatma's position at Râgha, referred to below, would entitle him to high legal authority among his other prerogatives. During the ascendancy of the Arsacids the Mâgi together with the members of the royal race formed the Council of the Empire, 18 and during the Sassanian period the Grand Mâgian performed the coronation of the kings.

6. Qualifications and symbols of the priestly office.—How much or how little at different periods racial or tribal descent may have counted as afford-

ing a right to exercise the priestly functions, the primary qualifications clearly and strongly insisted

upon in the Avesta were of a moral and spiritual character. According to the Vendidad, the priest must not be a thief, a forger, a cheat, speak a lie or a little bread, and should eat what is offered to him.1

1 Call him a priest, O pure Zarathushtra, who enquires of the pure

intelligence the whole light of the wisdom which purifies

sin and makes the heart whole, when he hears the whole

light without praising, or hearing, or reciting, or learning,

or teaching—call not such an one a priest.2

The Aēρpantāśān speaks in the same tenor:

The priest, the house whereunto he is delivered to the sacred calling? He who has the greatest thirst after righteousness, that is, he who is the truest friend unto the soul whether he be

great or humble.3

Diogenes Laertius,4 after Sotion, says that the

Magi were forbidden to wear ornaments or jewel-

lery; their resting-place was the ground; vegetables,

a little cheese, and bread their food. Nevertheless they possessed certain outward sym-

bols. The first was a līna (Yavūnī or penōn), a cloth or napkin with which they covered,

and still do, the lower part of the face as they recited the Avesta and especially when tend-

ing the sacred fire, lest perchance any pollution of the fire should be imputed to them. From this, through the khrafstraghna, a leather thong or strap with which they killed insects and other unclean creatures. They also carried the uvrarna, or staff, and the astra mātrī, or knife, with which to kill snakes. But perhaps the most characteristic sym-

bol was the bersema, or borsam, a bundle of slender rods or twigs of a specially sacred tree, but now substituted by a bundle of metal wires, which are held before the face at the prayers and sacrifices (see Zarathushtra, vol. 1, p. 254, ed. Ency. 1896).

7. The priesthood in modern times.—To-day the priesthood is a hereditary privilege, though it does not seem always to have been so.6 All priests in India at the present time claim to be descended from a single priest, Mimnčihir, who came from Persia with the first settlers in the 7th century. The unity of the priesthood is a cardinal doctrine

among the Parsees. Every son of a priest, however, is not ipso facto himself a priest able and entitled to officiate. Although no consecration can make a priest, all priests must pass through a series of sym-

bolic actions to institute him into the different grades of the sacerdotal office. There is in India a preliminary function called nāzēd (really meaning 'new sazdār'), which, although not a door to any stage of actual priestly grade, is essential to every aspirant to such dignity, and by which he becomes a recognized member of the Zoroastrian church or community—a bhiđān, a status corresponding to full membership in Christian churches, or, as some of the learned Parsees, a yag se among the Jews. In Persia this ceremony is called sudrāh or kāsti dādām, i.e. the investing with the sudrāh, or sacred shirt, and kusti, or holy girdle, which are the outward and visible marks of the Zoroastrians. The term nāzēd is employed by the Zoroastrians of Persia for the ceremony termed nāzēr by the Parsees, and which is made to a mobed's son into a priest of the lower grade called

herbāt (Avestan ašiyārvarītī) and qualifies him for performing the ceremonies of the second grade. Before receiving a herbāt, and by the use of a fiber called bahrām, after which he is conducted to the temple by a dasātir and his patron, followed by his friends and other guests. He carries the gurz and garvastī, or club, a reminder of that which was in the hands of Zoroaster and his descendants, and a visible sign of the authority over the demons. The head of the assembly asks if they admit him as a candidate for the holy office, and, taking their silence for an assent, he enters the zhānān kāh, where he celebrates the kāh—i.e., he head priest, who initiates him, acting for the time being as his ridzi, or ministering priest. He performs the purification of mirang and water for four successive days, and

on the fourth day he has attained the degree of herbāt. With a rich to celebrate all the ceremonies of the khrafstraghna, the most important of the Vendidad together with that of initiating other candidates to nāzēr it is essential that he should be a mobed, or fully qualified priest. To attain the mobedship he must have passed through the ceremony called in India wadātīb (pl. of Arabic مَرْتَنَة, meaning 'grade' or 'degree'). This consists of another nine nights'

training. On the morning of the succeeding day he performs the Yasna with a fully qualified priest. On the following or second day again he performs the sacrifice of the fravashtī or that of the srosh; at midnight the Vendidad is performed and henceforth the candidate is a mobed and enti-

tiled to all the privileges of a full-fledged priest. Another frequent designation of the chief priest in India is dasātir. The name and office probably arose, as Darmesteter observes,7 after the Arab conquest of Persia. The origin of the term is not altogether clear.8 It is used in the translations to render the Avestan rātu. In the Shāh-nāmāh it sometimes denotes a high ecclesiastical functionary; at other times a minister of State. To-day in India many mobeds assume and are accorded the title of dasātir or shāh or i. But it is often more properly applied as a title of honour to a learned mobed who knows his Zend or Avestan and Fahlavi. But it specially and more correctly designates the priest attached-in-chief to a fire-temple of the highest order, i.e. an atash bahram. The office is generally hereditary, but not necessarily so, inasmuch as the patron or founder of such a temple may choose his own dasātir. See, further, artt. SACRIFICE (Iranian) and WORSHIP (Iranian).

LITERATURE.—In addition to the works referred to in the article the following may be consulted: Auquetti du Perron, Zend-Avesta, Paris, 1771, iii. 529-610; A. Rapo, Die Religion und Sitten der Perser und Irannier, in EDMG xx. 1869, 69-77. Much further additional material may be found in the Aēρpantāsān, ed. S. J. Bulsara, Bombay, 1915, which could not be included in the compass of this article. Darmesteter's excellent introduction to vol. i. of his Le Zend-Avesta already appeared in the text in the treatment of the modern period, this article is greatly indebted, may be further profitably consulted. E. EDWARDS.

PRIEST, PRIESTHOOD (Jewish).—I. Ex-
clusiveness of the priesthood.—According to the Levitical code, the Hebrew priest is born, not

made. This principle has always been so rigor-
ously uph楼主l that the priestly office, which from the Babylonian captivity, all those who

1 Herbed did not originally designate a priest of inferior as opposed to holy, or instructor as opposed to hokhâvît, or disciple. See Spiegel, loc. cit., s.v. 4.

2 Le Zend-Avesta (= Annuaire du Musée Guimet, 21, p. lv).

3 See Spiegel, iii. 506.

4 According to the Levitical code, the Hebrew priest is born, not

PRIEST, PRIESTHOOD (Jewish) 323

claimed priestly rank but were unable to produce documentary evidence of their descent from Aaron were disqualified (Ezr 2: 5; Neh 7: 7). In order to safeguard the purity of the line in later generations, according to the Tosefta, the Biblical laws regulating priestly marriages were not only strictly enforced, but also strengthened in various directions. Priests were forbidden to marry a hagalah (childless widow whose husband had died childless) or a woman who had been refused permission to marry, or a woman who had spent some time in captivity, or a freed slave, or the daughter of a proselyte, unless the mother was of Jewish descent (Mishnah, Bikurim, i. 5). The high priest, it was believed, should be virginal, who, however, was allowed to be of lay origin. These restrictive regulations, added to ancestral pride, gradually converted the priestly class into an exalted theocracy which, from the nature of public affairs at the same time, formed the social aristocracy. The priestly family of the Hasmonaean acquired royal dignity. Later the high priest was the president of the Sanhedrin. Thus power, both spiritual and temporal, and wealth accumulated to a vast extent.

2. Classification.—(a) The principal duties of the priests were those connected with the sacrificial service of the Temple in Jerusalem. It was also their business to prepare and kindle the perpetual lamps. The ancient priestly calendar was based on the golden table every Sabbath. From Biblical sources we know that the number of priests had in the course of time increased to such an extent that only a limited number could be employed in the Temple at one time. At any one time the four classes mentioned by Ezra (2: 41-42; Neh 7: 42-43) numbered more than 4000 male members. It was, therefore, necessary to fix a rota of attendance, in order to give every priest an opportunity of discharging his duty at the service. For this purpose the whole priestly tribe was divided into 24 companies, probably irrespective of the 22 families mentioned in Neh 12: 37. At what time this division was first made is uncertain, but the most reliable tradition seems to be that preserved in the Tosefta (Tosaf., ii. 1; To'ah, iv. fol. 69). The effect was that the classification was undertaken by the prophets. As both Jeremiah and Ezekiel were priests, it is not unlikely that they, especially the latter, had a voice in the constitution of the priestly section taking no active part in the duties of the Temple. When the procreative work of the high priest was restricted, the high priest was required by law to deliver the priestly calendar (Talmud, Yoma, fol. 39a) records a tradition on the authority of R. Hanania, himself a sagan, that, if the high priest was suddenly disqualified from ministering on the Day of Atonement, the sagan took his place. Now this Hanania is always called 'sagan of the priests' (in plural), which cannot mean that he acted as deputy to a priest of lower rank, or to one high priest only. It seems rather that he did duty to several high priests either by fixed appointment or by re-election. It stands to reason that at a time when many high priests were ignorant or neglectful of their duties an experienced assistant had to be near at hand to prevent them from making mistakes. The frequent change of high priest was most likely of less importance as long as a tried sagan looked after the proper execution of his duties. He was probably also meant to be in constant attendance on the high priest in order to give greater dignity and importance to his office. According to the Mishnah (Talmud, Yoma, vii. 3), one of his duties was to assist the high priest whenever the latter ascended the staircase to burn the perfumes. Then he took the flags and gave the Levites the signal to start singing. (b) High priest. —The office of the high priest is characterised by the privilege of being the spiritual head of the people, but since the period of the Hasmonaean he added the regal crown to the ecclesiastical mitre. His participation in the sacrificial duties during the year was left to his discretion, but he was supposed to act as offering priest on the Day of Atonement. There is no reason to assume that even on this day he nominated any other priest for his work, as otherwise the Mishnah would have had no cause to describe the preparations which began a week beforehand, when he had to make himself familiar with the details of his task for the holy day. Even an emergency was appointed for the event of his wife's sudden death. His evening meal was always a celebratory meal, with a table representing the description of office-holder rather than a fixed title.

(b) 'Amarkelihm.—Of somewhat higher status seem to have been the seven 'amarkelihm (Shek. v. 2; Tos. tb. 15). The exact meaning of the word is doubtful, but it seems that they were the keepers of the keys to the sanctuary itself. The Targum uses the term for the translation of the 'keepers of the door' in 2 K 12: 2 and similar passages. The Tosefta remarks that all seven 'amarkelihm had to be present when the door was opened on the Day of Atonement, although the high priest had a different key, so that the door to the Temple could never be opened without a certain amount of publicity, strict control being kept over every one who wished to enter. As the word is also employed in the Talmud for high priestly officials, it does not really describe any priestly function, although the offices who bore this title were priests. Together with the 'amarkelihm are mentioned three meziborim, or treasurers, who were responsible for the golden vessels and the Temple funds.

(c) Sagan.—One of the highest offices was that of the sagan, commonly believed to have been the high priest's lieutenant. Here, however, it should be noted that the Mishnah (Yoma, i. 1), when speaking of the appointment of a deputy priest for the Day of Atonement, does not use the term sagan, but simply says 'another priest.' Other passages (Yoma, vii. 1; Sotah, vii. 7) also have in common with the Mishnah, sagan.
in the person of Ecclesiasticius (ch. 50). Poetic
descriptions by various authors form an integral
part of the present liturgy for the Day of
Atonement.

3. Rules for the priesthood.—There was one
condition which all priests, high or low, had to
fulfil, viz., they must be free from bodily defects,
and the rules were as elaborate as their enforce-
ment was strict. It made no difference whether
the blemishes were chronic or temporary (Mishn.
Bokhóroth, vii.). The Mishnah even forbade a
priest whose hands were stained with dye to pro-
nounce the blessing over the people (Megillah,
vv. 8-18). A careful compilation of the sacrifices
(vis. Halakhah, viii. 1-17). The Mishnah dis-
allowed the sacrifice of an animal which was
attached to a votive offering (ibid., vii.). Hence
there was a considerable interval between the
layman and the high priest (Josephus, Ant.
xxii. 8, 10). A priest was forbidden to partake of
alcoholic drinks or any intoxicating drinks, but
he was allowed to partake of wine. The Talmud
holds that the public and the priest were allowed
to partake in the wine at the Feast of Tabernacles,
but the priest was debarred from eating any of
the fruits, vegetables, and meat of the altar during
the week. The Mishnah (Bikkurim, iii.) gives an
account of the cutting and conveying the first-
fruits to the Temple. Rich and poor joined in the
festival procession, every one carrying his basket,
and even the king, probably Agrippa I., handing
his gift of first-fruits to the high priest, while
reciting the prayer prescribed in Deut. 26:10-11.

The revenue of the high priest was placed on a
different level. His position demanded that he
should be wealthy. If he came from a poor family, it
was the duty of his brother priests to make him rich.
Josephus (Ant. xxii. viii. 8, 10) speaks of the
violent conduct of some high priests who sent their
servants into the threshing floors of the people to
take away the tithes so that their poorer brethren
were reduced to beggary. They acted under well
considered names, but attests this remark to the par-

aphrase in which he tells of the appointment of
Ismael b. Phabi as high priest. This, however,
is the priest of whom the Mishnah (Sukkah, ix. 15)
speaks when it states that he was the last priest
to come to an end. It is therefore probable that the
censure of Josephus (who was himself a priest)
was meant for Ismael's predecessor, the avaricious
Amanias, son of Nebuchadnezzar, who was removed
from office, and hence, no doubt, met with a violent
death at the hands of the people.

5. High priest's legal status.—Notwithstanding
his exalted position, the high priest did not stand
above the law, at least in theory. Both the
Mishnah and Tosefta point out that, in the event
of his committing breaches of the religious or
moral laws, he was liable to be called before the
court. No such case is recorded in the sources.
High priests were occasionally removed from office,
but for personal and political motives rather than
for religious reasons. For example, in the case of
the traditional teaching the people acted inde-
pendently. The Mishnah (Sukkah, iv. 9) relates
that one high priest (whose name is not given) who
endeavoured to introduce Sadducean practices
among the Jews was deposed by his fellow priests.
The Feast of Tabernacles was done to death by the
people, who pelted him with their citrons.

6. Decline of the priesthood.—The destruction
of the Temple by the Romans not only put an end
to the sacerdotal service, but also deprived the
priests of their chief source of income. Although
the laws connected with land-tenure remained in
force, the Jewish population was so reduced in
numbers and so impoverished that their tithes and
gifts could not have amounted to much. The
priests living in the Diaspora were reduced to
a number of empty privileges, and only the redemp-
tion of first-born sons, which is practised to this
day, preserved a remnant of monetary gift due to
them. In the storm and stress of the times the
real control of priestly pedigrees has been irretriev-
ably lost, and is replaced by family tradition.
Certain family-names, some of them being of considerable age and literary renown, carry an
indication of the anachronistic dignity with them.
In modern times the claim of priest-
hood has lost its title to social distinction.
The religious duties of priests are limited to pronounc-
ing the blessing (Nn 62a-62b) over the people during
the public worship on festival days. The ancient
rules of disqualification are still in force, with
the exception of the preservation of Levitical cleanli-

ness, since the means of re-establishing the same no longer exists, and are merely intimated by the ceremony of washing of hands with the assistance of Levites. The prohibition of coming in contact with a dead person or a grave, with the exceptions mentioned above, was a wise safeguard. The
till is still one privilege specified in the Mishnáh (Horayóth, iii. 8) to be mentioned, viz., the
ceremony of the prece
dence over a Levite or an ordinary
Israelite in every religious ceremony, especially in the ordinarycases of sin, called the 
learning of the lessons from the Ponte
tech in public worship.

The same paragraph goes up to contemplate those high priests who held office not by virtue of learning
and piety, but from worldly motives. It places them beneath the moñier in the Rabbinical
sense (Mishnáh, Véhámóth, iv. 18). The historical background of this is undoubted.

H. HIRSCHFELD.

PRIEST, PRIESTHOOD (Mexican).—In ancient Mexico the priestly office had arrived at
a condition of high complexity, the various grades
of the priesthood being sharply differentiated.
At first the priest was merely the tribal medicine-
man, and in nomadic times had charge of the tribal
god, the image of which he carried from place to
place. The temporal and religious authorities were
never quite distinct, the tlatoani, or king,
being necessarily a man conversant with hiero-
phantic as well as military practice. In
the Mexican hierarchy proper, as apart from those
of the surrounding and subject peoples, were two
chief priests, each of whom was entitled Quetzal-
cuauh, (the image of the god who was the founder
of religious orders), but who were distinguished
from one another by the titles of totoe tlamacazqui
and toloco tlamacazqui, and who were respectively
the leaders of those castes which especially served the
god during the various seasons. These priests
were equal in grade and held their positions in
virtue of their piety and general fitness. Occupy-
ing a lower rank was the mexecítl teohuatzin, head
of the calmcacs, or priestly college, and interpreter of
rationalistic difficulties, in which duties he was
assisted by the huitznaué teohuatzin and
the tepan teohuatzin, the latter being executive educa-
tional officer. The rank and file of the priesthood
consisted of two grades—the tlakamaneces, or upper
grade, and the tlamacazqui. Beneath these were
the tlamacaston, or neophytes. The first grade
included many special functionaries who served
various deities or performed definite rites.

The costume of the priest in general con-
sisted of a simple tunic, the face being painted
black, relieved, in some cases, with yellow designs.
The hair was allowed to grow long, and the ears
were torn and ragged from the practice of peniten-
tial blood-letting. The priest who performed the
act of human sacrifice was garbed in red.

The names of the Mexican priesthood were
numerous; and, besides sacrifice, the care of the
temples, and ritualistic labours, they were employed in
astrological observation and divination. The
amamaorí, a special class, were engaged in the
preparation of the sacred drinks, the cholultuca,
Mexicans as written records; and others were
employed as singers and dancers. Ritual practice, how-
ever, occupied most of their time, especially in-
cense-burning, which was performed several times a
day. The education and preparation of a priest were
severe. The neophyte commenced his priestly life
at about the age of seven by sweeping the temple
buildings and preparing the body-paint for the
priests from pine-wood, gathering the leaves of
the adobe building bricks. Later he made night pilgrimages to a holy moun-
tain in the vicinity as a test of austerity.

The Mexican priests were, however, above all,
diviners, and their practice in this respect
was almost universal. From the source
of their knowledge is derived the
basis of their calculations was the astronomical
calendar known as the Tonalamalt ('Book of
Days'), from which they cast horoscopes and fore-
told lucky days and seasons (see DIVINATION
[American], CALENDAR [Mexican]).

LEWIS SPENCE.

PRIEST, PRIESTHOOD (Muhammadan).—In the Muhammadan system there is properly no caste,
class, or division of the community according to
religious rites; when these were at first performed in public, the leader was properly
the chief of the community, and the name imám, 'leader in prayer,' is therefore used for 'sovereign,'
'chief authority,' and the like. Taking the lead
in the religious service of the mosque was there-
fore the duty of the sovereign in the capital and
of his representative in the provinces; but in
'Abbasid times we find the ālāt, or 'public
prayer,' occasionally separated from the governor-
ship and combined with another office—the
decision (Talabari, Chronique, Paris, 1867—74, iii.
378 [anno 155], 458 [anno 1563]) or the headship of
police (ib. iii. 469 [anno 1569]). As mosques
brought it became customary to make provision
for an imám, and, if there was a Friday sermon, for a
khatib ('preacher'). Such a man was supposed to
be of good character (Aghání, Búlaq, 1865, xvii.
11), and of course had to possess sufficient
learning to discharge his functions.

The legal aspect of the matter is treated by
M. de Jacob, Constatiation Politique (ed. M. Enger,
Bonn, 1853, pp. 175-185). A distinction is there
made between royal and civil mosques; in the
former the minister must normally be appointed by
the sovereign, in the latter by the congregation;
if there are more than one candidate, a majority
are to appoint; if votes are equal, the sovereign
is to do so. The founder of a mosque has not the
right to lead prayer in it himself, but on this point
there is a difference of opinion. Prayer may not
be led by a Roman, if there are any men in the
congregation.

D. S. MAEGOLOUTH.

PRIEST, PRIESTHOOD (Roman).—Under the old Roman monarchial system the office of king
included religious functions as well as political functions; the

priest—was both king and priest. But on the establish-
ment of the Republic a line of cleavage was
drawn, and, although religion remained a branch
of the general State administration, all its technical
phases were assigned to the pontifical organization.
The elevation of the priestly colleges to the secular
authorities was one of the characteristic features
of Roman religion. The powers of the priests
were not so much those of the Senate and the
magistrates, but were subordinated to the duties of their
office without special instructions, but, when unusual
circumstances arose, it was only at the command
of the State authorities that they became active.

Neither pontifices nor lares capices took measures in
PRIEST, PRIESTHOOD (Roman)

regard to prodigies until the senate had ordered them to do so; the quindecimviri were not permitted to inspect the Sibylline books except at the express command of the senate.

Of the numerous priestly organizations (sacerdocii) publica pontificia Romanorum (the college of special importance (sacerdotium quattuor et amplissima collegii): the pontifices, the augures, the commission in charge of the Sibylline books and of all ceremonies conducted "ritu Graeco" (quindecimviri sacris foedantia), and the colleges which supervised the sacred banquets and the epulones. Next to these in rank came the priestly sodalitates: the fetiales, the sodales Titii, the sodales of the divi imperatores (modelled on the sodales Titii), the Salii, and the fratres Arvaliae. There is evidence that the rank of the fetiales and of the sodales Augustales approached very closely that of the four great colleges; of the relative ranking of the Arvaliae, Titii, and Salii we have no definite indication. The runners of the Lupercales (the Luperci) were inferior to the others. The sodales Augustales were founded A.D. 14; but all the other priestages mentioned, with the exception of the septemviri epulones, go back to the regal period. This fact is significant of the centralizing tendency of the Roman national religion. Moreover, the septemviri epulones were organized (106 B.C.) merely for the purpose of relieving the pontifices of one of their functions; the priesthood did not represent any new religious ideas. There were, however, two minor priestly organizations during the Republican period to take care of the rites of some god or gods belonging to communities which the Romans had assimilated (sacerdotes Lanuvini, sacerdotes Tusculani, etc.). The Greek and Oriental cults introduced during the Republic and the Empire brought their own priestages in addition. The qualifications for membership in any of the priestages were free birth, Roman citizenship, an unblemished civil record, and a physique free from infirmities. Originally, with the exception of the quindecimviri, all the old priestages were limited to the patricians. But in the course of time this exclusiveness passed away, except in the case of the rex sacrorum, the Salii, the three great flamines, and later the flamines of the deified emperors. By the latter time the pontifices were freely chosen; in the colleges of the pontifices and the augures respectively were reserved for the plebeians, while the four others were open to both orders. Wiseman suggests that in all probability it was the lex Domitia passed by the other priestages also. From the beginning of the Empire a new classification prevailed: senatorial and equestrian priestages. To the former belonged the four great colleges, the sodales of the divi imperatores, sodales Titii, fetiales, fratres Arvalae, and Salii; to the latter the Luperci, the minor flamines, the minor pontifices, and the sacerdotes Tusculani, Lanuvini, etc.

The extent to which the accumulation of priestages on the hands of one man was customary varied with the kind of priest and with the period. As regards the combination of two of the four great priestages, we find examples in the earlier Republican period, but not in the later until the time of Cesar, who was both pontifex maximus and rex sacrorum. The two priesthoods of this class did not become common till the 3rd and 4th centuries, except in the case of the emperors and other members of the imperial family. There was less objection to the combination of one of the great priestages with one or more of the sodalitates, and many examples occur. The Salii, however, could not hold any other priesthood. If they joined another, they ceased antonomastically to be Salii. Whether a flamens Dia was allowed to hold any other priestages was doubtful.

Priests were allowed to hold civil and military offices. This probably was not intended in the readjustment of civil and religious offices that took place after the expulsion of the kings, but perhaps it became the regular practice. There were, however, exceptions. The pontifices could not hold any civil or military office, and the flamens Dia was virtually prevented from doing so by the numerous tabus which hampered his actions.

In the early Republican period the usual method of choosing members in the priestly colleges and sodalitates was that of co-optation, but in the year 103 B.C. the lex Domitia was passed, by which vacancies in the four great colleges were filled by election at the comitia sacrorum, which consisted of seven hundred men (a minority) of the tribes chosen by lot. The nominations to the sacerdotal comitia were made by the respective colleges, which after the election went through the form of co-optation. In the case of the sodalitates the old system of composition was retained.

Under the Empire the influence of the emperor in the appointments both to colleges and to sodalitates was almost unlimited. Appointment to a priesthood was generally for life. The Vestals and the Salii were exceptions.

The priests were provided by the State with funds for the maintenance of the various cults and for the performance of the duties of their office, and with attendants and slaves (opportores, licentiae, viduaria, servii publici). Some of them were familiar with their religious function and possessed the sacrorum and the Vestals. They had the privilege of wearing the toga praetexta, and, if they cared to take advantage of it, exemption from civil and military duties (exactio militiae numerumque publicis).

1. Collegium pontificum. — (a) Pontifices. — While the old derivation of pontifex from pons and facere is probably sound, it is not possible, with the data available, to determine precisely the original significance of the term. It is not even known positively whether it could originally be used for a bridge-builder. Some scholars once more tend to interpret the word in that way, finding an explanation in those religious associations of bridge-building which are known to have existed in ancient times. The priesthood was not confined to one person but existed also if necessary in places in Latin — e.g., Praeneste and Tibur. According to the tradition, the pontifices were originally five in number. Including the king, however, who doubtless performed the functions which under the Republic fell to the pontifex maximus, there were six. Subsequently the number was increased to nine (300 B.C.), and later by Sulla to fifteen.

With the pontifices were closely connected certain other priests or priestesses: the rex sacrorum, the flamens Dia, and the flamines Dia. Some interpreters see in the association that from the beginning of the Republic all these were regarded as belonging to the college of pontifices. Towards the close of the Republic the pontifices minores were also members of the college of pontifices. Or at least their places were called pontifices.

The pontifex maximus was the president of the college and represented its authority. But it is a mistake to suppose that the other pontifices consti-

1 See Indexes to CIL xiv.
2 The title of pontifex was applied to the regular pontifices only towards the end of the 3rd cent. after Christ. The title was used to distinguish them, not from the pontifices ministri, but from the pontifices sacri, the priesthood founded by the emperor Aurelian to supervise the worship of his sun-god.
PRIST, PRIESTHOOD (Roman)

The pontifices were an advisory body. A question submitted to the Senate was discussed by the whole College, and the opinion of the majority prevailed, even if the pontifex maximus held a different view. But along many lines he could act without reference to them. In the earlier period especially, his power was very great; e.g., he originally appointed the rex sacrorum, the flamines, and the Vestals, even against the wishes of the appointees. Later this power seems to have been modified, and in the time of Augustus (Livy, xxxv. 13), the priestly functions of the so-called flamines maiores (Tac. Ann. iv. 16) he made appointments from a list of candidates nominated probably by the college, while Vestals were chosen by lot from a list of twenty whom he nominated (Aug. Gell. i. xii. 11). He had also the power to punish these priests: the rex and the flamines he could fine, and under some circumstances dismiss from office; in the case of the Vestals he had the right of corporal punishment, and originally of inflicting the death penalty.

It was the duty of the pontifices to conserve the body of Roman religious traditions. They were primarily theologians, professors of sacred law. They were the final authority on all questions pertaining to the old Roman religious laws and on the proper course of maintaining satisfactory relations with them. It was a fundamental belief in Roman religion that a benevolent attitude on the part of the gods could be secured only by scrupulous attention to all the minutiae of ritual. With these minutiae the pontifices were familiar. They knew not only the names of the gods, but also their attributes and the formulae by which they should be addressed. They were consulted not only by the magistrates in regard to matters which concerned the State, but also by private citizens who found themselves under the stress of some religious problem.

They were not, however, merely authorities on sacred law. They themselves took an active part in religious services, and their sacral obligations are clearly indicated by the insignia of their office, which include the bowl for libations (stipulum), the sacrificial knife (secepsita), and the ax (securia). It was, moreover, with special reference to their duties as priests of the gods that, in the earlier period, they were subject to tabus similar to those which persisted with so much more rigour in the case of the flamen Dialis: they could then not look at a corpse or mount a horse. The pontifex maximus in particular was not permitted to absent himself from Rome, or at any rate from Italy, for a period of any length. They officiated at the most important ceremonies in the public worship of Vesta and the penates as well as at those of the Capitoline triad, for with these cults, which embodied some of the oldest and most sacred of Roman religious ideas, they, members of the College, were chargeable with the supervision of the sacred temples, which were open to private citizens as well as to magistrates and the body of the Senate. The pontifex, by act of the Senate (devotio), was constituted the greatest religious client of the city. The pontifex, in a word, was the highest religious official of the city, and his actions and decisions were of the highest importance to the city at large.

When Augustus became pontifex maximus (12 B.C.), he built a temple of Vesta close to his own residence on the Palatine, and the College of the Pontifical priests was equal in the sanctity of its appointment. This appointment was made by the pontifex maximus, after consultation with the Senate and other pontifices, elected or nominated by the pontifex at large, and it is clear that the pontifex, as a member of the College and by the nature of its office, was in possession of the temple of Vesta, and that the pontifex, by act of the College and by his own personal initiative, could nominate the Vestal priestesses (psedepus in Capitoilo), till in the year 106 B.C. his function was transferred to the college of the flamen. Furthermore, the pontifices officiated at the ceremonies held in connexion with cults which, though recognized by the State, were not provided with special priests. And it was they who, in order to prevent the complete disappearance of the worship of certain ancient divinities like Angerona, Carna, Acca Larentina, and others who were fading from memory in the course of human life, made annual stipends and sacrifices in their honour. Moreover, they were in charge of certain ceremonies belonging to the category of histrionica, as, e.g., the Forficidae on 16th April. They also took part in the preparation of the ludi xxv (in March and May).

On all these occasions the pontifices either officiated in person or were represented by subordinate priests. But there were many important ceremonies in which they participated merely as the advisers or assistants of the magistrates—e.g., when vows were made on the outbreak of a pestilence or at the beginning of a war, or on the occasion of the annual vows on 1st Jan., which were pronounced by the consul or other magistrate, and which were continued by the pontifex maximus. When relations with the gods were endangered by a flaw in a ceremony, the pontifices were consulted and charged with the supervision of appropriate expiatory rites; when a prodigy was announced (monstrum), they were charged with the task of determining that body consulted the pontifices, who gave their opinion as to the best methods of placating the gods of whose anger the prodigy was regarded as a manifestation. At a comparatively early date, however, the pontifices were given the exclusive management of the care of the prodigies to the haruspices or to the priests in charge of the Sibylline oracles, reserving for themselves the expiation of certain others only (e.g., showers of stones, speaking oxen, etc.), in regard to which the efficacy of their methods was recognized and approved by the Senate. Moreover, the ceremony of consecration (consacratio) was performed by the pontifices; e.g., a new temple or altar was dedicated by the magistrate who had vowed it, or, if he was no longer in office, by a committee appointed for the purpose (duoviri ad dedicanda), but was consecrated by the pontifices. By the act of dedication the magistrate gave it up to the god; by the consecration the pontifex maximus or one of his colleagues declared it to be the property of the State, and in the process usually another god also belonged the act of consacratio capitis et honorum. A husband who had sold his wife, a son who had killed his father, or some other equally reprehensible offender could, after adequate investigation, be expressly consigned to the pontifex to this or that divinity or group of divinities (Sacer esto); and one who had been pronounced sacer could be killed with impunity by any one of those whom his crime had injured. In historical times, however, the punishmer of one upon whom the sentence of 'Sacer esto' had been passed was left to the tribunes. Another ceremony in which the participation of the pontifices was indispensable was that known as devotion (devotion). The words in which the commander of an army, in the presence of the Senate, promised allegiance to the Roman State, was the act of devotion (devotio). The pontifex, by the act of devotion, transferred the soldiers of the army to the care of the pontifex and the Senate, who were responsible for the safety of the army, and who were also responsible for the direction of its religious policy. The pontifex was therefore the only person with the power to demand the discharge of any soldier who had been guilty of a religious offense. This power was exercised with great severity, and was a powerful check on the activities of any person who might wish to make use of the army for political purposes.

1 Livy, iv. xlvii., l: 'Dictator, praeseunte A. Cornelio pontifex maximus... ludos voxit;' livy, xxvii. ii. 8; 'id votum in haec verba, praeseunte P. Licinio pontifex maximus, consul munificiav.'
the proper observance of the festivals—a duty which was incumbent on them as the representatives of the rights of the gods—they had charge of the intercalations, and there is evidence that they sometimes manipulated them to further the aims of political parties or patrons.

In the early period of Roman society law and religion were inextricably intermingled, and so we find that the pontifices were authoritaries in the former as well as in the latter field. Even in later times, when the legal system had attained to independent development, the pontifices still retained functions that belonged to the sphere of law—e.g., their participation in the marriage rite of conferratio, in the kind of adoption known as arrogatio, and in the making of vows, as well as their control of burial, of sepulchres, and of the whole cult of the manes. In the case of an arrogation or the making of a will they convoked the people in the comitia calata in order to secure their approval of the act.

The archives of the college were in the regia. These included the formulæ which had to be used in appealing to the gods (indigitationes [q.v.]); the forms for vows, dedications, etc.; the directions for the observance of the festivals of Roman origin connected with sacrifices; the necessary instructions for the performance of expiatory rites, or, where the offence could not be expiated, for the infliction of the penalty; the calendar (fasti); and the annual transcriptions of the registers (anales maximi), which, on account of the connexion of the pontifices with the political administration of the country, became so important an element in Roman historiography. But the archives contained other documents of even greater importance, namely the laws, in the form from other sources formulated on questions submitted to them by magistrates or by the senate. These decrees dealt with the new problems which were constantly arising in regard to vows, dedications, sacred sites, festivals, the cult of the manes, and other phases of Roman religion which fell within the scope of the activity of the pontifices. These decrees formed a growing body of pontifical law.

(b) Rex sacrorum.—On the establishment of the Roughs in the religious life of the kingdom devolved upon the pontifex maximus, some of them were assigned to a priest whose office was instituted at that time, and who was given the name of rex sacrorum.1 While the office, as we see, was not an office of great dignity, it was vastly inferior to that of the pontifex maximus in power and influence. The rex could not hold any political office, and it is clear that appointment to the office was regarded as equivalent to political extinction. The incumbent was honorably but effectively shelled for the rest of his life.

He officiated at the rogatio, the ceremony held in the comitia on 24th Feb.; and the calendars show the notation Q.R.C.F. (quando rex consuetudinavit, fas) on 24th March and 24th May.

At the rogatio the rex sacrificed a victim as a sin-offering, and immediately after the sacrifice took to flight, apparently with the idea of escaping the taint.2 The old explanation, by which the manner of flight referred the expulsion of the kings, is wholly without foundation. Equally unsatisfactory is the explanation usually given in regard to the functions of the rex on 24th March and 24th May. It is generally said that these two days were the limits of the time within which priests might sacrifice rex sacrorum, flamen Diais, flamen Martialis, and flamen Quirinalis, and that the pontifices were always patricians. This true of the flamines maiores also in early times, but later this office became plebeian. Under the Empire flamines maiores were frequently members of the equestrian order.

In regard to the flamen Diasis we are reasonably well informed. He was chosen by the pontifex maximus out of three candidates, nominated by the college of pontifices, only those born of parents married by conferratio, and themselves married by that rite, being eligible. He had many prerogatives (the right of the toga pretexta, of the sella curulis, and the services of a lictor and herald), but was subject to galling restrictions and a long list of taboos. Although in the old list of priests his title appears before that of the pontifex maximus, and he had precedence over him at the prietely banquet, he was, so far as all the duties of his office were concerned, completely under his control. In the early period, he had become a powerful figure in Rome, and even in later times his absence from the city was limited to two and afterwards to three nights. From the year 200 B.C. he was eligible for political office, but the rule that required his continuance in the presence of the pontifex maximus prevented his occupying any office which required residence in the provinces.

1 Pauth-Wissowa, L.D.
2 The derivation is uncertain. It has been connected with farre, from kindling the altar fire; Marquardt, with fragare, flamma (Curtius, Cursen, Usener); with the Skr. brahman, 'priest' (Meyer).

3 This is the form of the title attested by inscriptions. Latin authors use rex sacrificatoris frequently. Livy, xx, xxxiv, 12, has rex sacrificatorum.
4 Cf. the pontifilia (6th July), where, from a similar motive, the people fled from a sin-offering.
The numerous tabns by which he was bound show the degree of sanctity associated with his office. He could not touch, approach, or name any object or animal with which contact in Roman religion was connected. The presence of uncleanness was associated: a corpse, a tiber, raw meat, beans, a dog, a goat, etc. He could not stand near or cross the sound of flutes played at a funeral. In a word, he was excluded from every possible contact with death or with anything connected with pollution.

Moreover, there was another series of tabns, which, while indicating the freedom of the flamen from the usual ties of human society, went still further to the point to which he belonged to his god. He could not come in contact with anything that was tied or knotted, or anything that had been placed under a ban, or which was considered as sacred, or anything which the flamen was particularly enjoined not to touch, such as safety pins (siductus), or some other device lacking continuity. He had to shave his head, and the ends of his hair were laid down on the altar of Jupiter. He could not walk on wood or on the choral floor of the temple, neither could he cut his nails, nor were he allowed to sit down on any piece of wood. He could be shaved only with a bronze razor. Furthermore, for him every day was a holy day, and he was not permitted to see any kind of work. On his walks an attendant always preceded him to warn workmen to desist from their labours while he was passing.

One of the chief duties of the flamen Dialis was to officiate at the sacrifice of a sheep to Jupiter at the 15th of each month (caput). He himself led the entrails of the victim on the altar fire. He officiated at the sacrifice of a lamb to the same god at the beginning of the vintage. His services, however, were not confined for the time being to the performance of these acts, but he was also required to assist in the sacrifices performed in temples and the shrines connected with the temple of Jupiter, the 100 flamines (flamines coelestes or merely flamines) participated in the sacred duties of his office. He was not the priestess of the temple, as is properly understood, but a subordinate, being appointed to the office. It was supposed that he was the most acceptable model for the teaching of young men in the profession of their art, and as such, he was charged with the instruction of the 100 flamines who were under his direction. The duties of the flamen Dialis included also the care of the temple, the distribution of the religious offices, and the preparation of the sacrifices.

The flamines of the deified emperors (flamines divorum) also were attached more or less loosely to the college of pontifices. Down to the 3rd cent., a flamen was appointed for every emperor enrolled among the gods.

There were other flamines in Rome, who were not connected with the college of pontifices—e.g., the fratre Arvalis had a flamen (flamen Arvalis), and so too had each of the curiae of the city (flamen curiae).

The wife of the flamen Dialis (flaminica Dialis or merely flaminica) participated in the sacred duties of his office. She was not the priestess of the temple, as is properly understood, but a subordinate, being appointed to the office. It was supposed that she was the most acceptable model for the teaching of young women in the profession of their art, and as such, she was charged with the instruction of the 100 flaminices who were under her direction. The duties of the flaminica Dialis included also the care of the temple, the distribution of the religious offices, and the preparation of the sacrifices.

(d) Virgines Vestales.—The Vestal virgins, six in number, were attached to the public cult of Vesta. They were chosen by lot out of a list of twenty, enrolled by the pontifex maximus. At first they were drawn from patrician families, but later the daughters of plebeian houses were eligible, and under the Empire we hear of daughters of freedmen being admitted. Only those whose parents, both living were eligible. A candidate who had been chosen was formally accepted by the pontifex maximus. She was then conducted to the house of the Vestals (atrium Vesta); her hair was cut off and hung on a lotus-tree, and she was provided with a mat. She was from six to ten years of age when she entered, and the term of service was thirty years. After its completion she was at liberty to leave the order and marry. The thirty years of service were divided into three decade, in the first of which the youngest lived in the temple of Vesta, and in the third instructed the virgines. The eldest Vestal was the head of the order (virgo Vestalis maxima).

Like many others, the cult of Vesta, goddess of the earth-born, had begun in the family, and had subsequently become a State-cult also. It was the duty of the priestesses to keep up the sacred fire. Once a year only was it allowed to go out and be rekindled (1st March). If it went out at any time assumed the garb of the order. She was from to seven to ten years of age when she entered, and the term of service was thirty years. After its completion she was at liberty to leave the order and marry. The thirty years of service were divided into three decades, in the first of which the youngest lived in the temple of Vesta, and in the third instructed the novices. The eldest Vestal was the head of the order (virgo Vestalis maxima).

some pertaining to ceremonies not primarily or definitely belonging to that goddess. Chief among the former was the festival of Vesta on 9th June (Vestalia). At this season (from 7th to 14th June) the Vestal VIRGINS, as their number could then, under the imperial bare feet thonged to the temple to ask a blessing on their households; offerings of food were sent to the temple; offerings of sacred salt-cakes (mola salae) were made by the Vestals; the millers and bakers of CARTHAGE and TARRACCA brought the bread and millstones adorned with garlands. On 15th June the temple was cleansed. In regard to the activities of the Vestals that seem to be outside the cult of Vesta proper it may be pointed out that it was they who kept the blood of the October horse and the ashes of the unbom calves sacrificed at the Pordicitia, giving them to the people for use in the ceremonies of libation held on the occasion of the Parilia (21st April). They were present at the sacrifice of the sheep to Jupiter on the Ides of each month. On 15th Feb. they provided the mola salae used at the Lupercalia. On 1st May they offered prayers to the Bona Dea. On 15th May they took part in the ceremonies of the Areii. On 21st Aug. they paraded in the Porta Capena; on 25th Aug. they, together with the pontifex major, undertook the secret sacrifice to Ops Consiva in the regia. Fowler (Roman Festivals, p. 149 ff.) has pointed out the connexion between these ceremonies and the food-supply, with which the Vestals from the earliest times were closely associated.

The Vestals enjoyed many privileges. A Victori attended them when they went out on the street, and even the highest magistrates had to make way for them; on certain occasions they could use a carriage in the streets of the city. It was pointed out to him by way of exhortation to himself to execution caught a glimpse of them, he could not be put to death; places of special honour were reserved for them at the public games; they could be buried within the city. But, on the other hand, the life was an exacting one. They were subject to discipline at the hands of the pontifex maximus, who could have them beaten for any negligence in their religious duties. It was he too who, in case of violation of the vow of chastity by any member of the order, pronounced the sentence of death. Hence, it should be noted that the response of the augures did not carry with it the annulment of the act. This took place only as the result of a senatus consultum, although the latter was based on the reply of the college. We do not know that the senate invariably followed the recommendation of the college, but it is certain that they generally did so.

A preliminary to the taking of the auspices was the marking off of the templum or place of observation. Then the magistrate, after announcing the moment (time, the legs were placed, the incantation, or his observation of the signs), stationed himself at that point of the templum prescribed by augural law, and, addressing Jupiter or other gods, asked for a certain, definitely specified sign or signs of auspices. The divine order was that the magistrates that were specifically asked for were called auguria or signa imprecativa, while signs that appeared without being asked for were known as signa oblativa. Quite apart from this classification, five different kinds of signs were recognized: from birds, from thunder and lightning, from animals (signa ex quadrupedibus), from the sacred chickens (agnus ex tripludibus), and from incidental occurrences of evil omen (dire). The birds were, in the language of augury, either alites or ovescinae. The former gave signs by their manner of flight, the latter by their songs or cries. Among the alites were the eagle and the vulture as well as the osprey, the nightingale (osfregata), the buzzard (a kind of hawk), and the animals that could be interpreted to have evil auguries, from the ravens (corvus), the crow (corvina), and the owl (noctua). Some birds were included in both lists, and we hear of some that as ovescinae were believed to give favourable, but as alites unfavourable, signs.

The signa aevi (the summer and spring) belong to a very early stage in the development of augury. 1 Dio Cass. xliii. 51 speaks of a sixteenth member added by Casar.
2 Cf. Festus, p. 107; Varro, De Ling. Lat. vi. 76; Pliny, H.N. x. 43; Cic. de Div. i. 20 (139).
Their precise interpretation involved a consideration not only of all the details connected with the appearance itself, but also of the nature of the occurrence which the gods were being invited to witness for a sign. The most favourable of the *signa* *ex celo* was a flash of lightning passing from left to right of the observer. Yet even this sign, though generally auspicious, was unpropitious for a meeting of the *comitia* *plebana, 2* and the holding of the meeting, or, if business had already begun, would result in its discontinuance. *Signa* *ex celo* were used at a comparatively early date in the *auspicia* of the magistrates, not only as signs of the heavens, but as portents of human action. They were used to indicate the moment at which the auspices had become a foreboding, and the end of the Republic they were practically the only *signa* that were used by the magistrates. It was not so much that they had crowded the others out as that in the general decay of the augural system they survived as the most convenient. Moreover, it was no longer regarded as essential that the magistrates themselves should take the auspices. A subordinate official, the *pullarius*, whose original function had been the care of the sacred chickens, could do so. The phrase 'serveur ex celo', which was frequently found in Caesar's official proclamations, is an indication of the kind of sign of which he was supposed to take cognizance. There is, however, abundant evidence that their announcement of a favourable sign had very little to do with any aesthetic appeal of the sign, and the magistrates had become a more formal, and the nature of the announcement in regard to them was dictated by political exigency.

Of the other signs, the *signa* *ex quadrupedibus* never seem to have been very much used as *signa* *imperatrices*, although, when occurring as *affecta*, they could not be left out of consideration. They did to have with the behaviour of animals appearing within the bounds of the *templum*.

The *signa* *ex tripudii* were the signs derived from the sacred chickens. By the end of the Republic these were practically the only auguries that were observed by military authorities. They came to have in the camps a place similar to that which the *signa* *ex celo* had in civil life. This was largely owing to the convenience of the method. The chickens were kept in cages, and, after the general who was to take the auspices had placed himself at the door of the tent within the bounds of the *templum*, the chickens were let out, and were led on a walk of walking-far which way they ate the food that was thrown to them. The most favourable omen was one that could give the augur an idea of the future. The auguries were interpreted as signs of the abundance of certain crops, the future growth of the city, or as a messenger of good news. If the omen was wanted, it was easily obtained either by giving the chickens food or by withholding it, and they were often to be seen eating or not eating, the omen being secured by the use of such other signs as were the auguries of the future.

The *dies* were unexpired events of an untoward nature which occurred either during the taking of the auspices or afterwards during the action itself. The fall of some object, the sudden illness of some one present, the gnawing of a mouse, etc., belonged to the category of the *dies*. All *dies* were deterrent.

With all the possibilities involved in the numerous auguries mentioned above, it is easy to see that the magistrate taking the auspices would frequently find himself at a loss in regard to the proper interpretation of the results. More often than not, a comparatively late date the *auspices* were not present to assist him. The statement made by some ancient authorities that he had assistants does not imply that these were members of the augural college. To be sure, the difficulties of the profession were at this time to some extent modified by his announcement of the signs for which he was watching. But *signa* *imperatrices*, of which course was always favourable, might be counteracted by the appearance of an unfavourable *signum* *blanditio*, and the possibility of conflict were endless. If he made a mistake or if he deliberately ignored manifest indications of the disapproval of the divine powers, there was danger of the business transacted being subse-

Whether they ever actually took the auspices themselves is not certain.

The inauguration of persons and places was another important function of the *auspices*. They themselves or authorised magistrates should be advanced in support of the theory that on the occasion of an inauguration they acted merely as assistants to the pontifex *maximus*, as Wissowa has shown in his article in Pauly-Wissowa, wholly inadequate. After the inauguration of the kings the only persons who were inaugurated were priests. We have definite record of the inauguration of the *re x sacrorum*, of the *auspices* themselves, and of the *flamines* of Jupiter, Mars, Quirinus, and the deified Julius Cæsar. This is not to say that *auspicia* alone were connected with the *pontifices*, and probably the Vestals were not inaugurated. Livy (ix. 8.3) describes the ceremony.

It took place on the *ara*.* The augur, after indicating with his right hand the auspices of the act or persons to be inaugurated, made his observations, laid his right hand on the head of the candidate, and asked the god to show by a *signum* *ex celo* whether the date was acceptable to him.

In regard to the places that had to be inaugurated, we find that the list includes all those intended for business which could be transacted only after the auspices had been taken. Among them we find many temples, and such places as the *rereda* of the kings the only persons who were inaugurated were priests. We have definite record of the inauguration of the *re x sacrorum*, of the *auspices* themselves, and of the *flamines* of Jupiter, Mars, Quirinus, and the deified Julius Cæsar. This is not to say that *auspicia* alone were connected with the *pontifices*, and probably the Vestals were not inaugurated. Livy (ix. 8.3) describes the ceremony.

It took place on the *ara*.* The augur, after indicating with his right hand the auspices of the act or persons to be inaugurated, made his observations, laid his right hand on the head of the candidate, and asked the god to show by a *signum* *ex celo* whether the date was acceptable to him.

In regard to the places that had to be inaugurated, we find that the list includes all those intended for business which could be transacted only after the auspices had been taken. Among them we find many temples, and such places as the *rereda*. Moreover, the city itself was inaugurated as well as the land just outside the walls, as far perhaps as the first milestone. To this district the term *afer* *status* was applied. There were other loca *effasia*, as we know from the following list of five additional kinds of territory which were inaugurated so as to make possible the taking of auspices by magistrates absent from Rome: the *afer Romanus*, *Gabinus*, *pereregins*, *horatius*, *curtus*. The term *temples* *auspicia* is applicable only to an inaugurated place or building that is rectangular in shape. The city of Rome and the various territories referred to were *temples*, strictly speaking, but *loci liberae* *et effasiae* *status* also announces a property that is permanently free. We know very little about the ceremonies with which places were inaugurated, beyond the fact that a star-shaped piece of metal was brought in as a sign of the completion of the inauguration.

Other ceremonies in which we find the *auspices* officiating independently of the magistrates are the *augurium solutis*, the *verniscra auguria*, and the *augurium canarium*. The last-mentioned took place every year in midsummer, and was intended to gain the protection of the gods against the dangers of the sea. The ceremony was accompanied by sacrifices of red dogs. The *verniscra auguria* probably had to do with the agricultural operations of the spring. In regard to the *augurium solutis* there is a good deal of uncertain. Its start is obviously intended to procure from the gods some assurance of a continuance of the safety and prosperity of the nation. It could be held only when there was no Roman army in the field. Tacitus speaks of its being celebrated in a period of seven years. It was intended to hold it at an interval of seven years. It was intended to hold it at an interval of seven years. It was intended to hold it at an interval of seven years.

1 Possibly they sometimes did in the last period of the Republic. Cicero (de *Leg. lat. 20*) apparently makes a claim to this effect.
2 *Batuli* sine nodo adunacum (Livy, i. xvii. 7).
3 I.e. freed by the formula spoken by the augur from all previously existing religious associations.
4 Annals, xii. 23.
The archives of the augures, which were kept in the auguraculum on the ark, consisted of fasti (a list of members past and present), acta (the record of the transactions of the college), and, most important of all, the libri or copies of all the records of the temple. Both terms, libri and commentarii, are used indiscriminately of the traditional material and of the numerous acclamations consisting of the responses given to questions put to the god by the senate. 

3. Quinctierviri sacris faciundis. — The third of the great priestly colleges is the quinctierviri (sacris) faciundis. Originally it was a commission of two members (diwviri s.), and it was not till 367 B.C. that it became a collegium of ten, of whom five were patrician and five plebeian. In Sulla's time the number was increased to fifteen. Cæsar made it sixteen, and under the Empire others were added supra numerum. In the time of Augustus the college was administered by a group of five magistri 1 (chosen annually by the college from its own membership), later by one. 2

While the priesthood is less ancient than the pontifex and the augures, it goes back as far as the Tarquin dynasty, and its foundation is one of the indications of the foreign influences at work in Rome during that period. Its activity was confined to the Sibyline books, to the cults introduced in Rome in the 3rd century B.C. and to the ceremonies performed, after consultation of the books, to avert the wrath of the gods. But, as the Sibylline books were Greek oracles, the cults introduced through them were Greek, except in such a case as that of the Augustan Mother, which came from Pessinus in Asia Minor. The result of this was that the quinctierviri bore to all cults which were conducted according to Greek forms of ritual (ritus Graecus) a relation analogous to that of the pontifices to the cults whose ceremonies adhered to Roman tradition (ritus Romanus).

The Sibyline books contained the oracles of the Sibyl of Cumæ, to which perhaps some others from different sources were added from time to time. 3 When brought from Cumæ, they were placed in the temple of Jupiter on the Capitol, where they remained till the year 83 B.C., when they perished in the fire that destroyed the temple. A commission was sent to Greece to make a new collection, and returned with 1000 verses, which were increased in the 1st century B.C. The books had been built on the Capitol. They were left there till Augustus moved them to the temple of Apollo which he had erected on the Palatine. Augustus made a careful inspection of the oracles and rejected such as bore evidence of having been introduced into the collection for political reasons. Tiberius subjected them to a similar inspection, and there are other indications that the books were sometimes manipulated in the interests of political factions. 4

No one had access to the books but the quinctierviri, and even they could not consult them except when authorized by the senate. Moreover, it was only on the occurrence of prodigies which seemed to be of special importance that the senate gave in writing the quinctierviri the order for the inspection. When the quinctierviri had consulted the oracles, they made a report to the senate, stating by what sacrifices or ceremonies the gods could be appeased. The Senate then decided on the manner of those rites under the supervision of the quinctierviri.

The clearest indication of the nature of the activity of the quinctierviri is furnished by the list of divinities whose cults were introduced as the result of an inspection of the oracles. Among these are the cult of Apollo (with whom the oracles are most closely connected), Ceres, Liber, Libera (Demeter, Dionysus, and Kore), Mercury (Hermes), Neptune (Poseidon), 5 and Hercules. 6 At a later date came Asculapius, Dis, and others. The quinctierviri did not themselves perform the favorite or rites, for the Greek cults had their own priests; but they supervised them. They had a similar supervision over lectisternia, supplicationes, and other ceremonies ordered by the books in expiation of prodigies. That Oriental cults were not regarded as lying outside the field of their activities is shown by the fact that they were in charge of the cult of the Great Mother (see art. MOTHER OF THE GODS), introduced in 204 B.C. in accordance with a Sibylline oracle. Their connexion with this cult was especially close. They actually participated in some of the rites, 7 and from the latter half of the 1st cent. after Christ they were thought of in two capacities: priests of the Great Mother and custodians of the Sibylline books.

4. Septemviri epulones. — This priesthood was instituted in 196 B.C., and to it was assigned the administration of the sacred banquets of Jupiter on the ides of September in connexion with the ludi Romani, and on the ides of November on the occasion of the ludi plebei. It was probably founded by Mark Antony 8 and others, that at the time of the organization of the priesthood the only banquet to which it was held in connexion with the ludi plebei, and that the epulum Iovi at the ludi Romani was not established much later, is highly improbable. The epulum of the ludi Romani is in all likelihood an old institution. 9 These banquets, though they were wholly independent of the lectisternia in origin, were doubtless strongly influenced by them.

At the banquets a triclinium was set up in the temple of Jupiter on the Capitol. An image of Jupiter reclining and images of Juno and Minerva seated were placed at the table, and food was put before them. The senators attended the banquets as representatives of the State, and had places at the triclini set up in front of the temple. In a word, this epulum Iovi was not merely an offering to the god; it was a communion of the god with his people. The practice of holding sacred banquets in connexion with the ludi Romani probably began on the occasion of triumphs, dedications, games, etc. Not only the senators but also the people in general participated in them, being accommodated at tables that were set up throughout the entire length of the forum. The strictly religious element in the institution receded into the background. They became great public banquets, but remained under the supervision of the epulones.

Before the institution of the epulones the pontifices had had nothing to do with the epulum Iovi. It was the burden of their other duties that compelled them to relinquish this function, and the epulones, though an independent college and forming one of the four great priesthoods, were always regarded as the supplements of the pontificate and to a certain extent subject to its influence. When first instituted, the college had three members (treviri epulones). This number was subsequently increased to seven (septemviri epulones) and later (by Cæsar) to nine. Even after this increase the college was known as
PRIEST, PRIESTHOOD (Roman) 333

the septemviri epulones. An individual member of the college was called septemviris epulonis. 1

In the Roman calendar, the aediles were the authorities on the inaeftile, the sacred forms that should be observed in international relations. To them the senate or magistrates appealed in regard to questions pertaining to demands for redress, declarations of war, or conclusion of alliances. It was they who served as the emissaries of the State to the country with which the negotiations were being carried on. In the discussion of problems submitted to them by the senate the whole sodali
tol and of twenty of the thirty patres, patres patruus, took part. On the missions to foreign countries, however, a smaller number went. When the purpose of the embassy was the making of peace, the number of fetiales was two; 2 when redress was demanded, four were employed. That the sodalitas was a very ancient one is seen from the use of the stone (siles) in killing the victim. It was in fact an old Italic institution, for we hear of fetiales not only at other places in Latium but also among the Samnians, the Faliscus, and the Samnites. If Rome, with her priesthood ranked next to the four great colleges; and in A.D. 22 an effort, which, however, failed, was made to place it on an equality with them. Its members were men of distinction during both the Republic and the Empire. Augustus himself was one of the later emperors.

In Lily, I. xxiv., we are given some details in regard to the appointment and procedure of a deputation of fetiales on a peace mission.

The verbenarius 4 asks the king to authorize him definitely and specifically as the envoy of the Roman people. 5 The king formally gives the authorization requested. Then the verben
arius, under the escort of soldiers, herds (heres) of women, senators, and friends of the Senate, and is instructed by the king to gather them on the arx. These herbs are the symbol of his office. The verbenarius then chooses from the fetiales as patres patruus, 6 touching his hair with the herbs. The pater patruus is the plenipotentiary and spokesman of the deputation, and it is he who carries the sacred stone and the sceptre. The treaty is made in the presence of the commanders and of the armies by the patres patruus of each of the two nations. After the terms have been read, the pater patruus of the Romans, holding his sceptre and calling to witness the people present as well as the gods Jupiter, Mars, and Minerva, declares that his nation will keep the treaty. Then he kills a pig with the sacred stone, calling upon Jupiter, if the Roman people shall be the first to break the treaty, to treat them as he treats the victim. After the sacrifice he
threw away" the stone, saying: 7 "Si scelens fallo, tum me Dice
plurum et legum sanguinem" (the blood of the law). 8 When the same ceremony has been performed by the other pater patruus, the treaty is signed by both. 9 The fact that the treaty is in writing is not unlikely to be understandable to theory that it is nothing more than a primitive weapon that has survived from the stone age, and not, as W. Helbig 10 has suggested, a symbol of the god of lightning.

In the case of injury at the hands of citizens of some foreign power, fetiales were sent to demand redress. 11

The pater patruus goes to the boundary of the enemy's terri
tory and states his country's case, swearing to the Justice of the claims which he makes. 12 Then, crossing the border, he repeats the claims to the first native of the country whom he
meets. He repeats them again at the gate of the capital and in its forum. If the offenders are given up, he departs as a friend. If the nation addressed asks time for further consideration, he

1 The Roman grammarians connected the word with fides (Varro), fadus (Servius), forte (Paulus); Lange derives it from an old substantive fada (et. Jatari. Jari, Jat); Weiss compares the Latin verba.
2 Wissowa, Religions und Kultur, p. 561, thinks that the number was afterwards increased to four, but his reasons seem inadequate.
4 See the letter of the sacred herbs (verbena). How he was chosen is not known.
5 Petreus me rex, cum patre patruo populi Albanorum fides ferre.
6 Wissowa plausibly derives this word from patruo, "to make a contract," and applies it to the pater patruus, who is in a father artificially created as opposed to a natural father (frater).
7 "The formula are given in Lily, I. xxiv. 7
8 Posid. de Poier.
9 Lily. xxv. 4. 4
11 Lily, vii. v. 7. xxiii. i. xiv. 7.
12 On the ethical element in the feticl rite see Tenney Frank, in Classical Philology, vii. (1912) 335.

grants thirty days, publicly repeating his claims at the end of each ten days. After the expiration of this time, if satisfaction is not given, he solemnly calls the gods to witness, and, in the presence of the senators, the circumstances to the senate. If the senate decides on war, the pater patruus is dispatched again to the boundary, and in the presence of three adults enters the country of the enemy, to be received with a show of friendly adoration and charred at the end. Under the feticl law only a war declared in this way is legible.

Just as it was the duty of the fetiales to demand of another people those who had committed an offense against their nation, so also it was their duty to give up similar offenders among their own people. 1

Octavian declared war against Cleopatra in 32 B.C. according to the feticl rite; the emperor Cleopater (pater patruus) Marcus Aurelius declared war against the Marcomanni in this way. But it had long since became a symbolical act. In the war with Pyrrhus a piece of land near the Circus Flaminius at Rome had been legally conveyed to a captive. This was declared enemy territory, and into it the pater patruus flung the spear from the columna bellica near the temple of Bellona.

6. Fretar Arvales.—See art. ARVAL BROTHERS.

Those who were two of the class of Solii in Rome, the Solii Palatini whose headquarters were in the curia Saliiorn on the Palatine, and the Solii collini, or Agoneces, of the Quirinal hill. The former were the dancing priests of Mars, the latter of Jupiter. Each organization consisted of twelve members and had a magister, a presul, and a nates. The magister was in general charge, the presul was the leader of the dance, and the nates of the singing.

The period of their greatest activity was the month of March, with its many festivals in honour of Mars. Although the calendars specifically record only three days of the month (the 1st, 9th, and 24th) on which the Solii took down the sacred shields, 2 their processions seem to have taken place every day from the 1st to the 24th. Their dress consisted of tunica picta and trabea. On their left arm they carried the shield, which as they danced they struck with a spear or club held in the right hand. The dancing took place at certain sacred places, or in the circus, when the procession paused. Each evening they halted at one of the mansiones, erected for the purpose, where the shields and other paraphernalia were kept till next morning. There also the priests dined together. Banquets became the custom of the day. Next day the procession was resumed, and in the evening a halt was made at another mansion. After 24th March there was no procession of the Solii till 19th Oct., the armilustrum, when they danced on the Arventine. This ceremony corresponds to the quinquatrus of 19th March, which was originally a festival of lastration. After the armilustrum the shields were replaced in the sacrarium, and were not moved again till 1st March. The significance of this institution of dancing varied as follows:—Wissowa

1 Lily, vii. xxxix. 14.
2 From solis, "leap, 'dance."
3 It is not certain whether the shields (anctilas) were kept in the arms on the Palatine or in the regions.
4 Mannhardt, Roscher, Frazer, Fowler.
purpose of frightening away the evil spirits that might harm the sprouting crops or interfere with the transmission of the vegetative principle from year to year.

8. Sodales Titii.—Of this priesthood we know almost nothing. Tacitus (Hist. ii. 93) tells us that it was organized by Romulus for the worship of the Sabine king, Titus Tatius.1 Dionysius (ii. 52) makes a similar statement. It seems to have been defunct at the end of the Republic, but was revived by Augustus and lasted till at least the end of the 2nd century. The members belonged to the senatorial order or to the imperial house. We have no information as to their duties.

9. Luperci.—In the case of the Luperci we have a priesthood whose activity was confined to a single day of the year, 16th Feb., the date of the celebration of the Lupercalia. There were Luperci Quinctiales and Luperci Fabiani.2 In 44 B.C. a third group, Luperci Iutii, was added in honor of Julius Caesar, and of these Antony was magister. But this group did not last long, and it was omitted on the reorganization of the priesthood by Augustus. The Luperci were administered by a magister who did not carry with it a distinction equal to that of the other priestly sodalities. It was an equestrian, not a senatorial, priesthood. The festival lasted into Christian times, not being abolished till the 4th century.

The meaning of the title Lupercus has been the subject of a long discussion. Till recently the prevailing view was that the word meant simply 'wolves,' like hier' in the Sabine language (hiera' ; i.e., the name applied to the priest who was the god (Sorumus pater) worshipped on the top of M. Soracte; and it was claimed that we had here another manifestation of the vegetation-spirit, which often turns up in the shape of animals.3 But this theory seems too fantastic for serious consideration, and the author of the latest detailed investigation of the cult (Deubner, ARW xiii. 482 ff.),4 has returned to the old etymology (Serv. Aen. viii. 343) by which Lupercus is derived from lupus and arteo and means 'one who keeps off wolves.' Deubner's reconstruction of the festival is ingenious and in regard to many points very plausible.

The most important features of the celebration were as follows: In the morning the young men were sacrificed (though this is by no means certain); (2) two young men were smeared on the forehead with the blood of the sacrifice, which was offered in a small vessel; (3) a goat-skin was placed on the forehead of each and on that the Luperci danced, and the boys were laughed; (3) the Luperci, in two bands, naked except for goat-skins striped from the victims about their loins, ran round the back of the Palatine hill, and as they ran struck with strips of the same goat-skins all those (mostly women) who threw themselves in their way.

We have in the Lupercalia traces of a pastoral festival (implied in the protective measures against wolves), of a lustration of the community (seen in the encircling of the hill), and of a rite for fertilization (for which the striking with the thongs of goat-skin furnishes the evidence). According to Deubner, the course around the hill goes back to the early days of the Palatine settlement, when it was actually necessary to provide the sheep-folds from wolves, and individuals from certain families were appointed Luperci. Deubner's reconstruction of the festival is ingenious and in regard to many points very plausible.

The practice was not at that time connected with the worship of any god, but later was brought into relation with Fannus. The other elements in the festival, the dancing with the thongs of the Quirinal goat-skin, the sacrifices of the Luperci, and the processions which preceded the Lupercalia, were performed to pay the honours due to him as a god (divus). The sodalitas was organized on the analogy of the sodales Titii. It consisted of twenty-one regular members from the senatorial order and four honorary members from the imperial family. This number, however, does not seem to have been rigidly adhered to, for there are references which indicate that in later times the membership was as high as twenty-eight. The sodalitas was ad

1 Tacitus' own information on the subject seems to have been somewhat vague, for in another passage (Ann. i. 54) he says that the priesthood was instituted by King Tatius for the purpose of keeping up the religious rites of the Sabines.
2 It is generally assumed that the former represented the Palatine sanctuary, the latter the libraries of the Quirinal.
3 But Fowler (Roman Festivals, p. 280) points out that this is inconsistent with the fact that the running of the Luperci was always done round only one.
5 See also Fowler, Religious Experience, p. 478 ff.
6 Perhaps the source of the Luperci Quinctiales and Luperci Fabiani respectively.
sacerdotes Lanuvini (Lanuvium), sacerdotes Laurentes Latnovii (Lavinium and Laurentum), sacerdotes Suecini (Suecia), sacerdotes Tusculani (Tusculum).

In the municipalities throughout the Empire there were, besides the local priests, sacerdotes publici modelled on those in Rome: pontifices augures, and for the imperial cult flaminii as well as the organizations of the servii Augustales. More important than any of these municipal priests was the provincial priest, sacerdos,2 probably appointed by the central authority, generally for a year, and who was the chief priest of the imperial cult in the province or group of provinces to which he belonged.

12. Haruspices.—Although the haruspices never became State priests, they played a part of considerable importance in Roman religion from the time of the war with Hannibal.3 They were of Etruscan origin, and the field of their activities was threefold: (1) the scrutiny of the exta of sacrificial victims, (2) the interpretation of lightning, and (3) the interpretation of lightning. None of these was new in Roman religion. Examination of the exta of victims was made by members of the regular Roman priesthoods, portents were cared for by the pontifices, and the interpretation of lightning was included in the lore of the augures. But the haruspices supplemented the work of the Roman priesthoods, and along many lines showed a degree of specialization and an elaboration of detail which went far beyond that attained by the Roman priests; e.g., the examination of the exta 4 by Roman priests was not intended to do more than to determine whether the god to whom the offering was made was propitious or not, but the haruspices, by means of a complicated system, one entirely independent of the change of the liver into sixteen different parts,5 claimed to read not simply the mind of one god on the subject, but the secrets of the future. In dealing with a portent they undertook to show what its meaning was. Their science of lightning transcended in detail and complexity that of the augures. The division of the liver into sixteen parts is obviously to be connected with the division of the heavens into sixteen regions upon which their interpretation of lightning was based.

The science of the haruspices was traditional in the noble families of Etruria, and so important was it considered by the Romans that in the 2nd cent. before Christ they took measures to assure its regular performance. For the haruspices whom the senate consulted were regularly brought from Etruria. Distinct from them were the haruspices who resided in Rome, and who were of two classes: (1) those attached to the service of officials and forming the ordo haruspicius LX,6 and (2) private haruspices retained and paid for by citizens for advice on domestic problems. The status of these, especially the latter, was distinctly inferior to that of the haruspices summoned from Etruria.

Recent researches tend to show that the system practised by the haruspices in the examination of the exta is derived from Babylonia, and that its use in Rome constitutes an important channel of Oriental influence.

GORDON J. LAING.

PRIEST, PRIESTHOOD (Ugro-Finnish).—The priests among the Ugro-Finnish peoples did not form a separate social class. Their importance in the community, generally speaking, was evident only at the sacrificial feasts. The office of priest was regarded as an honour, and usually brought with it a certain amount of respect. In some cases, one priest was elected for a year, and in the absence of male lawful issue, to the nearest male relative. Besides the family sacrifice, we find a tribal sacrifice held in common by several families in a tribal hut called a great hut (kuala-kuala). These sacrifices were performed by a descendant of the progenitor of the tribe—an eldest son, if possible. One and the same Votyak thus belongs to two kuala-families, a smaller and a larger.

Sacrifices were also offered in sacred groves. Groves were dedicated both to underground spirits —i.e. the great men, princes, etc., of a community—and to great nature-gods. If a family, for some reason or another—usually when a great misfortune had befallen them—dedicated a grove to some great man who was dead, it was deemed right that the sacrifices should be continued in that group by his posterity. When the priestly office did not pass by inheritance, a priest was chosen from among the members of the family or tribe concerned. The groves usually comprised this small grove set apart by one particular village community, or in a common sacrificial place belonging to a number of communities—sometimes as many as twenty-five. For both, sacrificial priests were chosen. As a condition of appointment, the priest was required to have the respect of the community and also to be skilled in prayer. Often the sacrificial priest remained in office all his life.

When several animals were to be sacrificed at the same time, as many priests took part in the service as there were animals offered. In the groves used by several communities the service was usually performed by the priests of the larger towns or villages of the district. When several priests took part in the service, the people occasionally called the oldest among them the chief priest; and his duty was to supervise the 'small priests' in the discharge of their functions. The most general appellation for a priest was 'old man.' He had always one or more colleagues, to whom he was connected by a common origin. Two tribesmen were entrusted. When an individual wished to sacrifice in the grove of his village, he summoned the priest to hold a service for him. The seer could also sometimes appoint the priest to make the sacrifice.

In earlier times, when shamanism prevailed, it was the duty of the shaman to attend to the sacrifices. The shaman priest was held in very high esteem among his people. It was said, e.g., of the
Laps that they always gave the shaman the best seat in the house, set before him the daintiest viands, and presented him with valuable gifts; indeed, sometimes they even paid tribute to him; and his opinion and advice were always highly esteemed.

It is uncertain whether the Ugro-Finnish priest wore a special sacrificial robe. It is known front that he had to wash before every service, and to put on a new, or at least a perfectly clean and, if possible, white robe. Fastening before the sacrifice may also have been customary. Woman, as a rule, could not participate in the sacrificial rites. It is believed, however, that they were deemed unworthy of the priestly office.

PRINCIPLE I. Philosophical.—The word 'principle,' reproducing the Latin principium, is a translation of the Greek philosophical term ἀρχή. This term designated two very different kinds of facts—principles of knowledge and principles of reality (cf. Aristotle, Met. 9067). This double application of the term runs through English philosophical literature. Not only the axioms of logic—e.g., the Law of Contradiction—to which Aristotle refers in the passage cited, but the fundamental truths of any body of doctrine are called its principles (cf. the title of the work, Principles of Mathematics, by B. Russell). Sometimes by a redundancy of expression these are called 'first principles'—e.g., in Herbert-Spencer's work of that name.

Again, anything fundamental in the nature of things may be called a principle. Thus, when T. H. Green talks of 'the spiritual principle in nature,' or B. Jowett, translating Plato (Dialogues2, Oxford, 1875, iv. 229), mentions 'a principle which is above sensation,' they refer to a real existent.

A 'principle' in the sense of a principle of reality may be conceived of either as a cause or as a constituent. It is in the latter sense that water is the principle of all things in the philosophy of Thales. But, even when a principle is conceived of as a constituent, the principles of reality may be divided into two classes, those which are supposed to be in some way causally dependent on it.

To be fundamental is the essential notion of a principle, of whatever sort that be. If we ask, How fundamental? the answer is, Logically; the principle is that which comes first in the order of explanation, whether we are explaining the nature of a demonstration or the nature of a concrete fact. Thus, if the principle of the universe is spiritual, it is the existence of spirit that explains all other facts. Again, the principles of morality are the truths about moral relations on which depend all our explanations of particular moral phenomena (cf. T. Fowler, The Principles of Morals).

2. Popular.—'Principle' has various popular significations which are directly derivative from the different philosophical uses of the term.

(1) We constantly speak of the 'poisonous principle' or 'bitter principle' in substances, meaning by that something concrete which is the source or center of the evil or harm which these things possess. These are not far removed from such more philosophical expressions as the 'vital principle' or the 'spiritual principle in nature.'

(2) On the other hand, when we talk about the 'principle' of the steam-engine or of the electric motor, we mean the truth which gives the explanation of their working. Principle is here the formal and not the material cause of a fact. At the same time, while in this case principle means a scientific truth, the idea of logical explanation, the use of the term, is not wholly dissimilar from that which it has in the previous instance. By a principle here meant the ultimate and simple truth which stands at the beginning of our explanation. Again, the fact that ultimate principle is held to be the actual cause of the phenomenon explained.

(3) Principles of conduct stand on a somewhat different footing. They are general rules of good conduct which form the logical starting point when we deliberate upon the rightness and wrongness of a particular action. A 'man of principle' (cf. Carlyle, Cromwell, speech iv.) is one whose conduct is regulated by the agreement of his projected acts with the general laws of moral action. By a 'man of good principle' we mean little more, for it is assumed that, when a man regulates his conduct by testing its agreement with general maxims, he employs maxims which are morally excellent. A 'man of no principle' is one whose conduct is not regulated by his maxims, but is determined by some law, moral or not, which he regards as binding upon him. Regard for principle in politics is strictly analogous to what it is in the case of morals. It means the regulation of action by its agreement with a general rule which has been established as law, or is natural and being, without taking into account the immediate advantages which the infringement of that rule might bring.

G. R. T. Ross.

PRISCILLIANISM.—The Priscillianists or Priscillians were a heretical sect charged with Manichanean and Gnostic opinions, which made its appearance under this name in Spain towards the end of the 4th cent., and, after exercising considerable influence in S.W. Europe, was confined within ever narrower limits until it disappeared after a history of 150 years about the year 500 cent.

The sect took its name from Priscillian, its reputed founder, but it is very doubtful whether he is justly made responsible for the views which were held by his followers. The conditions of this problem have been carefully discussed by Schepss in his dissertation of 1885 and the publication by G. Scheppe of the extant works of Priscillian. The other primary authorities are very scanty (a letter of Ambrose, a notice in Jerome, and a reference in Pacetus), but they support rather than contradict the evidence to be drawn from Priscillian himself, by which the witness of secondary authorities must be controlled.

Priscillian was a layman of good family, of fair education, and of considerable wealth, born probably at Meos, in Lusitania, shortly before the middle of the 4th cent. He was attracted by that wide-spread movement of thought which found approval and safety when it went to the extreme of monasticism, but was exposed to the dangers of heresy when it gave itself to the cultivation of piety and an austere life apart from and not without criticism of the offices and officers of the Church. S.W. Europe had many groups of ascetically disposed Christians, in many cases, a sect only, the so-called 'entusiastes,' who nourished their faith not only on the canonical Scriptures but also on 'apocryphal' writings, such as the Acts of Andrew, of Thomas, and of John. In these it is probable that Manich-
ean ideas and ascetic practices found a common root (see Babut, Priscillian et Priscillianism, p. 231 ff.). One of the earliest works of Priscillian, the Nonoginta Canonum in Pauli Epistolae, a series of commentaries, transmitted today in selected sections of the Epistles, shows him in general sympathy with this movement, emphasizing those elements in St. Paul which look towards dualism and asceticism (canons 33 and 57), the 'carnal' character of the Law (can. 27), and the virtue of 'beata voluntaria paupertas' (can. 37). The first tendency of the movement was schismatic rather than heretical, and the fact that it captured several of the Spanish bishops—e.g., Salvidianus and Instantius—alarmed Iadius, bishop of Merida, who, after consulting Pope Damasus on the matter, summoned a synod at Saragossa for its consideration (A.D. 380). No individuals were condemned by this synod, nor do its decisions and anathemas console errors in doctrine of any kind; they are concerned with practical matters such as fasting, the use of the Eucharist, and the frequenting of conventicles. Priscillian took up the challenge thrown down by this synod, and, by accepting the Bishop's condemnation publicly, paraded it before the face of the movement, and entered the lists against Iadius. Iadius proceeded to obtain from the emperor Gratian a rescript condemning in general terms 'pseudo-episcopos et Manicheos,' and his condemnation of conventicles from Spain. This he then applied to Priscillian in a circular to other bishops in Spain, and also in a letter to Ambrose. Through the latter an unfavourable reception was provided for Priscillian when he proceeded to Italy in company with the bishops Salvidianus and Instantius 'cum usuroriis,' to bring his case before Damasus and Ambrose in turn. His Liber ad Damasum contains his apology, in which he repudiates every kind of heresy, and especially that of the Manicheans. Damasus probably refused to interfere, but an appeal to the emperor met with better success: the rescript was cancelled, and Priscillian returned to his diocese in peace (382).

The next two years formed a period of great and successful activity for Priscillian. Most of his tracts (iv.–ix.) were now produced, and the important de Fide et Apocrypho, in which the note of independence is distinctly heard.

There is no reason for supposing that Priscillian ever wrote evidence as to the pre-Hieronian text of the Latin Bible. The texte biblique de Priscillien presente tous les caractères des textes 'italiens': it seems former the transition entre ces textes du IV siècle et leur rejeton, the texte 'africain de base epoque' que nous retrouvons regnant a la fin du IVe siecle dans l'Empire des Vandales (G. Berger, Hist. de la Vulgate, Paris, 1889, p. 53). The 'comma Johanneum' (1 Jn 5) has what is probably its earliest witness in Priscillian, tract. i. (ed. Scheppa, p. 6). The Canon of Priscillian, often under the name of Peregriinus, and possibly modified in some respects by him, had a considerable vogue for several centuries in Provence and Spain (see Berger, p. 36 ff.).

The progress of the sect may be described in Babut's words: 'Les factes ne sont pas unies s'ils étaient supportés, they are likely to be the subject of almost any heresy. The swift disaster which overtook Priscillian and the whole movement was closely connected with the successful revolt of Maximus and the fall and death of Gratian. Ithacius (bishop of Ossonum) was the first to be arrested, and Priscillian, as the bishop of Tordes, and there claimed the assistance of Maximus in suppressing the 'Manichean' heresy in Spain. Maximus seized the opportunity of accruing credit for orthodoxy. There was another possible motive in the wealth of the 'heresy' as Priscillian and Instantius were roused to make a first step in summing the synod at Bordeaux, before which Priscillian and Instantius were arraigned as prisoners. To the charge of heresy was added that of gross immorality and the practice of magic. According to Sulpicius, who is probably followed by others, Maximus was unwilling to proceed, and refused to plead, and appealed to the emperor. Condemned by the synod, the accused were transferred to Trèves. There Priscillian, though still a bishop, was put to the torture, and the confessions he made were extorted from him. He refused to incriminate himself, and his name was added, then and ever since. Ambrose happened to be in Trèves on an embassy at the time, and was so indignant at the spectacle of bishops demanding the death of another bishop that he refused to communicate with Iadius and Ithacius, and was dismissed from Trèves in consequence (Ambrose, Ep. xxiv. 12). Having received from Maximus permission to proceed to a capital sentence, Evodius the prefect ordered Priscillian and his companions to be beheaded, and thus they perished—Priscillian, two of the clergy, Armenius and Feliceissimus, Latronianus, a poet, and Euchroia, the widow of Delphidius, the first heretics to be sent to the scaffold by the Church. The trial of Priscillian was followed first by a reaction and then by a counter-reaction. The horror which was felt throughout the Church was marked by the indignant protests of St. Martin of Tours, the excommunication by a Spanish synod of Priscillianists, the forced resignation of the bishopric by Iadius, and the sentence of exile pronounced upon both bishops by Theodosius. On the other hand, Latinius Pacatus pronounced a panegyric on the victims in the presence of the emperor; their remains were removed with all honour to Spain, and the names were inscribed on many prominent memorial lists there as martyrs. In Galicia the clergy and the people were almost wholly adherent to the movement.

Of the counter-reaction which followed we have no satisfactory record, beyond that which is indirectly given in the accounts of Priscillian and his followers which were circulated by Orosius and Turribius, and the judgment, probably based on Orosius, which was passed by Augustine. Councils held at Toledo (400 and 447) and at Braga (448 and 563) successively dealt with the Priscillianists. After the latter date they disappear. Isolated and persecuted, it is likely that they fell into heresy of the Manichean or Gnostic type, but the evidence on which this judgment is based is slight, and the names used to represent either is precarious. Much turns on the authenticity of a quotation from Priscillian given by Orosius (Commonitorium, 2 (CSEL xvii. 153)). Its genuineness has been taken for granted by most writers, and is maintained by Künzle and Lezun ; but the searching criticism to which it has been subjected by Babut (p. 279 ff.) lays it under serious suspicion. All the other evidence points in the other direction—the silence of the synod of Saragossa, the express and repeated statement by Priscillian himself to Ithacius, and the judgment of Jerome, the protest of Ambrose, and the championship of St. Martin. The case was soon found to be weak, and the evidence of Priscillian himself turned against him by the assertion that he had defended the death of an innocent martyr in order to conceal dangerous views. This Augustine believed of him on the authority of Dictinnum, which is the authority of one who, having left the Priscillianists and been reconciled to the Church and the clergy, is trying to demonstrate the completeness of his conversion.

E. CHRETIEN.—G. Scheppa, Priscillian, Würzburg, 1861;
PRISONS.

The sentence pronounced in 1630 upon Archbiichop Leighton's father, a physician and divine, for writing against Prelacy in Ireland, is still unexampled. He was no less magnanimous and not less honest than those employed by his accusers against Prelaty, was an extreme instance, in degree, but not in kind. It ran as follows: (1) to be twice pig-fist'd with a truncheon; (2) to be pillor'd in Chesterfield; (3) to have an ear cut off; (4) to have the nose slit; (5) to have both cheeks brand'd with a hot poker: (6) to be sent for 30 days' confinement; (7) to pay £100, and (7) to be imprisoned for life.

How long old ideas survive may be inferred from the Children Act of 1908. By sections 102 and 103 of that great statute it is solemnly enacted that, in Great Britain, delinquents under the age of 14 years, if defined as a person under the age of 14 years, shall be imprisoned or sent to penal servitude or the gallow.s. England obtained a Court of Criminal Appeal in 1907. But in Scotland, while a question of property of trilling value, tried in the civil courts, may be the subject of two, in some cases three, appeals, there is as yet, except in a case of conviction for habitual criminality, no appeal from the verdict of a jury, disposing, in the criminal courts, of a citizen's life or liberty.

For the system, the trial of which still impedes prison reform, a false theological view was partly responsible, along with an inadequate estimate of the sacredness of life and liberty. Lunacy and criminality were looked upon as works of the devil, to be expunged by dealing with the criminal or the laith. That the State, by its own shameful neglect and its iniquitous laws, was itself largely responsible, along with the cynical indifference of the community, for both crime and lunacy was an idea as new as the advance in sanitary science that had been made in the 19th, and which were admitted and mitigated by the State, were the chief cause of disease. Original sin was an easy explanation of all abnormal conduct. So thought Mr. and Mrs. Squeers in Nicholas Nickleby.

Neither the pictures of Hogarth nor the arguments of Jeremy Bentham, neither the disclosures of John Howard, Mrs. Fry, and Thomas Powell Buxton nor the eloquence of Samuel Romilly had much practical effect till the reform of Parliament in 1832. In the beginning of the 19th cent. Acts were passed abolishing goal fees, ordering the appointment of clerks, the police, and prison buildings, the classification of prisoners, the separation of the sexes, and the appointment of female warders for female prisoners. Yet, writing in 1812, James Neild, who followed in Howard's footsteps, said:

'The great reformation produced by Howard was merely temporary... Prisons are relapsing into their former horrid state of privation, filthiness, severity and neglect.' (State of the Prisoners in England, Scotland and Wales, London, 1812).

The movements for the amendment of the criminal law and the reformation of prisons dated from the American and French Revolutions; and they were largely connected with the growth of democratic ideas and institutions.

The importance of the subject, its human interest, and the difficulties which it presents cannot be exaggerated. There is no more difficult question to the legislator than the controlling of the housing of the people, or the liquor question, with all of which the subject of crime is vitally connected. Unfortunately, most critics of present methods are purely destructive. Some ignore the responsibility behind them, and blind to the large share played by poverty and unemployment, drink, gambling, and vice in the production of crime. The index to du Cane's Punishment and Prevention of Crime (London, 1885) does not contain the word 'poverty' or the word 'drink'; and J. Devon's original and interesting
PRISONS

study, The Criminal and the Community (London, 1912), breathes a spirit of despair. The subject has been canvassed at national and international congresses; and, in the United Kingdom, it has been taken up by Government commissions, royal and departmental, whose reports have resulted in a large number of valuable Acts of Parliament and prison regulations, each one advancing more and more in the direction of the treatment of prisoners as human beings, and not as things. Under these statutes and regulations the penal side of prison life has been diminished, and the reformatory side increased, not, as sometimes ignorantly asserted, to gratify a sentimental humanitarianism, but because it was found that the capital community, outside and inside the prison. Reform is cheap at any price. It is a moderate estimate that a thief costs the community £150 a year, while at liberty. It is significant that in no single instance has there been any return to former less humane methods. Two hundred years ago, Montesquieu wrote:

"As freedom advances, the severity of the penal law decreases" (Esprit des lois, Paris, 1935, v. vi, ch. iv.)

We need not be holden of roses, neither should they be torture-chambers.

Experts have written on prisons and prison reform in every European language. Ex-converts have described their experiences, with little value for their point of view; or former, like Lord William Nevill, members of parliament like Michael Davitt, financiers like Jabez Balfour, ladies of fashion like Mrs. Maybrick, and literary men like Oscar Wilde. No subject is more in fashion among the literati than prison reform, and by it playwrights and discussed on the platform, in the pulpit, and in the press. Too often the case for reform is prejudiced by gross exaggeration. As in Oscar Wilde's powerful Ballad of Reading Gaol (London, 1898), pictures are drawn which depend for their point on hardships and cruelties no longer anywhere to be found. It is of little practical benefit to denounce present-day administrators. The question is one of system; it can be solved only by experiment on a large scale and over a prolonged period. Such experiments are being carried on by governments, by communities, and by individuals in the United Kingdom, the United States, and many European countries. Happily for the future, many prison problems will solve themselves as the results of the adequate and appearance of persons requiring penal treatment, through the gradual removal of the chief causes of crime, namely, (a) unemployment and irregular employment, with attendant idleness, the formation of bad habits, lack of energy, and starvation; (b) drunkenness, one of the chief causes of poverty and crime, and likewise one of their most common and dehumanizing concomitants and effects; and (c) the failure to seclude the mentally deficient, the habitual drunkard, and the habitual criminal, so as to prevent the perpetuation of a degenerate race.

It is no exaggeration to say that the greater portion of crime in this country is due to economic, rather than to directly moral, causes.

I. PAST AND PRESENT-DAY PRISONS.—Down to the beginning of the 19th cent. the time-honored methods of dealing with criminals made the question of prisons and prison-management of small practical importance. Prisons were places in which those who had been awarded trial and the condemned awaited execution. The old penal system, for the crime of theft, was to get rid of the criminal, as distinguished from the modern endeavour to reform him and to prevent crime by stopping the manufacture of criminals. This is obvious from a bare enumeration of the methods formerly in use: (a) capital punishment, (b) mutilation, (c) flogging, (d) the pillory, the stocks, and branding, (e) compensation payable to the injured or fines payable to the State, and (f) compulsory exile. Under the Jews, Greeks, and Romans, as also among the Saxons and Germans, the chief and most prevalent form of crime consisted in the enforcement of compensation to the injured. For this rational procedure the feudal barons and the Church of the Middle Ages substituted imprisonment, torture, mutilation, and death.

By degrees, partly through the writings of men like Cesare Beccaria in Italy and Jeremy Bentham in England, partly because a greater value came to be put on human life, and partly through the punishment of capital crimes continued to pass capital sentences for trifling as well as serious offences, the executive, especially in the case of young offenders, frequently remitted the extreme penalty. People may be better than their creed; and legislators and administrators have often been more humane than the laws which they enacted and executed.

These causes led to the system of transportation, which was introduced in the reign of Charles II. Criminals who were sentenced to death in England were transported to the American colonies, along with those who were directly sentenced to transportation.

The old system, thus modified by transportation, continued to prevail in England. Convicts who were sentenced to death in 1776, when ships, called 'hulks,' were established for convicts in the Thames, and at Portsmouth and Chatham. The first hulk was opened in 1778, and the system was not finally abandoned till 1857. Concurrently with the hulks a fresh field for transportation was found, in 1787, in the Australian colonies. In 1834, 4920 convicts were transported to W. Australia. The system of transportation continued till 1857, when the last batch of convicts sent to any British colony was prevented by the colonists from landing in W. Australia. Both systems, transportation and the hulks, were attended with misery, cruelty, disease, and loss of life, avoidable and unavoidable. In the hulks the inmates were herded together in unclean association. Vice, profligacy, and demoralization prevailed (du Cane, Chambers's Ency.

clopedia, a. v., 'Prisons,' viii. 418). It appears that about a fourth of the deaths in the hulks were due to a deadly, but preventable, malady called 'hulk fever.' Transportation was condemned in a Government report of 1838 in these terms:

'The system of transportation is unequal, without terror to the criminal class, corrupting both convict and colonist, and very expensive' (quoted by du Cane, The Punishment and Prevention of Crime, London, 1865, p. 190).

Yet, in view of the importance of emigration for those in danger of falling into crime, it is important to remember that many transported convicts, in new surroundings, away from old companions and temptations, and freed from poverty and idleness, became good citizens, and that some of their descendants overseas now occupy responsible positions in Church and State.

The next phase, concurrent for a time with the maintenance of transportation and the hulks, was the cellular prison and convict settlement, with the accompaniment either of solitary confinement by night and day or of solitary confinement by night and association at work and at meals during the day, but in both cases with silence by day and by night. It was the experience that England and the United States is entitled to the credit or discredit of the origin of the cellular system, which had been advocated by John Howard as early as 1776, always, however, with the accompaniment of work, instruction, and moral and religious influences.
The cellular system, so far as involving isolation at night and continuous silence while the prisoners are in association, still remains in almost universal use in all European countries. But in the United Kingdom the number of days of solitary confinement during the day, except as a punishment for offences committed in prison, was abandoned in 1859 for prisoners with short sentences; it has also been abandoned in Scotland in the case of convicts, and reduced in England in 1910 to one month. So far as the present buildings and surrounding ground will allow, the prisoners work, eat, and exercise in association, but in silence.

1. Kinds of modern prisons.—The various kinds of prison in the British Isles have, similarly to those in Great Britain, been designed, and a number of experiments in a few cases of exceptional local interest and intelligence, great abuses, due to want of any uniform system of treatment, to inhumane or incompetent officials, to antiquated and inadequate buildings, and to the disregard of the humanitarian and unnecessary prisons. The differences in prison treatment were so great that criminals were known to select for their operations the locality of the gaol with soft beds, generous diet, and lax rules. The cases of association, however, have always been hampered by want of funds in introducing humane and reformative methods; they have done much to minimize the disastrous effects of prison life, and their annual reports do not disguise their dissatisfaction with much that is done, and much that is left undone, under their administration. These reports show a progressive realization of the Compatibility of humane and reformative treatment with good discipline.

(a) Local prisons, for those sentenced to not more than two years' confinement, are vested in and managed by three bodies of Prison Commissioners for England, Scotland, and Ireland respectively, created by the Act of 1878. There had been previous attempts to a maximum of ten years' imprisonment, but the cases of exceptional local interest and intelligence, great abuses, due to want of any uniform system of treatment, to inhumane or incompetent officials, to antiquated and inadequate buildings, and to the disregard of the humanitarian and unnecessary prisons. The differences in prison treatment were so great that criminals were known to select for their operations the locality of the gaol with soft beds, generous diet, and lax rules. The cases of association, however, have always been hampered by want of funds in introducing humane and reformative methods; they have done much to minimize the disastrous effects of prison life, and their annual reports do not disguise their dissatisfaction with much that is done, and much that is left undone, under their administration. These reports show a progressive realization of the Compatibility of humane and reformative treatment with good discipline.

(b) Convict settlements, for prisoners sentenced to what is called 'penal servitude' (first authorized in Great Britain by the Penal Servitude Act of 1853), that is to say, any period of imprisonment from three years up to a life sentence. There are three periods in a convict's sentence: (1) the first month, (2) the remainder of his period of detention, during which he works in association with other convicts, but in silence, and (3) the balance of his sentence, when he is outside on a ticket-of-leave, liable to be apprehended if he fails to report himself or breaks any of the other conditions of his licence. Penal servitude involves so much food and so much more open-air work, in association with others and not in solitary confinement, that many 'old hands' prefer a sentence of three years' penal servitude (to be served at Dartmoor in England, where the convicts are employed reining ground and in farm-work, or at Peterhead in Scotland, where they quarry granite and build a harbour) to one of imprisonment for two years in an ordinary prison.

Comparative statistics of criminal offences and criminals require to be dealt with cautiously, and with intimate knowledge of the whole field, if one age or one country is to be fairly and accurately compared with another. The comparison between transportation and the hulks, on the one hand, and penal servitude, on the other, is not a complete one; but, subject to all deductions, it is encouraging that, whereas in the days of transportation there were, in 1857 (when the population of England and Wales was some 15,000,000), about 50,000 convicts, in the colonies or at home in 1869 the total number of convicts under sentence of penal servitude was only 11,660, of whom 3950 were men and 1700 women. This number of convicts was reduced in 1867 to 4978 (4545 men and 234 women), and in 1908 to 2799 (2660 men and 130 women). Taking local prisons and convict settlements together, it seems to be established that of first offenders about three-fourths never return, while of those convicted for the third time about three-fourths reappear as prisoners in local prisons or convict settlements. (c) Preventive detention prisons, or departments of prisons, established under the Prevention of Crimes Act of 1908 for convicts who have received a sentence of penal servitude, and who have also been proved to have been 'habitual criminals' at the time the offence was committed, engaged in no occupation except that of crime. These are the 'reeducitives' of France, the 'revolvers' of the United States. The period of preventive detention, which begins when the sentence of penal servitude ends, instead of being unlimited, as it ought to be and as was proposed in the original bill, is limited to two years, or ten years if the sentence is for more than 15 years. When the convicts cease to require attendance at the Prison Commissioners the convict may have to serve the full period of preventive detention named in the sentence or he may be liberated at any time on probation. This useful Act requires amendment, because at some classes of criminals, such as those convicted of the minor and unnecessary prisons.

(d) Criminal Lunatic Asylums, established under the Criminal Lunatics Act of 1898, to which habitual drunkards, falling into crime, may be sent for lengthened periods. It was recognized that the short sentences usually inflicted on the habitual drunkard were worse than useless, and that to send a man or a woman to gaol for a day, a week, or a month on, say, their 200th appearance is to make a laughing-stock of legal procedure. Such short sentences, while long enough to rehabilitate the drunkard for further excess, are too short to do any good to the 'old hands', when out of prison, even while truly pursuing a life of crime, take care to do just as much work as will make it impossible to convict them, under the definition in the statute, of being 'habitual criminals.'

(e) Criminal Inebriate Asylums, established under the Criminal Inebriates Act of 1898, to which habitual drunkards, falling into crime, may be sent for lengthened periods. It was recognized that the short sentences usually inflicted on the habitual drunkard were worse than useless, and that to send a man or a woman to gaol for a day, a week, or a month on, say, their 200th appearance is to make a laughing-stock of legal procedure. Such short sentences, while long enough to rehabilitate the drunkard for further excess, are too short to do any good to the 'old hands', when out of prison, even while truly pursuing a life of crime, take care to do just as much work as will make it impossible to convict them, under the definition in the statute, of being 'habitual criminals.'

(f) 'Borstal' Institutions, established under the Prevention of Crime Act of 1908, pt. i., for persons between 16 and 23. Du Cane says that most habitual criminals have begun their malpractices before 20 years of age, and 60 per cent under 15 (see art. JUVENILE CRIMINALS).

(g) Reformatories for boys and girls under 16, convicted of crime, to be detained for not less than three or more than five years, of which there are 38 in England, 7 in Scotland, and 2 in Ireland (see art. JUVENILE CRIMINALS).

2. Differences between the prisons of the past and the prisons of the present in the United King-
dom. — (a) Ownership and administration of prisons.

— The possession, or assumption, of judicial powers, and the use of dungeons attached to their castles and palaces, were formed one of the chief sources of the power of the landed classes, titled and untitled, and of the Church in the Middle Ages. After imprisonment by private persons was rendered illegal, there came the system of small prisons, which, while inadequately inspected by Government officials, belonged to, and were maintained and managed by, local bodies. In 1818, in 59 of the 518 prisons in the United Kingdom women were not divided from men, and in 445 there was no segregation of classes. Some of these prisons were described as scenes of abandoned wickedness. In 1813 Mrs. Fry, on her first visit to Newgate, found 300 women, tried and untried, with their children, crowded together, in rags and dirt, and with nothing but the floor, without bedding, to sleep on. The Act of 1878 already referred to, which vested all prisons in Prison Commissioners appointed by the Crown, effected large savings in cost as well as improvement in the buildings and treatment, without sacrificing the benefit of local inspection.

(b) Prison management.—A writer (M. F. Johnstone) in the Forthnightly Review, new ser., lxix. (1901) 560, says:

"The improvements which have been effected in recent years in prison management are of so radical a nature that they practically amount to a change of attitude towards the offender. It is the general conception that punishment is imposed for the sake of the suffering they entail do not act as a cure. They rather tend to brutalize the subject, and serve to intensify the undue prejudice against both him, in the first instance, to raise his hand against his fellow-men."

The old class of official and prison administrator not unnaturally, in view of his training, considered only what would maintain perfect prison discipline, and was not influenced by the fact that, while flogging and 'the black hole' undoubtedly crushed the prisoner into sullen and revengful submission, these methods rendered him unfit, on release, to be re-absorbed into the decent part of the community. From every relaxation of the last century the old official has propagated disorders, which have in no case occurred. He did so when it was proposed that the use of 'the black hole' should cease, with the crank (denounced by Charles Reade in It Is Never Too Late to Mend) and the treatise which shows diminution in size and dim glass removed so that at least the sky, if not the earth, might be visible; when an effort was made to substitute for oakum-picking interesting and educative work; when flogging ceased, except for mutiny or gross violence on warders, and then only when authorized by a visiting magistrate or a Prison Commissioner; when work in association was introduced; when libraries were started; when, instead of everything being done to weaken the family tie (perhaps the only remaining motive for reform), prisoners were allowed to have their children's photographs in their cells; when a little bit of mirror, to promote tidiness, was fastened into the walls of their cells; when it was proposed to lay wooden floors over the miserably cold cement of which cell floor was constructed; when Swedish drill for women and ordinary drill for men were introduced, instead of, or in supplement to, the weary pacing round a circle in the prison-yard; when work in the fields was tried in connection with flogging; when a variety of foods was substituted for the eternal 'skilly'; when good conduct marks, carrying a money value, were introduced; when magic-lantern lectures, which have been found a valuable aid to discipline, were first started. It is only fair to say that he has, in most cases, admitted that his fears were unfounded; to his amazement he has found that discipline can be maintained better by the stimuli of moderate rewards, judiciously given, than by the deterrence of the most severe punishment. In 1865, in English prisons, according to the first of Mr. Montagu's Reports, 1864, under the so-called 'humanitarian' methods, the numbers had fallen to 37,000—a figure which has been since steadily reduced. Convicts on whom the terrors of the lash or the dark cell produce no effect, will stop their bad behaviour if they know that perseverance will deprive them of the magic-lantern lecture or cut off the right, recently conferred upon them, of spending a small portion of their earnings on caddy or tobacco. An old class of official still clings to the stereotyped prison in or near towns and within high walls, although he has to admit that reformatories for juvenile and borstals for juvenile-adult criminals, not to speak of such startlingly successful experiments as George Montagu's Little Commonwealth in England, are conducted successfully in the country, without high walls, and with only a manageable number of attempts to escape.

Prison management is in the hands of the following officials:

(1) Governor and matron.—Prison rules are uniform all over the country; but the humanity and reasonableness of their execution depend on the individual governor: the tone from him or her more than from the Prison Commissioners or from the chaplain or medical officer. No absolute rule can be laid down for the selection of governors and matrons. Admittedly, the experiments have been most successful in the class of official still clings to the stereotyped prison in or near towns and within high walls, although he has to admit that reformatories for juvenile and borstals for juvenile-adult criminals, not to speak of such startlingly successful experiments as George Montagu's Little Commonwealth in England, are conducted successfully in the country, without high walls, and with only a manageable number of attempts to escape.

(2) Chaplains.—There were made the appointment of prison chaplains compulsory. Previously, and for some time after 1814, their chief work consisted in ministering to the prisoners under sentence of death and attending them to the scaffold. Till 1868 that spectacle continued to be a public disgrace, denounced by Dickens, but successfully upheld by Samuel Johnson.

'Tyburn itself,' Johnson said, 'is not safe from the fury of innovation, . . . The old method was most satisfactory to all parties. The public was gratified by a procession; and the criminal was supported by it. Why is it all to be swept away?' (quoted by du Cane, Punishment and Prevention of Crime, p. 22).

Nowadays the right kind of chaplain becomes the prisoners' friend, and keeps in touch with them after their release. Realizing acutely the chaotic and pernicious character of the prison, he at their undying and misleading, he is at the same time fully alive to the prisoners' own share of blame. The present writer knows a convict settlement where nominally Protestant convicts have entered themselves into a community to have their services of a particularly friendly priest. The chaplain, Protestant or Catholic, is not readily gullible, as the public believe. His disappointments do not arise from the prisoners' insincerity, but from his weakness of will, his want of friends, and the temptations which the State licenses or permits. Prison-effect ed reformation may be quite
PRISONS

genuine at the time; but it is generally too tender a plant to stand the storm of temptation. Chaplains used to be appointed for life; short terms, with the system of rotation under which the clergymen, now are found to secure greater freedom. The chaplain has in many cases the supervision of the educational work of the prison and of the library, and he organizes prison lectures. Moral and religious instruction now has a place in the library than formerly. Education does not make men and women moral or religious, but it prevents their becoming criminal. In prisons persons of good education are almost as unknown as total abstainers, and the most intelligent in prisons is a prison which preserve a prisoner's individuality. In Mountjoy Prison in Dublin the writer was told that Dickens is the favourite author among the men, and Annie Swan among the women.

(3) Medical officer. — The prison doctor's most important duty used to be to certify, in cases of hanging, that life was extinct, and, in cases of flogging, to see that death did not ensue. Now his observations of the mental condition of a man convicted of a crime is of far greater importance, for he is accused is fully responsible and can be held to account as a normal human being, or whether, as to a certain extent mentally defective, he may have lita crime, if proved, treated as one of manslaughter. The doctrine of the conditions, or whether he is in such a mental condition that he is incapable of instructing a defence and must be committed to a criminal lunatic asylum. Every prisoner is seen at short intervals by the doctor, inside or outside the prison hospital; the doctor, particularly under Scotch administration, has a free hand in the increase or decrease of the prisoner's diet and in regulating his work; moreover, he soon acquires marvellous skill in detecting malingerers. Prison doctors have opportunities of studying medico-legal questions of scientific and practical importance, including the proportion of prisoners who have been from birth, or whose habits have made them, morally and mentally defective—a question which has an obvious bearing on punitive as well as reformatory treatment.

(4) Warders, male and female. — 'The officer who has charge of prisoners has such power, for good or ill, to control their conduct, that his position is of at least as many positions more responsible. Nor are there many in which the officer is exposed to more temptation to neglect his duty, or to misbehave, than in that of the ordinary warder.' (p. 241.) (Pendle and Preventive Principles, London, 1896, p. 278.)

The warders' daily routine, spent in an atmosphere of repression and degradation, is not favourable to the development of human sympathy; but in the general case no complaint can be made of the fairness of their treatment of prisoners. Instances of favouritism are due rather to the good conduct of the prisoners favoured than to any improper preference. As in lunatic asylums, cruel treatment by prison officers, which cannot be entirely prevented even under the best system of selection and supervision, is associated almost invariably with grievous provocation. Attempts in prison to commit suicide, which are seldom successful, are the fault of the system, not of those who administer it.

(5) Prison visitors. — It was not till the Act of 1899 that lady visitors were ordered for all local prisons where there are female prisoners. Religious and philanthropic visitors, who ought in all cases to be encouraged to visit local prisons, should be allowed to visit the classes of the prisoners from which prisoners come, are now welcomed to local prisons, under suitable regulations.

The English Prison Commissioners' report for 1915 heartily endorses the increase of local prison visitors, aid societies, workers, secular and religious, who work day by day with patience and undiminished hope, for the rescue and reinstatement of the criminal of both sexes, and of all ages.

. . . It is to this organized effort of charity and goodwill, which has been so speedily extended with increasing numbers of years to the visitation and after care of prisoners, that the yearly improvement of our criminal records, especially with regard to the younger offender, is due (p. 25).

Devon writes:

'..The visits to prisoners on the part of people from outside are of great benefit; anything is better than to break the solitude of a life devoted to evil. They must have preserved many from desperation, and from suicide. The visits of clergymen and charitable friends show the prisoner that he is not considered an outcast, impossible of redemption' (p. 257). As to prison lectures, 'anything that prevents the inciting and making the prisoners think of the petty incidents that go to make up their lives in prison, from beating against the bars of their cage, is beneficial' (p. 251).

(6) Prison work. — The provision of work in prisons, which is a cardinal principle in the Prisons Act of 1898, is attended with great difficulties, if it is to be (1) sufficiently interesting to preserve the prisoner's humanity, (2) educative, (3) remunerative, or at least not productive of loss, (4) not competitive with philanthropic institutions, like blind asylums, and (5) not hostile to trade union rules and the legitimate interests of free labour. In connection with the present European War, the necessity of having work which will engage prisoners and even enthusiasm, work of a patriotic kind has been done by prisoners, toiling extra hours without remuneration other than the much-esteemed privilege of having the war news of the day read to them.

In connection with prisoners working in association, the question of classification presents great difficulties. An effort is made to keep so-called 'first offenders' separate from so-called 'hardened criminals, but in many cases the first offender's act of fraud, or assault, is not his first offence, but only the first case which has been reported to the police or in which there was evidence to convict; and there are so-called 'hardened criminals', more sinned against than sinning, whose moral nature is by no means totally depraved. It is a widespread and pernicious delusion that an assault implies normal quarrelsomeness or brutality, and that an indecent attack implies normally ungodly, lust; in both cases, apart from any question of provocation, any existing personal grievances, or a converted respectable citizen into a felon may be the direct result of drink taken to such an extent (which may be far short of 'drunkenness') as to destroy self-respect and respect for the rights of others.

The difficult question of the universal enforcement of silence among ordinary prisoners in our local prisons and convict settlements remains for consideration. The difficulty consists in reconciling in practice the two principles, 'It is not good for man to be alone,' and 'Evil communications corrupt good manners.' In this important respect our prisons and convict settlements are more dehumanizing than transportation and the hulks in old days or than modern Siberian and Turkish prisons. But, then, it is said that suppression and not supervision is necessary, because conversation, however carefully regulated, is unavoidable subservive of discipline, and prisoners would abuse the privilege, if not impossible in the strictest system of escape, at all events, for carrying on destructive and seditious conversation, by access to newspapers as well as books after the day's work is over, as is done with good results at Borstals, among female convicts in England, and among male convicts undergoing preventive detention. The hardships as well as the pernicious effects of the present system are
so much felt that the writer knows at least one governor who, when dealing with prisoners' marks, does not count those bad marks which have been caused by the process of passing a harmless observation to his neighbour.

It is right to add, in regard to prison management generally, that no prison administrators, unless the most old-fashioned, are satisfied with the present system and its results. Therein lies the hope of the future.

(7) Discharged Prisoners' Aid Societies.—If efforts to reform are to be of permanent avail, the prisoner must, before release, be gradually prepared for life out of prison. On leaving the prison, have work found for him and be otherwise befriended. More might be done in both directions, even under the present system. It is not enough to allow the prisoners to grow their hair of a normal length for a few weeks before their release. Additional relaxations would not be abused, because abuse would mean forfeiture of gratuity and of the period of remission. Opportunity is needed to overcome the shyness and timidity of the prisoner as he faces the world which prolonged seclusion produces.

An Act of 1792, enlarged by the Gaol Act of 1823, made provision for discharged prisoners out of public funds. In 1802 the first Discharged Prisoners' Aid Society was founded. Others followed; but it was not till 1862 that these societies obtained statutory recognition. Since 1887 every prison of any size has had a Discharged Prisoners' Aid Society working in connexion with it. In 1898 the Prison Commissioners issued schemes for the guidance of these societies, containing provisions as to grants in aid to their funds; and when, in 1899, lady visitors were appointed to all local prisons containing female prisoners, this was stated to be with the special object of aiding in the reformation of the prisoners and finding employment for them.

In 1906, 39,413 discharged prisoners passed through the hands of 62 Aid Societies, of whom 2000 were found worthy and 1100 refused assistance. These societies are doing admirable work despite inadequate funds and an insufficient number of voluntary helpers.

(c) Prisoners with special privileges.—The modern prison contains two classes of inmates who should not come to it. Some are those who have been convicted of actual crime, namely (1) convicted prisoners, who are entitled to furnish their own rooms, wear their own clothes, provide their own food, carry on correspondence with persons outside, and receive visits from their friends, and (2) debtors (now, happily, under modern legislation, few in number), who have somewhat similar privileges. In the case of convicted prisoners in good health there is little respect of persons, in either accommodation, food, dress, or work. It was not so in former days. Just as, in medieval warfare, all officers were, if possible, captured alive, that they might be made a source of profit to the captors, so imprisonment was then used as a means of obtaining what would now be called blackmail but was then known as ransom. In old the only wind was tempered in many ways to the wooldy lamb, clerical and secular. The so-called 'benefit of clergy' was greatly abused; but, on the whole, like the right of sanctuary, it acted beneficially for the criminal as a whole. In old, with the only wind that was tempred from the brutal treatment to which secular persons were exposed. But for the benefit of clergy and the right of sanctuary, both history and literature would be poorer. The medieval Church rivalled the State's brutal treatment of all prisoners, lay or clerical, charged with heresy; but its treatment of non-heretical prisoners was, on the whole, much more humane. Sometimes it was more than humane, if we can judge from Archbishop Bliss's Constitutions (dated in 1367).

The general idea that the prisoner in prison that the prison, intended for a punishment for their crimes, is turned into a refreshment and delicious solace, and they are pampered in their vices by case and the admission of concerns is.

(d) Prisoners in modern prisons who were absent from old prisons.—These are long-sentence prisoners. Long sentences were originally the outcome of the false theological view of sin already referred to. But it does not follow that prolonged imprisonments must cease. Under totally different conditions, with different social circumstances, the prisoner may be reformable, until the offender has shown that he may be released with safety to the interests of his fellow-citizens. In the case of those who have been proved, by repeated and prolonged trials, to be un reformable imprisonment for life will be substituted for the present absurd system, under which a prisoner, who has shown after a short period that he may safely be released, has to be maintained in prison, and his family in the poorhouse, for the rest of their lives; a prisoner, who, after sentence; and a prisoner is released at the end of a fixed sentence, even although he openly boasts that he means, on liberation, to resume his Ishmaelite trade, his hand against every man.

(e) Prisoners who are to be found in modern prisons.—(1) Children convicted or untried. For centuries prisons were nurseries of crime. Children, some of them born and brought up in prison, were sent, for trifling offences, to the gallows, to Botany Bay, or to prison. In prison they became accustomed to the prison atmosphere and indifferent to it, and they left it 'goat-birds,' with the prison-brand on them figuratively, and in some cases literally. The establishment of industrial schools for children under 14 in danger of falling into crime, and of reformatories for children under 16 who had been convicted of crime, and the marked success of these establishments had gradually reduced the number of children in our prisons. But, as already pointed out, it was not till the passing of the Children's Act in 1908 that it was declared illegal to send any boy or girl under 14 in any circumstances to prison; and it was provided by the same statute that no sentence of imprisonment, except in a very limited class of cases, could be imposed on any offender under 16.

(2) Debtors. Literature has made great use of the abuses connected in old days with debtors' prisons, especially in England. The whole iniquitous system was terminated by the Abolition of Imprisonment for Debt Act, 1880. The modern prison is not imprisoned for debt is negligible. They consist, in England, of debtors who are able to pay, but will not, and, in Scotland, of debtors for Crown taxes and for aliment, these cases forming exceptions in the English and Scottish statutes abolishing imprisonment for debt in the two countries.

(3) Prisoners waiting for trial. In England it is a rule that the king's judges would not visit the place of trial for several years, during which time prisoners who were accused of the most insanitary kind, and their families, being deprived of their bread-winners, starved. Now, if a prisoner is not tried within a short time after apprehension, he is entitled to release.

(4) What prisoners are imprisoned for which they have been apprehended, but unable to pay the gaoler's fees, which were always extortionate, and often illegal. Now all gaolers' fees are abolished, and instant and unconditional liberation follows a verdict of acquittal.

(f) Security of modern as distinguished from old prisons.—In former times the facility of escape
from prison helped to explain some of the practices mistakenly quoted in evidence of our ancestors' brutality. Nowadays the safety of the community can be increased by depriving the law-breaker of his life or mutilating him by blinding or by cutting off a limb, and, at the same time, punishment can be inflicted by imprisonment in place of the old sentences of flogging, the pillory, the stocks, or branding. Gaol life was constructed on the high principle, ponderous doors, and weighted fitters. It is now achieved by properly constructed buildings, constant personal supervision, and reliable warders. Our ancestors should not be blamed for practices which were forced upon them by necessity.

(g) Hygienic conditions.—Until the 19th cent. these were bad, beyond our power to realize. The inmates were starved, housed in a manner incoherent, sordid, and dissolute, and as for their habitation, it is evil enough for doggys, and yet, the Lord knoweth, they have not enough thereof!' (ed. J. M. Cowper, Early English Text Society, London, 1854, p. 37).

In the third edition of his great book, published in 1784, John Howard says:

"Many, who went in healthy, are in a few months changed into belittled beings, and become objects of sympathy. Some are taken by a new infection under diseases, "sick, and in prison," expiring on the floors, in loathsome cells, of pestilential fevers and the continual smallpox."

Gaal fever was one of the commonest as well as most deadly maladies.

Lord Bacon (quoted by du Cane, p. 43) spoke of "the smell of the gaol the most pernicious infection next to the plague. When prisoners have been long and close and nastily kept, whereas we have in our time experienced twice or thrice, both judges that sat upon the trial, and numbers of persons that attended the business, or were present, sickened upon it or died."

Nowadays gaols are models of sanitation; prisoners are well fed; the death-rate is below that of the outside population; and the old moral evils, arising from the absence of separation between the sexes, are almost unknown. The disease for which John Howard and Elizabeth Fry and their coadjutors have worked so thoroughly accomplished, and the crying abuses, physical and moral, which they denounced have been removed. Great attention has been paid to the cleansing of the outside of the cup and platter. But whether the proportion of prisoners who leave our prisons more inclined and better fitted to lead law-abiding lives than when they entered is greater or smaller than under the brutal systems of the past is by no means so clear. Dickens exaggerated the disastrous effects of the separate cell, and, since his day, it has been ameliorated by good libraries, the friendly visits of the chaplains and prison visitors, and in other ways. The idea of the brutal prison, in that dehumanizing effect modern prisons, with so their vast cost, their perfect discipline, and the good intentions and endeavours of the Prison Commissioners and the officials who manage them, are little dreamed of.

(4) Reformatory methods.—The modern definition of punishment by imprisonment is founded on the idea (1) of discipline so severe as to act as a deterrent, and (2) of such reformatory influences as religious and moral teaching, and good example and training in self-control, promoted by offering advantages to industry and good conduct, as well as punishment for the reverse. However inadequate this conception may be, it is at least a great advance on old ideas and methods. At first chance was employed for the detection of criminals, and one of many methods of punishment, and, ultimately, the only method of punishment, except hanging, flogging, and fining. What is said by F. Pollock and F. W. Maitland applies to the abuses of our modern prisons:

"Imprisonment occurs in the Anglo-Saxon laws only as a means of temporary security. . . . Imprisonment would have been regarded in their old times as a useless punishment; it does not satisfy revenge, it keeps the criminal idle, and, do we what we may, it is costly." (Hist. of English Law before Edward I., p. 490.)

H. de Brecot, who wrote in 1268, expressly states that prisons were to confine and not to punish:

"Carcer ad continendas et non ad puniendas haberi debet" (de Legibus et Consuetudinibus Angliae, London, 1509, fol. 105).

Persons were often kept in prisons for lengthened periods and even for life, not as a punishment, but as a means of avoiding the prisoner's right to trial or in order to compel payment of fines or ransom, or to elicit testimony.

It must be supposed that the idea of deterrence, which, along with expiation, is at the root of our modern system, was unknown in former times. Indeed, the principle of deterrence must have a place, large or small, in every criminal system and be the cherished idea of some of our ancestors. But its importance is usually exaggerated. Tested by the criminal records of all ages and in all countries, even the most savage punishments are conclusively proved inadequate either to stop the supply of offenders or to turn criminals into law-abiding citizens. On crimes of passion deterrence has not time to operate; in cases of deliberate crime the fear of detection and punishment only makes the criminal more wary. The question in the end must be, Are the results which the expenditure on the prison system is likely to afford the best worth the expense? And the best of these are at present carried on, that is to say, under a system so identified with exploded theories of punishment that the reformative elements which have been engraven on it do not have a fair chance of success? No doubt it would be dangerous to the State if at large are withdrawn for periods more or less extended. On the other hand, thousands are housed, fed, clothed, and doctored by the State who, if at large, would be supporting themselves by their work and adding their labor to the production of the wealth of the State. Some are benefited by good influences under which they come in prison, but, for one of these, there are scores who are brutalized by prison life and who come out worse than they went in. There are cases where, in their results, notwithstanding the best endeavours of their managers, our prisons may come under the condemnation pronounced by Mme de Staël on the Old Bicêtre, which she called "a prison to propagate crime and a hospital to propagate disease."

It may be said that these are grave statements to be made by an administrator of the present system; but they are in accord with a growing section of expert opinion.

"It may be at once admitted," writes A. G. F. Griffiths, H.M. Inspector of Prisons, "that the system of isolation has produced some remarkable results, and no conference has ever conferred more appreciably diminished crime. Cloistered seclusion is an artificial condition quite at variance with human nature, and has, in all experience, and the evidence on the subject continues, has proved injurious to health, inducing mental breakdown. A slow death may be defended indeed on moral grounds if the individual has been "‘taxed’ without a further form of capital punishment" (E.B., xxv. 369).

In 1855 a Departmental Committee reported:

"The great, and, as we consider, the proved danger of this highly centralized system has been, and is, that, while much attention has been given to organization, finance, order, health of the prisoners, and prison statistics, the prisoners have been"
PRISONS

345
treated too much as a hopeless, or worthless, element of the community, and the moral, as well as the legal, responsibility of the prison authorities has been held to cease, when they passed outside the prison gates. The satisfactory sanitary conditions, the unbroken orderliness of prison life, economy, and high organization are held and justly held to prove the administration. But the moral condition, in which a large number of prisoners leave the prison, and the serious number of recidivists, has led us to think that there is ample cause for a searching inquiry into the main features of prison life (p. 7).

II. THE PRISON OF THE FUTURE.—The word prison is used in this title. But in the criminal institutions of the future many of the features associated with the word will be eliminated. In the Children Act of 1868 'places of detention' (not 'prisons') are, by sections 102, 106, and 108, to be provided for certain classes of juvenile offenders. The criminal institutions of the future will be places of detention and reformation for the reformable, and places of detention for the unconvertible. But this can be done only by the reconstruction, generally on new sites, of existing prisons, which were built to carry out erroneous ideas by methods now discredited. Instead of being situated in the country, with ample ground inside the bounds for the erection of workshops as occasionally used, and ample ground out for farm work and for exercise, existing prisons are generally situated in or near towns; the ground, originally insufficient, has been gradually encroached upon for the erection of workshops and other buildings. In the present system, the measure of demand on prisons and on reformers; and the only exercise possible is in Indian file, round and round a circle marked by stones on the ground—a ghastly tramp, euphemistically referred to in an English prison report as 'the prisoners enjoying exercise the air'.

It is true that there are important respects in which the prison of the future cannot hope to excel the prison of to-day. The large areas of ground that will be required and the ampler buildings will make the initial expense greater than the continuance of the present system; but thereafter, when the reformatory methods get a fair chance to tell, the expense will rapidly lessen, until the premises are used only to detain those who are criminal, and those, having proved themselves hopelessly unable to be at large with safety to the community. The future prison will be less rather than more secure against escape, although the motives prompting escape will be materially lessened. No ingenious devices will be employed to prevent the inmates catching even a passing glimpse of earth and sky and sea; but in cleanliness, heating, and ventilation its buildings cannot improve on those at present in use. The prisoners of the future will not work for the benefit of the State, but for those whom they have defrauded and for the support of their own wives and children. There will be greater variety in food, but there can be no possible advance on the quality of the excellent, but unvaried, diet which at present prevails. The prisoners' clothes will be quite as good as the present uniform, but they will not be such as to prevent any man with a shadow of self-respect from allowing his wife and children to visit him. The discipline may be less mechanically justifiable than the present, but is no longer preventive of the escape to which it is necessary to keep the inmates human, nor will it be thought essential, in every ordinary interview between husband and wife, to interpose two sets of iron bars between the visitor and the wife, so that they may not meet in the same sitting and sleeping space. The discipline will not be lax, but it will allow some opportunity for the exercise of volition and initiative, the complete stifling of which under the present system renders prisoners on release unfit to stand alone and fight their own battles.

Generally speaking, discipline will be maintained by just treatment and human kindness. ‘Even a donkey will go farther after a carrot than when driven by a stick.”

The main difference between the present prison and the prison of the future may be thus stated: in the prison of to-day the system is not wholly directed to detention and punishment, as it was immediately before Howard's time, yet it is primarily punitive and hardening, and only secondarily reformatory, whereas in the prison of the future the whole effort will be directed to secure that, when the offender is released (if he ever is released), he shall be at least so far reformed as to make it safe that he should return, under friendly supervision and help, to be a free member of the community. Whatever be the precise system, it must be based on the comparatively modern discovery that a healthy open-air life, interesting and educative work, and wholesome moral and religious influences are the chief panacea for human maladies—physical, mental, and moral. A Dutch proverb was a favourite of John Howard, ‘Make men diligent, and you will make them honest.' Griffiths' well-known epigram—a man is but a man as long as he be an prisoner—emphasizes the fact that all epigrams and generalizations are exposed; yet there is some foundation for his statement that half the inmates of our prisons should never be let out and the other half should never have been.

There are certain classes of persons at present forming part of our prison population who will not be found in the prisons of the future, but in separate establishments:

(a) Persons accused of crime who have been either refused, or who have been unable to find, bail.

(b) Persons for whose offences fines are deemed sufficient, and who, are, under the present system, sent to prison in default of payment. By recent legislation time is now given for payment of fines, and part payment of fines can be made, thereby reducing pro tanto the period of imprisonment. The result has been to lessen greatly the number of prisoners of this class. Such prisoners, whose only offence, generally speaking, are not crimes, but only breaches of social discipline, are really detained for non-payment of debt; and, so far as it is necessary to deprive them of liberty, they ought not to be kept in an ordinary prison, but in an institution in which they could earn, by their work, the balance of the fine imposed upon them, without being branded for life as criminals.

(c) Mental defectives. These are now sent to prison because judges have to deal with all criminals, except lunatics and imbeciles, on the false basis (1) that they are normal, physically, mentally, and morally; (2) that they have had, and have made, a deliberate choice between good and evil; and (3) that they were in a normal condition when the act was done, the fact generally being that they went to be questioned under the influence of drink, which, like other drugs, can, during the time of its operation, completely transform the most law-abiding disposition. These persons are unable, with the facilities and temptations authorized for them, by the law, to control the impulses of which they are subject, and are driven by their weak wills to violate the laws of society.

When there is risk of injury to themselves or others, they ought to be confined in asylums; when there is neither homicidal nor suicidal tendency, their proper place is in farm colonies.
where, while prevented from committing crime and from perpetuating their degenerate stock, they will be saved the needlessly rigorous treatment to which they are at present subjected. Much in our present system contravenes the maxim that ‘all unnecessary pain is cruelty.’

(4) The best and most certain means of effecting the purposes here sought can be accomplished by placing them on probation under the supervision of probation officers, in accordance with the Probation of Offenders Act, 1907. This is known as ‘conditional liberty, on probation,’ first introduced in Massachusetts, and has been further developed in various places. The system is capable of great developments; and sooner or later the State will find it economical to employ, and adequately remunerate, probation officers. If people can be got to take charge of lunatics, it should be possible, for adequate remuneration, to provide for the guardianship, outside of prison, of criminals or other persons suffering from mental disease. In England, among those who are known as juvenile-adults—those between 16 and 21—the commitments fell from 12,178 in 1900 to 3663 in 1915. Before long all committals to prison of persons under 21, when the offence is trivial and the antecedents of the offender are good, will be avoided by the extension of the system of supervision.

(c) Those who receive short sentences. The Borstal Committee for Wakefield Prison, reporting in 1915, stated:

‘There is not a single redeeming feature in a short sentence. It carries with it all the social stigma and industrial penalties of imprisonment, with no compensation to the offender or to the community. If there still survives in the minds of administrators of justice the obsolete and exploded theory that prison is essentially a place for punishment—and for punishment alone—for the expiation of offences in dehumanizing, senseless tasks, and arbitrary discipline, truly there could be developed no more deplorable form of punishment than the short sentence oft repeated (English Prison Commissioners’ Report for 1915, p. 18).’

Yet, in spite of such views, which represent the opinion of criminologists, there were in England, in 1914, 1106 sentences of one day.

Whatever improvements may be effected in the future in the system and methods employed to deal with crime in prison and to reform the criminal during detention there, to the extent at least of making him on his release a safe member of society, it must never be forgotten that these are merely palliatives to reduce the effects of a disease. It is an undoubted fact that the present system and the present methods have failed, and are failing, to rid the country of crime. If it is also true that no effective system of reformation is compatible with the conditions necessarily involved in imprisonment—because effectual reformation, to be permanent, requires reformation of the individual, and reformation of the individuality involves innocent and wholesome social intercourse, which is practically impossible in prisons—then the claim for preventive, in preference to curative, measures becomes all the more manifest and urgent.

It cannot be said for that view, and, if it is sound, the main effort of the statesman and the philanthropist must evidently be to go to the fountain-head and to cut off the supply.

Adopt, so far as possible, other means than imprisonment for the reformation of the delinquent. The conviction of a person as of the 5th century, and throughout the Middle Ages, and the repressive effort must be that which reduces incarceration to the lowest extent compatible with public security, and which seeks to limit the evil by moral treatment; and the treatment of the offenders is to be supplemented outside the gates of jails, rather than within them. . . . Even the best

prisons are in a certain sense evils. One of the chief aims of a wise penology is to devise means for advantageously and safely dispensing with them (Tulloch’s, p. 290).

Every movement calculated to improve the social well-being of the people is a step to empty prisons and convict settlements and to reduce and extinguish crime. So far as trivial offences go, it is better not to punish at all than to send to prison. If prisons are to be emptied and crime is to be prevented, it must be done by the State securing:

(1) that no citizen shall, without fault or physical or mental feehness on his part, be unable to earn a continuous living wage for himself and his family;

(2) that every citizen shall be able to obtain such housing and surroundings as shall make it possible for him and his family to live decent law-abiding lives;

(3) that every child capable of education shall receive an efficient physical, mental, and moral training; and

(4) that, whether or not, in the interests of personal, social, and national efficiency, the sale of alcohol, like the sale of opium, should be prohibited except for medicinal use, the existing temptations to use alcohol either in moderation or in excess—such temptations being often found at the maximum of the power of resistance in the young criminal—shall be ended.

An eminent criminologist has said:

‘The immense majority of cases that pass through our Courts arise out of sheer need, or wicked education and surroundings, and without which the delinquents could not exist—social conditions’ (Edward Carpenter, Prisons, Police, and Punishment, London, 1905, p. 5).

Judges have often declared, as the result of long and varied experience in dealing with criminal cases coming from all parts of the United Kingdom, urban and rural, that for the use of alcohol (although not necessarily to excess in the ordinary sense of the word) certain classes of crime would cease to exist, and all classes of crime would be greatly reduced.

If the State does its duty in these essential particulars, the Christian Church will not be slow to avail itself of the opportunity, which it has never yet had, of bringing to bear the power of the gospel of Christ, without the hindrances and pitfalls which at present, to so large an extent, render nugatory the best efforts of religion and philanthropy. The present generation will not see it; but the day will come when the civilized world will be able to say to any judge what a criminal, young in years but old in crime, once truthfully said, before sentence, to the writer of this article, ‘My lord, I never had a chance!’

LITERATURE.—See the works cited throughout the article.

CHARLES J. GUTHRIE.

PRIVATE JUDGMENT.—‘Justification by faith’ and ‘the right of private judgment’ are the two watchwords of the Reformation. Neither, of course, was new, but each expressed an old truth in a new way. And what gave them their power to open a new chapter in man’s history came through the personality of Luther, from whose fiery soul faith burst forth as the destroyer of hierarchical religion. Paul and Augustine had felt before him the same urgency towards the assertion of the ultimate authority of the individual, but it remained for Luther to rea where they had sown. Pleiderer has expressed the relations thus: ‘The three in the Church. The Augustine was a Romanized and Luther a Tenentized Paul. But Paul, in his turn, was a Christian individualist partly Judaized and partly Hellenized. The two tyrannies which pressed on the religious man of the 16th cent. were those of the practical system of religion controlled by the hierarchy and of the scholasticism (q.v.), which had

1 Philosophy of Religion, ii. 229.
been adapted from Aristotle to serve the theoretical ends of the Church's dogmatic system. The weight of these became more and more intolerable when the civil power interfered with the Church in matters that the Church by right of its own, had claimed liberty to judge for themselves in matters of religion. It is true that in no century were there wanting men and groups of men who to some extent sought to think and speak with freedom. The names of Abelard (q.v.), Wyclif (q.v.), Roger Bacon, John of G Oscle, John of Wessol, John Hus (see Hussites), Jerome of Prague, and the Brethren of the Common Life (q.v.) will all come to mind. Moreover, the protagonists of another movement, mysticism (q.v.), contributed parasitically to the formation of a deep subconscious belief in the inherent right of the individual to formulate his religion for himself. Of the predecessors of the Reformation men like Hus and Savonarola assailed current ecclesiastical practice; John of Gosclos, Gerson, and John of Wessol devoted themselves to theological thought, while mystics such as Ruysbroek, Eckhart, Tauler, and Suso aimed directly at transcending in individual experience all the externals of Church form. While tracing these as convenient expressions of the independent life that they lived immediately with God.

In Martin Luther (q.v.) these three streams ran into one. A student of St. Paul and Augustine, he had been the disciple of the doctrine and the scholasticism which had trained him. As an Augustinian he knew and practised the austerities associated with the monastic life; in Rome he performed all the exercises appropriate to pious pilgrimage with a readiness which might have been the match to his latent zeal for reform. And Tauler and the Theologin Germanican taught him what spiritual power mysticism could exercise. The result of the three influences thus brought to bear on him was the assertion of the Christian principle of justification by faith—a phrase which was but a theological variant of the philosophical principle of 'the right of private judgment' (see ERE vi. 619).

It is not in the realm of physics alone that the law of the identity of action and reaction holds good. In the forces which constitute history it also asserts itself. A powerful hierarchy and an authoritative dogmatic system had set themselves in the Middle Ages to crush all spontaneity of individualism and personal practice which might seem dangerous to the ecclesiastical system. Luther thereupon did but give expression through his forceful personality to the inevitable reaction for which the minds of all in different degrees were ready. And in doing this he built up more wisely than he knew. The three factors which had gone to make him what he was again separated when his work was done. One gave the principle that lies explicitly or implicitly at the heart of all the Churches of the West which are out of communion with the pope, and is the source of the idea of the democratic State. The second has been the fruitful mother of all later science and philosophy, and has profoundly influenced theology. The third reappears in the lives and writings of all subsequent Christian mystics. But it is one and the same principle that appears in all three—the right of private judgment.' A few words will suffice to set out the filiation.

1. Social polity.—The chief difference in the conception of the Social order was the basis of all social order which ruled before and after Luther is that in the former the individual was the passive recipient of rights at the hand of the authority which ruled him jus divino in Church and State alike, while in the latter he is the active creator. Not is the distinction more than obscured by the fact that to establish his rights he must co-operate with his fellows, for such co-operation is only a means to an end, and that end is the establishment of the right of private judgment alone man attains his proper self, the Protestant Churches and in all liberal States this principle has now 'stormed out into reality.' It is true that it did not triumph all at once; that Luther himself did not always give it its dominant position; that the struggle for the authority of the Bible as the written Word of God has for three centuries been every whit as tyrannical in its application as the older Inquisition (q.v.); that autocratic empires are but now being got rid of at the hands of democratic parties; that the ideal of a free Church in a free State is not fully actualized; and that democracy is yet on its trial. But in spite of these short-comings the principle has so far triumphed that a return to the medieval ideal is to the modern mind unthinkable, and survives only in relatively obscure coteries which are of the nature of atavistic survivals in bodies under the otherwise undisputed sway of the principle of the right of private judgment. 'A people's Bible, then, is a necessary thing. Only we have ever had these fierce and almost exclusively physical is characteristic of the modern Church.' 'One man, one vote,' and 'manhood suffrage' form their civic equivalent. Robert Browne's Treatise of Reformation without taying for anie Protestantism (Milde) has been the watchword of the principle in English religion (see BROWNISM). The hanging of two men at Bury St. Edmunds in 1533 for circulating it was the counter-blow of the civil government, which had assumed the opposite point of view the Lutheran position.

2. Modern thought.—Though the free thought of to-day was prepared for by events prior to Luther, such as the invention of the printing-press, the rediscovery of Greek, and the opening up of the New World, yet to Luther still falls the credit of bringing to its support the forces of religion. The survival of medieval dogmatism in the churches of the New Learning only serves to show how much harder would have been the progress of thought towards freedom had not Protestant Churches appeared to counteract the reaction known as Jesuitism. Milton states the case fairly when he says that it is a general maxim of the Protestant religion that 'no man, no synod, no session of men, though called the church, can judge definitively the sense of scripture to another man's conscience.' Hence, where the right of private judgment is explicitly maintained, heresy is impossible, and a trial for so-called heresy is at bottom merely an action for breach of contract. In the room of the inquisitor now sits the schoolmaster.

Erasmus, in his controversy with Luther on the question of free will, asserted caustically that 'where Lutheranism flourishes the sciences perish.' This could hardly be maintained to-day, especially of Luther's fatherland. The Church should have to say that where Luther's principle of private judgment obtains there is the door opened for the full life of science and philosophy. Not that thought was inactive through the earlier period. The great names which were not then in what they thought in blinkers. The end of their journey was prescribed at the start, and hence free thought was denied them. And thought

---

1 T. H. Green, Works, iii. 385.
3 Distracts, p. 4.
which is not free runs the risk at least of not being thought at all. It may under the guise of thought deliver us over to the ‘double truth’—that of philosophy and that of theology—or rest in a delimitation of boundaries which is made by assertion. This dogma is not country, race, or reason, but above reason. But the principle of the right of private judgment cannot stop short of the demand that ‘fact and reason,’ ‘religion and science,’ shall resolve their antinomies at the bar of reason, and extend the right of reason to non-moral judgment over the whole domain of faith.

How far we have travelled along the road of private judgment, and with what difficulty, may be conveniently seen by comparing a declaration of 1633 with another of 1900. The Congregation of Prelates and Cardinals ruled in the case of Galilei that ‘the doctrine that the earth is not the centre of the universe, and is not immobile, but is moved with a motion that is daily, is not only an absurd proposition but false in philosophy, and theologically considered at least erroneous in faith.’ On the other hand, Karl Pearson makes the assertion (Grammar of Science, London, 1900, p. 308), while deprecating its one-sidedness and exaggeration, shows that modern science with all its really great achievements has been sought—and perhaps not unreasonably sought—in the individualistic instinct. And, though this instinct may need to be balanced by those of socialism and humanitarianism, its effect, which is striving to promote individual or national cooperation in the place of competition, does so avowedly in the interest of the highest good of the individual, of all individuals.

It must not be assumed, however, that the right of private judgment, when asserted, triumphed at once or even in a short time. At first the civil power stepped into the place of the papal, and adopted its spirit. ‘Where the individual appealed to the powerful (individual) spirit within him, Luther would have none of it. Further, in politics nothing was heard of save the good of the State, or the general weal.’ The National Church sought to clothe itself with the autocracy of the rejected Roman Church; little respect was paid at first to the point of individual personality or individual communities. This transition spirit persisted in philosophy until Descartes (q.v.), by rejecting all authority and starting de novo from the thinking ego as the basis of all philosophy, laid the foundations of modern philosophy, which is aspired to call itself modern. While philosophies are in conflict from generation to generation, they are agreed on one point, and that is, that the appeal of all philosophy is in the end to reason speaking through the individual thinker. In philosophy the right of private judgment is irrefragable. The most striking proof of this is given indirectly by the long sway of the political theories of Bentham and by his maxim that the end of government is to secure the greatest good for the greatest number. The liberty existing to affect the individual, and, if the individual is called on from time to time to sacrifice himself to society, it is only that he may find his life enriched by losing it.

3. Mysticism.—This third element has not enjoyed in modern times the same popular vogue as empiricism or rationalism, and indeed it may be questioned whether it ought not to be regarded as the inspirer of thought rather than as an independent and co-ordinate factor. In philosophy indeed in modern times the same popular vogue has not been enjoyed by the mystics of the early church, the foundresses of the German mysticism, and the more or less Popish mysticism of the Alexandrians; and Henri Bergson’s justification of the following proposition: ‘non licet sequi opinionem probabilissimam.’ If we can follow the opinio probabilissima, which always implies a minimum of doubt, it follows, according to him, that we also follow to the contrary, namely opinio probabilis opinio without the doubt which it leaves in existence sufficient to render it suspect. He demands, however, that the reasons for probabiliorism should be very genuine. The resolutions of the assembly of the French clergy in 1600 also seem to him favourable to

1 See Karl von Gebler, Galileo Galilei und die römische Curie, Stuttgart, 1876, p. 258 f.
2 Erdmann, Hist. of Philosophy, ii. § 294, p. 6.
3 Emerges in literature in poets such as Wordsworth and Shelley, and in writers such as Novalis, Amiel, Emerson, Walt Whitman, and Coventry Patmore. It inspires the pre-Raphaelites, and art-symbolists in some cases, of every type. The Dutch, Prussian, and Italian schools of thought is. It is paramount in thinkers like Schlegel (alike in his ‘ironic’ stage and in his latter, where he treats the individual as insufficient to himself, but progressing towards divinity), in the early Schelling, and in the ‘Scottish school,’ which identified philosophy with the observation of the facts of consciousness, in Rousseau, in the Wofensteinbittel Fragments of Reimarus, in Jacobi, and in Jacob Boehme.
4 Finally, it should be observed that private judgment is properly or directly concerned not with matter of fact but with values. The discussion of matter of fact belongs to science, where private judgment has no legitimate place, but the values of things, whether partial or ultimate, are values for the individual. Interest in them is personal, and hence private judgment must in them assert itself. A good, to be a good to me, must be a good for me. But this is not to say that my private judgment is self-originated or self-sufficient. The social context in which I live takes a large part in supplying the content of that self-consciousness of which private judgment is an inevitable expression. The perfect correlation, however, of the individual and the society remains one of the gravest problems which man has yet to solve.

PROBABILISM.—Probabilism is a form of probabilism (q.v.). The principle may be stated thus: the opinio minium tuta qua libertat' favet may be followed to the detriment of the opinio tuta qua legi favet when the former is more probable than the latter although it is not quite certain, i.e., when the reasons militating in its favour have more weight than those militating in favour of the opinio tuta. There have always been probabilist casuists, but probabilism was peculiarly in favour during the first half of the 19th century. Among its defenders may be mentioned Thielis and Billuart. Thielis wrote a treatise in which he refutes the so-called reflex arguments upon which mainly the partisans of simple probabilism rest, viz. (1) ‘lex dubia nolite dubitare’ (2) ‘lex dabit invincibiliter temperatur’; (3) ‘melior est conditioni possidentis.’ Billuart, after severely condemning simple probabilism and equiprobabilism (q.v.), declared himself in favour of probabilism with the help of arguments drawn from reason and faith. Alexander and Henri Bergson’s justification of the following proposition: ‘non licet sequi opinionem probabilissimam.’ If we can follow the opinio probabilissima, which always implies a minimum of doubt, it follows, according to him, that we also follow to the contrary, namely opinio probabilis opinio without the doubt which it leaves in existence sufficient to render it suspect. He demands, however, that the reasons for probabiliorism should be very genuine. The resolutions of the assembly of the French clergy in 1600 also seem to him favourable to
PROBABILITY

349

Ordinarily cannot, for nevertheless In E., principle are !. in instances the circumstances contrary eating needed, probabiliorism. forsaken. we the is distinction between the honestum and the licitum is to limit simple probabilism in appearance, by leaving consciousness in reality free to adopt it.

The probabiliorists apply this principle only to the question of law, not to that of fact. In theory, we may follow the opinio minus tuta because it is more probable than the opinio tuta, but in order to make sure whether the concrete conditions, under which alone the surplus of probability exists, are realized to be had, more than probability is needed, viz. certainty; e.g. the law forbids the eating of meat during Lent; nevertheless the contrary is more probable, viz. that in certain circumstances I can eat meat even then; from that time onward I can eat meat; and the contrary circumstances I can eat meat during Lent; I cannot, however, do it in a given case unless I am absolutely sure that I am in these circumstances.

E. EHRENDRT.

PROBABILITY.—By probabilism is signified the moral system according to which, when there are divergent views as to the lawfulness of an action, for each of which solid arguments may be not, and the law being that, we are under no obligation to follow the more probable of the two views, but are equally free to adopt either course.

It is the teaching of all theologians that no one may act except in case he is sure it is right. If a man acts with a doubtful conscience—not knowing whether the thing he is doing is right or wrong—that alone suffices to make his action sinful; for it proves that he is willing to do it even though it should be wrong. He is deliberately exposing himself to the risk of committing a sin. And to expose oneself to the risk of sinning mortally is by common consent a mortal sin. Yet in the conduct of life cases are constantly arising in which we are uncertain whether a given course is forbidden or not. The problem, then, is to determine the conditions in which, notwithstanding this uncertainty, a man may act as though no prohibition existed, with full assurance that his action is morally right. The various moral systems, tutiorism (or rigorism), probabilism, equi-probabilism (qq.v.), probabilism, and laxism give the different answers to the question. Since immediate and direct certainty as to the lawfulness of the act is impossible, each system proceeds to substitute a principle of morals to provide the required assurance. In this connexion these are termed principles of reflex certainty or, occasionally, reflex principles.

In all the cases which we are considering there is said to be, on the one hand, a probable opinion in favour of the law, and, on the other, a probable opinion in favour of liberty, the respective probability of the opinions being determined according to the weight of the reasons which can be advanced on either side. In order to avoid misapprehensions it seems desirable here to call attention to the fact that the meaning of the word 'probable' in theo-

logy differs somewhat from that now commonly attached to it. In the present sense of the term this is to be understood to mean that the probable only is claimed a greater likelihood than the other alternatives. These are not said to be probable at all. Moreover, the idea suggested is in many minds linked up with the mathematical theory of probabilities (i.e. chance-happenings). In theology, on the other hand, extending to certain we are getting to a local sense. An opinion is probable which commends itself to the mind by weighty reasons as being very possibly true. The idea of chance is altogether absent. Confining our attention, then, to the three systems which alone can be said to have had any actual importance in the theological schools, the probabiliorist theologians hold that we are free to follow the opinion in favour of liberty when and only when it is the more probable of the two. According to the equi-probabilists, in order that we may take this course it is necessary that the two opinions should have at least an equal degree of probability. The probabilist system teaches that, should there be a solid reason to suppose the other, then we are bound to adopt it. The probabilist maintains that opinion, even though the reasons on the other side are more weighty, provided that the difference is not such as to render the existence of the law not merely probable, but morally certain.

Believing that the arguments which on this system is based, it will be well briefly to explain two points of importance: (1) what constitutes solid probability, and (2) the limits within which the system of probabilism is applicable.

(1) An opinion is said to possess intrinsic probability when the grounds on which it is based are such as to have serious weight with men of competent judgment. Moreover, the grounds must be such as to retain their value even in face of the reasons which can be adduced on the other side. By this test, many of the objections of the system are cogent. But they must be such that the opponent arguments do not render them nugatory. When the arguments on the two sides are drawn from different, and even from disparate, considerations, it will be seen that the less probable cause is in no sense invalidated by those which support the more probable. Extrinsic probability is that which belongs to an opinion by reason of the authorities who can be cited for it. Ordinary speaking, it is held that, if five or six writers of recognized weight in the theological school can be reckoned as independently supporting a view, that view may be safely followed. The condition that the authorities quoted must be theologians of real weight is to be noted. An opinion does not acquire extrinsic probability because it is found in a few works which at one time or another have enjoyed some popularity.

(2) There are certain well-defined spheres of human activity in which probabilism has no place. If we are under obligation to ensure the validity of some act, it would be altogether unlawful to adopt means which will only probably be efficacious, should a safer course be open to us. In such cases one must be certain already or must make the necessary dispensation in order to avoid a grave charge of negligence.

Thus, probabilism is excluded (save in a few exceptional cases) in regard to the administration of the sacraments. If, e.g., a man had some doubt as to whether there was not an ecclesiastical impediment of some sort to the marriage contract, he would be bound to procure the necessary dispensation to proceed. The mere fact that there was a sound probability
against the existence of the impediment, and that
the question would certainly never be raised, would
constitute no justification for neglecting to take
these precautions, or for neglecting to consider
whether the rights of another person are con-
cerned. We are under strict obligation not to
wrong our neighbour, and it is unlawful to put
ourselves in danger of so doing. There may be
excellent reasons for thinking that a match thrown
at random over the hedge will not fire the hayrick
on the other side. But a man would be acting
wrongfully if on the strength of those reasons he
should take the chance of causing the damage. Fin-
ally, probabilism is not a mere precaution, but a
binding force on the conscience, since there is
question of some end that one is absolutely
bound to attain. No man may use merely probable
means to ensure his eternal salvation; he is bound
to take measures which he knows to be sufficient.
It would be erroneous to speak of these as excep-
tions to probabilism. Probabilism is applicable
only where the obligation itself is dubious. In
all these cases, although there is a doubtful element
in the situation, the obligation is certain.

The inexactitude of probabilism was stated very
briefly. Whenever there is a solid reason for
questioning the existence of a law, that law is ipso
dato doubtful. But a doubtful law imposes no
obligation on the conscience ("lex dubia non obli-
gat, and must therefore be treated as non-existent.
This principle, that a doubtful law has no binding
force on the conscience, seems scarcely to require
proof. But two considerations may be advanced
in its support. In the first place, a law binds only
in so far as it is known. If, therefore, after taking
all reasonable means to make certain, a man still
does not know whether a given law exists, he is
not yet under any moral obligation in its regard.
For practical purposes, he is in the same position
as a man who has never heard of it ("lex dubia
invincibili ignarum"). Secondly, it is urged that
an obligation is always to be viewed as a
restriction on a previous state of liberty. Liberty
is in possession till the obligation is imposed.
Since this is so, and since "melior est conditio
possessoris," unless the obligation is absolutely
certain, a man remains free. But in the cases
which we are considering the obligation is not
certain but dubious.

These reasons, it is urged, are conclusive, and
put probabilism as a non sequitur beyond
question. Hence, whenever there is a
reason for doubt as to the law, a man may adopt
the opinion in favour of liberty with absolute assur-
ance that he is justified in doing so, even though
there be greater probability on the opposite
side.

Probabilism, it is manifest, is concerned solely
with what is of obligation, not with what is the
most perfect course of action. In other words, it
belongs to moral, not to ascetical, theology. It is
of little importance to avoid confusing the two
issues. A man is not bound to adopt the more
perfect course in all his actions, and the attempt
to impose what is most perfect as a matter of
obligation always results at last in the total re-
jection of this moral law, as being too burdensome
for flesh and blood. It seems necessary to call
attention to this point, as probabilism has often
been attacked on the ground that it proposes a
low standard of perfection. The fact is that it is
most perfectly in accordance with the pedagogical
principles of Christian perfection belongs to ascetical
theology.

The first to enunciate clearly and to defend
the principles of probabilism was the Dominican,
Bartholomew de Medina, in his Expositio in 1st

PROBABILITY. — There are certain pheno-
mena of such a nature that their antecedents,
being extremely complex, cannot be adequately
comprehended by observation, however search-
ing it may be; nor can they be subjected to any
analysis that will disclose the causal elements
to which the effect in question is due.

In the throwing of dice, e.g., the antecedent
shaking of the box and tossing the dice upon the
table is about the same each time—at least the
difference cannot be determined—and yet
the results vary with each successive throw. The causal
determination in each case is so complex as to be beyond computa-
tion; the determination of the total die, that of the top
of the box, the height of the box above the table when they
leave it, the inequalities of the table itself, a variation between
the physical and geometrical centres of gravity of the
die, etc.—all make the antecedent so complex that a slight varia-
tion in any one of these conditions will affect the result. We
find, therefore, double sixes at one time, a three and a four
at another, and so on indefinitely.

Again, it is certainly certain that with perfect sanitary
conditions an infectious disease will appear that has always
been regarded, as well as valued, by prelates, as well as
theologians, whereas an entire disregard of sanitary requirements and of all
the laws of health may yet give rise to no disease of special
moment. Certain combinations of temperature, humidity, pres-
ture, velocity and direction of the wind, may one day bring
storm and rain, and another, clear skies; yet the observed
conditions remain just the same and bring fair weather. So
also the rise and fall in stock and money markets is extremely susceptible to the
varying conditions of indefinitely complex forces wholly beyond
all powers of determination or of prediction.

G. H. JOYCE.
Such phenomena present a problem with which the methods of inductive inquiry cannot deal. Observation is not far-reaching enough to provide the data for the solution of the problem, and, even if it were, our methods of computation and determination are not adequate to solve problems of so many terms and of so complex a nature.

The causal connexion may be established beyond all reasonable doubt, and yet the cause obtains in the midst of so complex a setting that the problem is one of the antecedent and consequent where the exact nature may be known or unknown, will prove operative or inoperative. The cause may be always present and even its exact nature may be known, and yet the complex circumstances attending it may be of such a character that one alone, or two or more combining, may neutralize the operation of the cause, and, on the other hand, a slight variation of the combined circumstances may promote and even accelerate the operation of the cause in question. The problem then is to determine how often the event happens and how often it fails of happening, the complex and indeterminate antecedent being present in all the instances examined.

When we begin to count instances, we are reminded that there must be in the neighbourhood of the sphere of enumerative induction. Enumerative induction treats instances by noting the number of observed coincident happenings of the antecedent and consequent under investigation, no attention being paid to an analysis of their respective contents or to determine a causal connexion more definitely by means of any one or more of the inductive methods of research and verification. The result of such an investigation may be formulated in a proposition of the form, "Every A is B." This, strictly interpreted, has the force of "Every A that has been observed is B." There are cases, however, in which observation leads to a twofold result—a set of instances in which it is observed that the A's are B's, and another set of instances in which the A's are not B's. These instances are of such a nature that the observed A is an antecedent so extremely complex that the element within it, which is a cause capable of producing B, either may be combined with another producing change in the general nature of A, or, being present, may be neutralized by some other element of A itself. The result gives a basis for a probable inference only; and the nature of that inference will depend upon the preponderance of the observed happenings or of the failure of the event under investigation.

The probability attached to such an inference, however, is different from the probability which characterizes the nature of enumerative induction. In the latter, when the observation has been widely extended and no exceptions noted, it is usual to say that the result expressed in the proposition, "Every A is B," has the force of a high degree of probability. But in the instances whose investigation shows the result that some A's are B's, and some not, and yet where the former far outnumbers the latter cases, it may be inferred that the A's in which future we may meet will probably be B's; and the degree of probability expressed in such a case, in the mere preponderance of the number of observed affirmative instances over the negative. Here the probability refers to the validity of an inference concerning certain particular instances, be they many or be they few; and depends upon the present knowledge; in enumerative induction the probability is attached to the universality of the proposition affirmed as a result of observation that has not so far detected an exception. In the former case the question of the universality of the result is conclusively answered, as there can be no universal proposition possible, as some instances give A and B together, others give A with the absence of B; and the question of probability that here arises, therefore, refers to individuals not yet examined, to what extent they severally will more likely correspond to the set of affirmative or to that of the negative instances already noted.

The comparison of the number of happenings with that of the failures of an event affords a basis for several kinds of inference, all of them in the sphere of probability. We find in such a comparison a basis for the calculation of the probability of a particular event happening when there is a repetition of the circumstances which, in former cases, have sometimes produced the event and sometimes failed to produce it. If, according to former observation, the event has happened, let us say, seven times, and failed three, the probability, expressed numerically, will be 7:10, which is the ratio of the number of the probability to the number of the failure. And if we wish to express the probability of an event, take as numerator the number of times which the event has been observed to occur, and as denominator the total number observed, both of happening and failure. Thus expressing the probability of the event, we have an indication of the probability of the event happening. The counter-probability may be represented by the number of observed failures of the event divided by the total number of cases observed. The counter-probability plus the probability evidently is equal to unity. If, therefore, the probability is unity, the counter-probability will equal zero; i.e., the probability in that case has merged into certainty. Zero, therefore, represents absolute impossibility. All fractions between the limits 0 and 1, represent varying degrees of probability, from impossibility at one extreme to certainty at the other.

Not only may there be this inductive basis for the calculation of probability, arising from actually observed instances; there may be also a deductive calculation of probability based upon the known structure or nature of the phenomena themselves in advance of any observation as to their actual behaviour.

We may assume, that the probability of a penny turning up heads is 1/2. Knowing the form of the penny and that there are but two possibilities, heads or tails, there being no reason why one is not as likely as another, we may say that the chance is one chance favourable to heads against the two chances which represent the total number of possibilities under the existing circumstances. With a die, in the form of a perfect cube, we say there is one chance of its turning up the face marked 1 against the six chances represented by the six faces—the total number; here the probability is 1/7. Thus the basis for the calculation of probability may be a theoretical as well as an empirical one.

In the estimate of the probability of an event in the actual conduct of affairs we seldom express that probability numerically; we express a degree of probability adverbially rather than numerically; i.e., we say an event is quite probable, very probable, or extremely probable. The facts are that, as regards most phenomena, we do not keep an exact or even approximate memorandum of the number of happenings compared with that of the failures. We rather classify our observations in terms of more or less, rather than in more precise terms, and observe produce about as many failures as happenings of an event, other circumstances produce far more happenings than failures, others far less, and so on. Consequently we receive certain psychological impressions, the degree of certainty according to the preponderance of happening over failure, or vice versa; this impression becomes the basis for estimating the probability in question, and the degree of that probability is commensurate
with the intensity of the original psychological impression arising from concepts of more or of less. In fact, probability is defensible, however, as that devoted to the interests of betting, gambling, pool-selling, book-making, etc., probabilities are estimated according to observations and theoretical considerations whose conditions are expressed numerically; and there is no one similarity in the case of counter-probability according to the exact ratio of probability to counter-probability under the existing circumstances.

The estimation of probability in terms of a greater or less degree is, however, more usual, and applicable to the conduct of human life generally (for the theory of probability as the guide of life see art. Butler). It has special force and utility as a mode of inference when the observed instances far outnumber the exceptions as to create an impression of such a high degree of probability as to approximate practical if not theoretical certainty.

It has been noted over a wide field of observation that a second attack of scarlet fever is extremely rare. Exceptions have occurred and, therefore, by enumerative induction it is inferred that in a group the deviation is not so great; in a group of 1000, still less; and in a group of 100,000 the ratio as above given would be substantially realized. The approximation would be so near the error would be insignificant as compared with total number of cases.

The comparison of failure and happening of events based upon observation or theoretical considerations of structure and nature leads also to inferences concerning large numbers of instances considered together. If a memorandum is kept of the number of times an event has happened and of the number of times it has failed, and the total number of instances examined be sufficiently great, then the resulting ratio of favourable instances to the total number would be found approximately repeated if a second set of an equal number of instances be likewise examined. There is a law of tendency whereby Nature seems to repeat herself even when the attendant circumstances of an event are most complex and beyond all powers of accurate determination.

As the result of observations extending over thousands and thousands of instances, it is affirmed that about 1 of the children born in the world die before the age of sixteen. In a group of 19 children the ratio would perhaps be deviated from very materially; in a group of 100 the deviation is not so great; in a group of 1000, still less; and in a group of 100,000 the ratio as above given would be substantially realized. The approximation would be so near the error would be insignificant as compared with total number of cases.

The following law, therefore, expresses this tendency—that, while in a small number of instances there is irregularity in the observed ratio between the number of times a given event has happened and its failures, still in a large number of instances this ratio tends towards a constant limit.

This clear seen in the pitching of a penny: 10 throws might very possibly result in 7 heads and 3 tails; in 100 throws, however, the ratio expressing the result as to heads and tails observed will be much nearer 1 than in the former case; while, if 1000 or 10,000 throws be observed, the result will approximate the ratio 1. The comparison of observed cases with the number of instances, the calculation of the probabilities in question has been made by Quetelet, and also by Jevons. Their results are most significant and interesting.

Quetelet made 4096 drawings from an urn containing 29 black balls and 71 white balls; the actual results were 2393 black and 1703 white balls. Jevons made 20,480 drawings from a penny: 4500 heads; 1500 tails. The result was 10,540 heads; the actual result was 10,533 heads.

In the case of a table of life insurance companies, in which the number of lives represented contained a considerable number of instances is strikingly illustrated in the record of haptisms taken from an old parish register in England. The number of haptisms registered to every 1000 females ran as follows for the respective years from 1814 to 1846: 1040, 1066, 1047, 1045, 1043, 1049. We see with what uniformity the constant ratio was repeated substantially year after year.

A like regularity seems to pervade every department of life. The total number of crimes is approximately the same, year after year; the annual death-rate of the population of London for the last 150 years, or to the several diseases as their evident causes, the number of missent letters each year, the annual number of suicides, of divorces—all these diverse events indicate a regularity in the long run, as regards the numerical and practical value of such an event.

The results which are thus attained regarding aggregates cannot be stated as probable results. If a sufficiently large number of instances are taken, the result will be certain within a very small, and in many cases within a negligible degree of certainty. In estimating the probability of a single event the question is whether it will happen or not happen, and the element of uncertainty is therefore prominent. In dealing with aggregates, however, no such element of uncertainty enters; the question is not whether or not there will be certain results, but concerns rather the degree of exactness with which the results will approximate a definite ratio. And the law of tendency is that the larger the number of instances, the greater will be the approach of an accurate and definite result.

This is especially illustrated in the numerous insurance companies whose business is conducted upon the basis of an approximately constant death-rate. The general procedure is somewhat as follows: Suppose 10,000 persons insure their lives at £200 per individual, and the annual death-rate observed over a wide extent of territories to be 1 in 400; the company, therefore, will form an annual loss for the next year of £10,000, exceeding the sums insured in the company, would amount to £4000. It is true that the law, therefore, thus calculated is not the true basis for the determination of the premium which each person must pay in order to cover the annual losses and to provide an assured revenue for the company.

The problem has been stated in round numbers merely to illustrate in general the principle involved; the actual calculation is more complicated, because, in each particular case, the age of the individual and the varying death-rate for different years must be taken into account. The substantial standing of the innumerable insurance companies in our country bears witness to the fact that these enterprises are based upon a practical certainty regarding death-rates when applied to large aggregates. Chance is thus eliminated almost entirely; which would be a serious risk as regards an individual, who would eventually avoid all risk when large numbers are concerned.

Moreover, phenomena indicate a marked departure from the ratio of frequency as determined by prior observation or by theoretical considerations; then it is ordinarily inferred that a new cause has become operative, not before existent, or, if present, with its effect neutralized.

We would naturally expect a die to show the face 3, on an average, about once in six throws. But, if it repeatedly turns up 6 in succession, and if no other number appears, or appears but rarely, we are warranted in inferring that the die is loaded. The number of instances that are observed, far exceeded the annual number observed for the several years preceding. This discrepancy is easily accounted for by the fact that the natural number was weakened by the deaths caused by the strikers and rioters in the month of July of that year. So also a large number of deaths from the typhus fever of a large city is at once an urgent suggestion to the public health authority to start investigations that will unearth the hidden cause that has turned it into a large scale epidemic. Such causes as defective drains, prevalence of epidemics, etc., are again and again found to accompany an increase of the average death-rate.

Under such circumstances the method of investigation which should be pursued, when practicable, is to endeavour to break up the total into smaller groups of a specific nature. Thus, if the death-rate for a given city is at exception to the death-rate per month. See if any month shows a marked departure from the average. If so, this will suggest a careful investigation of the circum-
stances and characteristics of the month in question. Or it may be possible to make a geographical distribution of the amount of the activity under investigation. Some special locality may indicate an unusually large death-rate. Investigation, therefore, at that point may reveal a lurking cause of disease, otherwise unnoticed.

If we found indications of it being possible to distinguish between a chance coincidence and a determinate cause which has produced the event in question. For, if the possibility of some one definite cause is considered out of the question, and the event in question consists of a complex phenomena of such a number and variety that they may form an indefinite number of combinations only one of which can possibly produce the event in question, then the probability that the event has actually been produced by such a chance combination is extremely small. We are then thrown back upon the other hypothesis, that, instead of one out of many possible combinations, there is some one definite cause operative in the case. Its nature may not be definitely indicated, but at least the possibility of its presence is suggested.

This line of reasoning is illustrated in the following account of the discovery of the existence of iron in the sun, in the researches of Bunsen and Kirchoff:

"On comparing the spectra of sunlight and of the light proceeding from the immense vapour of iron, it became apparent that at least sixty bright lines in the spectrum of iron coincided with dark lines in the sun's spectrum. Such coincidences occurred within and without the limits of another, on the map of the spectra, they could not be pronounced distinct. Now the average distance of the solar lines from Bunsen's map is two millimetres, and if we throw down a line, as it were by pure chance, on such a map, the probability is about \( \frac{1}{60} \) that the new line will fall within one-hundred millimetres on one side of the other side of some one of the solar lines. To put it in another way, we may suppose that each solar line, either on account of its real breadth, or the defects of the instrument, possesses a breadth of one-hundred millimetres, and that each line in the iron spectrum has a like breadth. The probability, then, is just \( \frac{1}{60} \) that the centre of each iron line will be touched by chance within one-millimetre of the centre of a solar line, so as to appear to coincide with it. The probability of the actual coincidence of each iron line with a solar line is in like manner \( \frac{1}{60} \). Coincidence in the case of each of the sixty iron lines is a very unlikely event, if it arises capriciously, for we would have a probability of only \( \frac{1}{60^6} \) or less than one in a trillion. The odds, in short, are more than a million millions millions against each line of the iron spectrum being coincident with a solar line. But as the sixtysix iron lines, each of which exists in the sun, it is highly probable that such coincidences will occur: it is likewise highly probable that sixty coincidences would be observed if iron existed in the sun, than that they should arise from chance. Hence, by our principle, it is immensely probable that iron does exist in the sun."

This principle is also illustrated in instances of circumstantial evidence. In such cases the observed combination of so many diverse circumstances, even as regards an indefinite number of minor details, precludes the hypothesis of casual coincidences, and suggests some one definite cause that will prove a unifying principle of explanation of all the attendant circumstances. As Bullett says:

"A presumption is very often more convincing and more satisfactory than any other kind of evidence. It is not within the reach and competence of human abilities to invent a train of circumstances which shall be so connected together as to amount to a conclusive evidence. The human mind, without opportunities to contradict a great part, if not all of these circumstances."

In the various illustrations which have been given we find that the theory of probability provides a method of dealing with phenomena which cannot be accounted for by the inductive methods. The phenomena are so complex that a specific cause cannot be determined, for the reason that in question is a corollary of many diverse forces, and, if only a few instances are examined, of which it can be seen that there will be discrimination is necessary, therefore, to deal with large numbers, statistical averages, etc., in order to detect an emerging relation of a casual character, expressed by a constant ratio. This ratio once determined, it becomes a further test, and we have already seen when the results widely depart from it, to suggest the presence of a new force outside of the combinations to which the effect would be naturally referred according to the indications of the probability-ratio. The method of inductive reasoning is brought to the method of residues, for the inference in question is based upon the fact that the probability-ratio will account for only a certain frequency of occurrence of the event under investigation; a marked excess must be accounted for by hypothesis of a definitely operative cause. And, if an antecedent of such a nature is known to be present, the suggestion at once arises in our thought that this excess in the probability is that causing the event in question."

PROBATION.—One of the most obvious and striking aspects of experience, one which forces itself upon a man's mind as soon as he begins to reflect at all, is its incomplete and fragmentary character. In the pursuit of truth he finds himself considering cases, and not laws; or isolated questions, face to face with insoluble mysteries. Knowledge may be real as far as it goes, but finally is not to be found. In the pursuit of the good, again, there is a perpetual discrepancy between the actual and the ideal, a constant failure of achievement. And the passion for the beautiful is never really satisfied, though its hunger may be partially stayed. In all these directions neither the mind nor the heart of man ever finds absolute satisfaction; his capacity finds neither limit nor adequate response.

The questions, then, are inevitably thrust upon us: Why is aspiration so far in advance of attainment? Has it always been so? Will it always remain so? The incomplete, the inadequate, the fragmentary, the discontented tend to us, with exasperating and perplexing questions, face to face with insoluble mysteries. Knowledge may be real as far as it goes, but finally is not to be found. In the pursuit of the good, again, there is a perpetual discrepancy between the actual and the ideal, a constant failure of achievement. And the passion for the beautiful is never really satisfied, though its hunger may be partially stayed. In all these directions neither the mind nor the heart of man ever finds absolute satisfaction; his capacity finds neither limit nor adequate response.

has? The world, as we perceive it, may be only a part of a larger universe; our temporal existence may be but a transient phase of a larger pattern. The notion is not to be numbered by years; in a word, this present world may be but a period of probation, a period, that is, whose explanation and justification lie beyond itself in the idea of an end to which it may serve as means, of a purpose of which all the change and chances of this mortal life may be but many ways of fulfilment.

Now the probation of which this life is the scene is to be conceived not as a process that goes on indefinitely, but were, but as the direct work of the God and Father of mankind. The theory presupposes, then, that there has already been formed the conception of a personal God, with whom the spirit of man is in immediate contact. For probation is a teleological concept, and a purpose or end is the expression of the will of a person, and cannot have its source in a mere 'tendency, not ourselves, that makes for righteousness.' Hence it is an idea that seems very closely bound up with the belief in a personal God. Probation is a distinctively religious, not only a moral or philosophical, theory.

The ideas of discipline and purification are to be found in any religion which has any ethical quality at all. It was, therefore, that man has been fully developed except among the Jews, of whose theology it is an important element, and whose history is interpreted by the prophets in the light of it. The history of the Jews, broadly speaking, is that of a people whose high calling, to be in a special sense the medium of Divine revelation and blessing to the world, was equalled only by their failure, as a nation, to discern its import and to rise to its fulfilment. For this reason, as all the vicissitudes of their history, as that of a 'chosen people' par excellence, were meant to fit them; all was meant, in Scripture language, to humble them, and to prove them, whether they would keep God's commandments or no (cf. Dt 8:4). 'Elect peoples,' it has been said, 'have tragic careers,'1 and the tragedy is never more deep and complete than when the nation is spiritually blind to the meaning of its destiny, which is throughout recognized, by those who have eyes to see, to be of Divine appointment and place. When the real relation of the probationary scene to a personal God, known as such, that is, as a Being of moral nature, that gave their failure the further character of sin.

To regard this world as the scene of probation is to regard it from a point of view that throws light on much that is otherwise hopelessly obscure and inexplicable in experience; for instance, some such conception as probation, that is, of life as a time of testing and training the will rather than of complete moral achievement, seems the only possible direction whence the nearest approach to a solution of the problem of evil could come; it is along these lines only that we can justify the twofold deliverance of the religious consciousness, that evil and sin are temporarily real, and yet that God is good and that He is almighty. The only justification for even the temporary existence of evil would lie in its being an essential condition of the attainment of an end which could not be attained otherwise. If we may attempt to define the end for which this world and its probationary scene were meant, it is being as the realization of the conscious communion of every soul with the God and Father of that soul, then it at once becomes plain that the probationary scene of which we have been recognized, and recognized as worth while. For man can attain the Divine likeness and become in the fullest sense partaker of the Divine nature only by a process of probation, in which temptation plays an essential part. Character is an acquired product; no virtue or goodness is given to man that has not been put to the test in some way or another, and such trial or probation is accomplished through an experience in which the necessity of a choice between good and evil is constantly presented. One of the most profound truths of the OT narrative of the Fall is that man, though originally innocent, i.e. ignorant of the distinction between good and evil, can attain holiness only through such a process of probation and temptation.

'Goodness as a moral experience is for us the overcoming of experienced evil. . . . So, in the good act I experience the good as likeness, as a rebellion against the good conquered in the moment of its birth, as a peace that arises in the midst of this triumphant conflict, as a satisfaction that lives in this restless activity of inner warfare. This child of inner strife is the good, and the only moral good, we know. . . . No genuine moral goodness is possible save in the midst of such inner warfare. The absence of the evil impulse leaves naught but innocence or instinct, morally insipid and colourless. Goodness is this organism of struggling elements' (J. Royce, The Religious Aspects of Philosophy, Boston, 1885, pp. 455, 456, 499).

Goodness is not forced upon us; we make it our own by willing identification of our will with the good. Hence probation implies freedom, power to choose. It is the 'chaos' of man, or rather the place not the room for a discussion of the interminable Free Will versus Determinism controversy. It is enough to point out what will be denied by none, that those who regard this life as a period of probation make the implicit assumption that man is free—an assumption which receives most emphatic confirmation from the witness of the moral consciousness. It would be futile to speak of the 'probation' of a being who could not be otherwise than unfallen, or of the man's performance of duty; in fact, such an one could scarcely attach any meaning to the word. Freedom, as Kant pointed out once for all, is a fundamental presupposition of morality, and the belief in probation lays great stress on this side of truth. Hence probation is not consistent with determinism, Calvinistic or otherwise. This world is no scene of probation for Johannes Agricola in Meditation.

If this life is a period of probation, it makes a constant appeal to our will; it takes sides with a cause not yet won—that is the condition of the moral consciousness, while yet the religious consciousness possesses the fundamental assurance that the victory is already accomplished. God's will shall be done; that cannot fail. But then arises the question as to the attitude of the individual, whether he will co-operate in its fulfilment or not. The constant pressure of this question is his probation.

And, just because the probation to which man is subject is an appeal to his willing spirit, it is no merely theoretic experiment to see what he will or can do, but is essentially practical, leading to definite issues for conduct, which can then be dealt with by way either of correction or of confirmation. If a good or evil event be allowed not simply to increase the knowledge of the one who makes it, but continually carried on to affect the nature of the world itself. This leading to a definite issue, whether for good or for evil, is an important aspect of probation, and its moral issue. For the world calls for the remedy of 'a piercing pain.'2 Acts may be forgiven, but not even God Himself can forgive the hanger-back. 'At every instant, at every step in life, the point has to be decided, our soul will, our saved. Hence there is to be gained or lost.'3 Hence probation, even though it may

---

3 E. L. Stevenson, Law Morals, ch. iii.
result for the time in the choice of evil, is the first step of the way that leads through purification towards perfection.

The belief that this is the divinely appointed way by which man finds its classic expression in the words of Job: 'He knoweth the way that I take; when he hath tried me, I shall come forth as gold.'1 It may be objected that, in the case of Job at any rate, we see an instance of probation for purely theological interests. The drama represents Job's trials as being sent to supply an answer to the cynical question, 'Dost Job fear God for nought?' Here mere knowledge seems the end in view. But this is not really so. Two things must be remembered. First, Job's real devotion to, and trust in, God were practically tested, and the issue of his probation was a far higher, more deeply rooted, type of goodness than was possible to the merely prosperous, God-fearing man who is first depicted. His choice of the good becomes a perfect passion for right. Besides, 'the more righteous the man, the more urgent the demand for a testing experience.'2 And, secondly, even if the testing had been unnecessary for Job himself, the results are necessary for the individual, and perhaps for society. Reality must sometimes be dissociated, if it were only to let piety have an opportunity for evincing its sincerity, and to 'silence doubt as to the reality of goodness.'3 And the effects go even further than this; the language of St. Paul makes abundantly clear.4

We have seen, then, that this life is meant to be a stage in the progress towards perfection, through probation and purification of the will and character.

'IT looks as if this strange life of ours were made only for character. . . . For all other purposes—the making of fortune, the enjoyment of society, the attainment of wealth or position or fame—this is life ill-adapted. The flux of things, the uncertainties of fate, the varied unforeseen combinations of circumstances adverse or destructive of health or wealth or happiness—all these make life a place obviously not formed primarily for these ends, the attempt to gain which is so easily and often thwarted, and which, even when gained, are held on so uncertain a tenure. This is really not the world for worldliness. But. . . all these conditions—this flux, this uncertainty—are the very conditions that help to form character. They make just the discipline by which a man may become father and spiritual, patient and humble, unselfish and loving. The circumstances of life may defeat all other ends, but they cannot defeat the end; they cannot even neutralize the purpose. Towards the end' (P. Carnegie Simpson, The Fast of Christ, London, 1909, p. 287).

But we do not yet see probation taking effect in the complete purification of character, much less in its perfection. 'Life, as we know it, does not give full scope for the working out of individuality, ethical or intellectual.'5 The gradual perception that this is so leads to two alternatives: either to a form of pessimism which stops short with the conviction that 'All my life seems meant for falls,' or to a belief in immortality—a belief that is due not to a selfish desire to 'call into being a new world to repress the balance of the old,' or to a mere craving for continuance, but a belief that is seen to be a postulate of spiritual implication of morality. A spiritual being cannot be a mere temporary phenomenon. And probation, taken in its deepest implication, seems essentially a process that demands a sphere of completion. We can scarcely conceive that it should stop short of it, though the bare judgment that the subject of the testing, having failed to discern its true meaning, is useless and unfit for the purpose it was meant to serve, and is therefore to be left as a "castaway." It is possible, of course, that the probation of a nation does stop short at such a point. But the case of the individual is scarcely parallel; here we do not judge that his value consisting in his capacity to be an instrument, and that, if at a given point he is a failure in this respect, no further effort will be made by his Creator. The relation of man to God is not exhausted by the category of the clay and the potter. Each individual is in himself an incalculable worth to God, at least from the Christian point of view. Probation, then, demands a future life for its completion, both for those in whose case the results are already evident and for those who as yet are still blind to spiritual issues.4

Furthermore, with regard to such, 'life beyond death holds hope, the hope that under other conditions, through other experiences, the awakening may come, evil be renounced, and good chosen.'6

Such speculations, such deepest hopes, only serve to emphasize the very supreme significance of that probation which is the key to temporal experience. After all, it is first for its illumination of the present that the theory has value. The belief is a marked characteristic of Browning's philosophy of life. A brief reference to his "Easter Day," which is typical in this respect may help to throw some light on the doctrine itself.

'How very hard it is to be a Christian!' is the exclamation which opens the dialogue. In the admitted harshness lies the test; were it easy to be a Christian, easy to the flesh, to the mind, or to the spirit, it would be comparatively valueless. The teaching is to see viscosity and acutely grasp once for all, the relation between the finite and the infinite. Hence the need for faith. Now faith demands, not proof, but probability; it is satisfied 'So long as there be just enough / To pin my faith to, though it hap / Only at points: from gap to gap / One hangs up a huge curtain so, / Grinning, nor seeks to have it go / Foldless and flat along the wall.'

But the 'faith' that is a mere balancing of probabilities and choice of that which in the long run may prove to be the most profitable is by no means the true faith consisting in that strenuous attitude of will which is demanded by the facts of life as we find it. It is not to elicit a merely intellectual and cold selection of the 'safe side' that we are set in the midst of all that the world has to offer. To one who can penetrate beneath the masks of things, issues the most profound disclosure themselves. To the purged eye-sight it becomes a marvel.

'Why we groaned
Our labour here, and idly judged
Of heaven, we might have gained, but lose!'

Such an one, in a moment of intense illumination, that the failure to choose heaven means choice of the world, that the refusal to renounce the finite and transitory is the rejection of the Infinite and Eternal, of which they are the shows and symbols.

'This world,
This finite life, thou hast preferred,
In disbelief of God's plain word,
To heaven and to inutility.'

Here the probation was for thee,
To show thy soul the earthly mixed.'

He finds that neither nature, nor art, nor culture, nor even love itself, taken as complete in itself, is enough to satisfy the spirit's hunger. The infinite hunger of a soul cannot be satisfied with the things of sense.2 God alone is great enough to satisfy the heart of man. As St. Augustine says, 'Tu fecisti nos ad Te, Domine, et inquietum est cor nostrum donec requiescat in Te.' But God does not force this truth on any one; he sets us the figures of life and lets us work through them, and then, through a medium experience, upheld by the confidence that He is dealing with us as with sons.

PROCESSIONS AND DANCES

1. Types of procession. — Procession being employed for practically all social ceremonial, it is unwise to enumerate every ceremony served by it, but some types may be mentioned in which procession as such is emphasized.

Ceremonies which bind the individual life to the social, by making solemn the various physical crises, usually accompany in all cultures circumcision, marriage, burial, and the like. The lowest cultures, however, such as that of the Central Australians, do not celebrate these to any considerable extent, if at all. But at the stages represented by the ancient Hebrews, Greeks, and Romans, in medieval Europe, and modern Egypt, these and other occasions are emphatically celebrated, and the procession is an important feature. Some of these peoples may be said to live processionally. Very complete examples may be seen among the high grade ceremonial of the Mediterranean area. Among funeral processions that of the ancient Roman nobles is remarkable. The dead man was accompanied by all his ancestors, represented by persons resembling them in form and stature and wearing wax portrait masks (sacrifices). In Western civilization the funeral and the wedding processions survive in some completeness, while those celebrating other life-crisis are more or less obsolete.

As social organization develops, the solemnity of the procession is applied (1) to the economic operations on which the existence of man depends — agriculture, owing to its sedentary character, being conspicuous for this feature of celebration; and (2), as social operations are gradually differentiated, to the various subdivisions of activity — religious, legal, social, royal, and even athletic.

2. Earlier processional forms. — The earlier forms of these applications throw light upon the meaning and purpose of processions. To understand the demon of cholera, a Chinese population marches in procession, with music and dances. In such a case the idea is probably that of a demonstration in force, to show the strength of the community. In a more elaborate form we have the procession of the Roman soldiers. The participants were armed with peculiar helmets, shields, and lances, and their processional ritual was obviously a military pantomime, intended to awe the demons of blight and infertility. The processions of the ancient Egyptians are typical of the character. It is possible that, besides their minatory aspect, such mobilizations of the people were intended to disseminate the virtue of vegetation-spirits, which may have been represented by certain living performers. Many processional rites have the object of exhibiting sacred things and distributing their potency.

Thus, in the ancient Greek world, the 'gardens of Adonis,' a vegetation-charm, were carried in procession. 1 In Egypt at the festivals of Isis women carried in procession pascal images of the god, perhaps as 'a charm to ensure the growth of the crops.' 2 Greece and India have similar phallic processions.

But the meaning of the symbol may be simply minatory.

The human sacrifice of the Khonds of Oriasa, the merth, is clearly an example of its kind, and his votaries, the charnel houses, the inhabitants in solemn procession. 3 What Frazer terms 'the form of communion in which the sacred animal is taken from its abode to house to house, and is exposed to the gaze of the multitude,' is well illustrated by the rite of the Gilyaks. The sacred bear is taken from its abode, and its entrails are exposed to the gaze of the multitude, while fish, brandy, and so forth are offered to him... His entrance into a house is supposed to bring a blessing. 4 The Hebrew Ark of the Covenant carried in procession served both as a protection and as a blessing.

The carrying of sacred sheaves, trees, and other innumerable symbols of corn and wine is a regular practice of agricultural ritual, which Frazer has abundantly illustrated.

3. Civic and religious processions. — The processional 'beat of the bounds' seems to have had primarily a purification intention. Processions of a disciplinary character, to inspire respect for law and custom, and so forth, are frequently combined with pantomime and mask-performance — e.g., by such 'societies' as the Duk-duk and Mumbo-jumbo. In such cases as the fall of Jericho in early Hebrew story there seems to be implied a belief that procession round an object not only hem's it but also dominates it. The converse idea, illustrated by some uses of the magical circle (q.v.), is that procession round an object protects it. This idea may perhaps exist in the customs of cutting the bounds of the procession into the city area. Of this character are mayoral shows, though originally derived from guild-processions, celebrating both the city and its patron, and the Panathenaeic procession of ancient Athens, in which the sacred peplos of Athene served as the sail of the ship carried or drawn on rollers through the city, perhaps symbolizing the maritime power of the Athenian empire.

Magnificent processions of athletes, horses, and chariots introduced the performance of the great games of Hellas; and the modern revival of Olympic games includes the procession. When crime was still expiated in public, a procession attended the malefactor to the place of punishment and execution. In this case there was a striking contrast between the outlying rabble and the procession itself, which should be 'an organized body of people advancing in a formal or ceremonial manner.' 5 In modern times the procession is retained to dignify the law, royalty, parliament, military, public and municipal functions and is a special

PROCessions AND DANCEs

instrument of public appeal by bodies with a grievance or desires of demonstrating this or that political view. Friendly Societies and similar bodies make great use of it, and it is one of the chief instruments of the Salvation Army.

1. The making either of honouring or of degrading a person. The triumphal entry of Jesus balances the procession to Calvary. The 'triumph' of Roman generals was a very elaborate procession, including captives and spoils. It was really a triumphal sacrifice. In the opinion of Frazer, constitute an impersonation by the victor of the Jupiter Capitolinus to whose temple he was borne in procession. He wore the robes of the god, and his face was painted with vermillion. The custom survived the regal period to the republic.1

4. The procession in Roman Catholic ritual.—The procession and the procession, as modes of proceeding and receding from a ceremony, and also as acts of worship in themselves, have always been of great importance in the Christian Church. An exception is the Churches of the Reformation, which practically abolished, along with other ritual, every procession but the funeral; and this is more or less extemporaneous, and not arranged by the church for the benefit of the faithful. In as much as the 4th cent., adopted the procession from the existing religions, pagan rather than Jewish, and primarily for the funeral, the Roman Catholic Church has exploited it thoroughly. Litanies, rogations, and supplications were traditional functions.2 After the time of Gregory the Great the procession entered the celebrant and the procession to the station became regular. In processions to the stations of the Cross the Saviour's route to Calvary is represented and symbolized. The procession of the blessed sacrament is an old Roman Catholic function.3 The rulings of the RituaJ Romanum (tit. ix.) must be noted, as showing the continuity of processionai ideas.

There are (1) processiones generalis, in which the whole body of the clergy takes part; (2) processiones ordinarii on yearly festivals, such as the Feast of the Ascension of the Virgin, the procession on Palm Sunday, the Stations of the Cross, the Easter Matins and Whitsune, the Feast of Corpus Christi, and on other days according to the custom of the churches; (3) processiones extraordinarias, or processiones on special occasion. E.g., to pray for rain or fine weather, in time of famine, plague, war, or in other emergency; (4) processiones as the dedication of churches, thanksgiving, translation of relics, the dedication of a church or monastery. There are also processions of honour—e.g., to meet a royal personage, or to pay a visit to one who has come into his country.

5. The 'pardon' of Brittany.—Processions of a special character or unusual interest are numerous. Purificatory processions through fire, or in which the people walk upon fire, occur in agricultural ritual.5 To the same sphere belong the processions of giant figures, carried to the burning, processions to the midsummer bonfires, and those in which torches are waved over the gardens and fields.5 The carnival processions of France and the pardons of Brittany are remarkably developed. The latter processions are those in the towns and some districts of the people.5 In Normandy such festivals are rare; in Flanders they survive partially in the Kermesses, e.g., of Brussels. It has been suggested that the Breton pardon is a survival of pagan festivals.6 But in the agricultural ritual, that of Notre Dame de Bon Secours at Guingamp, held about midsummer, there is certainly a connexion with the agricultural ritual of fire, the central act of the night procession being the lighting of a huge fire in the chief place of the town.1 The pardon aptly links together pilgrimage and procession. It illustrates equally well the early connexion of religion with all spheres of social life. Fairs of all kinds are held during the pardon, and merry- making with dancing and bet between solemn functions.

'From far and wide the people crowd to this festival' (the Pardon of Guingamp). The chief procession is by night, the townspeople's procession on Sunday, the following procession on Monday. In the opinion of Frazer, constitute an impersonation by the victor of the Jupiter Capitolinus to whose temple he was borne in procession. He wore the robes of the god, and his face was painted with vermillion. The custom survived the regal period to the republic.

6. Procession and the drama.—Before referring to the use of the procession in the development of the drama, it is necessary to give some idea of the nature of the procession. The Romans had a type of procession which was not unlike that of the Greek. It was more formal, and the Romans did not use it as freely as the Greeks. The Romans did not use the procession for religious purposes, but for political and social purposes. The Romans did not use the procession for religious purposes, but for political and social purposes. The Romans did not use the procession for religious purposes, but for political and social purposes.

Each parish procession is accompanied by its clergy, who lead the singing of ancient canticles. The several processions, as many as can be accommodated in the available space, half round the great wood-pile, which is solemnly set alight for the beating of the Trumpet. The Beat of the procession, of course, is a pagan festival, and in these is a representation of the procession and the procession, as modes of proceeding and receding from a ceremony, and also as acts of worship in themselves, have always been of great importance in the Christian Church. An exception is the Churches of the Reformation, which practically abolished, along with other ritual, every procession but the funeral; and this is more or less extemporaneous, and not arranged by the church for the benefit of the faithful. In as much as the 4th cent., adopted the procession from the existing religions, pagan rather than Jewish, and primarily for the funeral, the Roman Catholic Church has exploited it thoroughly. Litanies, rogations, and supplications were traditional functions.2 After the time of Gregory the Great the procession entered the celebrant and the procession to the station became regular. In processions to the stations of the Cross the Saviour's route to Calvary is represented and symbolized. The procession of the blessed sacrament is an old Roman Catholic function.3 The rulings of the RituaJ Romanum (tit. ix.) must be noted, as showing the continuity of processionai ideas.

There are (1) processiones generalis, in which the whole body of the clergy takes part; (2) processiones ordinarii on yearly festivals, such as the Feast of the Ascension of the Virgin, the procession on Palm Sunday, the Stations of the Cross, the Easter Matins and Whitsune, the Feast of Corpus Christi, and on other days according to the custom of the churches; (3) processiones extraordinarias, or processiones on special occasion. E.g., to pray for rain or fine weather, in time of famine, plague, war, or in other emergency; (4) processiones as the dedication of churches, thanksgiving, translation of relics, the dedication of a church or monastery. There are also processions of honour—e.g., to meet a royal personage, or to pay a visit to one who has come into his country.

5. The 'pardon' of Brittany.—Processions of a special character or unusual interest are numerous. Purificatory processions through fire, or in which the people walk upon fire, occur in agricultural ritual.5 To the same sphere belong the processions of giant figures, carried to the burning, processions to the midsummer bonfires, and those in which torches are waved over the gardens and fields.5 The carnival processions of France and the pardons of Brittany are remarkably developed. The latter processions are those in the towns and some districts of the people.5 In Normandy such festivals are rare; in Flanders they survive partially in the Kermesses, e.g., of Brussels. It has been suggested that the Breton pardon is a survival of pagan festivals.6 But in the agricultural ritual, that of Notre Dame de Bon Secours at Guingamp, held about midsummer, there is certainly a connexion with the agricultural ritual of fire, the central act of the night procession being the lighting of a huge

natural tendency to make processions dramatic. Two converse causes thus help to produce the procession and the stage. The ‘ridings’ on St. George’s Day and other occasions were ‘glorified’ by these pantomimic representations or dumb-show pageants.1 These culminated, or rather reached an artificial climax, losing their folk-interest, when Elizabethan artists elaborated the pageant and the Italians the trionfo. A conspicuous example of such procession exhibitions, though the scenes were not apparently always noted, is the dance of death, danses macabres, Toulciette, trionfo della morte. Cars, draped in black and white, were drawn through the streets. On these were the Angel blowing the last trump and Death with his scythe. Before and behind marched men robed in black and white, and wearing ‘death masks.’ Choirs chanted the Misereere.2 This dance of death, and the possible origin of the Breton pardon in the funeral, taken with the fact that the earliest Christian procession was funeral, while it is to-day the latest to survive, show the funeral procession to be the most constant expression of the religious rite.

II. DANCES.—Dancing and procession are sometimes confused terminologically—a result partly due to the existence of processional dances, or the enlivening of the self-created dance by the processional. The heretic Albigenses called dancing the procession of the devil.3 The bear dance (dperesia) of Athenian girls was probably processional rather than choric.4 The ‘dances’ of the old Roman collegia, such as those of the Flavian collegia, were processional with some variety of movement.5

1. Physical and psychological aspects.—Dancing is an instinctive mode of muscular expression of feeling, in man and many animals, especially birds. The laws of the social life of the human race it has played a part which touches every activity of the individual and society. Dancing may be described as ‘play’ in its absolute form. Rhythm is inseparable from its movements, as it is from any bodily function, and therefore belongs to it without saying. It is in the middle stages of culture that dancing is seen at its highest development. Here it is much more, and also less, than a ‘poetry of motion,’ or the ‘silent poetry’ of Simonides. It is rather life expressed in muscular movement. The human instinct in play is childlike without the final stage of the human love of excitement. The dance satisfies both, and its rhythmical character also makes it suitable for the expression of the most solemn and controlled emotions. It is at once the servant of Art and of Life.

Dancing, in the proper sense, consists in rhythmical movement of any part or all parts of the body in accordance with some scheme of individual or concerted action. As Aristotle remarked, dancing is imitative; and in all its forms it is an artistic imitation of physical movement expressive of emotions or ideas.

In its simplest terms it has been described as ‘merely the voluntary application of the rhythmic principle, when excitement has induced an abnormally rapid oscillation of brain tissue, to the physical exertion by which the overcharged brain is relieved.’

The social importance of dancing depends on its instinctual causation and its results. It has been noted that the physiological effects of dancing are identical with the physiological results of pleasure.

Muscular movement, of which the dance is the most complex expression, is undoubtedly a method of auto-intoxication of the very area of the brain concerned with bodily motion. A girl who has waited for a quarter of an hour is in the same condition as if she had drunk champagne.2

With regard to the muscular movements involved, the following has been observed of Kaffir dancing:

The perception of pleasure or science consists in their being able to put every part of the body into motion at the same time.4

Steri notes that it ‘touche j every vital organ.5 Of the Marquesan girls Melville writes:

They ‘dance all over, as it were; not only do their feet dance, but their arms, hands, fingers, ay, their very eyes seem to dance in their heads. In good sooth, they so play them in moving forms, arch their necks, toss aloft their naked arms, and glide and swim and whirl.6

Primitive dancing ... embraces all movements of the limbs and body expressive of joy or grief, all pantomimic representations of incidents in the lives of the dancers, all performances in which movements of the body are employed to excite the passions of hatred or love, pity or revenge, or to arouse the warlike instincts, and all ceremonies in which the emblematic express homage or worship, or are used as religious exercises.7

Groos speaks of the ‘self-created world of the dance,’8 in which the dancer realizes himself in a physical improvisation. The ‘sensation of motion,’ says Kiihn, is the ‘play-giving sensation,’ and Aristippus defined pleasure as a ‘gentle motion.’9 On the physiological side dancing develops energy and releases it; it promotes tenesmus and effects detumescence.

Tare says, that a young fellow’s muscles quiver from head to foot and his jaws tremble, without any apparent ability on his part to control them, until foaming at the mouth, and with his eyes rolling, bringing about a physical excitement.

In both individual and social functioning the dance is thus a translatable engine of emotional energy. Philosophy has noted this, and Pythagorean mysticism found in it a replica of the movements of the stars in the cosmos ‘when the morning stars danced together.’ Folk-lore has it that the sun dances on Easter Day. John Davies elaborated such fancies in his poem Orchestra (London, 1596).11

The dance is thus a natural method of celebrating anything of expressing individual or social emotions or ideas. Primarily mere physical play, it has developed in many cultures, gymnastic and artistic, as a pastime, and as a sexual stimulus; but in social evolution its main applications are the ceremonial and the dramatic. The dance course may include various other functions of the dance. Thus, in the mimetic dances of the simpler cultures there are combined worship, drama, exercise, excitement, pastime, play, art.

2. Range of movements.—The range of movements in dancing is naturally very considerable, connecting on the one side with marching steps, ‘parades,’ and on the other with the gestures of the hands used in conversation. Metrical terms in versification are frequently derived from choreic steps. In modern dancing as a pastoral, movement is practically confined to the legs. But in earlier stages the rest of the body and especially the hands are employed.

5. Sergi, loc. cit.
7. E. Codrington, p. 262.
8. K. Groos, Die Spiele der Menschen, Jena, 1890, p. 112.
11. W. W. Skeat, Etym. Dict., Oxford, 1910, defines dancing to ‘trip with measured steps.’ This definition ignores all the body except the lower limbs. The word is connected with O. H. G. tina, ‘to draw or drag forcibly,’ ‘to trail along.’
The typical Malay movements are shutting of the feet and swaying of the hands. An old Roman writer speaks of the "dancing birds", who are seen in the cruciform and semi-cruciform positions. The Mendelssohn of ancient Egypt included a curious outward twisting of the hands raised above the head. The dancing of the Indians of Guiana is similar, in stamping on the ground, and staggering in different attitudes as if intoxicated. 

2. Movements of the trunk are conspicuous in ancient and primitive dancing. National and racial characteristics are not fundamental, and the use of music and of paraphernalia, such as weapons and scarfs, is an obvious aid to physical expression.

Most of the ancient Greek ball-games were dances. In Madagascar the performers carry leaves of aréca-palm flowers, to which their movements give the appearance of being alive. In some of its aspects artistic dancing borders on the acrobatic and the juggling arts. The majority of social religious dances, on the other hand, are more akin to the procession, and consist largely of processional dancing, evolution, or pantomime.

The dancing is a development of physical play is shown by the familiar fact that some animals, especially birds, dance, not only as a method of courting, but at other times, as an individual exercise, and often combined with vocalisations. The dance of the argus pheasant, the "waltz" of the ostrich, the bowing and scraping of the penguin, and the "tumultuous" dance of the geese, has been observed of very human-like in appearance. Insects and birds perform air-dances, and flies water-dances. Dancing on skates is man's use of another element.

A dance of the Timagami Algonquins will typify the ordinary dancer of the dance of the simpler peoples and their derivatives.

The Common Round Dance is an outdoor performance generally performed at the camp. One man sings one of a set of tunes, which seem to be mostly improvisations in which human passages are often introduced, accompanying himself upon a drum which is suspended from the branches of a tree. The dancers form a circle, generally with a person at the head of the line, some carrying rattles. Then they begin trotting around to the left quite close together, in time to the music. There is very little form to the dance. It seems to be for the most part merely a form of amusement in which women and children join for the sake of excitement. At irregular intervals the dancers may face right about and circle in the opposite direction a few turns.

This and other dances of the Timagami were still being performed in the ordinary course of the time at writing.

3. Auto-intoxication and ecstasy. —The powerful nervous-muscular and emotional influence, leading to auto-intoxication and ecstasy, is thus brought to the people by originating in itself and to its employment for special purposes, such as the production of cerebellum excitement, vertigo, and various epileptoid results, in the case of medicine-men, shamans, dervishes, prophets, oracle-givers, visionaries, and sectaries even in modern culture. The similar results attainable by the normal mind indicate that the dance with its power of producing unconsciousness was the fundamental and primitive form of the orgy.

The effect of dancing "among the spinning Dervish" or in the ecstatic worship of Baechus and Cybele amounted to something like madness. It is probably due to some instinctive appreciation of these effects, as well as to the similar desire to retain self-possession and dignity that the changing element of aversion from intoxication generally, that the ancient Greeks and Romans and many Oriental peoples confined dancing to professionals. Socraates danced

attack or practising with the layonet, may imagine that he is actually fighting the spiritual forms of the enemy or some vague ghostly foe. There can be little doubt that the war-dances of barbarous peoples and even those of the ancient Spartans were unconsciously, rehearsals of battle.

War-dances are performed also for the purpose of combating supernatural influences of any kind. The Arunta of Australia, after returning from an expedition of war-dancing, defined war-dancing as repelling the ghost of the man whom they have executed. In agricultural ritual the evil influences of blight, bad weather, and general infertility with its various causes are often assayed by a war-dance or similar demonstration. Thus, in ancient Italy, the dancing priests of the god Mars derived their name of Salii from the leaps or dances which they were bound to execute at a solemn religious ceremony every year in the Comitia. Similar colleges of dancing priests are known to have existed in many towns of ancient Italy, but their dancing was a war-dance with curious weapons (see above), more potent, doubtless, for expelling demons of infertility than their high leaps were for making the corn grow high. The natives of French Guiana and other parts of South America sowing, thus: Fifty or sixty blacks in a line, with bent backs, are seen dancing in the fields, each dancing to his own tune, which glows in the sun. Ten pairs in front of them, marching backwards, the women sing a well marked air, clapping their hands, and whose motions are in the same step with the steps kept by the men. Between the women and the singers a man runs and dances, crouching on his hams like a clown, while he whirs about his umbrella. With the same, or another, dance, also sowing and nutting the earth here and there with that is necessary for exercising the spirits and causing the grain to sprout.

A remarkable Gregorian parallel to this is the agricultural ceremony of the ancient Brygates and Etruscans terrifying the Sibyls. Men ploughed and sowed, but acted as on the alert against robbers. The drama ended in a conflict and the repulse of the enemy. Such dances, or dances of the more or less religious character, were, therefore, necessary for exercising the spirits and causing the grain to sprout.

6. Agricultural dances. In many such ceremonies at the operations of agriculture the movements of the performers may be supposed to stimulate, by the action of imaginative magic, the growth of the crops, or the performers may be supposed themselves to represent the spirits of vegetation, and by their presence to disseminate virtue and fertility. It is not in possible that such ideas should have been combined. Many European cases are thus explained by Frazer:

They are 'intended both to stimulate the growth of vegetation, and to drive away the demons and other evil influences.' And these two motives of stimulation and protection have been blended and perhaps confused together, appear to explain the qualities said to have been discovered in numbers, and their significations, which they make, and the blows which they direct either at invisible foes or at the visible and tangible persons of their fellows.

Where, however, the operations of agriculture are ceremonially imitated, the stimulation is probably not so much from the supposed presence of the corn-spirits or from any specific action of imaginative magic as from the actual, practical result of a rehearsal, the instinct to which comes naturally from the human tendency to imitate and dramatize —in simpler terms, to play. Among the later developments of this instinct into 'magical' applications perhaps the most important is the production of movement (or growth) in nature, following upon the movements of man. Many 'sympathetic' rites are explained by this idea, which is derived straight from the psychology of the simplest savage. But the observation is made that many of these 'Sympathetic' Rites are of a large number of agricultural dances:

To ensure a tall crop of hemp, it is the custom among the peasants of Germany and the Tyrol to dance with high leaps. So in the case of flax and various cereals. In such customs as this the nearer the higher the jumping the taller will be the crop is probably an after-thought.

There are numerous rites in which the sexual activity of human beings is supposed to assist the fecundity of nature. Sexual processes are often imitated in the dance, and may lead to magical ideas.

Thus, the natives of N.W. Brazil imitate in dance the act of procreation and 'are believed to stimulate the growth of plants.'

Such dances seem to be in origin rather celebrations of the season or its work than magical charms, and, while the magical meaning is added, it is probably only half-serious. The permanent and original element is the vigour and movement of the dancers, representing the workers.

At the Matabele festival of the new fruits the soldiers danced round the root of the tree with knives joined together, and when he did the medicine-men and their satellites, armed with thorn-bushes, rushed about among the dancers and invited them to fresh efforts by a vigorous application of the thorns to the bodies of such as seemed to fling. The king's wife also sang and danced before him in a state of trance-Gtomo. When he had wakened her, she was blindfolded and her hands and green boughs in her left.' Similarly at the Kaffir corn-festivals generally; in one of these the king dances 'in a mantle of grass' or 'of herbs and corn-kernels. This mantle is the medicine-men and their satellites, armed with thorn-bushes, rushed about among the dancers and invited them to fresh efforts by a vigorous application of the thorns to the bodies of such as seemed to fling. The king's wife also sang and danced before him in a state of trance-Gtomo. When he had wakened her, she was blindfolded and her hands and green boughs in her left.' Similarly at the Kaffir corn-festivals generally; in one of these the king dances 'in a mantle of grass' or 'of herbs and corn-kernels. This mantle is the
afterwards burnt and its ashes are scattered and trodden into the ground by cattle.1 Here the king acts as master of the ceremonies and performs the office of harvester. It is unnecessary to suppose that he definitely represents a corn-spirit; his costume is naturally adapted to the occasion.

**Magical dancing.**—The notion that dancing by reason of its vigorous movement can induce movement in the environment is illustrated by curious customs employed for rain-making.

In Morocco ball-games of the hockey type have been employed for this purpose. The rapid movements of the ball and the players are supposed to induce movement in the clouds.2 Another case of ceremonial movement (which is of the essence of magical dancing) is that of the rain-maker of the Australian Arunta. To produce a shower of rain, he goes through a curious process of quivering of his body, which is accompanied by the rain falling at the time of his movements. At day-break he makes a final and exhaustive effort.3

It has been suggested that the crane-dance (typos) of Greek mythology records a magical dance for assisting the progress of the sun. This case is complicated.

When Theseeus landed with Ariadne in Belos on his return from Crete, he and the young companions whom he had rescued from the Minotaur are said to have danced a naxy dance in imitation of the tracery windings of the labyrinth; on account of its sinuous turns the dance was called "the Crane."

In various parts of the world, pantomimic dances have imitated the flight of birds. This may be the case here. A similar dance was practised by the Hawaiian women in the days of Freke.4 The Mazu-scheme, for dancing evolutions, however, is quite common, and would easily attach to itself famous names and exploits. Frazer suggests that the intention of both was to imitate, and so to assist, the sun's progress through the sky.5

The data are insufficient to arrange such cases as that of the king of Onitsha, on the Niger, who danced annually before his people, possibly to show his physical fitness.6 But, certainly, the dance in this case may be called the positive applications of dancing, personal vigour is demonstrable, and invites attention. In many customs it may be said both to compel attention and to invite imitation.

Both applications of the dance are 'sympathetic' in the natural sense, without being necessarily magical.

Thus, it is recorded of old Madagascar that, "while the men are in the field reaping and all their women and girls cease not day and night to dance. . . . They believe that by dancing they impart strength, courage, and good fortune to their dead. . . . Their women danced continuously that their men might not be weary. These very natural practices, such as rain-making and highly decorative, are not necessarily magical. On the Gold Coast, when a battle is expected, the women at home have a kind of sham fight, in which they cut to pieces charged on white boards at the time of the feast-maker, and drumming, he dances before the assembly. Soon he threads his way in and out amongst the people, continuing his song, and when he has gone through the ranks of the spectators he dances back to the feast-ground and ends his dance.6

**Pantomimic dancing.**—From the point of view of aesthetics dancing may be described as mask-making. Like music, it expresses primarily itself; secondarily it expresses whatever is within the scope and material of the art. In this secondary function dancing is pantomimic.

The pantomimic has the longest history of all forms of dancing. It is a natural instinct. In low-caste societies such as the Australian, and it is popular in the highest civilizations of to-day. Like other forms, it is applied to various purposes and on various differing occasions. Many other forms (see examples cited above) are pantomimic. Practically all the ceremonial of the Arunta and other Australians is pantomimic, and special ornam-entation and dress are usual necessaries.7

A good deal of mysticism is attached to the masked dances or pantomimes which have had so remarkable an influence upon various arts and crafts of N.W. America. They represent incidents in the lives of the guardian spirits of the tribe.

The gift of a dance means that the protege of the spirit is permitted to use the powers which he has learned from him. In these dances he personates the spirit. . . . The obtaining of the magical gifts (e.g., the 'death-bringer,' and the water of life, and other supernatural gifts) from the guardian spirit's body, while the person who has obtained them becomes natakatlele, supernatural, which is also the quality of the spirit himself. Among various other forms these spirits are described as made of cedar bark, which is dyed red in the juice of elder bark. They are kept only in winter.

In so far as any worship is connected with such animal-dances, they will involve various religious emotions.

Thus, if no reason is given, we assume that, when the Yuchi Indians in some of their dances imitate the movements and cries of the animals, they are paying for the destroyed property with property of higher value. The Zoilo dance before sacred tortoises may be ‘to intercede with the ancestral spirits, inanimate in the animals.’

Pantomime is also used as a part of such heilous ceremonial dances in one of which the performers practice cannibalism; in another they eat dogs; in a third they break open the heads of wild ducks with the help of daga sticks, at the same time paying for the destroyed property with property of higher value.

The last detail is akin to the system of the theatre.

In the bear-dance of the Timagami Indians the men and women form a circle, with a leader to direct operations. The bear-dance is carried on by the drummer, who carries a drum and sings the bear-dance song, then starts around counter-clockwise. The leader sometimes stops the circle, and the singer way she impugns the bear. . . . The circle keeps up until the song is finished. The idea of this dance seems to be to honour the bear by imitating him.

In another dance of the same people, the duck-dance, the movements of a flock of ducks and drakes are represented by the movements of a small group, which walks and sings. There is no curios to note that such a dance is interlarded with European steps—a modern folk-tune or two is introduced between the movements. At the close the performers quack two or three times. ‘This is purely a pleasure-dance.’

Pantomime is recognized as an educative process in elementary schools to-day, simple operations, such as sowing and reaping, being represented by appropriate movements.

A good illustration of the pantomime dance as fine art with a touch of social significance or artistic effect, is found among the Malays. In their monkey-dance pantomime represents a monkey entertaining itself, as soon as it is rocked in a cot. Then she imitates the behaviour of a monkey, and performs some remarkable tree-climbing.

In pantomime it seems the monkey is more important than in pantomimic dancing, as it is, e.g., in the ceremonial dances of the Australians and American Indians. The representation of a dramatic story in dumb show, with or less of dancing movement, is the ballet of Egypt and the pantomime of ancient Rome. Under the Roman Empire this form of dancing attained extraordinary popularity, superseding other shows, and with it remarkable artistic excellence. The fabula solitica used plots from old mythology, a love-motive being the favourite. The best poets of the day were commissioned to write the scenarios, which seem at times to have been drawn from contemporary life. The modern cinema picture-drama is a close parallel, but in the fabula solitica an explanatory narrative was sung by a chorus accompanied by an orchestra.

In another form, parallel to modern skirt-dancing, the dancer represented all the action of the various characters by the movements of his body and arms.

The modern ballet, in common with artistic dancing generally, dates from the 15th century. The great Renaissance included a new birth of dancing. Probably the tradition of the Roman pantomime assisted the innovation. From Italy the ballet passed to France, where it was perfected as the ballet d'action."

10. Dancing as a social pastime. Artistic and dramatic dancing has frequently and among various peoples been placed under a social ban, in the same way and for the same reasons as the drama. More rarely this has happened than the ballet and the dance of the social pastime. Apart from ceremonial dancing in religious worship, Greeks and Romans and most Eastern peoples, while encouraging dancing as a form of entertainment—e.g., at banquets—have refused to hear of the social pastime. There is thus a professional class. The Malays never dance themselves, but will pay well for good professional dancing. Roman dancers were infames. But as a professional class they had an important though unofficial status, like that of the bayaderes of India, the geishas of Japan, or the almesh of Egypt. Even religious dancing developed a professional class, if the d’hehkkth, e.g., of Hebrew sanctuaries may be so described.

In the history of the world’s art the great dancing genres, such as Taglioni and Pavlova, are entitled to a position only second to that of great singers and musical composers.

The use of dancing as a social pastime is comparatively modern. Plato forbids boy and girls dancing. The only approximation to this was the 6pom, in which boys and girls danced in counter-formation. The 17th century, of course, saw the birth of the school of dancing, and Spain its ‘true home.’ It is outside the scope of this article to discuss the development of this form of dancing, which belongs to the sphere of pastime. But it may be noted that the evolution of the art throws much light on the evolution of society as an individual, and in a more clear-cut manner than the evolution of music. For, in the case of dancing, the whole system is involved. As in music, so in dancing; stages of evolution, ‘schools,’ have developed a method, to be superseded by another. Among typical movements may be mentioned the pavane; its character was professional. The minuet has been described as the ‘fine flower of the art.’ But actually it expresses merely an artificial code of courtesy. The type of pair-dancing is the waltz, a dance of uncertain origin.

When in contact with European culture, native peoples throughout the world soon assimilate European dances; e.g., the people of Ceram (East Indies) have for a century or two adopted the ‘lasso’ as a modern form of pastime and of social life. The higher cultures assimilate the dances of the simpler peoples, and the ephemeral popularity of the tango and ‘ragtime’ serves to illustrate the continuity of human physical evolution.

LITERATURE.—The authorities quoted in the article supply satisfactory data, but there are no treatises written on any scientifically comprehensive lines.

A. E. CRAWLEY.

PRODIGIES AND PORTENTS.—I. INTRODUCTION.—Interpretation of prodigies.—What fortune or misfortune the prodigy portends is determined for the individual by the culture to which he belongs. Origin of the culture is properly studied in anthropological research, for the same interpretation may have had different origins, and different interpretations may have the same objective cause, the respective similarity and difference representing the varied reactions of the cultures in question. Were the interpretations given by differ-

1 Sceat, Malay Magic, p. 405.
5 E. J. B. Boudreau, De la science et des miracles, Paris, 1910.
ent cultures wholly arbitrary, they would not present such thoroughgoing, or even such partial, resemblance. Some of the resemblances may be attributed to cultural diffusion, where the phenomenon is really continuous in development, over long periods of time. The cultural bounds within which it originates. The classical cultures are good instances, for here we have historical proof of the diffusion, such proof, in the nature of the case, being very difficult to obtain in primitive society, where there is a remarkable spontaneous effect of the phenomenon upon the mind is, however, in some cases such as, if not to rule out diffusion, at least to make this supposition superfluous. The eclipse and the earthquake, e.g., never portend good. The reason is not far to seek: earthquakes never effect any good, and frequently leave disaster in their train; the completion of what the eclipse partly effects, in bringing about a diminution of light, would be the culmination of disasters that hardness has ever been the harbinger of evils which the garish light of day dissipates. 1

In many other instances the prodigy points its own moral, though one largely determined by the prejudices of the people who are affected if e.g., Napoleon's 'sun of Austerlitz'). Whether or not the inference made is historically true, the following passage shows that the suggestion of the interpretation grows out of the nature of the event:

At the time of the amplification and enlarging [of the village which Milan grew] by Bellonessus there happened a very strange accident, which gave occasion of the denominations. For when it was new building, a certain wise Sow that cause forth of an olea ruinous house very early in the morning, happening to go that way about the building of the city. This Sow had half her body covered with hard bristly hair as other Piggies are, and the other half with very white wool; which portentum, Bellonessus took for a very happy and ominous token, so that he caused the city to be called Mediolanum from the half-wooled Sow. What his reason was why he should esteem this strange spectacle for such a buckie token I know not but I conjecture it might be this: perhaps he supposed that the bristly hair might presage strength and puissance in his subjects, and the wool plenty of necessary means that might tend to the clothing of their bodies. 2

2. The realm of the unknown.—The unknown is highly charged with mystic power. Many peoples, like the Thonga, have added faith in foreign medicines just because they come from a distant place. Medical remedies, which are too seldom engage the medicine-man of their own village.

They know too much about him to waste their money on him. They float him and send for the medicine-man of another village of whom they know little or nothing. 4

In the skill with which iron is worked there is something mystical. Among the Bakongo, as among many of the tribes of Africa and of India, the blacksmith holds an honourable position, or is despised and feared. Similarly, the forge is often regarded as a sacred place, and respect is shown towards the anvil and the fire. 5

In the Middle Ages this superstitious fear and dread attached to the higher learning and superior skill.

A good instance of this tendency is the attitude taken towards Michael Scott, an Irishman of the 12th century, who was supposed to have the archangel Gabriel in his ear. 6

He was so widely renowned for his varied and extensive learning that he was credited with supernatural powers; a number of his sayings have become proverbs in the language and transformed the man of science into a magian. In the Western country traditions of his magical power are common. Boccaccio alludes to "a great master in necromancy, called Michael Scot," while Dante places him in the eighth circle of

Hell---all because his learning was beyond the comprehension of his fellows. In the 14th century, similar magic powers were attributed to a man living in a remote and barbarous part of Ireland. The priests of the church in their account of his learning. In Ireland, during the witchcraft superstition, many women were put to death on the charge of bewitching the sick. Another, of a man who had gained such extensive knowledge of their knowledge of the medicinal value of herbs—just such skill and knowledge to the gods. 7

The realm of the unknown is people by many monstrous beings. This is especially true of the celestial regions and what are, for the question, the remotest parts of the earth. In the moon and on parts of the earth, say the Eskimos, there is a people or race of men without heads or head dresses, not having a mouth, armed with sharp teeth, across the chest. 8 Many tribes in Africa have similar beliefs. They prevailed in Europe until a century ago. 9 In fact, the disposition to make monstrous men of the distant and the unknown is old as history. The early Babylonians reported an attack by a strange people who had the bodies of birds and the faces of ravens, whose dwelling-place was in the mountains to the north of Meso-

3. The psychology of prodigies. (a) Recognition of events as prodigies.—What phenomena are recognized as prodigies and what importance attaches to them depends upon the state of mind, social and individual. The wise man, as Seneca says, was not menaced by prodigies, nor his table of fortunes, nor the extremities of fire and sword, whereas a fool is afraid of his own shadow, and surprised at all accidents, as if they were all levelled at him. As Pliny 10 says, the Romans described prodigies as a disparagement, not even that a person was dead; there are, in fact, many examples of the dead returning to life, in some cases after the funeral pyre had been lighted and the flames had proceeded too far to permit rescue. There are critical moments when the mind, group and individual, is especially liable to harbour hallucinations and to magnify the ordinary into something prodigious. Intense expectancy gives exaggerated proportions to every event which is extraordinary and heightened expressions forward into suppositional realization. The politico-religious fervour of the down-trodden Jews affords many illustrations.

Prior to the revolt in Judaea which broke out in a.d. 66 this expectation of life and permanency to a host of terrifying rumours, which, in turn, fanned the fervour into greater vagaries. 'Men dreamed only of signs and omens; the apocalyptic idea gained immense ground. The persecution of the Coven, swords in the sky, battles in the clouds, light breaking forth with itself from the depth of the sanctuary, victims at the moment of sacrifice bringing forth a monstrous progeny.' These were the tales told with horror from month to month. One day the vast heavens of the temple had flown open of themselves and refused to close. At the Passover of a.d. 65, about 3 a.m., the temple was for half an hour lighted as bright as day; some thought that it was on fire. Again, at Pentecost, the priests heard a sound as of many persons in the interior, making hearty preparations as if for flight, and saying to one another, 'Let us depart hence!' The great disturbance of mind was itself the best of signs that something extraordinary was about to happen. 11

The devil you know is better than the devil you don't know, and the latter always exerts in power and malignity.

An observer of the Iroquois has declared that no Iroquois lives who would not in the night-time quail and with a bright light the nature of which he did not understand. 12

The Jesuits who visited the Huron in 1635 found them entertaining 'sacred superstitions' in which they associated much of the Devil himself. These beliefs were not uncommon. If, for instance, in their hunt they had difficulty in killing a bear or a stag, and on opening it they found in its heart a little stone, a bone, a stiletto, a serpent, etc.,
they said that such object was an oak; that is, an enchantment which gave strength and vigor to the animal, so that it could not be killed; and it used the superstitious to reli-
quishes, in order to make the tree bear fruit.  

In many parts of England and of America a crowning hen is considered very unlucky and can by no means be permitted to strut and flame in the market place.  

A whistling woman and a crowing hen  
Always come to bad ends.

The Australian prosidies are most unusual and the weird 'Ha! ha!' and 'Hoo! hoo!' of the laughing jackass.  

The Ainus find it wise not to initia the cry of any unknown bird, for it is said by the devil and carry about the seeds of disease.  

Double fruits in bananas, nuts, etc., being the result of a certain kind of mule, a term used for a hybrid produced by the crossing of two distinct species of the same genus, and to be made by certain inviable beings. The Romans were similarly impressed with the presence of a double 'head' of the river of a viciss, by which is meant the devil.  

When the devout Brahman acetic heard the elephant talk-
ing to a tree, he exclaimed in amazement, 'Ha! ha!' and wondered, that an elephant should speak with an intelligible voice, and that I should understand him?  

These trees are regarded as sinister and are considered im-

The fear of ghosts is universal.  

When the supposedly dead Gerait, hero of the Mohunjaus, rose up and slew one of the soldiers who had been left behind in a chariot.  

And this was not so much through fear of the dying as through the dread they felt at seeing the dead man.  

It was not unusual for the tax inspectors to be killed by the Irish blacksmith, when he discovered that the rider of the horse was a ghost, to 'recall with a terrified prayer.'  

This fear is not a fear of physical injury, but a fear for the future.  

In this territory all natural restraint breaks down.

Horror was on the faces of the friends of a certain John Browne of Durley when, as he lay dying in the year 1654, they saw a great iron tripod thrown up at the foot of the bed, 'begin to open, look by look, without the aid of any visible hand, until at length the lid stood upright.'

Horror would be on our faces too, if we accepted the fact that there was no natural explanation. There is no other attitude to take in the presence of events that shatter our every-day working categories.  

(6) Religious aspect. — The concepts and emotions that underlie the prodigies, and find in them a wealth of mystic meaning, have much in common with the religious attitude. Disasters of all kinds are recognized as the inflictions of an angry god.  

Pindar's remark, 'I ween there is no marvelous impos-

of the Mad Mullah, are one of many examples of a people assailed by supernatural terrors and doubts, lured by hopes of celestial glory, and apt to expect prodigious events.  

II. History.*. The Greek view of prodigies.

—According to Empedocles, the various parts of animals had a separate existence. Heads grew supported by no necks, arms wandered about detached from shoulders, and disembodied eyes pierced the solitudes. These several parts united, forming in some cases normal organs, because of their vagarious juxtaposition, in some cases monstrosities, such as man-headed oxen. The normal ones, being better adapted to the conditions of life, survived, while the monsters perished because of their maladjustment.

The stress of the times always heightened the interest in prodigies. Thus, during the Peloponnesian War there were earthquakes unparalleled in their extent and fury, and eclipses of the sun more numerous than are recorded to have happened in any former age, if we are to believe Thucydides. Again, when Xerxes was leading his army into Greece, prodigies of his defeat were not wanting; a mare gave birth to a bare, signifying, says Herodotus, that Xerxes would return fleeting for his life, and a male brought forth a colt with the organs of both sexes. Again, when the Persian army approached the temple at Delphi, numerous prodigies appeared; the sacred arms were dried by the sun, and a throng of defiled beasts outside the temple; thunder struck two cags above the heads of the barbarian force and brought them down upon the foe with considerable mortality. Two days after the olive-tree in the Erethneum had been burned down, a shoot a cubit long had sprung up from the stub, an omen that were being found leaping from the pan; this signified that the deceased Protetans would leap from the dead and avenge himself on the one who had wronged him.

By reading the horoscope Greek astronomers were able to predict the birth of monstrosities. If there was disjunction (δισνέων) between all or most of the recognized proper positions of the planets, a monstrous birth might be expected. It would not be of human birth if the planets in question were of opposite sex. Amens were seen marching, countermarching, and fighting; and the heavens themselves were seen in flames. In the district of Mutina two mountains rushed together, falling upon each other with a very loud crash, and the mountains; in the districts of the Apennines, smoke issued from them. There was the usual great crowd of witnesses. All the farmhouses were thrown down by the shock, and many of the animals in them were killed. This heralded the Social War, which was even more disastrous for Italy. Near Harpsa, in Asia, was a large rock which could be moved by the finger, but not if the entire body was applied to it. Near the river Indus a certain mountain had such attraction for iron that, if shoes containing iron were placed on it, the mountains would be drawn, while another would repel iron to such an extent that the foot within in a shoe containing iron could not rest upon it. In several places things pushed into the ground could not be pulled out.

Prodigies were not uncommon at any time, but they were especially frequent in time of political or national danger or disaster. In the year in which Fabius Maximus was for the third time elected to the consulship the sea appeared on fire; at Sinuessa a cow brought forth a colt; the statues in the temple of Juno Sospita, Lanuvium, sweating blood, and a shower of stones fell in the neighbourhood of that temple.

* On account of this shower the nine days' sacred rite was celebrated, as is usual on such occasions, and the other prodigies were carefully explained. Prodigies announced from many places while Hannibal was threatening Rome augured the hero of the future. Many Gerald bard, the soldiers had taken fire; in Sardinia the staff of a horseman who was going his rounds upon a wall took fire as he held it in his hand; the horses were frequently ablaze; at Preneste two shields sweated blood; at Arpi runners were seen to fall from the heavens; at Capena shields appeared in the heavens, and the sun fought with the moon; two moons rose during one day; the fountain of Hercules flowed with spots of blood; in Antium bloody grain fell into the basket as the people were reaping; at...
Falerii the heavens appeared cleat as if with a great chasm, and from the cleft came a vast light; the prophetic tables suddenly diminished in size, and one fell out, on which appeared the inscription, 'Mars shakes his spear.' The statue of Mars at Lyons stood at the place, the Appen Way, swept at the sight of images of wolves; at Capua the heavens seemed to be on fire, and the moon appeared to be falling amid the rain. This must, indeed, have been good preparation for smaller wonders.

Professor/of Shakespeare, says Liévy, 'credit was assigned on a magnitude of less magnitude: that the gods of certain persons had borne wool; that a hen had changed herself into a cock; and a cock into a hen. These things having been later before the senate, as reported, the authors being conducted into the senate-house, the consul took the sense of the fathers on religious affairs. It was agreed that these prodigies should be expiated, partly with full-grown, partly with sucking, victims.'

Later, in the Pune War, another flood of prodigies aroused new fear to supplement the old. Crows had torn some gold in the Capitol with their beaks and had eaten it; at Antium mice gnawed a golden crown; an immense quantity of locusts, coming apparently from nowhere, filled the whole country around Capua; at Reate a foal with five feet was born; at Anagmia scattered fires appeared in the woods. In the following year, at Arpinum the earth sank into an immense gulf, in a place where the ground was level; the 'head of the liver was absent from the first victim immolated by one of the consuls; these prodigies were explained as omens and saved the state.

A circle of stars near the moon was visible when Augustus entered Rome, after the death of his father, to assume the name by which he was afterwards known. Shakespeare is following ample parallel for his description in the image of those five moons immediately after the death of Prince Arthur.

2 The early Christian view.—The spirit of evil, typified by the Roman power or by the violent party of Jerusalem, as the case may be, is a dragon which pours out a flood of water to sweep away the Church (Rev 12:1-12). The concept is possibly of Babylonian or Egyptian origin, though it is found also in Mazzinism. The false prophet or Antichrist is especially hated in the Church and is sometimes called the 'false prophet' whom the writer of the Apocalypse represents as an ally of Nero who causes fire to fall from the sky, graven images to live and speak, and who puts the 'mark of the beast' upon men (Rev 13:15). He is a monster, speaks like a dragon, and has 'two horns like a lamb.'  

Nor are there lacking elements of the prodigies in that hated Antichrist, the emperor Nero, whose life has been likened to the descendant cires of a grotesque witches' revel. In the bloody troublous days of Nero meteor and celestial signs received heightened attention.

Comm. eclipses, mock-ans, northern lights, in which appear crooked, horses and streaks of blood, fantastic forms of clouds in time of heat, with traces of battles or strange beasts, drew anger attention and seemed never to have been so vivid as in these true prodigies. The flowers of blood, of wonderful thunder-bolts, of rivers flowing up-stream, of bloody torrent. A thousand things never noticed in ordinary life have a high importance in the feverish excitement of the public mind.'

Christ Himself had prophesied that nation would rise against nation, kingdom against kingdom; there would be earthquakes, terrors, famines, plagues and destructions in the sky (Mt 24:23, Mk 13:29, Lk 21:11). The prophecy had its ample fulfilment in the near future. The famine came in the year 68; inundation from the Tiber in 69 and from the sea along the coast of Lycia; the pestilence visited Rome in 65, carrying off 30,000 inhabitants. In 69 occurred the first barbarian conquest, and the Campania by scarcely less destructive cyclones and tornadoes; tempests spread terror broadcast, and nature seemed everywhere perverse. It was a prevalent belief that portents, hiding of the sun, eclipses, flood, even the death of the sky, were to usher in the Messianic kingdom. This view—that calamities were signs of the Messiah's approach—was in vogue among the Jews for many centuries after the time of Christ. Similar signs and more terrible were the omens heralding the death of Charlemagne, recounted by his contemporaneous and biographer, Egino:

There were frequent eclipses, both solar and lunar, and a black spot appeared in the heavens daily for three years of his life; the gallery between the basilica and the palace fell suddenly in ruin; accidental fire consumed the wooden bridge which led to it. At Anagnia—both gallery and bridge had been constructed by Charlemagne; during his last campaign into Saxony a ball of fire fell suddenly from the heavens with a great light. If, rushed across the clear sky from right to left, and everybody was wondering what was the meaning of this, a crane which the spring of the year had given a sudden plunge, head foremost, and fell. Her javelin was struck from his hand with a violence that sent it twenty feet away. The palace in Als-Chappè was frequently trembled, the roofs of whatever buildings it harbored in kept up a continual cracking noise, the basilica was struck by lightning, and the tiled roof fell. The general populace was wattled by the thunder-bolt and hurled upon the bishop's house ad

III. ANIMALS.—I. DIVINATION:—Divination is by no means confined to the classical cultures. It is practised by means of lice in the Torres Strait, and on the island of Mer is a divinatory shrines in these lices are taken from the movements of insects, lizards, and other animals. The Kafir of the divine by means of the shoulder-blade of a sheep; the Buruts use the shoulder-blade of a sheep in a god in divining the cause of disease or for the discovery of a thief. A written law was given by God to the chief tribal ancestor of the Buruts, who, on his death, bequeathed it to his own people, fell asleep under a haystack. A cow came to the stack and ate up all the law as well as the hay, but the law remained engraved on the cow's' shoulder-blade. The law is the basis of the cow's' divining by way of divination, and the Igorot resort to divination with chickens. Before going to battle the Samoans observe in the movements of the chicken as to whether it will go about the points of the spears and the outside of the bundle, it is a good omen, their very grit is a good omen. The Chinese and Japanese use certain animals as the basis of divination, it is a bad omen. If a lizard comes down the back of a reptile the dragon which was being discovered. The Tonga preserve, as useful for divinatory purposes, the stratagems of a smaller animal found in the stumps of a hyena—a most uncommon discovery.

See, further, artt. DIVINATION, 2. Omens.—Omens likewise are common among primitive peoples.

The looking of vultures denotes impending war, it being the habit of these birds to settle upon the cadaver of the slain. The snake portends death to a Bushman. Among the Tonga it is a bad omen for a man to cross the river. The touch of the eagle informed the Tukama that some one would be killed
by an arrow. When a snake crosses a person's path, it is a sign that the person is to die. The aurora, or a fiery red glow, is a sign that he will vomit. 3 The Yana declare it a bad sign if a fox 'talk' before daylight,4 but, if the fish lies left on the shore—a bad omen for a good brewer; it is a bad omen if seen to fly in any other direction. If a certain fish swims rapidly, they are about to be defeated. However, if it round a column and then on its back, the party would not dare to proceed.5 The flight of the owl is a good or a bad omen according to the direction it is seen to fly. If the battle-owl is seen to approach when a party is about to set out, it is a good sign; if far away, a bad sign. Evil is portended when the same owl flies driven upon the path, and the event creates a commotion throughout that locality. If the heron flies before the eagle in the spring, there is a disturbance in the world. If the party is about to set out, this is a bad omen. The appearance of the creeper-bird in the morning or in the evening means that one's prayers are answered, while its failure to appear means that the gods are angry. If the teeth of the serpent-whale, after being placed in position, lie fest and wide, it is a good omen; while, if they point towards the north or south, it is a bad omen. A war party will return if a lizard is seen crossing its path.6

In Russia an expedition, preceded by months of labour, will turn homeward if bad omens are observed—g.5, if a particular bird calls on a certain side or flies across the river in some particular fashion; and a newly-married pair will separate if it on the wedding day the cry of a deer is heard near the house. Similar beliefs prevail among the Todas. In Holland, as early as 1611, the presence of a stork upon a house was looked upon as a good omen, and its leave-taking as a bad omen.7

3. The crow and the raven.—The English rustic who pronounces a curse on the ill-betiding crook of the crow might well be considered the inheritor of the Roman belief that the crow is a bird of ill-omened garrulity and especially so when the time of ill-omen is the morning.8 Even the indigenous croak of the raven will give bloody milk if it is frightened by an owl, and will fall sick and die if touched by it. Sreech-owls are ghosts among the Arapaho, and in many American tribes the owl is regarded as a bird of ill-omen, or of magic power, as, notably, in the South-western area. With the Navajo it is a symbol of bugaboo used to frighten children into submission.

IV. NATURAL PHENOMENA. — 1. Aurora borealis.—The Mandans say that the northern lights are caused by a large assembly of medicine-men and distinguished warriors of several northern nations who boil their prisoners and slain enemies in huge cauldrons. The Eskimos say that they are the ghosts of the dead playing football with a walrus skull.4 To the Malecite they represented blood and portended war. The Tingit share with the Eskimos the belief that the northern lights are the spirits of the dead at play,5 while the Saukteaux say they are the spirits of the dead dancing mankind round a bonfire at sea and this is called the Lacedemonians and the loss of their influence in Greece. This 'flame of a bloody appearance (and nothing is more dreaded by mortals) which falls down upon the earth' appears to the Greeks as an omen of war.6

Pliny is inclined to interpret it as due to natural causes, but does not deny its association with untoward events:

They have indeed been the precursors of great events, but I conceive that the evils occurred not because the prodigies took place, but that these took place because the evils were appointed to occur at that period. Their cause is obscure in consequence of their rarity.7

2. Earthquakes.—According to Pliny, the Babylonians attributed earthquakes to the influence of the stars when in a certain conjunction with the sun or with one another. The Greeks attributed thunder and earthquakes to one and the same cause, the former to agitation of the air above the earth, the latter to disturbances in the air beneath the earth. Yet, in spite of the scientific theories, such as we find in Aristophanes or Herodotus, an earned tradition kept up by which

2 Batchelor, op. cit., 468-429.

6 See RREEW [1908], p. 452.

the deity intimated to men the evils that were about to befall them. During the 2nd cent. of our era, where earthquakes were both frequent and frightful in their destruction of cities, the Stoe philosophers, believing the old explanation insufficient to account for such disasters, attributed them to the displeasure of the gods—a view which later Christian theologians adopted. In the latter latter case in the region of the Bay of Naples in the 1st cent. A.D. were interpreted by Christians as signs of divine wrath visiting deserved punishment upon the wicked. J. T. S. Kostand and T. P. N. T. later also regarded them as supernatural. Lucretius, following Epicurus, Democritus (water and air), and Anaxagoras (fire and air), ascribes earthquakes to the full of great substances beneath the earth as well as air escaping from subterranian caverns. Seneca attributes them to escaping air. Earthquakes occurring during the day or a little after sunset are heralded by a long thin cloud extending over the clear sky. The water in wells is more turbid than usual and emits a disagreeable odor. Birds settle upon vessels at sea and give the alarm. Yet so ominous are earthquakes that Pliny, who is inclined to find their cause in subterranian winds, declares that the city of Rome never experienced a shock which was not the forerunner of some subterranian calamity. The Japanese once held that the magnet loses its power during an earthquake or even entirely prior to one. They attributed earthquakes to movements of a tortoise, on which the earth rests, or to the wriggling of a large subterranian fish, which, when it wakes, wriggles about and causes the vibrations. During a severe earthquake masses of people can be seen, robed in white, some of them on their knees, attempting to appease the wrath of the gods or demons who are responsible for the disturbance. The Indians of the south-western part of the United States have a similar belief. They say that the shaking of the earth is caused by the wriggling of a large subterranian serpent or dragon. The Thungit attribute earthquakes to Old-woman-underneath. This is almost identical with the belief prevalent in Melanesia and Polynesia. The Arabs regard an earthquake as the will of Allah and resign themselves to it calmly, not anticipating any greater calamity. The Caribs attribute earthquakes to demons or terrestrial people. The natives of Bali and of the Fagi Islands attribute them to evil spirits, as do the Mao Nagas. With these peoples, as also among the ancient Greeks and in ancient Rome, a tabu was placed on all ordinary occupations; a Brahman might not read the Veda. Earthquakes were so common in Rome in the year 133 B.C. that all public business was blocked, and during the following year shocks lasting thirty-eight days called for a total cessation of business. As late as the time of the emperor Claudius an earthquake was always followed by the appointment of a holiday for the performance of sacred rites. After the occurrence of an earthquake during a little earthquake would be appeased. In the first centuries A.D. the pagan Romans usually attributed them to displeasure towards the Christians. In the 8th cent., Bede attributes earthquakes to the levitation in his subterranean prison, who, in his incessant prayer, shook the earth. Artemidorus review was generally championed by the later medieval theologians (as by Cardinal d’Ailly, Concordia Astronomiae Christianae, Paris, 1483); yet in 1580, during the reign of Queen Elizabeth, earthquakes were generally considered by the clergy as evidence of God’s wrath—a view popular in the New England States as late as the last half of the 18th cent., and revived on the Pacific coast after the earthquake of 1868 which destroyed San Francisco.

3. Eclipses.—The Chaldeans explained eclipses on the supposition that one half of the moon was bright, the other half dark. When she suddenly turned to the sun she sent away the sun by presented to her dark visage, they had evidence of her displeasure. Some event of importance—a pestilence, a famine, a war, an earthquake—followed hard upon each eclipse. For the Greeks, similarly, an eclipse领衔ed no good. It signified the turning aside of the face of the god and the approach of a dire crisis. The moon hid the sun, and the sun fell into a swoon, or ἔφαγεν (défautance). The moon, assisted by the other planets, then provided the energy which the sun temporarily could not supply.

1 Xerxes [remarking an eclipse of the sun] was seized with alarm, and, sending at once for the Magians, inquired of them the meaning of the phenomenon. They replied, showing to the Greeks the destruction of their cities; for the sun foretells for the moon and us. 2 So Xerxes, thus instructed, departed on his way with great enthusiasm. 3 An eclipse caused Cleombrotus to bring his army home. 4 For while he was offering sacrifice to know if he should march out against the Persians, the sun was suddenly darkened in mid sky. 5 In 583 B.C. a sudden eclipse of the sun caused the fighting Medes and Lydians to lay down their arms and hastily make peace; and the Athenian expedition, which was about to depart from Syracuse in 413 B.C., after ignominious defeat, was delayed by an eclipse of the moon which filled the soldiers with fear. Thales was reputed able to predict an eclipse of the sun and to account satisfactorily for the phenomenon. Pythagoras likewise explained eclipses as natural phenomena, as did Aristotle and Pliny. The Egyptians also attempted to explain them as part of normal celestial occurrences and to predict them. 6 Lucretius explains them in the spirit of the age and by modern ways, as do Seneca and Livy. 7 Livy says that Caius Sulpicius Gallus, military tribune, 'lest they should any of them consider the matter a prodigy,' foretold to the army an eclipse of the moon on the following night. He refers also to the customs of making a din during an eclipse of the moon, presumably to frighten away the beast that is devouring it. 8 Pliny admits, with his pre valent inconsistency of reason and superstition, that many eclipses are portentous, especially such as are uncommonly long. This was the case when Caesar was slain, as in the war against Antony, when the sun remained dim for almost an entire year. Driving away an eclipse by beating drums and cymbals is referred to by Tacitus. 9 The inhabitants of Turin long continued this practice.

The Armenians believed eclipses of the moon to be caused by the interposition of a dark body between it and the earth during the earth’s revolution about the moon. 10 Orthodox Hindus look upon an eclipse as the eclipse of the sun by his creditors, Râhu and Ketu. They accordingly

give alms and observe a fast during the eclipse. There is another belief to the effect that it is 
called by a demon, called Svarbhanu. This is similar to the Chinese belief that the sun or moon 
is being swallowed by a dog or other beast. They accordingly beat gongs to rescuse it by frightening 
away the devourer. Since an eclipse of the sun portends some awful and mysterious event, the 
natives of Ceylon observe a fast on that day. The Todas fire off guns and send up rockets to frighten 
away the snake that is trying to eat the hare in the moon, and accompany these demonstrations 
with shouts. They observe a fast also. Shinto religion ordained that, at the time of an 
eclipse, certain jewels, regarded as amulets, should be suspended from the highest branches of the 
sacred cedar, their brilliance being suggestive of the light of the sun which it was desired to restore.
The lightning of fires, doubtless for the same reason, will dispel an eclipse, and so will the crowing 
of cocks, as they are the usual heralds of the sun's return. The penultimate stârah of the Qurân 
contains a spell designed to ward off the evil influences that normally accompany an eclipse.

Pierre Bayle argues in some detail that comets and eclipses do not presage ill. He refutes the 
document of the ancients and that of his contemporaries, by showing that no more misfortunes came 
after the occurrence of certain comets of his day (17th cent.) than before them.

On the west coast of Africa an eclipse of the moon is attributed to the shadow of the sun, which is 
constantly in pursuit. The natives throng the streets and watch the coming shadow for hours. 'Be 
day!' Go away! But Junod declares that the Thonga are not much impressed with eclipses, 
being more struck with wonder at the supernatural knowledge of the white people than with fear 
of the phenomenon itself.

For the Maori, an eclipse of the moon presages the fall of the enemy's fortress. The Tahitians 
who filled with dismay. They supposed it under the influence of some evil spirit which was about to 
destroy it. They accordingly repaired to the ten or so years later, the luminaries of day and night 
from his stomach. The Tonga Islanders are content to explain the eclipse of the moon as 
due to a thick cloud passing over it. The N. Queensland natives attribute an eclipse to the 
anger of spirits, and the Sandwich Islander says that the moon is beaten, pinched, or swallowed.

The Bella Coola believe that during an eclipse the moon paints her face black. At this time the 
moon performs one of the most sacred ceremonies of the Iesuist, which are thought to be 
vastly dangerous to the performers. The black paint

with which her face is covered is supposed to be 
a protection against these dangers. Alilhaya, 
the guardian of the moon, restores her to her full 
size, and cleans her face after an eclipse. The 
Dakota discharge their rifles in the air to drive 
away the demon or evil spirit that is causing the 
eclipse. The Eskimos of the Lower Yukon 
believe that the moon is swallowed by the moon, 
and a ceremony is often deferred on this account. The rising 
generation, however, pays little or no attention 
to this custom. The Tilting say that the sun and 
moon are hiding their faces during eclipse, and 
their breath towards them in order to blow 
away the sickness which the eclipse is bringing.

4. Hail.—Hail was formed by the freezing of an 
entire cloud (Posidonius). At Cleone, according 
to Strabo, the Great Hail-storm was reported to 
the State to notify the people of the approach of hail. 
Upon such notification the people offered sacrifices, 
some a chicken, some a lamb. If these were not 
to be had, they pricked the finger with a well-
sharpened stile and made atonement with 
their own blood.

Aristotle considered hail and snow in the same 
formation, differing only in size and shape. For Pliny it was merely frozen rain, probably 
caused by the winds; but the star Arcturus scarcely ever rises without accompanying storms of 
hail. Lucertius leans towards a similar inter-
pretation, but his views of its formation are not 
clearly expressed. Hail is the result of frozen 
rain-drops, said Bede; but the Lec Visigothorum, 
the earliest known written code of the Roman law, 
those who, by incantations, bring hail-storms upon 
the fields and vineyards.

Hail is often personified in N. American mythol-
ogy, but the phenomenon is seldom regarded as 
of any special significance. Among the Nandi no 
work was permitted during the twenty-four hours 
following a hail-storm. The Kafrs permitted no 
field work on the day following a hail-storm, for 
this would bring down more hail.

5. Lightning and thunder.—Thunder, especially 
on a cloudless day, was the great omens of Zeus.
If heard on the right, it was favourable, and therefore unfavourable to the foe, who would hear it on the left. The thunderbolt was cast by Zeus.

4 All the. Zeus had been meditating evil against them, thundering terribly. And pale fear seized them and they poured wine from their cups upon the ground, nor did any one dare to taste it before it had poured a little of its exalted juice of Kronos. 3

The Pythagoreans believed that lightning was intended to terrify the damned in Tartarus. The Persians considered it a missile of divine wrath.

5 Said Arataineus, the adviser of Xerxes, 'They seem thus the Delphic thunderbolt, the sublime power above their fellow; but the little ones worry him not; and thou seest also how his missiles always smite the largest buildings and trees of such kind; for God loves to truncate all those things that rise too high. Thus, too, a large army may be raised by a small one, when God in his jealousy hurl.s a panic or a thunderbolt through them; they are shockingly destroyed: for God permits none but himself to entertain grand ideas.' 4

For the Romans thunder predicted the good or evil fortune attendant upon an undertaking, and might itself be compelled or invoked. According to an Etruscan legend, thunder was invoked when the territory of Volsinium was laid waste by the monster Volta. To perform the ceremonies improperly was to court death from the lightning—a punishment which, according to Tullus Hostilius for such shortcomings. Thunder on the left was propitious, for the not very enlightening reason that the east is on the side of the heavens. It is very propitious if the thunder proceeds from the north to the east and returns to the north. The remaining quarters of the heavens are neither so propitious nor so much to be dreaded. When Marcellus was about to enter upon the duties of consul, it thundered. The augurs were summoned and declared that the movements of thunder were valid and that the emperor's father spread abroad the report that the gods were displeased because of the election of two plebeians as consuls. 3 Seneca finds marvellous effects in lightning, which leave no doubt that a subtle divine power is present in it. He knew that if one has a design, then the lightning that occurs counsels; but, if one has no such design, it warns. Nor does he agree that the bolt which occurs first after entrance on an inheritance, or when a citizen or an individual has entered upon a new phase of existence in his own person, in its participation in a series of events through the whole substantive life. Sometimes it portends nothing, or at least nothing that we can discover—e.g., if it strike in the sea or in the desert. 4

6 The Stoic Attalus, according to Seneca, 6 recognized a class of lightning portending nothing that concerns us, and a class intimating what does concern us. Of the significant lightning there are several varieties—a favourable, an unfavourable, and a neutral. The unfavourable portents may be (a) unavoidable, (b) avoidable, (c) such as may be mitigated, or (d) such as may be delayed. If benefits be foretold, they may be (a) abiding or (b) transient.

In violent storms at sea stars seem to settle on the sails. This is accepted as aid from Castor and Pollux. It is, says Seneca, 3 really a sign that the storm is breaking and the wind subsiding; otherwise the stars wouldfloat about without settling. When Glyppus was on the voyage to Syracuse, a star was observed rising on the horizon of his lance. At other times stars rested on the points of the Roman spears. 7

the glance of its eye when seeking prey giving rise to the lightning.

The Chaldeans explained comets as special thunderbolts, flaming torches hurled by the thunder-gods. The Greeks held, among other views, that they were rocketed from the earth to the higher regions of the heavens. Here they were consumed, and afterwards fell back to earth. Aristotle held the much more advanced view that they were the result of a certain juxtaposition of the stars. Plato ranked in large part the classification of comets inherited from the Greeks.

There are the Crinoline, as if shaggy with bloody locks, and surrounded with bristles like hair; the Pogonie, with a mane hanging down from their lower part, suggestive of a beard, etc. There is also a white comet, with silver hair, so brilliant that it can scarcely be looked at, exhibiting, as it were, the aspect of the Delyth in a human form. There are also some that are shaggy, having the appearance of a Beecie, surrounded by a kind of crown.

The rising of a comet does not convey a threat of wind and rain in the immediate future, as Aristotle says, but casts suspicion over the whole year. Hence it is plain that the comet has not descended from the heavens, but has been stored up and buried deep within by the laws of the universe. The comet which appeared in the consilium of Paterenus and Vosiens fulfilled the anticipations of this kind entertained by Aristotle, and, for that matter, by Theophrastus; for there were everywhere prolonged storms, while in Asia and Macedonia cities were overturned by earthquakes. A meteor as big as the moon appeared when Paulus was waging war against Persus. A similar portent appeared about the time of the death of Augustus, when Tiberius was executed, and before the death of Germanicus. For the Roman sailors many shooting stars were the sign of a storm.

Shooting stars are the embers thrown down from the fires kept by spirits of the dead. They are usually seen in the falling rains. The shooting stars are believed to depose a king at the end of eight years, if, during their vigil on a clear and moonless night, they saw a meteor or shooting star. Frequently they portend some important event:

When beggars die, there are no comets seen.
The heavens themselves blaze forth the death of princes.
(Shakespeare, Julius Caesar, act vi. sc. ii.)

7. The Milky Way.—The Jews thought of the Milky Way as a river flowing through the heavens, proceeding from the throne of God—an idea derived from the Greek legend that the Milky Way is a river of gold in the heavens, 8 and in the opinion of the Jews, the Milky Way is a vast river in the sky, whose overflow is represented by the Yangtze. Across this river is never bridge nor ferry, but once a year, on the seventh day of the seventh month, the emperor, an immortal comes, and spreads its wings across. Over this bridge meet Kengin, the heatherd, who presides over arms, and Shoknu, the weaver, who presides over weaving and other feminine arts.

A tradition current among the Miameses states that the Milky Way was formed when the Virgin Mary, returning across the heavens with a pail of milk, stumbled and fell. The Tingit say that the Milky Way was made by the culture hero Q’ayak when journeying across the heavens. The Tewa call it the backbone of the Universe Man.

8. Perihelion.—The perihelion was explained by Aristotle as due to refraction from the sun, and by Sosigenes as due to the refraction of the sun in the heavens. To the Romans it portended rain, and often some considerable misfortune. The Tingit say that, if a moon sun goes down with the sun, good weather is portended; if it goes away before sunset, bad weather.

Bishop Latimer in 1532 speaks of rings about the sun as signs of the approaching end of the world.

9. Rainbow.—The Catawbas (as also the Tingit) call the rainbow the ‘dead people’s road.’ The Teton Dakota will not point at the rainbow with the index-finger, though they can point at it with the lips or elbow. Should one forget and point at it with the fore-finger, the bystanders laugh at him, saying, ‘By-and-by, O friend, when your finger becomes large and round, let us have it for a ball bat.’ The Hopi and the Thompson Indians of British Columbia have a similar tabu. The Hidatsa call the rainbow ‘the cap of the water’ or ‘the cap of the rain,’ and attribute its formation to the claws of a red bird. The Mandans say that it is a spirit bird holding the rainbow in its claw.

The ‘great snake of the underworld’ in the rainbow-god of the Yoruba. It comes up at times to

drink water from the sky. A variety of the python is the messenger of this god. 1  

Pliny gives a purely naturalistic explanation of the rainbow, denying that it is either wonderful or prodigious, but admits that it means either war or a fierce winter which will make an end of men's work and injure the sheep. 2 Senecon tells us that a rainbow in the south portends a heavy fall of rain; one in the west, a dew or light rain. 3  

To the Arawaks the rainbow heralds the approach of white people from that quarter in which it appears. When the Caribs see it at sea, they accept it as a good omen, but, if it appears while they are on land, they hide in their homes, considering it a strange and masterless spirit which is seeking to kill somebody. 4  

10. Volcanic activity.—For the Romans volcanic activity presaged dire calamities. 5 Avemnum, in Italy, was commonly thought the entrance into the infernal regions.  

The old crater in Ceylon contained salt water which was considered the residue of the tears of Adam and Eve, who retreated here after their expulsion from Eden and for one hundred years copiously bewailed their sin. 6 Gregory the Great saw the soul of Theodoric going down a volcano on the island of Lipari.  

11. Waterspout.—The waterspout took the form of a great animal and was much dreaded by the Roman sailors. 7  

12. Will o' the wisp.—The Yorkshireman can elude a will o' the wisp by putting a steel knife into the ground, head upwards. 8 It will run round until the knife is consumed, thus providing the pursuer an opportunity to overtake it. The mysterious power of attraction which it possesses can be escaped by twining one's apron. 9 In 16th cent. England many superstitions were associated with this phenomenon. 10  

Among the Micmac, as also among the Dakotas, the word for will o' the wisp means also ghost. Both tribes believe that it will pursue one. The Dakotas have a medicine which will protect the warrior from such pursuit. The Micmac elude it by putting a pin point upwards in their tracks. 11 This the skrgogamutch will not go past. 12 In Maryland the superstitious Whites believe that it is the evil eye pursuing them. 13  

V. PHYSIOLOGICAL AND PSYCHIC PHENOMENA.  
— The chief reason why an albino person or animal is often the object of religious reverence. The sudden and mysterious appearance of the white buffalo was the 'sign' for which the Fox Indians waited. 14 For many of the American tribes the white buffalo or the white deer portended some extraordinary fortune. The skin of the white buffalo cow was an eminent fetish with the Mandan and Hidatsa, worn on rare occasions and sometimes used as a sacrifice. The Crow have a superstitious fear of the white buffalo cow. When they address the sun with these words: 'I will give her to you.' They then attempt to kill the animal, but leave the flesh untouched, saying to the sun, 'Take her; she is yours.' They never make use of the hide of such a cow. 15  

Throughout the Lower Congo an albino or the hair of an albino person is necessary to supply the needed magical power for the Ndembu society. 16 On the West Coast the albino is regarded as a sacred animal, and is ipso facto a candidate for the priesthood. 17  

The white dog was sacred among the Iroquois and was sacrificed. In Sinn the white elephant or white monkey was sacred and might not be killed, but it fell into the hands of those who 'had a white elephant on their hands.' A white horse, a white pig, and a white cock were among the offerings at harvest-time prescribed by Shinto ritual. By virtue of such gifts the diviners obtained from the god of harvest the secret of a magical process which enabled them to save the imperilled crop. The white horse also served to establish the ruling house:  

As this white horse plants firmly his fore-hoofs and his hind-hoofs, so will the pillars of the Great Palace be set firmly on the upper rocks and frozen firmly on the lower rocks; the pricking up of his ears is a sign that your Majesty will, with ears ever open, hear the voice of Heaven. 18  

In the book of Enoch 19 the Messiah, at the conclusion of the world drama, appears under the figure of a white bull, and in this guise secures the respect and fear of all the heathen, who, thanks to this symbol, are converted to righteousness. He is feared by all the beasts. When all the other animals have become white, He changes into a buffalo with black horns. 20  

Xerxes sacrificed white horses and young men that the gods might give him victory. 21  

2. Birth.—(a) Supernatural birth.—To assure the divine nature of the ruler, and as a logical result of his alleged divinity, his origin was attributed to some other than natural birth.  

'At the birth of a white child the gods totally make away any other human being could not have been born without the agency of the deity,' said the biographer Arrian, when discussing the parentage of Alexander the Great. 22 He to whom the gods themselves reveal the future, who impose their will even on kings and peoples, cannot be fashioned by the same wools which bore us ignorant men,' said the Augustan writer Arrius Fuscus in his discussion of astrologers. 23  

In N. America the concept of a supernatural origin is frequently held with regard to the culture hero of the Indian peoples—the white man—emanates from a blood clot or from menstrual blood. 24  

(b) Twins.—The Navaho accept twins as a divine gift, though the advent of twin colts is viewed as an evil omen and both mare and colts are killed. Many Indian tribes, however, regard a healthy and uncanny and may kill one or both of them. Most of them regard triplets unfavourably, though in some instances they are welcome. 25  

3. Dreams.—The prophetic nature of dreams and their use as auguries are familiar themes to the student of Greek and Roman culture. 26 Prometheus, says Aeschylus, 27 was the first to teach men what sort of dreams were destined to prove realities. In obedience to dreams the great emperor Augustus went through the streets of Rome begging. 26 In cubation was practised there as in the temples of China at the present time. 28 Pliny doubted the mind's knowledge of the future, when in sleep, 29

16 For Persian interpretation of dreams see Herodotus'description of the dream of Xerxes (vi. 126).  
but in spite of his amazing credulity he was an advanced sceptic.

Muhammad, according to tradition, said:

1. A dream is a gift of God's favor, and a bad dream is of the devil's; therefore, when any of you dream a dream which is as he is pleased with, then he must not tell it to any but a house of rectitude. If he dream a dream and then left to seek protection from God both from its evil and from the without, he must let his father and mother and his nearest kin and shoulder, and not mention the dream to any one; then, verily, no evil shall come nigh him.
2. The truest dream is the one which a man is pleased to think.

Specific and conventional interpretations are often given to dreams.

In Persia 'seeing bees in a dream indicates riches. To dream of eating grapes presages sorrow and flowing tears.

In ancient Persia it was believed that if the angels will come for the soul of some member of the family.

In Northumberland to dream of a hare means that you have an enemy; if one crosses your path, it is an omen of ill-luck. To see a good omen is to be warned of plots and intended assaults. If it be bees carrying honey, you will earn money from wealthy people. If the bees sting you, your mind will be tormented by foreigners. If bees fly into the room, you will be destroyed. To dream of many fowls together is a sign of jealousy and chiding.

Any dream on the first night of the moon's age is a good omen, while the second and third nights are neutral. The following two nights before and after the dream of the sixth night should not be forgotten. That of the seventh is sure to be fulfillled. Whatever is dreamed on the eighth and ninth nights will become public. If it is unpleasant, turn the head towards the east and pray to God. Finally, he states that his fortune embodied in the days of the lunar calendar, and each month, from the first to the thirteenth, has its particular portent.

Dreams play an important part in the lives of many primitive peoples, and usually taken something in harmony with their content. Among the Dakota to dream of the moon is unlucky. It is lucky to dream of hawks, but unlucky to dream of bears, for the latter are slow and easily wounded.

A dream about snakes will be the result of killing one, and if the snake comes from his dream, and shortly afterwards was actually shot in that way. Still another man announced a dream to the effect that he was shot through his temples, and this also came true. While dancing, dreamers would call on outsiders to bear witness to the truth of their statements, and the expected outcome. Once a Joggo (a Clown) challenged a dreamer's account, saying that no man could recover from a wound of the kind described. Straightway the dreamer set out to the spot where the event was to be let through him. The wounded man staggered off, went to a sweat-lodge, and actually recovered within a few days.

And now other dreamers' revelations.

To the Omaha the moon would appear, having in one hand a burden strap, in the other a bow and arrows, and the man would be bidden to make a

5 Cockayne, iii. 156-167, 177-197.

choice. If he reached for the bow, the moon would cross its hands and attempt to force the strap from him. If he should wake before taking the strap, or if he should succeed in capturing the bow, he would succeed in escaping the penalty attached to the dream. If he failed and the strap was taken, he would become like a woman, follow her vocations, and later her dress. Instances are reported in which the unfortunate dreamer, unable to ward off the evil influence, has resorted to suicide as the only means of escape. To the Menominee a dream about the moon brings long life, but a life that will end in misery. Such people are always long when the moon is full, and then sickly when it is on the wane.
1. To the Huron the dream gives voice to the soul's desires.
2. Among the Hidatza only those dreams that follow prayer, sacrifice, or fasting are portentous; while for the Mandan Mandans are always prophetic or ominous. A Mandan dream of fire-arms, and soon afterward the Whites arrived with them. They dream of horses in similar manner before they obtained any. For the fasting youth to dream of a piece of bread is a foretelling of death. The Thonga profess to be disgusted when any dream is fulfilled, but this must depend somewhat on the nature of the fulfilment. The Kafr medicine-man acquires his powers through dreams, and the Hottentot, the forelock of a rhinoceros, the tail of a cow, and the feet of a tiger. The picture of the boku hung up in the house will secure the protection of the animal. The Chinese character representing its name used to be put in the lacquered wooden pillow for gods and princes. By virtue of this character on the pillow the sleeper was protected from evil dreams. When a man awakes from a nightmare, or from any unlucky dream, he should quickly repeat three times the invocation of Buddha, drive off the bad dream! The boku will then eat the dream and change the misfortune into good fortune and rejoicing.
7. The Vedas direct one who has had an evil dream to wipe his face in order to get rid of its malign influence.
8. This is more simple than the Navaho remedy, which may call for a 1 renewal ceremony.

4. Epilepsy.—Many peoples attribute epilepsy to possession by a demon. This was the view held by the Hindus, and in the Vedas texts a ritual ceremony is prescribed for its exorcism. Its uncanny nature has generally been recognized. From the time of Edward the Confessor to that of Queen Anne epilepsy was considered curable by royal touch.
9. 5. Liver.—The liver has long been considered an unusual organ in the human body, and unusual qualities have been attributed to it.
10. In ancient Greece goose liver was used as being efficacious in medical and astrological revolutions.
19. See Water, ii. 20; and authorities there cited.
treatment; the liver of the lizard would impart peculiar powers to the eater. The Lushai eat the witch's liver in order to destroy the witchcraft, and the Borneans express their deepest hatred of a person by saying, 'I wish I could eat his liver.' In ancient Arabia Hind, the wife of al-Fakih, inspired by similar motives, gnawed the liver of her arch-enemy Hamza, while a modern Arab will eat the liver of his arch-enemy in order to acquire an understanding of the language of birds. In N. Morocco the Jâála bride and bridegroom partake at the wedding ceremony of the liver of a sheep, to make them 'dear to one another'; and in Andhra the bridegroom (though not the bride nor any woman) takes of it, partakes of the liver of the bullock. Arabian influence may be reflected in the Apocryphal account of the evil spirit who loved Sarah and was exorcized by flames arising from the heart and liver of a fish which Tobit, by the instruction of the angel, burned on the evening of his wedding.

Similar attribution of unusual powers to the liver of a person or an animal is wide-spread. The Veddas of Ceylon chew the dried liver of a man in order to acquire knowledge, and the Bushmen have a traditional belief that they formerly followed the same practice. In Erub (Torres Straits) the liver, 'presumably of a deceased male,' was cut up and distributed among the young male members of the tribe, presumably to confer on those who partook of it the power of the liver of the bullock. The Maoris gave the liver of the balanu-fish to a nursing child as a cure for flatulence. The liver is the seat of the affections, as also among the Greeks; and a piece of the liver of the first man slain must be offered, along with a piece of the heart and the scalp, to the godling, Whiro. So acute is the power of the liver that the Maoris call one of their implements for cutting wood the Xolatue, 'liver-cutter.' The Tonga Islanders believe that turtle has a peculiar effect upon the liver and they will not eat it, fearing the enlargement of the liver which indulgence in this food will produce. The liver is the seat of courage, and therefore the largest livers pertain to the largest men. They have found also that in left-handed people the liver is发达 in the right hand and in the ambi-dextrous it is in the median line of the body. The Kayans of Borneo knew that the omen was bad if the under side of the liver of the pig was dark, good if it was pale. So general was harsupian among the Borneans that W. Warde Fowler is convinced that its origin is common with that derived by the Romans from the Etruscans, but, as the phenomenon is so common to savage culture, any theory of the connexion of the divination rites of the natives of Borneo and those of ancient Rome will have to take account of this fairly wide distribution of similar and related things in the larger world of savagery. The supposed uniqueness of the phenomenon does not exist, and all tribes, especially since the ancient Arabs, have entertained such beliefs, and they are common among African tribes. Leo Frobenius has attempted to establish the African origin of Etruscan culture, but the argument remains unconvincing to those who feel the need of historical demonstration.

Several tribes of Central Africa attribute special virtue to the liver—in some cases to the liver of the alligator. It is the seat of the soul, and to eat of it is to enhance one's own spiritual being, and is followed by similar effects on women. Accordingly, the Bakongo drink the blood and eat the liver of those killed in a fight. For similar reasons the Kagoro (of Nigeria) evil-wisher will catch one's soul or take one's liver. The pottery-makers of the Thonga (at least those dwelling near Morakwen) may not eat the liver of any animal. In the ceremonies and superstitions of this region the gall-bladder plays an important part, as does also the liver of the ox. When two parties are at variance, within the permitted relationship wish to marry, they must break the tabu by a ceremonial eating of the raw liver of this animal. They must first tear it out with their teeth, for it is tabu to cut it with a knife, and then eat it. You have acted with strong shibindji, they say to those who are eating their way to matrimony, 'Eat the liver now!' (shibindji means both 'liver' and 'determination,' a history of the interdependence of the two). When an ox is killed by the headman of the village for distribution among the village women, a piece is left over for the 'grandfather' and the old people, 'because it is soft and they have no teeth to gnaw the bones,' but doubtless also, because it imparts, more than does any other portion, the strength of the animal. The Sotho of the Transvaal believe that the black complexion of the eating by their ancestors of the black liver of an ox killed when the first people emerged from the tree that gave them birth. A Matabeleland native who wished to learn sorcery paid a big price to one of the recognized medicine-men in order to induce him to accompany the candidate to the grave of a recently buried person, unreath the body, cut it open, remove the liver, and, by its help, inculcate the desired instruction. The Bechuana find effective, in their prescription designed to defeat the enemy, the gall of a black bull whose eyelids have been sewn up, the animal then being allowed to wander for three days. If they find little gall in the gall-bladder of an animal, they say that some terrestrial spirit has prevented it. A man often cleanses himself with the gall of an ox, and a chief will

10 An extract of this belief will be found in G. C. Wheeler, The Tribe, and Intertribal Relations in Australia, London, 1910, p. 238.
drink it to acquire strength to withstand his enemies. During the initiation ceremonies the boy was not permitted to leave the lodge, and was killed for that purpose, and thereby acquire courage and intelligence. Yet any one who eats a certain tongue-shaped lobe of the liver (the lobus Spigolus) will forget the past, and this is given only to the older women who thus enter into forgetfulness of their sorrows.\(^2\)

The liver—sometimes the heart—is spoken of by the Kafr as the seat of courage, the gall being the fluid that contains its very essence.

It seems that the Basco considers the gall to be the agent of death; but it seems problematical whether the natives have any conception of such an abstract thing as the acquisition of death. When the natives wish to describe the bravery of a great man they say that he has a large liver. Perserverance, that elemental faculty in human nature, is coupled in the native mind with perspiration; and, as the first place this is seen is on the skin of the forehead, they frequently consider that its seat or "centre" (as physiologists would say) is there. Intelligence or enlightenment is also sometimes considered to reside in the liver; but I fancy the sort of intelligence that is referred to is that which is displayed in battle.\(^3\) The man who is capable of enduring hardships is said to have a hard liver.\(^2\)

The Chukchei of Siberia, in order to bring sickness upon a murdered man's kindred, eat the liver of the corpse, and the Eskimo practised a similar rite that the dead man's relatives might now share the courage to avenge his death.\(^4\) Moreover, by eating the liver of the murdered man, they deprive the ghost of the power that he would otherwise have of rushing upon them.\(^4\) A story given by Rink shows the importance attaching to the liver.

"At last there was silence; and during this, one of the two brothers stood forth, and, taking a bit of dried liver (this being excused by his voice), said to his wife, "I have been told that I have an enemy in Niaknugnak.\(^6\) At the same time he tried to crush the piece of liver he held in his hand; but failing in this, he said, "I can tear it by my very teeth!" The gall is regarded in most tribes as the seat of courage and boldness. When the natives wish to describe the bravery of a great man they say that he has a large liver. Perserverance, that elemental faculty in human nature, is coupled in the native mind with perspiration; and, as the first place this is seen is on the skin of the forehead, they frequently consider that its seat or "centre" (as physiologists would say) is there. Intelligence or enlightenment is also sometimes considered to reside in the liver; but I fancy the sort of intelligence that is referred to is that which is displayed in battle.\(^2\) The man who is capable of enduring hardships is said to have a hard liver.\(^2\)

Here some special significance seems attached to this crushing of the liver in the manner portrayed. It is improbable that the liver was associated with magpie power. They thus entered, and saw all the brothers stretched out at full length on the eed, only their feet visible on its outer edge as a small hole had been left in the side of the lodge where they were treated to the best of flesh and meat. When the liver in the plate had been eaten, they would then get only half through with it, the flesh being rolled up and tied together. Sometimes the liver was not eaten, but was placed in the plate and rolled up, like a large morsel of flesh. When she had ended, Habakuk went closer to them, saying, "Well, take the skin of my seal with blubber and all, and the liver besides."\(^8\)

An angakok gave the liver of a seal caught by a lucky hunter to one who was unlucky, and the latter acquired the desired luck by slowly chewing and swallowing the flesh. In Greenland the mother giving birth to her first child might not eat the liver of any animal; in Labrador she might partake of a portion of it.\(^8\)

The chenoa of Micmac mythology, an ogre, representing, not improbably, Eskimo influence, showed a special liking for the liver of a conquered foe.\(^9\) The Chipewyas were long ago admonished by the Crow to leave them the liver of the animal as part of their portion, and this custom is followed to-day.\(^10\) The Siouan tribes of the Plains area attach great importance to the liver of the buffalo and other game to this day, to that of the dog. The Omaha eat the liver of the buffalo.\(^11\) It gives a man a clear voice and imparts courage.\(^1\)

Accordingly, the youth who has shot his first buffalo eats the liver of that animal. All this may be considered a dressing.\(^2\) The Plains Cree warriors also, when they killed a bison, ate its liver raw.\(^3\) The Northern Shoshone imparted additional power, and, in this case, malign power, to the liver by placing atome on hot coals or upon a hot stone ground. The liver was that of a wild animal and was covered with the gall. The liver absorbed the poison from the fangs and was then carefully preserved in a little buckskin bag carried by the warrior.\(^4\)

A society of 'Liver Eaters' is found among the Crow,\(^5\) and members of the Bear clan of the Teton Dakota (Oglala division) sometimes eat the liver of the dog raw. A male must not eat the liver of a female dog, nor a female that of a male dog; Sores will break out on the face of an offender.\(^6\)

The 'Dog-Liver Eaters' Dance Association' is one peculiar to the Eastern Dakota.\(^7\) It takes its name from the fact that the raw liver of the dog is eaten by the performers. It is not often performed, and only on some extraordinary occasion. The performers are usually the bravest warriors of the tribe, and those having considerable experience and knowledge of how to digest raw liver.\(^8\)

When a dog-dance is to be given, the warriors who are to take part in it, with others who desire to be present, are invited at some time or other to attend. This dance is performed by one of the medicine-men, or jugglers, with a war-club or tomahawk. The side of the animal is then cut open and the liver taken out. This is then cut into strips and hung on a pole about or five feet in length. They are then commenced dangling about; then assuming the tips and making all sorts of grimaces, showing a great desire to get a taste of the delicious morsel. After performing this dance for a while, according to the fancy of the dancer, the performers make a grab at the liver, biting off a piece, and then hopping off, chewing and swallowing it as he goes. His example is followed by others, and soon every morsel of the liver is eaten. Should any particle of it fall to the ground, it is collected by the medicine-man in the palm of his hand, who carries it around to the dancers to be eaten and his hands well licked. After disposing of the first dog, they all sit down in a circle, and chafe and smoke a while until another dog is thrown in, when the same ceremonies are repeated, and continued so long as any one is disposed to present them with a dog. They are required to eat the liver, raw and warm, of every dog that is presented to them; and while they are eating it, none but the medicine-man are allowed to touch it with their hands. Women do not join in this dance.

The object of this ceremony is, they say, that those who eat the liver of the dog will, while it is raw, become possessed of the sagacity and bravery of the dog.\(^7\) The Ainu have the custom of cutting up the liver of the bear, which is one of their sacred animals, and of eating it raw. If a Pima woman ate liver, her child would be disfigured by the omn.\(^8\) The Zuñi hunter takes the liver from his captured game, and, while eating it, exclaims, "Thanks!" The Aztecs practised a well-developed system of baruspication, reading omens from the liver or other organs of the slaughtered animal, and the Araucanians of Chile were given to related practices. They dissected the body of a person of distinction in order to examine the liver. If it was found to be in a healthy state, the death was attributed to natural causes, and any belief that magical magic had caused the death. The gall is extracted and placed in a magic drum, and, after various incantations, taken out and put over the fire in a carefully covered vessel. If, after sufficient roasting, the liver is not consumed in the bowl, a great pot, it is known to have been the cause of death.\(^9\)

production before them, the classical or formal economies has often been called soulless. But it was natural at that time to put stress on the increase of capital, and on the great merit of saving. And it was easy for readers to slip wrong meanings into the terms ‘productive’ and ‘unproductive spending’ and ‘productive’ and ‘unproductive labour.’ Nor did economists wrong the actual system, for it is still the true measure of prosperity, regarded wages as the means of keeping labour efficient, and saw in high interest and profit the best guarantee for the upkeep of capital. Neither the economists nor the system would question, so long as over the best use and distribution of wealth, these are limited by the amount of it, and by the efficiency that can be given to the three agents that produce it—nature, capital, and labour.

It is through labour that the efficiency of nature and capital is discovered and more real. Capital is its product; and while nature does all the work, it needs directing. One has only to compare the unimproved value of nature in land and beast, plant and mineral, heat and electricity, with the value that his mind can attach to them. Ethical topics are traditional in the text-books, when they are dealing with labour as producer. One concerns its quantity, the other its quality. The first is connected with the doctrine of Maithus (1896), the second with education, and not merely technical education, but even more with its product in grit and conscientiousness. The two questions have now a unanimous answer from ethics and economics.

While, however, we ask about the fitness not of the labourer for the economic system, but of the system for the labourer, the question becomes critical. The division of labour that is essential in the system may mean to the man monotony, ill-health, and loss of the market for his skill. All the books, since the Wealth of Nations, discuss the advantages and disadvantages, but the only practical question is now how to meet the disadvantage from the gain. This has been the work of factory and other labour legislation. At first the argument for higher wages, for shorter hours, and for better health was their economy as measured by the work done. Labour, however, does not rely on this argument; it claims a better share on the ground of justice; it refuses to abate by the open market of nature or of its product, if it be true, though less than before, that the harder and more debasing the labour, the worse it is paid. The reason is that the lower the grade, the greater the competition. There are two ways of reducing the competition: one by combination, the other by moving some of the stress from lower to higher grades. The latter is the perfect way. It has been universal in economies since the death of the Iron law of wages; the doctrine that cheap labour is necessary has come near its end that it has come to be. The right way to itself as permanent and easier. But progress on it must be slow, and its results are mainly enjoyed by the next generation. And so, though it could be even more necessary in a social body, in the present state of things, there is nothing like a militant spirit on behalf of it, as there is for the other way.

Here too the quarrel between ethics and economics has been settled. But one far more serious has opened between them, on the actual working of the industrial system. It did not appear in the early days of capitalism, when competition was unchecked. This made for the greatest production of wealth, and to ethics it seemed that the rude justice of the market could be made more and more equitable by equalizing

**Production (of Wealth)**

The conduct of ethics and economics is more directly at the distribution (q.v.) and the consumption (q.v.) of wealth than at its production. Because it put

opportunity. Thus it was both the moral and the economic policy of the 19th cent. to keep the class open and see fair play. It was a new policy in that it deserted regulation for competition. But competition has become more and more regulated from within. The advantage of one large over many small units of production has led to aggregation and give rise to monopolies; the advantage of collective bargaining has brought an aggregation of labour, and another of employers to meet it. The original notion was that competition would give the best form of cooperation; it worked, like faith that the water was also bearers. But the competition has come to an end. In which the morals of war play havoc; and they do it without remorse, because a class conscience has made itself superior to private scruples and regret.

The concentration of capital has not in itself been prejudicial to production, for it seeks to regulate rather than limit the output; it obviates the waste and dislocation of too many plants and shops, and the advertising and other costs of commercial rivalry; and there is plenty of scope for competition within. The evils have been notorious in company promoting, in crushing rivals, in controlling prices as buyer and as seller. And mere size may prevent the coming of a competition that would be healthy. But the best course is to accept this trend, develop the tendency to amalgamation, and to meet the evils by developing regulation, from which, indeed, monopoly was never made exempt. Co-operation is always the final word. Competition is only a means, and a less means the less it is a, jester, and the more it is a directed course, where there is no loss in the struggle.

Unlike the concentration of capital, the concentration of labour easily becomes prejudicial to production. To over-time, piece-work, all spooling-up and labour-saving, there is opposition; and no measures are taken, as by the old guilds, to prevent fraud and incompetence. This is only another instance of the division of function, and nothing to condemn. But, again, it is a competition that has been harmful from co-operation, the homely relation of master and man is thought to be not incidental, but inevitable and permanent. The men see that it is the interest of the management to use as little labour as possible, and they think that the less they reduce on inordinate dividends or tax on their wages. As well, therefore, try to instruct a nation at war in the arts of peace as point to the injury they do and the loss they suffer; they think the injury to be deserved, and the loss to be a sacrifice for their class. To many of them the crimes of syndicalism are no more criminal than machine-breaking was at an older day. There are several things that keep the war civilized; but the main consideration is failure or success; and in either event the damage to the oppressor is always a pleasure. In times of peace a union is always preparing for war; men who are not members are denied the right to work; and others of the old natural rights and duties are made subordinate. It has been futile to insist on them, for an unnatural system is thought to make right wrong.

The contentions against the system are often ignorant, but, as a rule, they are honestly urged; and the evils of slavery, it is the system itself that holds the centre in the general view of industrial life. It is a late system, and the forces within it have always preveled it from resting where it is. But they may be directed, and it may grow. It is either of two ways that have a very different moral value. The root of the system, and the directions in which it grows, may best be seen from its origin, and as a stage in the history of industry. The older forms are never quite superseded, and they may all be seen to-day. In the earliest system the family was an industrial unit supplying nearly all its wants; there was a division of labour according to sex and capacity; with slaves and officials the unit grew large, but kept its unity even when the slaves were curred out, or employed in producing for a market. When a family became too large for its land, it was natural for some members to learn skill in a trade, and to confine their labour to it, working for other families, often living with them and being paid wages. The owner took little risk of producing on the chance of a market; the customer was still the employer. Capitalism came when the risk was definitely undertaken. The entrepreneur was sometimes the manufacturer, often the largest employer; and competition tended to the work of making, moving, and selling the product—can be distinguished from the more invisible work of ordering it and finding a market. This is the work of the entrepreneur or business man. Disadvantages it is explained how the business man is the pivot of the system, guarantees to all the other agents of production their share in the price, and pays himself from the residue.

Thus the second great separation of labour from the other agents was the separation from capital. It is often held that both separations were by disposition, and that they were an evil. But no one looks for pace by undoing either—by replacing men on the land, or by giving them the capital they need to employ their own labour. Nothing would give greater stability than for workmen to be shareholders in the enterprise that employs them, or in others; and it would be the best kind of revolution if unions tried to establish this. The result of this division of labour is that owners must always lend their capital instead of using it themselves. And, if we look from the owner to the real user, we find that the emphasis is on him, the acting capitalist, and not on the capital. Just so it is on the sculptor and the inventor, though nature does all the work that is done by the invention, and though the statute is all in the marble.

The process of production has become more and more roundabout; an ever greater distance has separated producer from consumer. The workman is bewildered by the number of intervening agencies; and to his divorce from land and capital he adds, for a general source of inequity, that the system allows many parasites to live on his product. He has been taught that the real value of a product comes from the labour spent on it, and he sees that, besides rent and interest—the extortions of the idle ownership of land and capital—money and middlemen lay hold on his work, and make a burden. He is old enough to have seen how one has to see that the production of a commodity is not complete—it is not produced—till it is in the hands of the consumer. If advertising, drumming, and commissions do not help it, and if they do not, the measures of commerce are no more secure than labour that is made useless by a machine. It is through economy in
marketing, no less than in manufacturing, that large capital has its advantage. Everything useless and predatory tends to be expelled; for everything must be demanded by an employer, if it is to be paid for. In this way and in this way, and by knowledge enough, he pays no more for it than he must. It is natural for those whom he employs to think his profit an extortion from them, and that 'what is somewhere gotten is somewhere lost,' and that the gains made is like the royalty from an invention, which gives more than it gets. Interest is different; it is like the royalty paid for mere ownership, and simply a burden. W. Smart thought that 'the community gets its employing done for it more cheaply than it gets its other service' (Distribution of Income, London, 1912, p. 159f.).

If a system of production were more moral and progressive the more it crushed incompetence, again the present system could well defend itself. The wealth of progress is by entailing cost, and employers are driven on it by the competition of one with another, or with the consumer, who is the final employer. It is a precarious position for a working man, and the thing that really throws the personal life of the individual. He cannot hope to be a civil servant, and have his future a chance on the community instead of at the necessity or the mercy of competing employers. He is in the majority; and, however little we like it, that the lives of men should centre on his livelihood, he has been given the power to bring that about. Wages-boards and courts of arbitration are useful, but they add evils of their own; animosity remains and preparation for war. To co-partnership and often to co-operation (p. 64), the war-spirit is still essentially hostile. The moral situation on the other side is no better; there it is thought that socialism must come, but that everything should be done to resist and postpone it. And both sides think that they are acting in the highest human interest, and that this consists in giving the freest scope that can be given to our spirit.

It is something that they make the same appeal, for so far the dispute becomes a question of means. The question breaks into two, one being, and having to do with production, the other about their ownership. The best management of an enterprise is from within; the sane that weakens a public enterprise is interference from without. Democracy has kept some of its self-interests of management, and it is desirable to refrain from interfering with the branch or the navy, where there are no profits and the voters are few, than with the conduct of a railway, and with industries that are less subject to mechanical regulation. If there were as little interference as that of the shareholders in a going concern, and if the same price were paid for ability, the efficiency and even the enterprise might be as great. Assuming the best in regard to management, would it be well to pool the stocks of every enterprise, the owners a uniform rate of interest? This is what socialism recommends, because it assumes that there must be an annual surplus for the ordinary shareholder, the tax-payer.

If a clear principle would intensify the moral chaos of the present; if it has any chance of working well, it must come gradually and through a long apprenticeship in the joint-stock system. And then, no doubt, the single amalgamation of many companies, and the demand for it will persist in embittering the present relations of owners and workmen unless the number of owners is greatly increased. The best way to retain the freedom and efficiency of the present system is by such increase. It is a form of co-operation like that of the co-operative distributing societies, and, like them, would be far more effective than co-partnership and the co-operative ownership by workmen in the same enterprise; and then it would give them a firmer hold.

If the things were easy, it would have come long ago; but it was never less difficult than now; and it could be made easier. It would offer a stronger impulse to thrift than the fear of a rainy day has proved. The foundation of such a system is that of a single amalgamation, which is the hope and the fear now confusing every effort at amelioration; but it will not come of its own accord.

LITERATURE. The several text-books on economics all devote a main division to production, and P. H. Gaskell, Production, London, 1907, shows that nearly the whole subject may be seen from this point of view. The earlier books dealt mostly with the three agents of production, the inter with their organization. This is naturally approached through its history, and C. Side, Political Economy, tr. C. H. M. Archibald, New York, 1914, well illustrates the closing of the old division between deductive and historical economics. The history of production from the point of view of organization can be read in C. Bücher, Industrial Evolution, tr. S. M. Wickert, New York, 1907, and can best be studied by the increasing literature of economic history which deals with particular periods, and publishes contemporary records. Recent collections are Economic Amnerica, 1607-1912, the Reference Library, 1912, W. Smart, London, 1910, and English Economic History, Select Documents, compiled and ed. A. E. Black, London, 1912, and R. H. Tawney, do. 1914.

W. MITCHELL.

PROFANITY.—I. Meaning and use of the term.—In popular usage the term 'profanity' is frequently used as a verbal reference and identified with 'proflane swearing.' It is perhaps unnecessary to say that such a limitation cannot be justified by historical and etymological investigation. It is undoubtedly true that an unifying and trivial use of certain verbal symbols has been almost universally included in the class of practices condemned as profane. The names of the gods in primitive religions and the name of the one God in more advanced religions have been considered as too sacred to be ordinarily employed, and even the sacred usage has been restricted to certain privileged persons. 'Thou shalt not take the name of the Lord thy God in vain' is one of the commandments, and the OT writers constantly warn the people against 'profaning the holy name.' Sacred formulae have been, in all religions, rigorously safeguarded, and the employment of them by other than authorized persons at the proper time and place has been regarded as constituting the sin of profanity. It is true also that, by investigating the import of religious and verbal reference, we may approach an understanding of the ideas underlying the disapproval of the profane. The words which must not be carelessly used refer to a world which is separated by a wide and deep gulf from the world of the ordinary, and the fact that verbal formulae are of a somewhat artificial origin indicates that the separation is to be maintained not so much by a recognition of rational distinction between the two worlds and an apprecia- tion of the extent of the separation as by elaborate and external regulations. Yet, notwithstanding all this, the term 'profanity' includes far more than mere indifference to the distinction in verbal matters, and the wider meaning must be clearly kept in mind.

The etymology of the word 'profane' (lit. 'before or in front of the shrine') may give us a certain amount of guidance because of its spatial sugges- tiveness. There immediately arises in our minds the idea of being close to or having access to which only peculiarly precious objects and specially privileged persons may remain, and outside of which there is a world of rigorously excluded persons and things having lesser assigned worth than those within. The same kind of suggestion comes to us from a consideration of the Greek
words, βασιλικός and βεβαίως, which are used to indicate profanity in the NT, and which introduce the idea that those who held — a threshold strictly guarded, which should not be crossed, but yet which is crossed by those to whom the epiteth ‘profane’ applies. Such persons properly belong to the world outside the sacred edifice, but they illegitimately occupy a position of the idea of artificiality.—As we consider these spatial implications, we arrive, first of all, at the idea of artificiality. There is no intrinsic reason why one particular place should be more sacred than another. If the temple had been founded a little earlier, the ground which is now profane would have been rendered sacred, and that which is now sacred would have retained its common or profane character. In primitive religions the location of the sacred and, contrariwise, of the profane depends very frequently upon chance. The importation of reason for the distinction comes entirely from the outside. We are thus not surprised to find that, e.g., in certain Australian religions the totemic and the profane, which are so closely connected, are to be found at the highest level of society. They are still at the stage of struggle. Their gods have still to compete with the gods of other tribes, and the people who worship the particular gods, and who thus acquire something of their sacredness, have to be preserved by external means from the infraction and pollution of other tribes. Even in the OT the disapproval of profanity is closely connected with the giving of worship to other gods, as, e.g., participation in the rites of Moloch (cf. Lv 20:2). The house of Israel is profaned among the heathen because the people have disregarded the restrictions upon which the exclusiveness of the nation depended (cf. Ezk 36:20-25). The stage has not yet been reached at which it is recognized that all people may hold and that there can come into rivalry with the God of Israel. It is therefore easily intelligible that the distinction between the sacred and the profane is based originally, for the most part, upon definite injunction and prohibition. The religion or the body of sacred things has to be zealously guarded by law, and the profane person is the man who transcgresses the law protecting the sacred ideas and rites. Of course, in the more advanced religions these ideas and rites acquire a greater degree of intrinsic value, but within the region of thought, where the distinction between sacred and profane is most intensely regarded, such value either has not yet been recognized or has been forgotten, and we may use the word ‘artificiality’ in order to draw attention to the independence of the distinction upon external support.

Perhaps the most striking illustrations of artificiality are to be found in connexion with the verbal formulae, prescriptive of rite or expressive of an attitude, which we have already referred to. The connexion between the sacred character which they now possess and their inherent meaning is exceedingly weak, and it is just where this meaning is most completely overlooked or forgotten that so-called of an unauthorized use of the formula is most intense. The more elaborate a system of ceremonies is, and the more clearly it bears upon it the marks of artificiality, the more numerous are the injunctions against profanity. In the modern rabbinic section of the Talmud the priestly monopoly of the names of the totems, and the men of certain tribes have a sacred name besides their ordinary name which they have only acquired by being declared to be the servants of the Lord. They are, e.g., not to be used in every-day life. In Vedice India we find the doctrine of sacred names of the gods, which is apparently so sacred that it would have been considered profane to reveal them to the vulgar. In the same land also, even at the present day, it has been a sacred thing for artificialitv to use the name of her husband, and ceremonies of initiation are accompanied by the giving of a sacred formula, or mantra, which has rather as given by the priest than as understood by the initiate, and which the initiate is forbidden to reveal to others if it he wishes to escape the sin of profanation of sacred things.

The idea of separation.—Another idea, related to the foregoing and also suggested by the spatial etymology of the word ‘profane,’ is that of absolute, abrupt, and rigorous separation between the sacred and the profane. The sacred enclosure is definitely separated from all labour and everything that proceeds from the profane world, and access from the outer world to the other is only through a rigorously-guarded portal. The dominant characteristic of the two worlds is their heterogeneity. The close system of artificial rules and the artificiality of separation is obvious. It is the fortresses without natural strength that require the broadest and deepest moats. Risks of contact between the sacred and the profane must be avoided at all costs, and the mind of the worshipper must be kept constantly alive to the dangers of the profane. Worship is deposited, and all ordinary work within the sacred enclosure is forbidden. We find the same attitude also in connexion with OT worship. Ezekiel, e.g., prescribes elaborate precautions in order to make a separation between the sanctuary and the profane place (429), and by the same prophet a certain portion of the city land is called ‘profane’ to distinguish it from the portion assigned to priests and Levites. One of the chief arguments brought against St. Paul by his Jewish critics has been that he had profaned the Temple by bringing into it men of an alien or unprivileged race.

The time.—Very commonly also profanity is held to consist in disregard of a strict division of time. The ordinary world is so separate from the sacred that the occupations of the former have to be altogether given up when the latter is entered. The time which is assigned to the sacred must be characterized by rest from the regular forms of labour. If at such a time work has to be carried on, it must have an essentially religious character and be free from connexion with utilitarian considerations. If it bears any resemblance to ordinary work, it can be redeemed from the profane by the rites that are strictly observed by privileged persons. In Mt 12 the priests are said to be without blame when they profane the Temple, because, though performing on the Sabbath actions similar to those of ordinary life, they were more completely by the rites that the holy office from the sin of Sabbath desecration. This failure to observe the sacredness of the Sabbath and of other special times and seasons is, in the Jewish religion generally, one of the most frequent grounds for the accusation of profanity (cf. Neh 13:19, Ezk 22:23).
PROFANITY

at a distance is clearly seen in connexion with tabu (q.v.) and the religions in which this conception is important. The word connotes exclusiveness—(being derived from a root *ta", 'mark,' and *pit", 'in the throes of unanesthetized pain of the general or the common. It is from this idea of tabu that the distinction between sacred and profane arises in many communities, and the rigour of the distinction owes much to the awe which the tabu inspires. As was sin and at the same time more frequently possible where the transition from the ordinary world to the profane is made as difficult as possible. The constant demand is that all actions and interests belonging to the ordinary world be left behind by the would-be initiate. Literal contact is of course forbidden, and the prohibition extends to the contact involved in the taking of food. The food of the profane must not be eaten by the initiated, and, conversely, the food of the priests must not be eaten by the profane. The latter must not even have the degree of contact which is implied in the sight of the sacred objects. In some communities certain instruments of worship are profaned if, e.g., women catch the faintest glimpse of them. This is also the case where a close connexion with this idea of absolute separation. Everywhere also elaborate ritual is accompanied by the most zealous care for the separation of the priestly class from the ordinary community. Many of the uses of the word 'profane' in the OT have reference to this withdrawal. The priests are to symbolize their separateness by changes of garments 'when they enter into the inner court.' They are to avoid ordinary food and the ordinary forms of family relationship, and in many cases prepare themselves to teach the people 'the difference between the holy and profane' (cf. Ezk 44:17-23). The erring priests are those who have themselves "put no difference" (22:9).

4. Profanation of sacred doctrine.—The danger of profanity also attaches itself to an incantatory use of the body of sacred doctrine. This is often regarded as the exclusive property of certain privileged classes. The ancient sacred scriptures of India, e.g., are profaned if they are read or taught to profane persons and their families. In many cases the various parts of the literature terrible penalties are announced for those who venture to teach the doctrines of the Vedas to a Sūdra. 'The ears of the Sudras who hear the Veda are to be filled with dirt. All persons having heard a Sūdra speak profanely in the Vedanta-Sūtra, 1. ii. 38 (SBE xxiv. 226), and, if he dares pronounce them, 'his tongue is to be slit.' Occasionally the idea is that the sacred doctrine is also to be kept strictly separate from other truths or opinions which are of lesser value. To mingle sacred and other knowledge is in itself profanity. Perhaps there is a lingering trace of this idea in the use of the word 'profane' in the First Epistle to Timothy. Timothy is urged to 'refuse profane and old wives' fables' and to avoid "profane and vain babblings, and oppositions of science falsely so called' (1 Ti 4:6). The idea of a strict line of demarcation certainly persists in the medieval distinction of sacred and profane learning.

5. Reasons for distinction between sacred and profane. — So far we have been content with noticing the character and the breadth of the distinction between the sacred and the profane. If we go farther and ask for reasons for the distinction—reasons which are decisive in any case—and we take these partly in belief in a divine revelation and partly in tradition and the social custom and pressure enshrined in such tradition. Though we have emphasized the artificial character of many of the defences of the sacred, it does not follow that these may not have previously involved a clearer consciousness of the inherent value of what is regarded as sacred. The original reason for the consecration of certain experiences and disapproval of others is much more apparent in the illustrative legends which they occupy may have been a sense of a divine revelation, even though that reason may now have been forgotten. The sanctuary at Bethel may have, in later times, become a home of priestcraft, but puns there was the origin of God ascending and descending that gave it originally a sacred character. Even in religions where a divine revelation is not recognized the artificial character of the interluditions against profanity is not the whole of the matter. These interdictions are not of recent growth; they enshrine tradition, and in this tradition we may perceive the embodiment of a social consciousness. The totem-animal is protected from profanity because it symbolizes the spirit of the clan and represents a social pressure which the individual recognizes as superior and authoritative. Among men more religiously-minded or more enlightened this law of the community is regarded as the law of God, and the profane person is one who transgresses the ineradicable sense of God as he preserves, like the prince of Tyre, to be 'cast as profane out of the mountain of God' (Ezk 28:16). But whether the divine origin of the law and its reference to an all-comprehensive divine community be recognized or not, the anti-social character of profanity seems to be an unmitigable reason for disapproval of it. The profane person is the anti-social person who refuses to recognize the code of the community, and, therefore one upon whom the law falls. Esau is called a profane person 'seemingly for the reason that he sold his birthright or despised his connexion with the community (He 12:16). In India the person who has broken through caste regulations becomes at once profane and a source of pollution for those who remain within the caste. The anti-social character of profanity is also illustrated by the frequency with which accusations of profanity are brought against those who indulge in magical practices. It is no doubt possible to speak of profaning a magical rite in the sense of doing it in an unaccustomed or profane way, but that is the most part, magic as a whole is itself condemned as profane just because it indicates a separatist procedure and a contravention of the regularized and socially approved worship of the community. Think of a person who has died, who which have a considerable resemblance to religious rites, should be regarded with such horror as profane in those communities, at least, where a social worship has been firmly established.

6. An inadequate differentiation. — We have emphasized certain inadequacies in the distinction between the sacred and the profane, arising from the artificial and abrupt character of the distinction. But this must not blind us to the elements of underlying value associated with these conceptions. Among primitive peoples the idea of tabu has often been the foundation of morality, and in the more advanced communities the rigorous protection of the priests from possible profanation may indicate a regard for persons and things so regarded as for privileges.

The development of the social consciousness which underlies the abhorrence of profanity has been an ethical asset, and the asceticism by which the heterogeneity of the sacred and profane worlds may often been described as a step towards personal holiness. Yet it must be admitted that the distinction between sacred and profane, as it is usually applied, does not belong to the highest level of thought. It still betrays the dominance of merely spatial categories; it is still influenced by the idea
that the divine is limited in the sphere of its operation, that God sets a seal upon certain persons, places, and times, relating them with special closeness to Himself, and leaving the rest of the world to be reckoned as common and profane. We must transform the distinction if we are to retain its underlying value. We must permit or deny it to the whole world which God has made, and encouraged to condemn as profane, not certain specified places, things, or persons, but the spirit of the dwelling, whether in the temple or in the street, whose vision is narrow and whose aim is low, who fail to recognize that the way to the Holy of Holies lies along the path of the good citizen, and that even in the lonely wilderness he may find 'the very gate of heaven.' See, further, art. HOLINESS.

PROPHECY (American) 381

American (L. Spence), p. 331.

PROPHECY (American).—Among both the semi-civilized and the savage aboriginal peoples of the American continent prophets were held in peculiar veneration, and on many occasions they have moulded the destinies of tribes and nations. The advent of the white man in America, we are informed by many authorities, was heralded by numerous prophecies, but in most cases the authentic character of these is open to the gravest doubt. The vision of Papantzin, sister of Moctezuma, Tlatosan of Tenochtitlan (Mexico), is a case in point. This princess, it is said, fell into a deathlike trance, on emerging from which she said that she had been led by a spirit through a field littered with dead men's bones to a place where she had seen strange, bearded, white men approach the coast of Mexico in large vessels. Another prophecy appears to have been current in Mexico in pre-Columbian times, to the effect that Quetzalcoatl (a god whose worship differed in certain of its characteristics from that of the other native cults, and who had come from the Land of the Sun and had been driven from Mexico by hostile deities) would one day return. The coming of Cortes and his comrades was regarded by the Mexicans as a fulfilment of the prophecy, and the title of Teule ('godlike being'), conferred by them upon the Spaniards, is proof that the tradition really existed. Among the Maya of Central America prophecies were delivered by the priests at stated intervals. Writings which profess to incorporate some of these are to be found in the so-called books of Chilan Balam (q.v.), and these also deal with the advent of Europeans. There are not wanting statements to the effect that in Inca Peru prophecies were current about the coming of white strangers, but the events alluded to in at least one of them are not in accordance with known facts.

In modern times numerous prophets have arisen among the N. American Indians, usually in periods of crisis in the history of the tribe. In 1675 Popé, a medicine-man of the Tewa ('Pueblo Indians) near San Juan, New Mexico, was charged along with others with the crime of witchcraft. He preached the doctrine of independence from Spanish rule and the restoration of Indian customs, and instituted a movement of usury to the Spaniards and the Spaniard-colonists from the country. Popé, along with his disciples, Cattiti, Tupati, and Jaca, set apart 18th Aug. 1808 as the day of massacre. Extraordinary precautions were taken to ensure that no European should learn of the intended revolt, but the news leaked out, and Popé had perforce to strike three days before the time. Four hundred Spaniards were massacred and Santa Fé was besieged, but a successful sortie ended in the rout and discomfiture of the Indians. The Spaniards were forced to abandon the town and to retreat to El Paso. Popé washed with a native preparation of those of his followers who had been baptized into the Christian Church, burned the churches, and obliterated every remaining mark of Christianity. But his rule became so despotic and was followed by such misfortunes that he was finally deposed. He was re-elected, however, in 1688, and died in 1692.

Tenskwatawa ('open door') was a famous prophet of the Shawnees and a twin brother of Tecumseh. An ignorant and drunken youth, he was one day engaged in lighting his pipe when he fell back in a state of trance. His friends, believing him dead, were preparing for his funeral when he revived and stated that he had paid a visit to the spirit-world. In 1805 he assembled his tribesmen and their allies at Wapakonita, now in Ohio, and announced himself as the bearer of a new revelation from the Master of Life. He declared that, whilst in the spirit-world, it had been granted to him to lift the veil of the future and behold the blessedness of those who followed the precepts of the Indian god and the punishments of such as had strayed from his path. He vehemently denounced witchcraft and medicine practices, the drinking of liquor, and the intermarriage of whites with white men, the wearing of European clothing, and all white customs and institutions. If these things were eschewed, the Master would receive the Indians into favour once again. He further announced that he had been granted the power to cure all diseases.

These statements caused great excitement among the people of his tribe, and those who dealt in witchcraft were boycotted. From time to time Tenskwatawa announced further wonderful revelations to his followers from his abode near Green- ville, Ohio. He predicted an eclipse of the sun which took place in the summer of 1806, and this greatly enhanced his reputation as a prophet. His apostles travelled from tribe to tribe disseminating his doctrines, and a belief arose that within four years all those who did not credit his predictions would be overwhelmed in a great catastrophe. Shortly before the war of 1812 a confederacy was entered into for the purpose of driving out the whites, but Harrison's victory near Tippecanoe destroyed both the faith and the movement connected with it. Tenskwatawa received a pension from the British Government. Although of somewhat forbidding appearance and blind of an eye, he had great gifts of fervour and personal magnetism.

Kanakuk, the prophet of the Kickapoos, received inspiration from the career of Tenskwatawa. In 1819 the Kickapoos ceded their extensive territory...
in Illinois to the United States, and were assigned a reservation in Missouri. This region, however, was unhealthy, and Dr. Emily Ongan, so that the Kickapoos were unable to take possession of it. Kanakuk exhorted his people not to abandon their territory and preached a moral code which forbade superstition, the use of alcohol, and internecine quarrels. If they received it faithfully, they would in time inherit a land of plenty. He became chief of that remnant of which remained in Illinois. He was in the habit of displaying a map or chart of the true path through the tribes, and these prophecies, borne with fire and water, did they desire to attain the happy hunting-grounds, and he furnished his disciples with prayer-sticks engraved with holy symbols. Ultimately the tribe was removed to Kansas, but Kanakuk remained his chief until his death from smallpox in 1852.

Tavibo (‘white man’), a Paiute chief and medicine-man, when his tribe was forced to retreat before the Whites, went into the mountains to receive a revelation, and prophesied on his return that the earth would swallow the Whites and that their possessions would be given to the Indians. But his followers were unable to entertain the idea of an earthquake that would discriminate between the Red Man and the Christian. He then foreboded a vision, which revealed to him that, although the Indians would be engulfed along with the Whites, they would rise again and would enjoy for ever an abundance of game and provisions. Followers flocked around him and, when they became sceptical, he had a further revelation, which told him that only those who believed in his prophecies would be resurrected. He died in Nevada about 1879.

Wovoka, the son of Tavibo, was responsible for the ‘Ghost-dance’ religion and prophecies, perhaps the most important from a political point of view in the history of the relations of the Whites and Indians. This creed he nurtured among the Paviots of Nevada about 1888. It spread rapidly until it embraced all the tribes from the Missouri to the Rockies and even beyond them. Wovoka (who was known to the Whites as Jack Wilson), like other native prophets, declared that he had been taken into the spirit-world, where he had received a message from God, and then he was impelled to the effect that they would be restored to their inheritance and united with their departed friends. They were to prepare for this event by practising song-and-dance ceremonies given them by the prophet. During these dances many of the Indians fell into a condition of hypnotic trance, and intense excitement usually prevailed. The movement led to an outbreak in the winter of 1890-91. It has now degenerated into a mere social function.

Smohalla was the originator of a religion current among the tribes of the Upper Columbia River and the adjacent region. The name (Smolqua) means ‘preacher,’ and was conferred upon him after he had attained celebrity. In his boyhood (he was born about 1815 or 1820) he frequented a Brooklyn, New York, in which he appears to have derived certain of his religious ideas. Beginning to preach about 1850, he quarrelled with a rival chief, left his tribe, and wandered south as far as Mexico. On returning, he declared that he had received a message from God, and God had given him a vision of his followers entering the spirit-world, whence he had been sent back to deliver a message to the Indians. The substance of this was that they must return to their aboriginal mode of life and eschew the Whites, their teachings, and their customs. Smohalla founded the Ghost-dance Movement. It was consecrated, known as ‘The Dreamers,’ and possessing an elaborate ceremonial, has maintained its religious organization.

The mysterious sect or secret society known in Central America as Maravistas, which subjected the destruction of Christianity, numbered several prophets among its priests and adherents. Jacinto Can-Ek, who led a Maya revolt at Yucatán, 1761, prophesied the destruction of the Spaniards, Maria Candalaria, an Indian girl, headed a similar and previous revolt, and likewise falsely prophesied the Spanish downfall.

PROPHECY (Christian).—1. Primitive form.—The opening of the Christian era was signalized by a remarkable awakening of the spirit of prophecy, and this was accepted by all believers as the fulfilment of Jl 23:20 (Ac 2:16). Moreover, our Lord Himself had, seen in His own equipment and ministry the fulfilment of the promise of the Spirit (Is 61:11, Lk 4:17). And ‘to the people he was a prophet, strong in action and in utterance’ (Lk 21:20; cf. 19:35-41, Mt 13th etc.). Earlier still John the Baptist had attracted crowds to the declaration that the baptism of the Spirit was at hand (Mk 1:1). And Zacharias and Simeon, Elisabeth, Mary, Anna, and many others who were ‘looking for the consolation of Israel’ had borne witness a generation and to the presence of the Spirit and His fuller advent as heralding a new era of divine grace (Lk 1:35-38). Furthermore, the whole Jewish Apocalyptic literature of the period testifies to the general expectation of the dawning of ‘the last days’ and the bestowal of the spirit of prophecy.

The demonstration of the Day of Pentecost was the opening of a new era in the religious history of mankind (Ac 2:4). Tongues were loosed, and the impulse to prophecy spread like wild-fire among the converts to the new faith. This was natural and indeed inevitable under the circumstances. Believers were at once impelled and compelled to account for to themselves and to explain to others the things that were happening among them and to the world. The Day of the Lord had dawned, and they were all eager to know what it meant to themselves and to the world. Looking back over the history of Israel, they sought to trace the purposes of God, and they then projected them to the future in the light of the fresh dispensation of grace. This was Christian prophecy in its primitive form, and the apostles were its first exponents. But other voices were soon heard explaining the ways of God and expounding the gospel of salvation. Stephen was arrayed as a Jewish leader for resisting the Holy Spirit, killing the prophets, and murdering the Son of man (Ac 7:54).

2. Spiritual gifts differentiated.—The persecution which followed the stoning of Stephen scattered the disciples widely and multiplied the number of those who sought to interpret ‘the signs of the times.’ It thus came about that each little community of believers had those among them who ‘spoke as the Spirit gave them utterance’ and were accounted as prophets of Christ. Many were no doubt often overwrought and distraught and promised things that failed of fulfilment; but the fittest survived and held high rank among those who set themselves to minister unto the saints. The manner in which this development took place in public assembly encouraged each disciple to exercise whatever gift the Spirit had bestowed upon him for the upbuilding of the brotherhood.
As time went on, these gifts became distinguished from one another and more sharply outlined (1 Co 12:28)

It is St. Paul who gives us the first clear classification of ‘spiritual gifts’ and announces that they have been bestowed for the common good. God has placed different people within the Church, he says, ‘that first of all apostles, secondly prophets, thirdly teachers, then workers of miracles, then healers, helpers, administrators and speakers in tongues of various kinds’ (1 Co 12:29; cf. 12:10, 1 Th 5:23). In the Church the first disciples tended to leave the churches, now widely scattered, open to the invasion of presumption, to claimants to leadership, and the words of the Lord were not often specific enough to meet these claims and who could claim to have the ‘mind of Christ’?

4. Warnings of the early fathers.—The rise and development of the monarchical episcopate was here and there favouréd and fostered in the interests of sound doctrine and as a restraint against new-fangled notions, foreign to the faith. ‘Hermas, Pastor (Mand. xi. and xii.), and Ignatius (Eph. vii., ix., and xvi., Mag. viii., Tral. vi., Phil. ii., iii., Smyr. iv., vi., ad Pol. iii.) are full of warnings against false prophets and teachers; this was the more necessary, for there were bishops. This was his hope for the maintenance of sound doctrine. Clement likewise relies upon the bishops (i.e. presbyters) for the preservation of the unity and purity of the Church (1 ad Cor. xii., xvii.).’ However, was not prophecy a gift of the Holy Ghost? It was thus the more necessary that it was not only repressed and somewhat regulated by the rising officials in the Churches. The Didache informs us that prophecy was still free and in good repute in Syria (or Egypt), although often counter-acted by the equally rich, but ephemeral gifts of the Spirit. ‘Prophecy here, as in other places, was a gift only, but not for the public or the common discussion of the Church, though in a private place and under the discipline of a wise and exacting presbyter. The Christian was not to seek to be a prophet, but must see that the gift was not abused, and that the prophecy was true and inspired by the Holy Spirit. A similar view was that of the Cyprians. He himself had the gift, but his chief anxiety was not to abuse it, but to preserve it from the defilements and abuses of the barbarians who were then in the provinces of Spain and Gaul. In his letter to the Carthaginian bishops he spoke of the gift of prophecy as a precious treasure in the Church, and exhorted them to guard it properly.

5. Disappearance of the prophetical office.—The churches were now put on the defensive and they soon sought to co-operate in the maintenance of their apostolic heritage. Joint action in councils was the result. The ecumenical councils had brought the bishops together and greatly increased their prestige and power. The appeal to the words of Christ was enlarged to include an appeal to the teaching and writings of the apostles, and the use of the OT as a book of discipline and standard of doctrine grew in favour. The Law and the Prophets had sufficed for Israel, and the Old Covenant needed only to be supplemented by the New with its apostolic guarantees. Prophecy was thus placed under the restraint of written records, and it was considered more important to interpret the old prophecies than to utter new ones. All the unstable, intermittent spiritual gifts were, as it were, suppressed and the gift of prophecy was again restored. The language of the didache, and the Ecumenical Councils, were those of the OT and the Targum, as well as the Talmud, and the Greek and Latin Scriptures and the standards of discipline. The pressing need of interpreting the ‘signs of the times,’ however, seemed to have passed away. Men were now trying to adjust Christianity to the place in the Church that was estimated for it by the efforts to reinstate prophecy as a special function in the life of the Church, but it had served its day (Iren., adv. Haer. iii. 32; Eus. HE v. 7). Its most important and essential element was absorbed by
the teachers and preachers, and the office practically disappeared.

**PROPHETY** (Hebrew).—1. Soothsaying and prophecy.—According to Cicero (de Div. i. 18), there were, traditionally, two kinds of divination, the one based upon an art or theory (The), the other isolated events. The former consisted in the application of certain rules which earlier generations believed to have been drawn from the observation of occasional coincidences between certain appearances and a subsequent occurrence; the Greek word (looking to the north) regarded a bird appearing on the left as of evil omen, and one seen on the right as a harbinger of good fortune (cf. Hom. Od. xvii. 159, 173 f.; so 524, as contrasted with xx. 242), while the Romans, looking towards the favorable sign (cf. the word). Those, again, who cultivated the second main type of divination are described by Cicero as perceiving the future beforehand by means of a certain agitation (concentatio), or unconstrained and free-moving intuitions. Cicero foretold the future are now usually distinguished as divination and prophecy. Now the historical writers of the OT, who have of late been frequently accused of suppressing the truth, do not conceal the fact that every nation of the time of prediction had a considerable vogue in Israel.

Thus (a) '*eom* is forbidden in Lv 29:26, De 15:10, 2 K 216, Mic 5:12, Jer 27:16; the term seems to have denoted the observing of the floating clouds and the weather bringing tidings from the heavens, the practice of observing the configuration and colouring of the clouds played an important role among the Babylonians and Assyrians (cf. C. Bezold, *J unsche und Babylon*, Bielefeld, 1906, p. 80). Again, (b) the practice of rhabdomancy (Latin) is described in Hos 1:4; this form of divination, according to Herodotus (iv. 67), was found among the Scythians, and Tacitus (Germani s.) describes the way in which it was practised among the Germans (Obbis).**

The term 'prophesying' was ascribed to them by many authorities, and was considered as a necessary part of their prophetic office; and it is evident that the throne of the OT (De 18:15, 18), as well as the name of the prophet, is a title used by the ancient prophets themselves, and is thus to be understood as the meaning and signification of the words ('prophesying', 'prophesier') used by the Hebrew prophet, and is a title which is essentially the highest of all titles, and is almost exclusive to the prophets of the OT. The word 'prophesy' means 'to speak', being formed from the verb (The), which corresponds to the Aram. (or *shôphē*), signifying 'to announce'; so, too, the Assy. (*nabû*), 'to call,' 'inform,' 'command' (cf. Is 46:4), and the Eth. (*náshê*), 'to speak.' It is true that many scholars (e.g., Kuenen, Wallhausen, Stade) connect *nabû* with *nabû*; but it was well for students to bubble up a little difference between the final gutturals, and severe *nabû* from its Semitic cognates; moreover, if *nabû* meant 'bubbling up,' a prophet would have blown in the prophet's mouth (pahû'ah, jer 35:14; cf. Zeph 3:4); while Kuenen's assertion (De 18:15) is developed into that of 'speaker' still leaves it open that the *nabû* is 'speakers' from the outset. The rendering of the Hebrew word 'speaker' is 'prophet,' 'interpreter,' 'orator,' 'ambassador' (Is 29:1); and this interpretation of the word is hardly different from the meaning in the later Arabic. *Nabû* has been distinguished by scholars, as wrongly, as the present writer thinks, since nabû's signification, not simply 'to speak,' but 'to inform,' 'to announce.' J. A. Bowyer (ASL xvii. 1891) proposes to connect *nabû* with Assy. *nasî*, 'to carry off,' and to give it the sense of 'one who is carried away,' 'transported' (by a supernatural power), but Babylonian-Assyrian usage does not give the slightest hint of such a derivation; the divine name *Nâbû* points rather to the derivation from the Bab.-Assyr. *nâbî*, 'to name,' 'to call.'

While the *nâbîm*, accordingly, were 'speakers,' we must of course understand that they were such in a unique sense, i.e., that they were heralds or messengers in the highest sphere of human activity, viz., religion. They were not, e.g., legal counsel or advocates, as is asserted by H. Winckler (Religionsgeschichtlicher und geschichtlicher Orient, Leipzig, 1906, p. 23 f.); for the preparation of 'written contracts,' to which he refers, required not a prophet but a lawyer, and, further, was mentioned, as in the admittedly ancient Song of Deborah (Jg 5:4), we never hear of a *nâbî* as spokesman or counsellor in any record of judicial proceedings (Ex 18:17, 19:6, 1 S 22:25, 24:4; cf. 1 S 12:14). In the Code of Hammurabi, moreover, we find the *ilmû, 'elder,' 'assessor' (cf. *šûrûn, Ru 4:16), and the *dûtan, 'judge,' but there is no mention of the *nâbîn*. We infer therefore that the Hebrew *nâbî* was the 'speaker' in the religious sphere, thus corresponding to the Greek *prophētēs*, originally 'the interpreter of the oracle,' and thus 'the exponent of divine revelation,' so that neither term at first connoted the idea of prediction.

If the Hebrew prophets, accordingly, were 'speakers' in the religious sphere, it is obvious that they were neither priests (kââhâmîn) nor 'judges' (šûpēghûmîn). It may not be quite clear, however, whether they were poets, as they have recently been often called. The present writer would here rest content if the term arrived in the *Staatskal., Rhetorik, Poetik* in Deut. 26 (aben) und Thalia in the *bibl. Litteratur* (Leipzig, 1900, p. 308 ff.), viz., that, while the Hebrew prophets occasionally introduce letters (cf. Is 5:1-26, and often involuntarily break into the rhythm of the dirge (e.g., Am 5), they were otherwise speakers or orators.

Further, the author of Ps 74, writing in the Macabean period (cf. 1 Mac 4:45 gē 14), could never have said (v. 9) *'There is no more any nābî*; had he—a poet—regarded himself as one; while, again, the poetical books of the OT, in the Hebrew arrangement, kept quite apart from the prophetic writings. For similar reasons the *nâbîn* cannot be classed as philosophers. The Hebrews too had their philosophers, the *kâhâhûmîn*, or 'wise,' whose literary productions are found, e.g., in Proverbs, Job, and Ecclesiastes; but no prophet of the OT ever calls himself a *kâhâhûn—Isaiah* (29:4) indeed positively differentiates himself from the class; and in the Hebrew order of the OT books the *nâbîn* and the *kâhâhûmîn* appear in different divisions.

3. The rise of the Hebrew prophecy.—The present writer would begin here by giving the conclusion to which his own investigations have led him, viz., that prophecy began in the final period of the Old Testament, and was a heart-throb of the lawful religion of Israel. This is just what we might expect, and, besides, it agrees with the testimony of the Pentateuchal
source E, which, while some scholars regard it as at least second in point of age, the present writer and others believe to be the oldest of all (cf. E. F. Scott, "History of the Old Testament," p. 47, note a, and F. V. M. 203 f.); thus E in Gv 20:9 calls Abraham a nábí (as in Ps 105:19 the name is given to the patriarchs generally, and in Dt 18:15, Hs 12:29) to Moses. And, if other religions found in some form of prophecy, why should this not have been the case for Israel as well as the other nations of the world? A somewhat different view is taken by Cornill, who inclines to think that Arabia was the native soil of nábí-lam (Der israelitische Prophetismus, p. 12). He seeks to support this theory by the observation that the verb corresponding to nábí is found in Hebrew. But Hebrew has many nouns that have no corresponding verb at all, e.g., dûn (blood), dâm (blood), and these words certainly did not denote foreign or imported concepts. Moreover, while kîhîn, 'secret' or ' profundity,' the corresponding verb to kîhîn is found in a much more involved determinative, in wâhâlâhâh (to prophecy) (from nábí), no one would ever deny that the priest- hood was an ancient and indigenous institution among the Hebrews. Yet some scholars go even farther than Cornill; thus Wellhausen (Der israelit.-jud. Religions, Leipzig, 1896, p. 29) asserts that nábí is a Persian loan word, first used in the ancient period before the outbreak of the Philistine war. At first sight this view looks plausible, in that nábí (nâbî was an epithet of the day) was formerly called the seer (râ'âbî). The present writer is of opinion, however, that in the exposition of this problem of the ancient Hebrew seer we must not regard the word as a 

(1) Samuel bears both titles—râ'âbî in 1 S 11:17, 18 (cf. 1 Ch 29:23, 27—29b), nábí in 2 S 22:14; and we need not attach much importance to the distinction (which he that he should be called the seer) for him, for he is also styled 'man of God' (Gn 26:24). On the other hand, Ahâ and 'El (Hos 11:4) is called a seer in 2 Ch 16:10, and there, accordingly, it is not implied that the two terms belonged to different periods. In point of fact, the terms might be considered as either one who perceived, or as one who proclaimed, religious truth, so that the nábí was subsequently also called râ'âbî (Is 8:17); and the addition of the article or preposition, 'the seer,' as in Cm 21 onwards) denoted by the verb râ'âbî, of which the râ'âbî of the Psalmist and several passages in Hos 11:9-11 of the ancient designation of ' prophetic' and ' seer' is unfounded.

We must take into account the purpose of 1 S 29b, that purpose being to explain why Saul choose the term râ'âbî (v. 11), which is not used of Samuel in the usual part of the chapter. It seems very probable, therefore, that the LXX has here preserved the true reading (δὴ τὸν προφήτην δὲ οὖν οὐκ ἐπορεύομαι, δὲ οὖν ἐπορεύομαι) for (a) the Hebrew here presents a difficulty, and, even if we read ἐπορεύομαι, this would mean 'the prophet of to-day;' (b) the adjective ἐπορεύομαι is never found in the LXX to designate the change of prophet (cf. Gn 17:17; ἐπορεύομαι might easily arise from ἐπορεύομαι, 'the people,' which is precisely the reading of the LXX, and certainly another person, but also the people in a special sense of ' the multitude.' Thus the statement that the name is shortly before the Philistine wars found but frail support in 1 S 29b.

That statement, moreover, is confronted by the fact that in the later history of Israel the prophet has been altered long before the period indicated, as may be inferred from Gv 20:12 (already noted as belonging to E), from Nu 11:22-25 (cf. from regular of the prophetic function of Moses (Dt 15:15, 15), and from Jeremiah's utterance regarding the unbroken prophetistic sequences from the Exodus (Deut 18:15). Notwithstanding all this, however, the statement in question has been amplified by the assertion that prophecy in Israel was derived from the Canaanite religion. It was Kuenen (De Profetien, ii. 227 f.), who formulated the theory that in the closing period of the Judges the Canaanite phenomena of gersternhkellng (ecstasy) passed over to the worshippers of the god Jahweh, and that Samuel placed himself at the head of the movement. This theory won the approval of Wellhausen and others, including W. H. Harper (Unf, Amos and Hosea, Edinburgh, 1896, p. iv.).

(5) It is to be noted, however, that Harper himself (p. 4) does not deny the influence of the Canaanite religion (the idea is analogous to what we find in gods and orgiastic practices they were bitterly hostile (Ex 23:13; 34:14, 15). Moreover, in the period of the Judges, not possessed the institution which constitutes the deepest source of their religious power, then the Canaanites had a superior external form of religion, which would almost certainly have absorbed them. (6) We must not, of course, overlook the influence of the Philistines, and that Samuel simply put himself at their head, finds much to support it.

We must remember that in the forty years before Samuel's day, for we can hardly think of Samson in this connection, while in E. B. the Ark itself was not guarded against capture by the enemy (1 S 4:19). Far from there having been a multitude of prophets before Samuel's day, we read that " the word of the Lord was rare in those days; vision was not widely spread." (v. 25.)

**PROPHECY (Hebrew)**

The actual situation, as it appeared to the historical consciousness of Israel, was, in contrast to the foregoing views, rather as follows. The fervour of faith in Jahweh as supreme among the gods (Ex 15:17-18), which had been kindled by the deliverance from Egypt, never wholly died out (Jos 24:20; Jg 20); on the contrary, clear-sighted representatives of the true religion, such as Deborah (Jg 4), and the unchanging men of God, had preserved the national and religious life sank to a very low level, and, in particular, the nation seemed about to be overwhelmed by the Philistines, who were constantly being reinforced from the west. Nevertheless, the national and religious life sank to a very low level, and, in particular, the nation seemed about to be overwhelmed by the Philistines, who were constantly being reinforced from the west. Nevertheless, the national

(3) in all probability they recorded the history of

(2) in chants expressing the great historical memories of the people they sounded forth the praise of God to the accompaniment of musical instruments;
Israel in the spirit of the prophetic religion; and accordingly it would doubtless be in their circle that the book of Jashar (Jon 10:13, 28 138), the book of the wars of the Lord (Nu 21:4), and especially the many other prophetic writings mentioned as such in the Bible. Comprehended within the inner relationship between men like Samuel and these prophetic societies, we may say that, while the former were vehicles of revelation, the members of the latter were derivative or reproductive prophets. But a more important mark of distinction is the fact that, while these derivative prophets caught the excitement of the times and in their vehement movements would throw themselves half-naked (אֲדֹם, 187 etc.) upon the ground (1 S 19:24), such enthusiastic and ecstatic behaviour is never ascribed to Samuel, Elijah, or Elisha; hence Stade, in attributing such action to the leading prophetic figures as well (Bibl. Theologie des AT, Tübingen, 1905, § 64), is speaking entirely without authority. Many, to sum up what the sources tell us regarding a possible fruition in the development of genuine Hebrew prophecy, we may say that the leading representatives became centres of groups or circles of emulative disciples who sought—sometimes, doubtless, in ways not wholly commendable—to capture the privilege of the true prophetic voice. This contrasts with the genetic theory advanced, e.g., by Wellhausen. This scholar speaks of the members of these prophetic unions (1 S 10:4), somewhat disparagingly, as 'swarms of prophets' (Prophetenwesen, p. 32, etc.), compares them to the modern dervishes of the East and to the Thracian Bachiastes of Greece, and regards them as having provided the raw materials from which the prophetic function of a Samuel or a Nathan was developed by a process of natural selection. This is the view now widely accepted theory (propounded also by K. Marti, Gesch, der israelit. Religion, Strassburg, 1907, p. 139), however, stands opposed to the statements of the sources. For (L), as was shown above, Abraham and Moses were thought of as having been prophets, and Samuel is expressly called a נַבֵּה (1 S 2:20). (ii.) None of the later prophets who occupied an independent position is ever described as having been previously a member of a prophetic society; thus Elisha was called from the ploughshare. These words were preserved as the true sayings of a prophet, but he was not the son (i.e. disciple) of a prophet, but a herdsman and a dresser of sycamore trees, the Lord having called him from following the flock (713). (iii.) It seems probable that the members of the prophetic companies, by reason of their national and more material points of view, became the popular prophets referred to in the passage of Amos just cited and in Is 3:6 etc. Thus the theory of Wellhausen conflicts with the actual data, and in point of fact it rests upon the evolutionary hypothesis, which so many scholars of the present day treat as an axiom.

(b) False prophets.—A further distinction among those who claimed to speak for Jehovah was that between true and false prophets. A concrete illustration of this distinction will be found in the scene in which Ahab and his ally Jehoshaphat seek to ascertain the possibilities of an attack upon the Syrians (1 K 20:23-29). Four hundred prophets assured them of victory, but another, Micaiah the son of Imlah (1 K 22:8, 22-28), went to prison rather than keep silence regarding the defeat which his prophetic consciousness divined. Here, then, we find a cleavage which affected not merely the rank but also the spirit of the prophets. Other religious, and even popular, classes of men might be assimilated to and identified with the hundred belonged are those with whom Amos contrasted himself (Am 7:14), those whose removal was predicted by Isaiah (Is 3:3 etc.), and those who were denounced by Micah (Mic 3:9); cf. also the collision between Hananiah and Jeremiah (Jer 29:16).

How are we to explain the rise of this inferior type of prophet? It is not adequately accounted for by the desire of court favour or of material gain. It is rather of a different order altogether, and in the nature of the case it is not at all inconceivable because there was in Palestine a non-Israelite clan, viz. the Rechabites (g.e.), whose great object it was to maintain the Bedawi mode of life, and to protest against the introduction of whose members the class. But neither of the Hebrew prophets adopted this principle, and even Elijah did not always live in the desert or in caves (1 K 17:5).
on the contrary, the genuine prophets appreciated the efforts and achievements of human culture, and accordingly we read in the OT that man is to natural focus, that he is permitted to enjoy the products of the land (Ex 36 etc.), as well as the gratifications of adornment (Gen 24:22 etc.) and of the arts (Ex 15:18 etc.). The Hebrew ideal, partly inspired by a very different from the prophetic hope that in the ensuing age "they shall sit every man under his vine and under his fig tree" (Mic 4). Nor did the prophets stand aloof from the common life of their fellows, or from their duties to the nation. As a matter of that, their most characteristic, as is shown by what we read of Abraham (Gen 14), Moses, Deborah, and Samuel. Isaiah identified himself so closely with the people that it wrung his heart to have to prophesy calamity (Is 64:19), and how sorely, with other prophets, did he mourn the political disruption of the nation (Is 11:1, Jer 39:3, Ezek 37:12, Hos 1:3). Jeremiah in particular was second to none in the intensity of his patriotic feeling (cf. Jer 48 etc.).

6. The means employed. — (a) Actions.—It was natural for a person with a prophetic vocation, especially in the earliest times, to seek to reinforce their words by actions. In point of fact, Abraham, the herald of what became the recognized religion of Israel, championed it almost exclusively by his conduct, and his greatest service to it was his obedience to the impulse that led him to abandon his polytheistic neighbours (Gen 12, Jos 24) and to found a new home for his faith in a strange land. Moses himself was a man of deeds rather than a "man of words" (Ex 4:11), and we note a similar emphasis on the prophetic personnel of Moses and Deborah (Jdg 4:6 etc.) and Samuel. The prophetic work of Elijah and Elisha (1 K 17:2-12 13:11 like-wise consists almost entirely of actions. Now, while many features in the records of these actions may be later interpolations, to a large extent the historical Hebrew history cannot claim to be free from what is a characteristic of all human tradition (cf. König, Gesch. des Reiches Gottes, pp. 76 f., 37 ff.); yet, before rejecting the marvellous deeds ascribed to the prophets, we should bear in mind the following points: (1) the Hebrew historical books contain many remarkable indications of trustworthi-ness (cf. p. 15 ff.; ) (2) the narratives regarding the patriarchs are free from the miraculous element; (3) we find Isaiah offering to King Ahaz an eviden-tial sign from the upper or the under world (Is 7:1) —here, therefore, a man of most discerning mind (cf. 5:13) thinks it not impossible that the Supreme Spirit should overcome other cosmic powers; (4) it is easier to accept the theory that the marvellous deeds have been embellished than to reject the substratum of the records relating to these deeds; there can be no husk without a kernel. The kernel in question here, however, consists in the development of the idea of a prophet, which, moreover, that stands at a relatively high stage in the development of human culture and was compelled by a destiny of the sterner character to test the objective validity of its religious position. A man who relied and speech as media of the prophet's work is found in the Hebrew literature in general to a higher level. At a time when such methodical and yet plastic historical works as J were being composed the

source of help (Ex 17:7). Samuel pours oil upon the head of Saul (1 S 10:1) and so indicates the lamp of the sanctuary, which was fed with oil and symbolized the knowledge that streams from God. The prophet Ahijah, in meeting Jeroboam, rends his garment in twelve pieces in order to show that God is about to divide the kingdom (1 K 11:12). In 1 K Jeroboam's words would therefore only imply that he had been prompted by his divine monitor to perform the action indicated, and that he performed it in his own consciousness; and the real aim of the narrative is to depict the corrup-tion and apostasy of Israel and the God in the clearest way (full discussion in HDB v. 174-176).

Another type of symbolic action brings us closer still to the distinctively prophetic media. This is found in the instances in which a symbolic name is given to a person or thing, especially in the earliest times, and we read of such an action furnished by the following passages from the Prophets: Hos 1:3, Is 20:4, Jer 13:11-15, 19, 25:32-31 etc., Ezek 4:11, 5:19, 12:21, 14:14, 22:24, 37:26, Zec 11:4. A key to the solution of the problem presented by these passages may perhaps be found in the narrative of Jer 25:27. Here the prophet is commanded to make a whole group of nations drink from the cup of God's fury —a command which could not of course be literally carried out, although the story runs as if it had been. Here Jeremias' words would therefore only imply that he had been prompted by his divine monitor to perform the action indicated, and that he performed it in his own consciousness; and the real aim of the narrative is to depict the corrup-tion and apostasy of Israel and the God in the clearest way (full discussion in HDB v. 174-176).

simple oracle of the prophets gave place to more elaborate discourses, and some prophets were now indeed writing books of their own.

7. Period and chronological sequence. The chronological succession of the literary collections of the prophets as well as the actual form, in a matter of great importance, since the historical background of the documents furnishes the best commentary upon them. The chronological succession may be made out from certain indications both in the contents and in the form of the books. (1) Linguistically, we note, e.g., that the ratio in which 'dɔ̀nhɔ̀ and ɗi, the two Hebrew words for 'I,' occur in Samuel is 48:50; in Kings 9:49; and in Chronicles 1:30; and, again, that in Amos it is 10:1; in Hosea 11:10 (owing perhaps to a mid-Palestinian colouring of the work); in Isaiah (1:59) 5:8; in Micah 1:2; in Jeremiah 37:53; in Ezekiel 1:138; in Haggai 0:4; in Zechariah 1:8; and in Malachi 1:15. Here we notice that in the prophetic books, as thus arranged, the use of the first person constantly increases. Now, as the three historical works named by way of example doubtless came into being successively in different centuries, it follows that these prophetic writings, running parallel with them in the development of national character, must also have arisen in the order given. (2) Still clearer indications of the date of a particular prophet are to be found in the political conditions to which he refers. Thus the discourses of Amos all come from the later and more independent states lying around Israel—Damascus (1:6), Gaza, i.e., Philistia (9b, Tyre (9c); while Samaria too is still independent (7:5). Further, Amos (3:5) and Hosea (9:10) make but cursory allusion to Assyria as the perverted and rebellious deity to which God turns his anger against the unfaithful portion of Israel. In Isaiah (7:24; 10:20), etc., however, the allusion is quite unmistakable; Assyria, in fact, has now trodden Damascus (732 B.C.) and Samaria (722) under foot (10:1); in 20th century is made of Sargon, the Assyrian monarch who, according to the cuneiform chronology, reigned 722–705 B.C.; and in the later discourses of Isaiah Judah is the only kingdom that still preserves its independence (29f.). In Nahum and Jeremiah, again, we see the fall of Assyria and Babylonia as the inevitable, if not clear, outcome. The Exile, which Jeremiah had predicted (251 etc.), was a fact of experience for Ezekiel (11th etc.); and, finally, Haggai, Zechariah (1–8), and Malachi refer to the Persian king; or to the viceroy of Egypt. (12th etc.)

The mass of the prophetic literature, accordingly, arose in the period 760–460 B.C.; and, in the present writer's opinion, a group of five books (Amos, Hosea, Isaiah, Micah, Nahum) represents the golden age of Hebrew rhetoric, while other three groups (Jeremiah, Joel, Zephaniah, Habakkuk; Ezekiel, Deutero-Isiah (40ff.), Jonah; Haggai, Zechariah (1–8), Malachi) may, in view of their tendency to pleonasm and their less metaphorical style, be assigned to the silver age. The concluding portion of 'Isaiah' (55–66), while containing perhaps some literary remains of the prophet, will then, in its present form, probably be the work of a disciple (cf. 8:8); and 'Daniel' will be a sequel of traditional expectations connected with a historical Daniel (Ezk 1414–20 28); circulated during the Maccabean wars with a view to exhorting the weak and comforting the godly (cf. Dan 8:16, and König, Einleitung, §§ 75–82).

Recently, it is true, the theory has been hazarded that the writings of all the Hebrew prophets were composed in the period of the Hebrew monarchy (10-6 B.C.)—a theory which demands some examination in view of the fact that

1The distinctive linguistic characteristics of the prophets are fully discussed in the present writer's Einleitung, § 90.

etc. assign portions of the prophetic literature (Is 24–27, Hab.) to the 2nd cent. B.C. Now (a) the type of Hebrew written c. 300 B.C. is in the texts of Ezra, Neh., etc. (Josephus, cap. Vermes, $Præcis d'histoire juive, Paris, 1839, p. 802) believes that the editor of these three books lived c. 150 B.C. (b) the latest accounts in the composition of Nebuchadrezzar, who closes the genealogy of the high-priestly family with Jaddus ( Neh 12:1–29), suggests that the prophetic literature is older than the book of Chronicles (considering the style and the setting of the narrative), so that we must still assign the books in question to c. 350–300; and hence the prophetic writings, reflecting an older stage in the development of the Hebrew faith, must be placed in the 6th century B.C. (6). It is easy to see why Hebrew contemporaries of Nabuchadrezzar-ur (604–602 B.C.), king of Babylon, should reproduce their composition of Nebuchadrezzar, who closes the 27 times in Jer. (12:21) etc.) and is the only form found in Ezk., the prophet himself. Thus, in the 5th century B.C., i.e. some 300 years after the time of Nabuchadrezzar-ur, the form Nebuchadrezzar is by no means so intelligible, quite apart from the fact that in Hebrew works which really date from the post-Exilic period the form Nebuchadrezzar is used. (c) It is surely mere caprice to say that the kingdoms of Damascus and Israel, Nineveh, the Babylonian monarchy, and the Persian empire would be made to disappear in the historical books while the biblical writer thus with the Persians the Babylonians, and the Persian empire.

8. What the true prophets actually accomplished.—(a) They upheld the lawful religion of their nation. We see this in Samuel, who by his appeal for loyalty to Jahweh moved the people to place in him a king (1 S 8): 'He shall judge Israel according to the judgment of God.' In Amos, when, in his very first discourse, he proclaims a divine retribution upon Damascus for the evils which it had wreaked upon Israel (Am 1). Amos here assumes that the Disposer and Judge of all will act on Israel's behalf, and makes it clear, as by a lightning flash, that the nation was conformed by the Eternal God by an ancient bond which it is the prophet's one aim to maintain. It was with the same compulsion in their hearts that Hosea (11th etc.), Isaiah (14th), and the other representatives of true prophecy came upon the scene. Hence the prophets of the 6th cent. B.C. were in no sense creators of a new era in religion, as so widely held to-day—a view that reappears in Wellhausen (p. 23), while Marti (Die Religion des AT unter den Religionen des vorderen Orientis, Tubingen, 1906, Eng. tr., London, 1907) finds three such epochs in the history of Israel, those namely of the 'Bedawi religion,' the 'peasant religion' (beginning with Israel's arrival in Canaan), and the 'prophecy religion' (from Amos onwards). This quite modern hypothesis, however, we may wisely dismiss as wanting in sufficient and fundamental character of the lawful religion of Israel. This, even on the lowest estimate, comprises the following elements: (1) belief in the existence of a God who is not, like the Babylonian or Greek deities, a product of the cosmic process (Gen 11:4a, Is 31:1); (2) a thoroughgoing monotheism, involved in the universal scope of the religion that began with Abraham (Gen 12:1, from an ancient Jahwistic source); (3) the thought of God as par excellence—there being at first no prophet in the history of the patriarchs (Gen 12–25); (4) the rejection of magic and soothsaying (Ex 22:18, Nu 23:2), etc. The supporters of the modern hypothesis assert that Amos made the idea of justice the main element in the prophetic writings. But, besides the fact that Amos himself says nothing of any such radical change and adopts no new divine name to signalize it, it must be remembered that the God of the prophets had all along been 'a Just God': 'We are not in the name of this God that the great principles of justice found in the Decalogue were promulgated, that Moses instituted the courts of law (Ex 18:21–22 [E]), and that even royal transgressers were arraigned (2 S 12, 1 K 18)!' All that can be said of Amos in this regard
is that he strongly emphasized the divine justice by proclaiming that the Eternal God would not pass over His own people when His day came (Amos 2:6); Hosea did with equal justice that God was in fact precisely what, a little later, Hosea did with reference to God’s love (cf. Hos 1:2, 11), and Isaiah with reference to His holiness (6:3); as a sanction for universal righteousness (Hos 9:10). Nevertheless, the prophets of the 8th cent., in thus emphasizing individual attributes of God, were certainly not the founders of a new religion.

(b) The prophets directed the affairs of the Kingdom of God. Originally and in principle God Himself was to be the sole ruler, and could be represented only by those who were filled by His spirit. When at length an earthly kingdom was sanctioned, the prophets still retained their religious jurisdiction, and acted as the conscience of the nation. This explains Samuel’s conflict with Saul (cf. König, Gesch. des Reiches Gottes, pp. 133 f., 199 f., 202 f.); and even to a David prophetic in the person of God to have made clear that the king’s part in external policy should be to maintain the peace of the country and to avoid wars of offence (2 S 24). Solomon’s political and religious obliquities were denounced by Ahijah the Shilonite (1 K 11:29f.), and Shemaiah and Elisha likewise interjected the most effective in national affairs (1 K 13:2-24, 2 K 9).

The most important factor here, however, was Isaiah’s great utterance, ‘In quietness and in confidence shall be your strength’ (Is 30:15), and his assertion that by political alliances and material preparations for war Jehovah’s people were only trying to rival the Gentile nations (v. 18, and the contemporary passages Zec 9:6, Hos 2:12). The chosen nation must keep to its mission of being a light to mankind (Is 42:6 f.); and, if it had but obeyed this prophetic injunction, it would not only have preserved its existence as a state, but would have discharged a supremely great function in the world’s history.

On similar lines the Hebrew prophets solved the related problem of their attitude to foreign nations. As was said above (§ 5 c), the true prophets were ardent patriots. Isaiah identifies himself fully with his guilt-laden nation (cf. I 31f.), and Micah can but exult and howl for its calamities, deserved though they were (1:9). True patriotism, however, does not consist in pandering to the national interests of the masses—indeed, but too easily directed to the conquest and exhaustion of alien peoples. The genuine patriot, on the contrary, must ever keep in mind the higher ideals of his nation. Hence the Hebrew prophets, with their unparalleled gifts of a spiritual leadership, brought all things under the moral and religious point of view, and it is this too which regulates their attitude to the great monarchies of their time. The prophet might hold over his own people the doom of foreign invasion, but the invader himself was only an instrument in the hands of the Supreme Disposer. Thus the Assyrian was the rod of God’s anger (Is 10f.), and the evils which he wreaked upon Israel were an element in the retribution to which the divinely appointed punishment of Jehovah was due, and thereby made liable by reason of their unfaithfulness. Similarly, foreign rulers are sometimes even called the ‘servants’ of God (Jer 25:27, 43f., Ezek 29). But, when such rulers in mere ruthlessness pass beyond this and become divinely evil, the retribution, the prophet threatens them with judgments of the sternest kind (Is 10f. ‘Woe to Assiria, the rod of mine anger!’ (RV), Jer 50:11f., 25, 26., Ezek 32:10f., Enoch, lxxix. 69).

In view of the actual facts, it is strange that the old charge of unduly favouring the Chaldeans should recently have been once more brought against Jeremiah in particular (H. Winckler, Der Prophet Jeremia, Leipzig, 1892, and others, as cited in König, Gesch. des Reiches Gottes, p. 239 f.).

(c) A third phase of the prophets’ activity appears in their preserving, expanding and spiritualizing the submission of Israel to an alien domination only by reason of his divinely inspired conviction that God had so decreed it in order to provide an occasion for the divine presence to be made manifest to the Gentiles, and to give the witness of the religious superiority of Israel to the heathen. The prophets thus laid the foundation of the legislative basis of the Jehovah religion scarcely requires proof. In view of certain modern theories, however, it may be well to state that Amos accused his people of rejecting God’s Law and not keeping His Sabbath, but He was not less imperious in their criticisms of the same evils (4: 9f.). But, without adding further testimony, we may affirm that what the prophets did with regard to the divine commandments was, in the first place, to guard the long-inherited religious and moral ideals of the community. They were primarily reformers, and their demand for repentance could never have appealed to the conscience of their contemporaries except upon the common ground of a recognized law. (2) They strongly insisted upon the religious character of the ancient world’s problem, though not quite so obviously, is nevertheless distinctly shown by the following incidents: at the institution of the human kingship Samuel defined the prerogative of the kingship, i.e. some kind of religious authority being invested in the king. He then, i.e. in the most holy place of the chief sanctuary of the time (1 S 10f.); in Hosea (2f.), again, we find the injunction that the designation ‘Ba’al‘ (lit. ‘owner’, ‘husband’) shall no longer be applied to Jehovah, the implication being that Israel’s God is not the Lord, i.e. in the most holy place of the chief sanctuary of the time (1 S 10f.); in Hosea (2f.), again, we find the injunction that the designation ‘Ba’al‘ (lit. ‘owner’, ‘husband’) shall no longer be applied to Jehovah, the implication being that Israel’s God is not the Lord, i.e. in the most holy place of the chief sanctuary of the time (1 S 10f.).

The prophets spiritualized the Law by the emphasis which they laid upon religion and the ethical life. In the critical days of the conflict between the Ba’al cult and the worship of the Eternal, the people must avoid what had previously ranked as an adiaphor—once more, the law in Deuteronomy (28f. (Heb. 8)) by which eunuchs were excluded from the community of Jehovah is repealed in the closing (Exilic) division of Isaiah (56f.)—the result of a deepening sense of the ultimate universality of God’s Kingdom. (3) The prophets spiritualized the Law by the emphasis which they laid upon religion and the ethical life. In the critical days of the conflict between the Ba’al cult and the worship of the Eternal, the people must avoid what had previously ranked as an adiaphor—once more, the law in Deuteronomy (28f. (Heb. 8)) by which eunuchs were excluded from the community of Jehovah is repealed in the closing (Exilic) division of Isaiah (56f.)—the result of a deepening sense of the ultimate universality of God’s Kingdom.

Devotion to God can find expression without sacrifice—a truth that is even more strongly insisted upon in Hos 5:6f. 14f., Is 12:3f., Mic 6:4, Jer 7:7f. Nor does even Ezekiel in any degree depart from this attitude. He severely reproaches his people with their impiety and immorality; he calls Israel ‘a rebellious house’ (25 etc.) he insists above all things upon an inward transformation (11:15-30f.); he is anxious to prevent dissoluty in every form (57f.); his zeal for the rebuilding of the Temple was a means of making Israel ashamed of its past transgressions (43f. 44f. 45f.); and one of his great aspirations was the benevolent treatment of aliens (47f.). If Ezekiel was also concerned for the ceremonial law, it was only in the view that by means of a regular order of worship the impious might be warned against a repetition of their former disloyalty. The prophets, moreover, sought to spiritualize the Law positively; thus, in contrast to Mosaic teaching, the prophets recognized that by means of the rending of garments as a symbol of mourning (cf. Mt 9:23, 31) and of the people rending their hearts (cf. König, Gesch. des Reiches Gottes, p. 317 f.).

(d) These three aspects of prophetic activity
with regard to the Law are now largely ignored, and the main emphasis is usually laid upon what the prophets say about the future. Here, however, it is to be noted that they were much less concerned with prediction (of concrete occurrences) than with truth or universal values. The prophet, in verbalizing the great regrettive lines of the future course of things. Sometimes, no doubt, they foresaw special events, such as the fall of Sheba (Is 22:6-7), the withdrawal (22:12) and the destruction (31) of the Assyrians, the later of which was prophesied nearly 70 years before (Is 10:22 ff., c.f. also Am 7:1, Jer 34:8 (2 K 25:7), Zec 7:1). In the main, however, prophetic utterances regarding the future were designed to set forth the fundamental lines upon which the divine kingdom would evolve.

The vistas of the future thus opened are manifold and glorious; a notable instance is the vision of the nations flocking exultantly to the Temple of Jehovah (Is 2:2-4; Mic 4:2). Still, these unveilings of times to come could not, in view of human guilt, but be sometimes full of menace. Thus, it was only in rarer moments that the prophets could depict the splendors of the final consummation. It must be remembered, of course, that the more ominous forecasts were given conditionally, as Jeremiah himself pointed out (Jer 4:6). Although this conditional character extends no doubt to the promises as well. The conditional nature of prophecy is a fact of the utmost significance, for it serves as a preliminary explanation of that nonfulfillment or only partial fulfillment of certain prophecies which has led some recent scholars to disparage OT prophecy in general (c. e.g. Kuenen, De Profeten, i. 114 ff., with König, Der Offenbarungsgedicht des AT, ii. 574 ff.). There are other expositions of the evil spirit at work among them lies in the supreme achievement of the prophets in the distinctively prophetic sphere, viz., the spiritualization of prophecy relating to the future of the divine kingdom.

Of this spiritualizing process we may trace the following main indications. (1) The relation between the divine kingdom and its earthly sphere is more and more relaxed. The noteworthy circumstance that the patriarchs had no permanent possession in the Land of Promise except a burial cave (Gen 35:29) and that the later historical development—the restriction of the Davidic dynasty to the lordship of Judah and its immediate neighbourhood (c. 937 B.C.), and the final overthrow of that dynasty (c. 586 B.C.). Prophecies of the coming spiritualization of the kingdom are found in the increasing clearness with which the following truths were realized: the superhuman gifts of the coming leader (Is 9:6, 11, Mal 3:4); suffering as an element in his work (Is 11:1-4); the personal God's interest in the potential human, the imparting of this power (cf. König, Gesch., pp. 207-278.

Notwithstanding these lofty ideals, the Hebrew prophets have in recent times been charged with one-sidedness and partiality, more especially by Kuenen, who (De Goddelijkheid van de Profeten, Haarlem, 1596-70, ii. 585 ff., Enc. tr. Religion of Israel, London, 1874-75) explains ourselves to be robbed of the conviction that God rules in all history. (1) This protest, however, does not really affect the design by which, according to the prophets, the future was foretold, the design was the same. A father who permits his son for a time to go his own way cannot be accused of indifference regarding that son's fate. The prophecy of the future, therefore, is to encompass even the peoples whom He suffers 'to walk in their own ways' (Ac 4:28), and He actually does more: He instructs the nations (Is 52:6); in the heavens He manifests His glory to all (Ps 19:1); He instructs the nations and teaches men (Is 48:17) to do the righteous and judge the ancient of days. (2) The prophetic design is not to give a guarantee of success, but to awaken the conscience. The facts of history are not thereby predicted, but it is a recognition that the methods followed in the past may prove also in the future. (3) Friedrich Delitzsch (Bibel und Bibel, Leipzig, 1805, ii. 38) asserts that in OT prophecy the history of the ancient world is looked at from a most oblique visual angle. Here, however, Delitzsch not only overlooks the facts just adduced, but ignores the universalism that forms the sublime element in the historical design unfolded by the prophets. He quotes Gn 12:3, but omits 12:1 (repeated in 15:18 22:16 26:3; 'in thee [or 'in thy seed'] shall all the families of the earth be blessed.' He likewise leaves out of account the excellence of the laws relating to aliens, in which the OT surpasses both the Code of Hammurabi, and the Mosaic law; a law the universalism of which is beyond delimitation on the universalistic side of OT prophecy, the history of the ancient world is surveyed from a pre-eminently ideal point of view.

The consummate achievement of OT prophecy, however, lies in the idea of the new covenant—a covenant which is to secure the effacement of human guilt, in which the fundamental law of acknowledging God is alone to prevail, and which is to be observed in hearts renewed by gratitude. This idea first emerges in Jer 31:23-4, and nothing could more clearly indicate the aspiration towards a higher stage in the development of the divine kingdom. The work of the Hebrew prophets thus culminates in a prospect which corresponds at once to the highest longing of the human heart and to the most perfect conception of God.

9. The inner sources of prophecy.—In the discourses of Micah (3:8) that prophet says, 'I am full of power, even the spirit of the Lord' (RVm), so expressing his conviction that his prophetic gift came from a superhuman source. Similarly Isaiah (51:11) says, 'The Lord spake to me with strength of hand' (RVm). These discourses are profoundly influenced by something outside the range of ordinary forces. A like impression, as from the wave-beats of some 'immortal sea,' was known also to Jeremiah (23:29); and the Psalmist (Ps 104:4) interprets these discourses as the movements of the heart at the centre of things, and sees them in the source of cosmic movement. Now, reflexion upon the origin of this cosmic movement (παρθένος κόσμου) really brings us, as far as the present writer can judge, to the conclusion that—in agreement likewise with Aristotle—that 'God is Spirit' (Is 31:3, Jn 4:24) contains the only reasonable solution of the primordial riddle of the universe. But, if we admit the possibility of an abnormal impulse proceeding from this source, then consciousness of the prophet have been affected by it in an abnormal way? May not his power of spiritual vision have been peculiarly intensified? As a matter of fact, if the prophet's conviction of his being, thus induced by an abnormal impulse has a basis of reality, this increased sensitiveness is psychologically quite intelligible. Even in the sphere of ordinary experience, sense and memory may be strangely quickened by some unusual connection; and, in the moments when a man is suddenly brought face to face with the peril of death, scenes long forgotten will pass before his mental vision, and he may make discoveries that at ordinary times seemed beyond him. Hence it is in no sense incredible that a
PROPHECY (Hebrew) 391

soul, receiving, as it believes, an impression from a region otherwise unknown, should thereby be endowed with a capacity for a knowledge beyond the limits of ordinary experience.

The prophets also affirm that they are granted visions of what lies behind the ordinary process of events. This is implied in their repeated use of the expression 'I saw'—an assertion all the more significant when it is always pressed in a special way (over 30 times; Am 7th etc.). Thus the true prophets, when speaking of their abnormal visions, use the verb רָאָש, the Hebrew word for simple ordinary seeing, whereas, when referring to those who are not prophets they expressly denied that such could 'see' (רָאָש), saying of them that they 'follow . . . what they have not seen' (Ezk 13), and ascribing to them at most a certain power of 'beholding,' looking at (חָאָש), i.e., a purely sensuous faculty, and not 'seeing' in the proper sense at all. That the true prophets were able to speak of others in this way argues a remarkable degree of conviction regarding their own powers of prophetic vision.

It may be asked however, whether the prophets were not perhaps like Sweeney, who, e.g. (as we shall not deny, and as is admitted by Kant [Werke, ed. G. Hartenstein, Leipzig, 1858–39, x. 453 f.]), 'saw' a conflagration in distant Stockholm, a letter in a secret drawer, etc. But Sweeney's pretended 'sight' was quite unassociated with the characteristics given on p. 390, anticipated the course of events, as shown in signal fashion by Is 553.

Thus, too, Isaiah amazed his fellows by his conviction that Jerusalem would be delivered from the Assyrian beleaguerment in 701 B.C. (Is 297)20 he also foretold that the Assyrian host would be destroyed by a 'not-man' (319), i.e. a superhuman power, as actually took place on the Egyptian frontier (372; Herod. ii. 141). Similarly Ezekiel (398) knew of the fall of Jerusalem the day before it took place.

These examples suffice to furnish us with a principle that governs the relations of history and prophecy (cf. König, Der Offenbarungsbegriff des AT, p. 278 f.), viz. that, while history and prophecy are so connected that no separation of the former is possible parallel to history in form and matter (§ 7 above), history is not their source. Thus Jeremiah's conviction that he was called to a great religious task doubtless came to him during the Scythian invasion of W. Asia (c. 628 n.c.; Herod. i. 103–106); his work as a prophet, however, was not causally connected with that invasion, but is simply concurrent with it. The historical events of his day merely supplied him with imagery (Jer 1239), but countless utterances of the prophet show that his commission was not derived from the course of events, and could not be so derived; cf. e.g. 20 (it is Jehovah who prevails over him) and 3262 (the symbolical action with the deed of sale, expressing his conviction that the departed Israelites would return).

The knowledge of the future which we find in the words of Isaiah and other prophets cannot be explained as resting upon 'the knowledge of historical events' (E. J. Willke, Jesus and Assur, Leipzig, 1905, p. 56). Isaiah certainly reports having received a vision (e.g. 1 the word of the Lord came to him, but by that work he means the events that have already happened. His prophetic knowledge, however, was of a peculiar kind, viz. what he had 'learned' that was the case with the king's councillors were at their wits' end (299); he himself knew what would happen, and was convinced of his superiority to the prophets whom the people called 'their wise men' (vs. 10, 14). The present writer's belief that the insight of the prophets was something distinctive and exceptional is shared by such modern scholars as C. F. A. Dillmann, F. Bleek, S. R.

Here we must once more consider the judgment passed by the true prophets upon certain of their contemporaries who likewise claimed to speak in the name of Jehovah.

(1) As regards the commission of the latter, the true prophets held very severe views. The motives of these pretenders were really of a material kind (Mic 3–4), and arrogance and presumption lay at the root of all that they said and did (cf. 33 etc.—the 'prophets' of Ezek 129). (2) As regards the sources from which their utterances were drawn, these are stigmatized as 'lying visions' (Jer 14, etc., 'what they have not seen' (Ezk 134, 16), visions by night (Mic 39), i.e. mere dreams (Jer 25–26), or 'their own heart' (Hos 14, Ezek 12, 17). As already said, these characterizations indicate a remarkable intensity of conviction on the part of the genuine prophets, all the more so because they were deeply aware of the lack of evidence for their statements.

The claim of the true prophets, nevertheless, is still being met with objections.

(1) It is said, e.g., that Ezekiel suffered from temporary blindness and hemiplegia (A. Klostiermann, SR 1, S. 271 f. 411). The 'compulsion' that moved him to write (cf. Ezekiel); A. Jeremias, Das AT im Lichte des alten Orients, Leipzig, 1896). Klostiermann finds symptoms of these illnesses in Ezekiel's prophetic blindness, i.e. in Ezekiel's claim to be a 'prophet by God.' What bodily idiocy was such critics assessing? E.g., it has been alleged that Ezekiel liked to have his baking with excrement for fuel (414), or his withholding his taxes (494)? (For a full discussion of the points at issue cf. II DB v. 172; also König, AT III, S. 129, 130; and Ezechielstudien, Leipzig, 1906, p. 72.) The theory of bodily indisposition in any case quite inadequate to account for the spiritual insight so characteristic of the prophets.

(2) The prophets were preoccupied with a particular aspect of their mission, and not with all aspects of life. This is peculiarly true of Isaiah. The latter part of his ministry (Is 620) has in fact been considered as the beginning of a 'new oracle'-Die Beraubung der AT Propheten, Götingen, 1897, p. 47), comes to the conclusion that their prophetic consciousness was not 'a conscious acceptance of the state of the late period,' but, however— not to be confounded with the 'sense of the prophets' (p. 6)—gave no hint of any state of ecstasy, i.e. unconsciousness or frenzy. It is true that Jeremiah was said by one of his opponents to be mad (2929). Hosias, again, referring probably to himself, says that the prophet is not of his own (56) quite obviously, however, his meaning is that the ineptitudes of his people (cf. Is 154, Jer 25–26 84) were enough to derange the mind of a man already sensitive and patient, so that the theory of ecstasy finds no support in the passages cited, while we have the positive evidence that the prophets lived an abnormal life, and the state of nature was one in which, all alike in construction and diction, are the work of sane and sober minds (cf. the freshness of their language); and were deeply moved by abnormal influences, they perfectly retain their self-consciousness and their memory: it was precisely in such a case that Isaiah regarded his own consciousness, and Jeremiah felt that he was too young for the task set before him.

(3) The prophets have also been charged with ignorance in matters of psychology. In answer to this we may recall Isaiah's severe picture against the sophistical perversion of moral concepts (59) and the remarkable precision of his own ideas and judgments. How often does Jeremiah reprove his people for 'the stubbornness of their evil heart' (37 etc.)? It is he who speaks of his God as searching the heart and trying the reins (170), and it is most unlikely that such a mind would indulge in phantastical or divinely given conceptions (cf. Cornill, Das Dick Jeremia erklärt, Leipzig, 1905, p. 230). This may be said also of Ezekiel, who (speaking in God's name) declares, 'I know the things that come into your mind' (115). Such utterances are not easily reconcilable with ignorance regarding the spiritual conditions of the human soul.

In point of fact, taking into account the precise intellectual distinctions and the delicacy of moral feeling displayed in the prophetic writings associated with the names of the prophets, we find it impossible to charge the prophets even with self-deception. Self-deception always implies the existence of information and of religious and moral sobriety—the very opposite of the characteristics set forth above, to ignore which would be to reject the one line of evidence that can avail in the question at issue.

Wallenhausen (p. 15) has finely said that the individual upon whom the grace of God has come remains a mystery. In view of what the prophets
PROPHECY (Hebrew)

said and did, however, we must go beyond this and recognize that they were wrought upon by some mysterious force lying behind the veil of ordinary phenomena. Difficult as it may be for the modern mind to accept such a possibility, the Bible itself teaches us that there is no other way of doing justice to the historical facts. After all, as the phenomena of life and of the human consciousness cannot be explained by reference to their antecedents, it need not seem strange that the phenomena of the true prophets in the spiritual history of the Hebrew people should defy every attempt to explain it on natural grounds.

10. Non-Israelite analogies.—(a) In Babylonia and in the divination of the Sea-coast, his utterances were rejected by the prophetic tradition of Israel (§ 1), who organized an function of the State (cf., e.g., C. Bezold, Die babylon.-assyr. Lit., Leipzig, 1906, p. 44 f.), the Babylonian-Assyrian religion being in this respect on a level with the religion of Egypt, Greece, and Rome, but analogous to the Hebrew. In Hebrew literature, moreover, we hear nothing of any person like Emneduranki, to whom Babylonian literature traces the art of divination. But we must still ask whether, outside this alleged practice of divination in these lands, there were individuals of prophetic character who might be compared to the prophets of Israel.

A personality of this type has been found in Hammurabi (cf. art. LAW [Babylonian], vol. vii. p. 817 f.), who, in a relief preceding his well-known Code, is depicted as standing before the sun-god (Shamash). From this, however, we are to infer that Hammurabi is not the pupil or prophet of the sun-god. Bezold thinks (p. 3), but rather his counterpart; for in the introductory lines of the inscription we read:

‘Anu and Bel called me, Hammurabi, the exalted prince, the wise king, who must not be impeded in my duty for one who enlighten the land,’ etc. (R. F. Harper, The Code of Hammurabi, Chicago, 1904, p. 5).

Further, the particular laws are as often ascribed to Hammurabi himself as to the sun-god, and towards the close of the inscription we find such utterances as ‘My weighty words I have written upon my monument’ (Harper, p. 101), and ‘My words are weighty, my wisdom (Harper, p. 103, ‘deeds’) univalued—sayings which we cannot identify with any utterances from Monarchic or Early Israelite; Nu 11[2] (Ej 12[2]) or from the literary prophecies of a later age (cf. Is 5[1], Jer 23[4], Ezk 13[-17] etc.).

In the cuneiform literature of the 7th cent. B.C., another writer speaks of himself as follows:

1, the servant, the prophet (2), of his lord the king, utter my prophecies for my lord the king. May the gods whose names I have enumerated accept and hear these prophecies on behalf of my lord the king; may they add to him more than his portion, and give to my lord the king! But may I, the prophet of my lord the king, stand before my lord the king, and with all my heart worship my steed far has my side becomes weak, may I exert my power to the utmost by the power of my word. Who must not love a good lord? Surely it is said in the song of the Babylonians: ‘Because of thy gracious lips, my shepherd, all men look to thee’ (We follow the version of F. E. Price in Mon. no. 267; but the Babylonian tablets are rendered ‘prophet’ simply means ‘servant’, ‘worshipper’.)

Winckler (KAT 2, p. 170 f.) refers to this passage as exhibiting a Babylonian-Assyrian counterpart to the Hebrew, however, e.g., Jeremiah. In point of fact, however, a comparison confirms ‘before the king’, and is obviously subservient to him in all things, rather suggests the ‘prophets’ who, while claiming to speak for Jahveh, were but the servile agents of King Sargon I (1.829-820 B.C.) those who in the days of Isaiah were regarded by the ruling faction as ‘their wise ones’ (Is 29:10, 14, Jer 20:15 etc.—men from whom the representatives of the lawful religion of Israel distinguished themselves as the most decided way (1 K 22[26], Am 7[19], Is 2[1] 2[9] 28[20] 28[14], Mic 3[31], Jer 7[19] 29[20] etc.).

Winckler has also sought to dispargage men like Amos and Jeremiah by speaking of them as ‘political agents’ (Geschicht. Zeitschr. 1873. 43), and argues that they were no more than professional agitators of the rulers of Nineveh or Babylon (KAT 2, p. 170 f.). Thus Amos is said to have laboured on behalf of the Assyrian convenience, in the policy of Sennacherib, and of his successor Ashur-bani-pal (KAT 2, § 56). In answer to this, however, we need only recall the words of Amos 7:10, ‘When r. to leave Bethel, he asserted that he had been called to his religious office by God (Am 7:9), and in all his utterances we nowhere hear his voice representing the interest of the Eternal (13-22 etc.). As for Jeremiah, again, it is clear that the tradition which believed himself to serve was none other than the King of Kings, who had reserved for himself belonging to that great succession which had championed the supreme interest of Israel, and that the supposed national spirit and his attitude in political affairs have already been dealt with (§ 8 (b)). Jeremiah (Das AT im Lichte alter Orient?, p. 38) suggests that the Hebrew prophets were the vehicles of the Babylonian culture: ‘Mercury is the morning-star; his name means “harbinger”. Here we come upon the astral interpretation of the word nôlû, “prophet”; he is the harbinger or vehicle of a new age.’ The Babylonian-Assyrian diviners, however, found their patron, not in Mercury, but in the sun-god (KAT 2, p. 395), while the genuine Hebrew sources say nothing of any such connexion between their propheticism and Mercury, and in fact actually protest against divination in every form (§ 8).

If, therefore, we find in Babylonia and Assyria, no direct evidence of the existence of prophetic personalities who were able to manifest themselves, it remains to ask whether we have any indirect traces—such as might be afforded, e.g., by the literature. Here, however, as in Assurbanipal’s library, we find nothing higher than series of omen-tablets, in one of which, e.g., we read:

‘If in the month of Sivan (June) an eclipse occurs between the first and thirtieth day, vegetation throughout the land will lag behind.’

But where in the Babylonian-Assyrian literature do we find anything to compare with the profound religious ideas, the earnest moral exhortations, and the glowing anticipations of the future, so characteristic of the writings of the Hebrew prophets?

Attention has been directed to the following passage as indicating Babylonian visions of the future (F. Hommel, in Glauben und Wissen, i. 1903) ff.:

The god Marduk, seeing a sick person, says to his father Ea: ‘My father, disease has come upon man; I know not by what means he may be healed.’ Then Ea answered his son thus: ‘My son, what may there be that thou knowest not? What new thing might I still teach thee? What I know, thou knowest, and what thou knowest, I know: go, my son, and break the spell, sick to stick it.’ Then come the directions for exorcising the disease.

Now, while this may show that the Babylonian-Assyrian diviners were regarded as ready to heal man, it is not the main point of the story, but only of a physical kind; and, besides, the passage is not really predictive at all. T. K. Cheyne (EB 1111. 3063), however, finds the predictive element in the following passage:

‘Sea-coast against sea-coast, Elamites against Elamites, Cassites against Cassites, Kuthites against Kuthites, country against country, house against house, man against man. Brother is to show no mercy towards brother; they shall kill one another.’

But this prediction, referring probably to Hammurabi’s triumph over the neighbouring kings, is a purely political one. It is hardly necessary to point to the contrast with Hebrew prophecy, which showed essentially in the spirit of the Jews for whom the founding of a divine kingdom has as its supreme practical end the culture of the ethical-religious interest—assuredly the highest element in the life of a nation.

(b) E. Meyer, ‘Religion und ihre Nachbarstämme’, Halle, 1906, pp. 451-453 asserts that the Hebrew prophecy was derived from Egypt, and cites a prophecy (partly from the earlier, partly from the middle, period of Egyptian literature, and recently more accurately deciphered) to the following effect:

‘A wise man (or the inspired lamb) reveals to the king the future of Egypt, and then with his last word falls down dead, and is ceremoniously interred by the king. His prophecies,
however, are put on record and handed down to future ages. Their tenor is that there is coming, to begin with, a period of awful distress, in which everything in Egypt turns topsy-turvy—foreign peoples make inroads, servants become masters, people of position are slain, women enslaved, the entire social order subverted, temples plundered and desecrated, and their mysteries laid bare, while the king himself is carried captive or forced to flee to a foreign land. Then follows an epoch in which the gods once more bestow their favour upon the country, and in which a just king, beloved of the gods and sprung from the sun-god Re, expels its enemies, restores its worship and its ancient order, subjugaates the neighbouring lands, and enjoys a long and happy reign.  

Meyer maintains that this ‘fixed traditional schema’ was known to the Hebrew prophets, who, in fact, merely elaborated it in detail and applied it to the situation of the day. But there is certainly no positive evidence to show that Hebrew prophecy was based upon any such design. This schema was not followed even by the popular prophets, whose great watchword for the future was ‘peace’ (Jer 6:14 etc.). The important point, however, is this: the distinctive features of Hebrew prophecy are that its predictions of good or evil were conditional or subverted, as an enactment of a divine kingdom, which was instituted in the call of Abraham (Gen 12:2-3) in order to establish in Israel a nursery of true religion and morality (Is 5:2-6), and so to open a fountain of blessing for all nations (44 etc.). Egypt supplies nothing that may for a moment compare with this.

(c) Finally, as to a possible comparison of the Hebrew prophets with Muhammad, we find an OT scholar (J. Köberle, NKS xvii. [1906] 202) giving expression to the view that their consciousness of their vocation loses significance when we look at Muhammad, who likewise, for that matter, regarded himself as a divine messenger. In answer to this we must carefully examine the qualities of the evidence which the Hebrew prophets themselves give regarding their mission. As the value of a witness’s testimony may be measured with a fair degree of objectivity by certain of its characteristics, we shall compare the Hebrew prophets and Muhammad with reference to the following points.

(i) Clearness and definiteness. —The clear conviction which underlies the utterances of men like Amos, Isaiah, etc., meets us everywhere in their works; they had distinct recollections of their composer’s personal sympathy, as also of their conviction of the continual need to respond to it (e.g., Jer 1:9-20). Such definiteness is certainly not exceeded by the utterances of Muhammad. Moreover, scholars who, like A. Müller (Th.LZ xii. [1887] 278 ff.), are anxious to do all justice to the latter speak of his ‘indeterminately thinking,’ his ‘self-deception,’ in that he denies a divine source for narratives which, like the Joseph sīrah (xlii.), are obviously mere plagiarisms.

(ii) Difficulty of the situation in which the testi-

is propitiation is more powerful than he who propitiates; else the latter would not require to implore, either by entreaty or by offering, those things which he considers necessary to his welfare. It is with propitiation in its more definitely theological sense, i.e., as affecting the relations between God and man, that we have here to deal.

I. The Idea in primitive religion.—Religion finds its origin in the conviction of man that his life is overruled by forces other and greater than those which he finds in himself. This power man has, construed from the earliest times, and according to his light, in the terms which he applies to his own life and personality. The only difference is that those characteristics which he recognizes to be rudimentary and fragmentary in himself are conceived of as existing in all their ideal perfection in the nature of the divine. In this sense all religions, whether their development be high or low, are anthropomorphic. Again, since man, in the earliest stages of his evolution, has little self-sufficiency, and is in all things closely dependent upon Nature and her forces, even for his bodily wants, he is instinctively impelled to find this supernatural element in the existence and in the entire state of the universe. This is the stage of animism, when worship is paid to the spirit or spirits which reside in trees, fire, wind, cloud, or sky.

But the mere belief in the existence of those superior powers would not be sufficient in itself to give rise to religion. It is felt also that these powers are interested in the welfare of man; and, further, that their interest can be quickened, or restored when lost, provided that their means be adopted to achieve this result. Primitive man attributes to his god the same feelings of like and dislike, of love and aversion, of friendship and hostility, as he finds to exist between himself and his fellow-men. Hence, from the first, there are present in religion the elements not merely of thought, but also of feeling and of will. In fact, it is due to the conjunction of these that religion ever came into being. Man does not merely think of his god; since, through nature, that god manifests his power often in terrible form, he conceives of him, now with feelings of utter dependence, now with awe and fear, as of one who smiles and visits him with wrath and destruction. Yet the emotion is not entirely that of fear. Fear in itself has the effect of soothing and driving further open the path to religion, but it is but one side of the religious emotion of an exactly contrary effect upon the will. Viewed in its practical aspect, religion is the effort on man's part, not to flee from, but to draw near to his god.

While the beginning of religion is not to be attributed entirely to fear, it is unquestionable that that emotion played a great, and even a predominating, part in the awakening of the religious consciousness. The things by which primitive man was made, viz., his own sources of energy, both generally those disastrous to himself or to the community. Any misfortune or disaster that he cannot trace to known human or natural sources he attributes to the direct agency of his god. Sin, which he considers necessary to his god which is the beginning of wisdom.

But, if fear thus awakens him to a knowledge of his god, it is his instinct of self-preservation that impels him to give to that knowledge a practical turn. The aim of religion is not solely to draw near to gods, nor even to propitiate them, but to secure the worshipper's well-being and happiness. It is just because man recognizes his present happiness to be imperfect, because he feels that only through the god can the right thing be supplied, that he ever seeks to win his favour. And the means which primitive man adopted towards this end were those which he employed in his dealings with his fellows — conciliation and petition. From this arose the ancient religious system of propitiatory sacrifice.

While the broad aim of sacrifice is thus to please the gods, the meaning and content attached to it are more clearly defined by reference to (a) the nature of that god who is to be propitiated, and (b) the evil which renders propitiation necessary. It may happen that man identifies this evil not with himself, but with the essential being of his god. This god is conceived of as one who delights in violence and bloodshed, and who sends plagues, storms, and floods in order to satiate himself with the suffering of man. Man therefore offers such sacrifice as he imagines will appease this passion for blood on the part of his god, that the impending doom may be averted from himself. It is with this notion that one of the chief stages of early sacrifice are associated. A degraded idea of the god leads to a degraded form of worship.

On the other hand, man may feel that the cause of his suffering lies not so much in the nature of his god as in his own moral evil. This was the idea that ultimately prevailed. Experience accumulated throughout the ages taught him that much of his misfortune was simply his own fault, and that by methods of forethought, of industry, and of hygiene he could appreciably diminish those evils which formerly he traced solely to supernatural influence; and that which experience taught him to be true of part of his existence he came more and more to infer as true of the whole. Thus he reached the conception, that, whenever his present happiness was marred, it was due not to the arbitrariness of his gods, but to his neglect to pay deference to them or to obey their commands. Once this truth emerged, the idea underlying propitiatory sacrifice assumed a new and more hopeful trend. Man aimed no longer at changing the original nature of his gods and bringing them into a temporal state of favour to himself; he sought rather to restore to them to that normal condition of benevolence which, by his offence, had for the time being been disturbed. He could better accomplish this than by sacrificing a part of his goods and possessions, in order to show the gods that he valued their favour more than anything else? It is not, of course, contended that primitive man regarded his own confession as part of the propitiatory sacrifice. That idea lay as yet in the background. He still retained a mechanical conception of the relations between sin and punishment, between sacrifice and benefit. In his eyes not his repentance, but the material offering that he made, was the only thing of account, and he never supposed that unknown was much wider than it is now, and since also, leaving out of count man's spiritual wants, even his bodily comfort was then more open to attack, there was all the more room for the worshipper's well-being and happiness. It is just because man recognizes his present happiness to be imperfect, because he feels that only through the god can the right thing be supplied, that he ever seeks to win his favour. And the means which primitive man adopted towards this end were those which he employed in his dealings with his fellows — conciliation and petition. From this arose the ancient religious system of propitiatory sacrifice.

While the broad aim of sacrifice is thus to please the gods, the meaning and content attached to it are more clearly defined by reference to (a) the nature of that god who is to be propitiated, and (b) the evil which renders propitiation necessary. It may happen that man identifies this evil not with himself, but with the essential being of his god. This god is conceived of as one who delights in violence and bloodshed, and who sends plagues, storms, and floods in order to satiate himself with the suffering of man. Man therefore offers such sacrifice as he imagines will appease this passion for blood on the part of his god, that the impending doom may be averted from himself. It is with this notion that one of the chief stages of early sacrifice are associated. A degraded idea of the god leads to a degraded form of worship.

On the other hand, man may feel that the cause of his suffering lies not so much in the nature of his god as in his own moral evil. This was the idea that ultimately prevailed. Experience accumulated throughout the ages taught him that much of his misfortune was simply his own fault, and that by methods of forethought, of industry, and of hygiene he could appreciably diminish those evils which formerly he traced solely to supernatural influence; and that which experience taught him to be true of part of his existence he came more and more to infer as true of the whole. Thus he reached the conception, that, whenever his present happiness was marred, it was due not to the arbitrariness of his gods, but to his neglect to pay deference to them or to obey their commands. Once this truth emerged, the idea underlying propitiatory sacrifice assumed a new and more hopeful trend. Man aimed no longer at changing the original nature of his gods and bringing them into a temporal state of favour to himself; he sought rather to restore to them to that normal condition of benevolence which, by his offence, had for the time being been disturbed. He could better accomplish this than by sacrificing a part of his goods and possessions, in order to show the gods that he valued their favour more than anything else? It is not, of course, contended that primitive man regarded his own confession as part of the propitiatory sacrifice. That idea lay as yet in the background. He still retained a mechanical conception of the relations between sin and punishment, between sacrifice and benefit. In his eyes not his repentance, but the material offering that he made, was the only thing of account, and he never supposed that unknown was much wider than it is now, and since also, leaving out of count man's spiritual wants, even his bodily comfort was then more open to attack, there was all the more room for the
tion comes to be drawn between (a) sins of ignorance or inadvertence, and (b) sins done with a high hand or of purpose.

(a) Sins of ignorance or inadvertence.—To these alone do the Levitical sacrifices apply. In this there is a certain natural fitness. The idea of sacrifices generally arose at the beginning of the development when he conceived of his relations to God as being semi-mechanically rather than morally conditioned; when, too, he imagined that the Deity could be propitiated in a correspondingly mechanical fashion, by material offerings. This idea Hebrew priests merely carried forward this idea, and gave it a greater symbolism and elaboration. In the first place, the moral sense being as yet imperfectly developed, there was in their conception of sin no element of personal guilt. The idea of sin was attached to no specific acts of which the perpetrators were conscious at the time that they were wrong; it belonged rather to the entire nature of man, as being tainted and impure. Thus sin was placed by them in that region intermediate between the purely physical and the definitely moral; i.e., it belonged to the region of the aesthetic, and partook of the nature of uncleanness. Again, corresponding to this view of sin as uncleanness was their view of the manner in which it offended against God's holiness. These are the considerations which lie at the root of the ancient Hebrew sacrificial system. They explain how the priestly offerings were regarded as atoning not for definite misdoings, but for the whole life as being imperfect or impure. They explain, too, how the symbolic 'covering,' or 'wiping out'—the root idea of the Hebrew word ẓāqār, which stands at the center of the Levitical thought on sacrifice (cf. HDB, s.v. 'Propitiation,' vol. iv. p. 131)—had in itself a propitiatory value as affecting God. Since God's justice had not been offended, and His actual wrath had not been provoked, there was no need that any positive recompense should be made. There was need only that the cause of offence to His aesthetic nature, i.e., to His purity and holiness, should be removed. That being accomplished by the priestly sacrifices, the harmonizing influence thus established may be regarded as the consideration either to God's justice or to the demands of His holiness. It simply made God's mercy take the place of the Levitical sacrifice, in that the mere exercise of that mercy was sufficient to wipe out all past transgressions, even those done with a high hand. No account is taken of the fact that not merely God's holiness, but also His righteousness, has been offended, and that this violated righteousness demands a certain satisfaction before His mercy can intervene. In the latter case, sin and suffering gave rise to the thought that suffering, and especially the suffering of the righteous, possessed a propitiatory value. Yet both these conclusions were deficient. The former certainly recognized the need for a change in the relationship between man and God, and the latter, too, recognized a change in man. But the Emphysis is now laid upon God's just indignation, and how it is by suffering that it is propitiated. Yet this is viewed wholly in a vicarious sense, and no vital organic connexion is traced between sin and suffering; it is merely said that the whole 'transaction' is wrought. The propitiation of sacrifices, then, was meted out to certain classes of sins, with which the prophets especially dealt; and for them the only remedy was for sinners to cast themselves upon God's mercy, when He Himself would cover their sins (Is. 65). Here the propitiation is effected not by any offering on man's part, but by some transaction within the being of the Divine. God's mercy prevails over His justice, so that His wrath is done away. But no hint is given that this victory of God's love or mercy is won at the sacrifice of His holiness in man's stead. Suffering is suggested that the self-surrender of the soul in repentance and prayer to God possesses an element of propitiation—'A broken and a contrite heart, O God, thou wilt not despise' (Ps. 51). The old idea emerges into clearer consciousness when the intimate connexion between suffering and sin is recognized. Since sin is the cause of suffering, the thought inevitably arises that suffering may in turn have some propitiatory value. But the ethical note is not lost sight of. Thus it is essentially the sufferings of the righteous which are regarded as having expiatory value. This coupling of suffering with merit as having power, by vicarious means, or in a substitutionary sense, to propitiate God is witnessed to in the frequent OT. In the OT the ancient patriarchs and prophets, and reaches its culmination in the passage describing the Suffering Servant of Is 53. Yet even there the idea is not fully wrought out. It is simply stated that 'He pleased the Lord to make Him burdened with sin' (Is 53. 11). Thus is the process propitiation of sacrifices; and to the passive onlooker, who reaps the results, but who himself has no vital or active part in the transaction.

(b) A high hand or of purpose.—Just as the sense of personal guilt implies a new stage in the growth of the moral personality, so also does it lead to a higher conception of the divine nature and of the means of propitiation. The opposition between man's offense and God's wrath of God is uplifted from the physical and the aesthetic to the moral and the spiritual. Material sacrifices are felt to be no longer available to propitiate God. But the need for propitiation is even more urgent. It was this class of sins with which the prophets especially dealt; and for them the only remedy was for sinners to cast themselves upon God's mercy, when He Himself

would cover their sins (Is. 65). Here the propitiation is effected not by any offering on man's part, but by some transaction within the being of the Divine. God's mercy prevails over His justice, so that His wrath is done away. But no hint is given that this victory of God's love or mercy is won at the sacrifice of His holiness in man's stead. Suffering is suggested that the self-surrender of the soul in repentance and prayer to God possesses an element of propitiation—'A broken and a contrite heart, O God, thou wilt not despise' (Ps. 51). The old idea emerges into clearer consciousness when the intimate connexion between suffering and sin is recognized. Since sin is the cause of suffering, the thought inevitably arises that suffering may in turn have some propitiatory value. But the ethical note is not lost sight of. Thus it is essentially the sufferings of the righteous which are regarded as having expiatory value. This coupling of suffering with merit as having power, by vicarious means, or in a substitutionary sense, to propitiate God is witnessed to in the frequent OT. In the OT the ancient patriarchs and prophets, and reaches its culmination in the passage describing the Suffering Servant of Is 53. Yet even there the idea is not fully wrought out. It is simply stated that 'He pleased the Lord to make Him burdened with sin' (Is 53. 11). Thus is the process propitiation of sacrifices; and to the passive onlooker, who reaps the results, but who himself has no vital or active part in the transaction.

3. In the NT.—It has been indicated how in the OT the idea of propitiation developed in its higher aspects along two different lines of thought: on the one hand, the consciousness of personal guilt led to the casting aside of material sacrifice and to the surrendering by the sinner of his soul to the mercy of God; on the other, the connexion between sin and suffering gave rise to the thought that suffering, and especially the suffering of the righteous, possessed a propitiatory value. Yet both these conclusions were deficient. The former certainly recognized the need for a change in the relationship between man and God, and the latter, too, recognized a change in man. But the Emphysis is now laid upon God's just indignation, and how it is by suffering that it is propitiated. Yet this is viewed wholly in a vicarious sense, and no vital organic connexion is traced between sin and suffering; it is merely said that 'all the transaction' is wrought. The propitiation of sacrifices, then, was meted out to certain classes of sins, with which the prophets especially dealt; and for them the only remedy was for sinners to cast themselves upon God's mercy, when He Himself would cover their sins (Is. 65). Here the propitiation is effected not by any offering on man's part, but by some transaction within the being of the Divine. God's mercy prevails over His justice, so that His wrath is done away. But no hint is given that this victory of God's love or mercy is won at the sacrifice of His holiness in man's stead. Suffering is suggested that the self-surrender of the soul in repentance and prayer to God possesses an element of propitiation—'A broken and a contrite heart, O God, thou wilt not despise' (Ps. 51). The old idea emerges into clearer consciousness when the intimate connexion between suffering and sin is recognized. Since sin is the cause of suffering, the thought inevitably arises that suffering may in turn have some propitiatory value. But the ethical note is not lost sight of. Thus it is essentially the sufferings of the righteous which are regarded as having expiatory value. This coupling of suffering with merit as having power, by vicarious means, or in a substitutionary sense, to propitiate God is witnessed to in the frequent OT. In the OT the ancient patriarchs and prophets, and reaches its culmination in the passage describing the Suffering Servant of Is 53. Yet even there the idea is not fully wrought out. It is simply stated that 'He pleased the Lord to make Him burdened with sin' (Is 53. 11). Thus is the process propitiation of sacrifices; and to the passive onlooker, who reaps the results, but who himself has no vital or active part in the transaction.

}
PROPITIATION (Introductory and Biblical)

(2) In 1 Jn 4:10, this idea is elaborated. The main thought of the verse is that Christ is God, and that to truly believe in God is fully to believe in Himself only when that love is completely exerted. But the realization of this divine love is checked by the presence of sin in all human existence, and the realization of love is always a function towards God (v. 5). Thus, though the situation or the occasion for propitiation is created by man, it is in God that the active situation is created. The propitiation proper is the result of man's use of this correspondence. Herein is love, not that we loved God, but that he loved us; i.e., He has in fact created the situation, and correspondingly is the motive of the whole, as God as that God who feels Himself alienated from man. In the same way, it is not man, but God, who not only feels the need but also acts to change the situation. Here, then, is repeated the O.T. priestly idea of God's mercy or love 'atonning' or 'covering' the sins of His people. But it is to be noted that this is a different starting point. God's love for man permeates over His righteousness. This victory is effected at the cost of one, namely Christ. This is the only new idea, prominent in the teaching of St. John, and in many ways the dominant note of the NT, that the sending of Christ is not the gift of mercy to man, but a gift of mercy from man to God. This thought received from St. John far greater emphasis—exerts a propitiatory effect upon man, in that it shows forth, or expresses, that love which has been indeed the condition of the gift of mercy. Thus love is here laid upon the element of suffering in propitiation. According to the writer to the Epistle to the Hebrews (He 10:5-10) suffering is that 'atonement' which essentially is linked with the priestly appointment to his office (3:1) and 'at oneness' with His people (4:14). These two principles are the main lines on which Christ's appointment is ratified, and His identification with His people sealed, by the fact that He is 'made like unto His brethren, and does also suffer' (2:11). It is in virtue of His sufferings that Christ is qualified to make propitiation for the sins of His people. In this there is a correspondence with the thought of St. Paul. But the aim of the writer to Hebrews is now to develop this thought and show how Christ's sufferings produce this effect. The underlying idea is not that suffering in itself gives satisfaction to God. For what God supremely and ultimately desires is to 'bring many sons to glory' (He 2:10). That is, God is concerned to bring about a situation in which the presence of sin is not a hindrance to the presence of the divine love. This stands in the way of this perfection, and suffering is the only means by which it can be removed (2:14); hence, in this doctrine possessing in itself suffering is not only permitted but essential to the purpose of God. Again, since Christ's sufferings bring Him into greater intimacy with His brethren, they render them altogether more subject to render them greater help (2:19), suffering has the additional propitiatory effect upon God in that it further the attainment of the divine purpose. It is a part of Christian experience. It has been suggested that the view taken by the writer to Hebrews regarding Christ's sacrifice may be that its propitiatory value lies not in its suffering but in its obedience (cf. W. E. Paterson, HDB, s. v. 'Sacrifice', vol. iv, p. 245). Yet it is not necessary to place these two views in so sharp a contrast. In the interpretation of the writer to Hebrews, suffering and obedience both possess a propitiatory value, but in a different sense. The immediate purpose of suffering is not to please God. Its direct effect is (a) upon Christ, to teach Him obedience (cf. 2:5-9) and to make in Him the faithful high priest to righteously offer Himself (2:17). This confidence then passes into obedience; and in this way does Christ become the author of man's eternal salvation (5:9). Thus suffering is propitiatory only as a means; but obedience—the end towards which suffering is directed—is propitiatory in itself. It is immediately satisfied.

That this is the view of the writer to Hebrews regarding suffering is elaborated by his contrasting the pattern of the OT propitiation, Christ's sacrifice to sin. The class of sin for which Christ is the propitiator is described as a 'wicked' transgression—i.e., as a state of moral or spiritual unconformity (cf. 10:26). Because sin, then, while it offends God's holiness, does not offend His justice, He must be consoled by suffering, this suffering being as satisfying the divine wrath, the death, or the blood, of Christ, it being the death along the line of the OT Levitical sacrifices (cf. 8:5-7). His perfect love is directed to sprinkle men's hearts from an evil conscience and to wash them from the guilt of their sin (10:2). Christ's offering, He is pleased with. 'their sins and iniquities will He remember no more' (10:17). But just as, according to the Mosaic law, there were classes of sin for which expiation was required, so also, according to the writer to Hebrews, there is one especial sin for which not even Christ can atone, and that is wilful transgression after knowledge of the truth (cf. Lk 17:29), viz.

He 10:26. It is only when the unpardonable sin of rejecting Christ is committed, that the sacrifice is fully effective. But the suffering which this punishment involves, being not disciplinary but penal, in no way leads to any reconciliation with God. It is the perfect atonement for a sin which cannot be forgiven. Herein lies the reason why St. Paul uses the Greek word ἀνατέλλω instead of ἀποκτάμην. In further contrast to the writer to Hebrews, his aim is not so much to win men to accept Christ as the sacrifice as to show the necessity for that sacrifice on the nature of the God.

While the teaching of the writer to Hebrews concerning suffering is a great advance upon that of Isaiah in that it explains its educative value, it does not sufficiently make clear the divine aspect of suffering, as being a law imminent in the very character of God. But this, St. Paul's NT, is to show us the deep divine aspect of suffering as being, as he understands it, the very nature of God, who is to the divine nature, and merely imposed upon man to bring him to obedience. This defect, as is indicated above, is a consequence of the writer's failure to give up the view that sin was innate and consequent upon the fall of man (cf. Rom 1:24). Thus it is possible for God is to suffer suffering, and that suffering is a 'necessary evil' to man. This point is clearly shown in the offering made by Christ, and who, at no cost to His own nature, simply pardons or forgets the sins of His people. These sufferings of Christ, then, are in this place, he takes a more serious view of the nature of sin. It is not simply unconcealed, but a definitely moral disorder, and is connected with the sin of the world being put to death. It is because Jesus Christ is the setting forth or the declaration of the truth that He is the propitiation for our sins (Ro 3:24-25). Further, since God is the one who requires to be propitiated, and is both the provider and the offerer of the sacrifice, He is the one who possesses the personal suffering and the justificatory of the man who believes in, who accepts, or who appropriates that sacrifice as made on his own behalf.

4. Summary and conclusion.—The form of the idea of propitiation, from its appearance in early Jewish literature to its development in the NT is constant: God has been offended, and means must be found whereby His wrath may be appeased and His favour restored. It is in the content given to that form that the development takes place. Man seeks first to propitiate God by material offerings. To these, and especially to the blood-sacrifice, a symbolic meaning is afterwards attached, as representing the offering by man of his own life to God. A clearer understanding of the nature of sin then leads to the casting aside of material sacrifices and to the idea that God is pleased only with repentance and personal obedience (cf. Is 11:2-5). Side by side with this, the connexion between sin and suffering suggests the thought that suffering may possess in itself a propitiatory value. The NT, then, shows how man begins to realize that he is utterly unable of himself to make any offering sufficient to recover God's favour. Hence the idea emerges that God Himself must provide the sacrifice. But, if God is to provide the sacrifice, then the relationship of man to God in His nature which is the object of propitiation, is no longer simply the God of holiness, or the God of righteousness; but He partakes of the complex nature of a personality. Thus it is only in the aspect of his personality that God is propitiated, while another aspect or attribute provides the propitiation. But this in itself would
lead to nothing further than that God becomes reconciled to Himself. Yet it is in the interests of man that God’s love seeks to propitiate His righteousness; and therefore man must also be involved in the decision and determination. However, stand in the way of his inclusion. The first is that recompense must be given for his past sins; and the second is that, since man’s natural state is sinful, therefore there must be infused into him that divine life which alone can make him acceptable to God. The theories of St. John, of the writer to the Hebrews, and of St. Paul are all endeavours to show how in Jesus Christ these difficulties are met and overcome. St. Paul alone lays the stress on the first. The final suffering of Jesus Christ that the wrath of God, aroused by the sin of man, is appeased. St. John and the writer to the Hebrews deal principally with the second. According to St. John, God’s love, made manifest to man, appeases God’s love, and so induces him to lay open his heart to the inflow of the divine life. According to the writer to the Hebrews, suffering, borne in the spirit of and under the guidance of Jesus, is that which makes man perfect, the latter being the condition of St. Paul, and also gives consideration to this second difficulty. Faith is the contribution that man must bring before the process of propitiation is finally completed. It may thus be concluded that the propitiation made by Jesus Christ acts upon God and upon man. It acts upon man in that it is a revelation to him of the immensity of God’s wrath and of the intensity of His love. It thus wins him to draw near to God in reverence and humility, yet in faith, trusting in the efficacy of the sacrifice on his behalf. It acts upon God in that it satisfies His offended justice, and enables His love to go forth in all its fullness to the man who now has a share in the righteousness and life of Jesus Christ. Finally, just as the ‘appearing of wrath’ is only the first term in propitiation in order that ‘favour may be restored,’ so the ultimate end of Christ’s sacrifice is that God may be able to say of each of his children, ‘This is my beloved son, in whom I am well pleased.’

C. M. KERR.

PROPITIATION (Greek).—The nature of divine anger, as conceived by the Greeks, has been considered in the art. EXPIATION AND ATONEMENT (Greek); the special rites for allaying the anger of the gods remain to be treated under the present heading. Briefly stated, calamities not easily traceable to human causes are referred to the gods —failure of the crops, plagues and diseases, childhood disease, disaster at sea, and defeat in battle—and when they occur, the anger of the gods is assumed. It is necessary first to remove the causes of divine anger, and then to propitiate the gods, as in the first book of the Iliad Clytemnestra must be returned to Aulis to appease the wrath of Apollo. A mule was offered to Apollo who had sent the plague. While the thought of possible anger and its propitiation was doubtless present in all worship, the proper sacrifices to an angry god were totally different from the homilean worship to the Olympian deities. The normal form of sacrifice was the communion meal, in which the animal was consecrated to the god, certain portions were burned on the altar, and the remainder was cooked and eaten by the worshipers. This form of sacrifice (thiasos) was frequently connectible with Homeric poems (e.g., II. ii. 421ff.), and with slight variations it was the typical form of worship to the greater gods of Greece. In sharp contrast with it is another type of sacrifice, called by a different name (seidyma; cf. Ill. x. 152f.), but equally efficacious and in character. Ordinarily it took place at night rather than in the morning; the animal prescribed was often black; when its throat was cut, the blood was allowed to flow on the ground; the altar was properly consecrated to Apollo and upon the intercession in ordinary sacrifice (pange) and the body of the animal was never eaten, but was usually entirely consumed by fire. Animals not suited for food, like the dog, were used for these sacrifices at times; but offerings of food as such, grain or cakes, found no place in them. These sacrifices, however, were not reduced to one definite type, but retained variations peculiar to the god to whom they were offered and the occasion of the sacrifice. An angry god or gods prone to anger differed from the Olympian deities, in that wine was regularly used for the latter but never for the former; honey and milk were the more fitting to soothe angry deities (mous). ‘

According to tradition in Greece, human sacrifice was at times demanded to soothe the anger of the gods. Agamemnon, who had offended Artemis by slaying a hind in her sacred precincts, was prevented from sailing for Troy till he had sacrificed to her. In like manner the death of Polyxena alone made it possible for the Greeks to start on their homeward voyage. A sacrifice of Egyptian youths was attributed to Menelaus as a means of stilling winds that prevented his voyage (Herod. ii. 191; cf. Esch. Agam. 146 f.); and it seems possible that seidyma offered in later times to secure favourable winds (cf. Plut. Ages. 6; Herod. vii. 191) were substitutes for human sacrifice. According to Plutarch (Aristid. 9, Them. 10), three captive Persians were sacrificed by Themistocles before the battle of Salamis. In myth similar sacrifices to secure success in battle were demanded by the oracle of Creon (Eur. Phan. 890 f.), of Erechtheus (Apoll. Ill. 11; cf. ii. 14), of Lycurgus (Aesch. Agam. iii. 5), and of other heroes. It is Greek tradition that the oracle at Delphi commanded human sacrifice on the occasion of pestilence to allay divine anger. Human sacrifice is also reported as part of the regular worship of Zeus Lykaios in Arcadia, of Apollo Kastriathis in Lycia, and of Apollo at the Athenian Thargelia. The explanation given (Eus. Prop. Evang. iv. 16, p. 156f.; cf. Eur. Elef. 1026; Vir. Aen. v. 815) is that an anger of a god which threatens to destroy a whole people may perhaps be appeased by sacrifice, especially when there is a certainty of the number. The Greek practice, however, was to substitute an animal for the man, as a deer is said to have been substituted for Iphigenia (cf. the calf treated like a child and sacrificed to Diana). The gods who received propitiatory sacrifice regularly were not the Olympian deities, but spirits who had shown their anger or who were easily stirred to anger. Such were the Eumaeides at Ithaca, the Callimachides at Athens, and the Leukias at Chios. A form of word to denote the blessings which the Furies might send when propitiated (cf. Aesch. Eumen., passim); the θεῖοι μελέται of Myonia (Paus. x. xxxvii. 4). Hecate, goddess of spirits of the night, the winds and in particular Boeotia, the north wind (Paus. xii. 1); Xen. Anab. vi. 4;
PROPITIATION (Roman)

The life of the animal was given to the god, sometimes clearly as a substitute for the life of the man, in the hope that thus divine anger might be allayed. It is the peculiarity of Greek religion that ordinarily men feared the anger of other than the Olympian gods, and that therefore propitiation or sacrifice to the great gods of Greece was unusual.

PROPITIATION (Roman)—If we accept the definition of religion as an 'effective desire to be in right relation to the Power manifesting itself in the universe' (W. Warde Fowler, Religious Experience of the Roman People, p. 8), propitiation in its widest sense is co-extensive with religion. Every utterance of prayer and every act of sacrifice, as being religious, is necessarily propitiatory. But it is unnecessary to make this the occasion for a general survey of the Roman attitude towards religion, more especially since the ambition of propitiatory religion is apparently conditioned by the position of an offended deity, as distinguished from the effort to secure a continuance of divine good-will. On the other hand, propitiation is a religious act which assumes the personal intervention of a deity, and has nothing to do with the objects and methods of tabu or magic. Thus, certain ceremonial practices of which we have a record from historical times may be survivals from an era ante-cedent to the development of the national religion. Horace's trieste bidetont (Ars Poet. 471), the walled enclosure presiding ingress to the spot where a thunderbolt had fallen, is an example of a permanent tabu not associated with any particular cult. But a definite act of propitiation is involved in the sacrifice of two black lambs to Summanus by the Arval Brethren, which took place whenever the grove of the Dea Dia was struck by lightning at night (W. Henzen, Acta Fratrum Arvalium, Berlin, 1874, p. 146). For Summanus, though an obscure personality (Ov. Post. vi. 731), was associated with Jupiter and his thunderbolt, and his name appears occasionally as an epithet of that god (G. Wissowa, Religion und Kultus der Römer, p. 124, n. 4). Another example may be quoted to show the difficulty of tracing the history of this act of propitiation. A mysterious rite of the 14th of May, on which day 27 straw puppets known as argi were thrown into the Tiber from the portus sublicius, is sometimes interpreted as a magical ceremony whose chief intention was to serve as a spell ensuring an adequate rainfall in the coming summer (Warde Fowler, Roman Festivals, p. 119). In that case it would be unnecessary to suppose that any deity was specially concerned with it. Much the same may be said of the rite of the lapis maquilis, which is nowhere definitely associated with Jupiter or his thunderbolt, but the above-mentioned explanation of the argi is not generally accepted, and an alternative view treats the puppets as substitutes for human victims, holding that on some occasion of stress during the 3rd cent. B.C. a peculiar sacrifice of foreigners (Argioli) was introduced on the advice of a Sibylline oracle (Wissowa, Gesammelte Abhandlungen, p. 258). We should then be in possession of a parallel to the otherwise isolated sacrificial rite of two men and two women, who were buried alive in the forum boarium in the year 216 (Livy, xxii. 171). A few examples of propitiatory rites which go back to the oldest stage of the native religion may now be mentioned.

PROPITIATION (Roman)

On the 25th of April, in order to remove from the crops the danger caused by the gnawing of rodents, a procession was held, accompanied by the歌声 of Rubipes near the fifth milestone on the Via Claudia, and a dog was sacrificed by the Flamen Quirinital (Ov. Fast. iv. 960 ff.). An extraordinary festival took place on the 17th of April at the Temple of Isis at Alexandria, where a pregnant woman (foris bona) were sacrificed to Tellus as well as to Isis, as a sign of the fertility of the land (Wissowa, Etrusc. Religion, p. 217). Volcanus, the god of fire, had his special festival on the 23rd of August at the time when it was considered to be particularly safe to smelt iron for the new grain. The antiquity of his cult is shown by the existence of the festival (Livy, vii. 7), but, beyond the appearance of the Volcanalia in the calendar, very little is known about it. Domician probably followed an ancient precedent when, in erecting a temple to Volcanus, the divinity got a male and a female, Faunus and Fauna, Liber and Libera, Quirinus and Roma, and that there were grades of dignity among them, as is shown not only by the distinction between flamines maiores and minores, but also by the fact that peculiar offerings were made to the flami diui as well as to the diui themselves (Wissowa, Religion und Kultur, p. 19). Even the great gods of the city, Mars, Jupiter, and Quirinus, being disconnected from any traditional mythology, were, as originally worshipped, devoid of any personal characteristics (E. Aus, Religion der Römer, Münster, 1899, p. 19). Thus propitiation was only in a limited sense possible for the Romans, who, apart from Etruscan and Greek influences, had no conception of any personal god. Varro (August. de Civ. Dit. iv. 23) made a very instructive comment on the spirit of the old Roman religion when he stated the remarkable fact that for a period of 170 years, that is, up to the time of the building of the Temple of Jupiter Capitolinus, the reign of Tarquinius Priscus, the old Romans worshipped the gods without making images of them, and added that the man who first made such images for the people not only destroyed the fear of God, but introduced a source of distraction.

Whatever possibilities of spiritual growth lay in the recurring festivals of the old agricultural communities were conducted in a particular direction by the rapid development of the city-State and the increasing influence of the priestly colleges. The general tendency of Roman religion to place every department of human life under the protection of a separate numen, which is displayed in its most conspicuous form in the pontifical classifications of the Romuini, Triumphalia, and the practical and utilitarian outlook of the average Roman, who desired to settle his relations to the gods upon fixed and definite terms, combined to produce that rigid formalism which made the ius divisorum and the State ceremonies accepted to adapt the poz decorum upon every possible contingency. It has been succinctly stated that the general object of the Roman festivals was so to propitiate the gods as to forestall any hostile intention by presenting a regular and under an obligation (C. Bailey, in EB xi. xxiii. 578). It was the interest of the State to see that its concord with the gods remained unbroken. This purpose was secured in particular by the periodical observance of iustrations, which both served to purify their object from all contact with human impurity and to ensure renewal of divine protection against the danger of foreign incursion. The illustration was accomplished by symbolic acts of cleansing with water or fire, or by a procession conducting the sacrificial victim round the area which required purification. The former method was observed at the Parilia (Prop. iv. 4. 355 ff.), the latter at the Ambarmalia (Cato, de Rust. 141; Verg. Georg. i. 343 ff.), and both together at the Lupercalia (Plut. Rom. 21).

Besides these annual celebrations, illustration was also used on special days in the invasion of an enemy's territory or the departure of a fleet. Above all, it became necessary when special notice had been received by means of extraordinary portents that the poz decorum had been broken and the anger of the gods incurred. Among these signs were thunder and lightning, solar eclipses, showers of stones and of blood, and monstrous births, all of which are frequently recorded in the pages of Livy (e.g., xxii. i.). On the announce- ment of an uncleanly day, the first duty of the senate was to determine whether the report was trustworthy, and, if so, whether the event had happened within the limits of the public jurisdiction (cf. Livy, xlviii. xiii.). If these questions were answered in the negative, the religious duty fell to the consuls, who would take the advice of the sacerdotal authorities so far as might be necessary. Before the innovations consequent upon the introduction of the ritus Graecus, the emphasis was upon the illustration of the usual "animalorum" (Lucan, i. 592 ff.), i.e., an additional celebration of the amburbiun annually held on the 2nd of February (Wissowa, in Pauly-Wissowa, i. 1817). Old-established tradition required that the portent of a shower of stones should be purged by a nonnullum sacrificium (Livy, i. xxxii. 4). The introduction of the ritus Graecus at the suggestion of the Sibyline oracles prepared the way for the employment of new methods in the placation of divine disfavour. The most remarkable of these was the lestistesiron, or the Sibyl's censer, the use of which was occasioned by the appearance of the six Greek gods, Apollo and Latona, Heracles and Diana, Mercurius and Neptunus, in some public place (Livy, xiv. lix. 7) by serving a banquet before the images, each of which reclined upon his couch, and was followed by the representation of the secular games, as recorded by Livy that the first institution was due to a severe pestilence in the year 399 (v. xiii. 6). After the disaster at Tarsimine in 217, when the altogether exceptional consecration of a mercuriam was vowed, a lestistesiron of unusual magnificence was celebrated in honour of six pairs of deities who were identical with the twelve great Olympian gods of Greece (Livy, xxxii. x). Another method adopted for restoring the poz decorum in times of national crisis was the supplicatio. On such occasions the senate had always been accustomed to decree extraordinary fere, during which the people, clad in suitable garb, passed from temple to temple imploring the assistance of heaven (Livy, iii. v. 14, vii. 7). But the systematic institution of the grandest and most magnificent of the ritus Graecus, as is shown by the regular mention of pulbinaria, by the fact that it was usually the result of an application to the Sibyline books, and by the responsibility for its administration being given to the confiding senator, was a development of the ritual-practice (cf. Religion und Kultur, p. 358). Among the details of the celebration may be mentioned the wearing of wreaths and the carrying of laurel branches by the participants (Livy, xli. xxxviii. 14, etc.), the solemn invocation of help (obsecratio), a chant led by the magistrates and repeated by the people,
was the climax of the whole proceedings (IV. xxii. 5).

The portrait of a monstrous birth at Praesina in the year 207 was placed under a commission of enquiry, which, as required, was to make an accurate and exact record of the case. A second commission was appointed, whose business it was to decide on the validity of the Dioscuri, and to establish the rights of the cause. The business of the commission was to be conducted with the utmost care, and every precaution was taken to ensure the accuracy of the report. The commission was to be composed of two members, and was to be attended by the consul, who was to be the chairman. Behind the masts were carried two images of Juno Regina, made of cypress wood, and hung up in the temple of Castor and Pollux, while the masts, all holding to a rope which passed from hand to hand, sang a hymn composed for the occasion by Livius Andronicus, and accompanied their singing with appropriate dances (Liv. xxvi. xxxvii. 7-15). The Greek origin of this rite, which in certain of its details is identical with the ceremonies venerated in Morocco, is a matter of speculation (H. Diels, Sybilinische Blätter, Berlin, 1880, p. 89 ff.).

The various modes of restoring the former good-will of the gods which have been enumerated are often described as piacular—a nomenclature which was sometimes adopted even by the Latin authorities (Liv. xl. xxxvii. 2). But, according to the strictest acceptance of the term, a piacular is not a prayer for divine protection or renewed favour, but a compensation rendered in reparation of an offence. Thus the pious offering of the ius sacrum, arising out of a fault either of commission or of omission (Wissowa, Religion und Kultus, p. 329). Every sacred ordinance had to be carried out with the utmost precision and accuracy, and even the slightest irregularity in the ritual proceedings was sufficient to make the piacular offering of little or no effect. It was therefore necessary to purify the celebrant from the effects of any offence which might have been previously committed by him in the performance of the funeral rites of any member of his household (Aul. Gv. iv. 32). The object of the contract was to give a claim for compensation (postllo [Cic. de Har. Resp. 20]) to the gods whose interests were involved. The occurrence of a portent was a notification to the citizens that the claim must be made good. It followed as a matter of course that the celebration of the rite where even a slight irregularity had occurred became null and void, and it was essential that the whole of it should be repeated. Hence Cicero remarks in his oration in Magnesian:

1. If a dancer halts, or a flute-player suddenly stops, or if the carefully selected youth who drives the sacred car slips from his seat or drops the reins, or if an aedile misses a word or uses the wrong hymn, even the whole procession becomes irregular, the mistake must be expiated, and a renewal is necessary in the matter of sacrifices (Aul. Har. Resp. 25).

The same circumstances caused Plutarch to marvel at the scrupulousness of Roman piety:

2. If one of the horses that draw the chariots in which are placed the images of the gods, happened to stumble, or if the charioteer took the reins in his left hand, the whole procession was to be repeated. And in later ages they have set about one sacrifice thirty seven times, on account of some defect or inauspicious appearance in it (Plut. Cato. 25).

But the public renewal did not exonerate the individual whose fault had made it necessary. If his sin was wilful, he became impious, and the favour which he had forfeited could not be restored to him (Varro, de Ling. Lat. vi. 30). If the act was involuntary, or for little well-intentioned indulging an inevitable need, it could be expiated by an appropriate offering, as when the sacrifice of a dog was prescribed as compensation for the performance of pressing agricultural duties during feriae (Cic. de Nat. Deor. iv. 38). But the whole ceremony was generally fixed by precedent; but all cases of doubt were referred to the pontiffs for decision (Liv. xxix. xii. 9). In this connexion it may be remarked that there was a noticeable tendency to act upon liberality in the matter of sacrifices required for expiatory purposes. Thus the complete offering of suovetaurilia was reserved for lustrations (Tace. Ann. vi. 37, Hist. iv. 53), whereas in the expiation of prodigies hostia maiores were the rule, and often in considerable numbers (Liv. Xlix. xii. 7, xxii. 7; 7). In the case of the failure of an ordinary agricultural undertaking, the second portent, from which kind as the first was required as a piacular (hostia succedanea [Aul. Gell. iv. vi. 6]).

A. C. Pearson.

PROSELYTE, PROSELYTISM.—1. Meaning of term.—The term ‘proselyte’ is usually employed in both a wider and a narrower sense to include all who is attracted by, and inclines less or more to, another form of faith, as well as one who has altogether come over and been incorporated. The half-proselyte, or the quasi-proselyte, who accepts a part but not the who, is to be distinguished from the full and strict proselyte, who becomes a convert and is born in the new religion. A comprehensive use of the term is recognized by A. C. Lyall: 1

1. . . if the word proselyte may be used in the sense of one who has come, and who has been readily admitted, not necessarily being that has been invited or persuaded to come.

This permits consideration of specific forms of religion whose growth is by agglomeration over and above extension by missionary zeal, and the inclusion of religions non-proselytizing in character as well as those which are admittedly proselytizing.

2. Scope of article.—The scope of this article is restricted by leaving out account religions that are professedly missionary—e.g., Christianity and Muhammadanism, which have been already treated (see arts. Missions). The proselytism of sects may also be omitted as falling to be dealt with in the numerous articles under this head (see art. Sects.). Inasmuch as the gain resulting from missionary propaganda is concurrent with loss to the religion or religions forsaken, the converse of proselytism is to be found in apostasy (see art. Apostasy).

In this way it is possible to narrow down consideration of the subject to nearly the usual limit of articles on ‘Proselyte appearing in Bible dictionary, who have treated the subject solely as the feature of the Jewish faith. At the same time it is fully recognized that the religion which has given the name (proselyte) to the world has not stood alone in the practice of the thing. Within Judaism itself the period of missionary activity, during which proselytes were sought and found, is comparatively short. It is generally recognized as having ended in the beginning of the 2nd cent. after Christ, when the Jews were forbidden by the laws of Rome to make proselytes, and when they also ceased to desire additions to their number and retreated more and more upon themselves. The rise of proselytism is found in post-Exile influences, particularly the Dispersion, and the period of its bloom is set in the age of Helenism.

A great deal of our information regarding proselytes is subsequent to this period of activity, being stored in the Talmud and reflecting the views of the Rabbis upon the past, with or without historical basis, as one born in the tradition of the high covenant righteousness and ‘proselytes of the gate,’ full as opposed to quasi-proselytes, was evolved by the later Rabbis, but is to be regarded as without

2. I. Philo, de Parn. 2, where proselytes are contrasted with apostates.
meaning for the life of the past. The distinction may be still binding upon the orthodox of the Jewish faith (see art. JUDAISM, vol. vii. p. 592); cf. vol. iv. p. 245)—although for various reasons the proselytes of the gate have ceased to be recognized, and until recently it was an admission of acceptance with most Biblical scholars. To E. Schürer belongs the credit for the discovery of the right historical perspective in this matter. With the fall of such a main prop the greater part of the superstructure collapses. Proselytes of the gate, once employed as a "convenient anachronism," is now dismissed as a "misnomer."44

44 In view of the restrictions imposed both from without (chiefly on account of persecution) and from within (because of insistence upon circumcision) proselytism might be regarded as almost non-existent in Judaism throughout the Christian era from the 2nd cent. onwards. A modern Jewish writer has collected the evidence for the survival of proselytism in spite of adverse circumstances, and he affirms that in the last two and a half centuries tens of thousands of proselytes have entered the Jewish fold, notwithstanding the laissez-faire attitude of modern Judaism towards the proselyte question.6 The strict adherence to the laws as required from those converted may be judged from the fact that until the last decade of the 19th cent. no official sanction was given to relaxing the bond by which the proselyte was fully initiated to the Jewish (Reformed) faith (see art. CIRCUMCISION, vol. iii. p. 664). It is only in a wider sense, therefore, that proselytes have been added. Intermarriage has accounted for most of the gains, yet has given occasion for some losses.7

3. Materials essential for the study.—Although the term "proselyte" is more universally employed, we shall use interchangeably the material essential for the study of proselytism in the centuries immediately preceding and following the coming of Christ to earth. An introduction is generally found in a discussion of the position of the gentile, the "stranger," or rather the "novice," in relation to the gentile (ERE vi. 77) of OT. The LXX reproduces this word some 75 times by προσελκυόμενος, and in a few cases by other Greek substantives, but a detailed examination of all passages would fail to disclose a scientific distinction of the ideas and results which might in any way be compared with the results yielded by the modern documentary theory. The term προσελκυόμενος seems to have been already so familiar to the LXX translators that it was made by them to do duty for nearly all occasions, even when the current sense of the term failed to suit past historical circumstances (e.g., the Israelites are called προσελκυόμενοι in Egypt).8 Commenting on the difference between D and P regarding the γέρ, S. R. Driver states:

"In π the term is already on the way to assume the later technical sense of προσελκυόμενος, the foreigner who, being circumcised and observant of the law generally, is in full religious communion with Israel."9

W. C. Allen concludes10 that in the LXX a later meaning like that of the Mishna was read into the word. But even if that be the case when it is not so evident that the word προσελκυόμενος was made to do duty for most cases, and it seems better to regard the LXX usage as on the whole dictated by the freer conditions of the Hellenistic period, when proselytes were recognized in both the wider and the narrower sense. The usage of Philo, Josephus, and NT (Acts) will be found to accord with this. The designation "half- or quasi-proselytes" is now employed by the phrase φασάλαμες or σφαλαμείς τὸν δῆμον (Ac 10:27 13:18 26:6 11:16 17:2 18:3), in which opinion he stands opposed to Berthelet, who endeavours to prove at length that they are equal to "proselytes of the gate" in the narrower sense. Apart from the question of a specific term for each, we may admit the existence of two main classes, and we then find the crucial difference to be that the one class adhered to the Jewish theological and moral ideal, while the other was bound by the ritual also, in particular having submitted themselves to circumcision.3 It is conceivable, indeed, that there were not two but many kinds of proselytes, according to the degree of root and the amount conceded to the Jewish party or required by the other. In the provinces and among the Jews of the Dispersion the proselytes, or quasi-proselytes, would have laboured under slight disability, but in Jerusalem within the Temple precincts they would have had the same privileges as full citizens. The Greeks of Jn 129, e.g., seem to have been proselytes in the wider sense, yet they had to stand without the κήρυ, or terrace, like other Gentiles (cf. Ac 2196).4 It is not to be supposed that at the very centre of the faith born Jews would have stopped short at any intermediate stage in their efforts to make proselytes, yet in general their own position among the nations was such that they had to content themselves with what they were able to secure.2 That the Jews of the Judaisms before the time of St. Paul is not to be denied; even Hellenized Jews remained Hebrews, with a zeal for the whole law.5 Yet in the main there was a cleavage between Palestinian Judaism, a religion of law, and Hellenistic Judaism, a religion of hope and, corresponding thereto, there were particularists v. universalists, legalists v. apocalyptists, literalists v. spiritualists.7 The atmosphere of Mt 238 is suggestive of the one, and of Acts (see ref. above) of the other. A way of reconciling the two by a suitable interpretation of the word is suggested by the verse in John supposing that the proselyte of Mt 2310 is a proselyte to the sect of the Pharisees, not to Judaism in general;12 but this is against the meaning of the word προσελκυόμενος, or at least is pressing it to an extreme.

The rivalry of the Jewish sects of the period has indeed to be reckoned with, and even the exclusive and separatist Pharisees must be credited with a zeal to win converts, who, it is true, had to come over wholly or not at all. The Essenes secured proselytes notwithstanding a strict and prolonged novitiate, and they even adopted children to ensure additions to their number (see art. ESSENES, vol. v. p. 397 f.). For the methods employed by the sects in order to gain adherents there is no direct information, but it is probable that they correspond in general to the propaganda of Judaism as a whole. The testimony of Josephus as to the outcome of

PROSELYTE, PROSELYTISM 401
PROSELYTE, PROSLEYTISM

such efforts is clear, while beneath the contempt in the allusions of classical writers to the Jews we can detect the measure of their success in making converts. This, it must be remembered, was accomplished in spite of the obloquy to which the convert exposed himself—a point elaborated by Philo. During the short period during the Maccabean triumph, when force was employed to bring over the Idumeans and Ituræans to Judaism, the propaganda made headway through the inherent merits of the Jewish system of religion and the administration of its laws. The Maccabean triumph permitted both Greeks and heathen learned to copy the observance of the Sabbath, fasts, kindling of lights, and many restrictions in the matter of food. These last invite comparison with certain of the decrees of the Council of the Apostles in Jerusalem (A.D. 15) and with the 'Seven Noachian Laws' (see art. NOAChIAN PRECEPTS, vol. ix. p. 379), but in neither case can identity be established. None of the items specified by Josephus touches the vital point, which is circumcision, and the conclusion to be drawn is that the adherents proceeded to the utmost. The preponderance of female proselytes is taken to indicate the unwillingness of males to fulfil all that the law required of them. According to the Talmud, three things were required of the full proselyte: (1) circumcision (mitâh), (2) baptism (têbîâh), and (3) sacrificial offering (hârèsh'âth, dûmîn, bôrâbîn), all of which may be taken to have been in operation at the time of Christ. (2) fell into disuse with the destruction of the Temple, although substitutes for it were found. (1) has already been referred to as essential at all times for full proselytes. (2) would have passed un questioned as a requirement among the Maccabean law but for the dispute which arose in the 18th cent. regarding the priority of Christian v. Jewish baptism (see art. BAPTISM, vol. ii. pp. 378, 408 f.). It may be assumed that the instruction of proselytes was a necessary preliminary to those ceremonial acts (see art. CATECHUMEN, vol. iii. p. 256, n. 3; INITIATION [Jewish], vol. vii. p. 524; HILIELE, vol. vi. p. 638).

4. Historical sketch. The limits of the period of the Maccabean triumph in Judaism have already been assigned. The Rabbis afterwards maintained that the Dispersion was with a view to securing proselytes, but the truth is rather that in the cosmopolitan atmosphere of the Dispersion the Jews first gained the incentive to add to the number of the faithful, 'the evidence for the existence of proselytes among the Jewish colony at Elephantine in Egypt (5th cent. B.C.) is doubtful.' The nature of the records prevents us drawing any conclusion as to the conditions among the Jews in Babylonia at the time of Ezra. During the period of Hellenistic influence the development of proselytism was rapid, the influence of Jewish colonists and their synagogue worship in every place being supplemented by literary aids of many kinds: the LXX, the Targums, the Tannaitic midrashim, the commentaries of the Mishna and more especially the Talmud, philosophical and historical books, apologetics and even forgeries under the manner of the Sibylline Books. The issue of this all is plainly to be seen in the many cities and towns in which proselytes are expressly mentioned as being found (see ref. to Acts already given). At the time of Christ a keen missionary spirit prevailed among the Jews, their trading proclivities going hand in hand with religious propaganda. Until the destruction of the Temple (A.D. 70) they persevered in their efforts to extend their religious influence. While the Marcion persecution, and the bitterness engendered by the subsequent revolt against Rome, the Rabbis were prompted to change their attitude towards the outside world, and henceforth the terms of conversion were made more flexible, but the proposal may be said to close with the prevalence of Gentile over Judaistic Christianity, or, from another point of view, when Pharisaism conquered Hellenism.

5. Numbers and outstanding instances. The number of proselytes made during the centuries of missionary zeal was doubtless very large—amounting to millions, though there is reason to believe that they were mostly adherents, and not members in the proper sense. Syria appears to have been the most fruitful field, but it was in Jerusalem at the time of the feasts that the most striking testimony to theuperiority and need of Jewish propaganda could be obtained (Ac 9:29-31).

Outstanding proselytes in the wider sense are to be recognized in the centurions of Lk 7:2 and Ac 10:26 and the eunuch of Ac 8:27-40. The most complete triumph of Judaism is to be seen in the conversion of the royal house of Abiabene, the story of which is instructive as revealing a temporizing spirit among the leading Jews of the time on the question of the chief ceremonial requirement. Among the imperial family there have been reckoned as converts Flavins Clemens, cousin of Domitian, and his wife Flavia Domitilla (see art. JUDAISM, vol. vii. p. 592), although most authorities incline to regard them as converts to Christianity. A historical instance, which might be brought within the Rabbinical category of 'Esthère proselytes (whose motive in conversion was fear), is forthcoming in the Roman general Metellus. Instances within the department of literature are Aquila (Onkelos), the LXX, and the Scripture translations of Aramaic and (especially) Talmudic. Within the realm of Rabbinism are R. Akiba, R. Meir (son of a proselyte), and other Talmudic sages.

6. The ethics of proselytism. In judging of the motives which led the Jews to seek for proselytes during the period of their missionary zeal we must believe that they were actuated chiefly by a desire to impart to others that best form of religion which they felt they had received of God. This serves to explain their keenness as missionaries. The agents whom they sent forth to make proselytes were imbued with the same earnestness to convert the world as were the first Christian apostles. Their propaganda succeeded, they believed, because of the indwelling of the Holy Spirit and their new-found power to accommodate themselves so far to those whom they sought to win as to present first the most attractive features of their faith, as judged from the outside, they steadily kept in view the ultimate purposes of their mission to bring the world, in whose hands they found themselves, filled with a zeal for the whole law and willing to make sacrifice of themselves in body to the noblest service of mankind.
and estate. Being of a subject race and in a hopeless minority among the nations, they were under no temptation to employ violent methods. The proselytes when made were, in theory at least, subject to no disability, save that which must ever attach to the naturalized as compared with the native born. In actual life and practice disabilities must have existed, although these are not brought to light until Talmudic times, when they may no longer have been operative.

It cannot be supposed that there were not disinterested motives present in the seekers any more than in the sought. The gifts of the converts helped to swell the riches of the Temple, and Josephus openly allows an instance of misappropriation by a Jew and his accomplices of purple and gold made over for this purpose by Fulvia, a Roman convert of great dignity. In other ways the Jews doubtless invited others to follow them ostensibly for their soul's good, yet with an actual view to the material advantage to be reaped by themselves and their nation.

Those who were the sought were for the most part in a position to invite themselves, if they felt thus disposed. They were Roman citizens, or under some of the conditions of the conquering power that time, or else were inheritors of the professedly superior culture of the Graeco-Roman world. Yet many of them voluntarily surrendered themselves to Jewish influence, abandoning the gods in whom they had placed their hope, and submitting to the higher morality of Judaism, or refuge from the heentious spirit of the age. The latter motive is said to have had special weight with heathen women. The monotheism and moral purity of Judaism had a powerful attraction for minds of a philosophic cast in every province. Considering the obloquy to which the converts were exposed, and the persecution of a later day, which led many to profess the Jewish faith in secret, proselytism must have been attended by a greater or less measure of conviction. Josephus admits that not all who came over continued in the faith; some had not courage and departed. Yet the vast majority of devout Gentiles certainly sought in the synagogue nothing but the true God.

Of course, the proselyte to certain unworthy exceptions must be allowed for, viz. those who came over to avoid military service (from which the Jews were exempt), those who were actuated by superstitions motives, and those who were led by a commercial privilege or social advantage through marriage with a noble or wealthy Jewess.

The judgment of the outside world upon the proselyte movement, as conveyed by classical writers (red. above), counts for little. The most grievous charge they make, viz. atheism, has no foundation, nor yet has the scoffing dictum of Seneca: 'Victi victoribus leges deducerunt.' The references in NT are favourable to proselytes, with the single exception of Mt 23: 25, which after all is more a condemnation of the leaders than of the followers, and that perhaps within a sect only.

The most abundant materials for forming a judgment on the ethical value of the proselyte appear to be found in Talmudic literature, but their worth is discounted by the fact that these are often contradictory (e.g., stories of Hillel v. Shammah), that they were evolved apart from actual historical conditions, and that in the main they are disparaging.

They 'chiefly serve to illustrate the strong animus which a large section of post-Christian Jews displayed against proselytism.'

The judgment of the present day is determined according as one belongs to a religion which considers proselytism, in the modern sense, to be an essential and a sacred duty, or to a religion, such as the Jewish, which reckons that the fulfilment of this mission does not require the support of numbers.

Christian opinion is largely moulded by a sense of indebtedness to proselytes, for they, in the wider acceptance, were the founders of Christianity at its beginning. By this standard of judgment the 'God's own,' regarded as proselytes, are superior to those—their number relatively few—who became punctilious in observing all the ceremonial requirements of the law. In the case of these the saying, 'the more converted the more perverted,' may well have been true. Proselytes in the strict sense formed no link between Jew and Gentile, and did not prepare the way for Christianity.

All that legal Judaism achieved over against Christianity, which came after, has been, with only some summing up by Stopford A. Brooke thus:

'A few swallows do not make a summer, nor a few thousand proselytes a regenerated world.'

Modern Judaism is concerned to clear itself of this reputation by its own right, and assert that the Jewish religion is, and has ever been, hostile to the reception of proselytes. It points to past successes in this respect, to the debt which Christianity owes to Judaism for providing it with universal sympathy, and it further maintains that willing proselytes are still freely received, once their good faith has been proved. But the missionary zeal has departed from Judaism, and indifference as to numbers prevails. How great the change is between the present and the era of proselytism, which has been considered, appears to be reflected in the following condemnation of the missionary methods of Christianity and Muhammadanism:

'The history and experience teach us that the proselytizing spirit, which enables a Church after universally, generally to engender a tendency which develops into an indirect negative of the human heart, or barrenness of churchmanship.' To the Moslem as to the Christian, questions of heredity and community were left to the spread of their religion; the stranger could only become their brother through the consent of his implanted faith.

While remitting nothing from the duty to strengthen the confidence of Christians over against the world as still lying in unbelief, the apologist for Christianity is free to admit the presence and operation of an objectionable proselytism, whose root is found in particularism, not universalism.

A judicial estimate of the principles and methods governing Christian and Muhammadan propaganda will be found in art. Missions, vol. vii. pp. 743 ff., 748 ff.

PROSTITUTION

Greek (W. J. WOODHOUSE), p. 404.

PROSTITUTION (Greek).—The Greeks had but little notion of moral purity in the modern sense of the term. The virtue of chastity with them was confined within very narrow limits,1 being obligatory upon the wife (or daughter), while the husband (or son) was required only to refrain from adultery. But the husband was in the family rights of his neighbour. The husband's honour was fully protected by law, but the wife had no legal remedy against her husband's irregularities;2 nor did public opinion, capricious and ineffective at best, supplement the law's deficiencies, except in cases of gross neglect and transgressions of the forms of respectability.3 Morally, according to the opinion of the day, this sort of indulgence was upon exactly the same plane as any other satisfaction of appetite. The question was one simply of more or less. Self-control, if borne itself carried to undue lengths, was, it is true, something to be admired, and by common consent must be a main element in that careful and worldly-wise balancing of competing desires to which Greek thought paid so much attention and to which the art of correct living (cf. the saying μήδεν δύνατον)4.

The philosophers themselves took no higher ground than this (see, e.g., Socrates in Xen. Mem. i. 36; 37, and Sympos. iv. 58, where he lays down the rule with his accustomed crudeness and simplicity). Even Plato practically goes no farther than to say that a wise man will attach no great value to these particulars (cf. Plato, Protag. 324 E). However, the opposite extreme, to which the Athenians very naturally resorted, would so far consult the weakness of the flesh as to allow promiscuous intercourse to both sexes when past the age for rearing children for the State—always provided that incest be avoided, and that no child be born of such unions (Rep. 401 B: ἐνότατον δὴ ὁ παῖς, αὐτὸς τῆς γυναικὸς καὶ τῶν ἄνδρων τῶν γυναικῶν ἀτέστατον τὴν ἤλευσιν, ἀφήμονον περίκλης αὐτὸν συγγενήτευσιν ἢ ἐξ ἀνδρόν, ήτοι). In the Laws he hopes to be able to restrict such intercourse to persons legally married, or at least to enforce a regulation that in other cases it shall be covered with a double veil of secrecy (Laws, 514). Aristotle is of the same mind (Pol. 1266 a 34, 35). For, in his own words, the family is, and must be, the bulwark of the state. In this respect there was no difference between the Athenian family of the natural (Xen. Mem. iii. 5. 1) and the unnatural (cf. Aristotle, Pol. iv. 1265 b 24). This, however, is too much to say of the Tarsian married women (Xen. Mem. iv. 1. 44), who are allowed to be purchased, and were not bound to remain in the same household.5

In this matter, then, the Greeks are to be pronounced not so much immoral as non-moral. Their practice was due to the social conditions with which they regarded the facts of life and human nature. There were few facts of human nature for which they felt it necessary to apologize. In a very literal sense they were naked and not ashamed. Not that they interpreted life simply in terms of animalism, though there were among them also plenty of men to whom bodily indulgence was the sole end or the chief end of life; for the average man, as for the better sort also, it meant just the sober exercise of natural faculties and the moderate enjoyment of natural pleasures. Taken in the mass, the Greeks were probably just as far from being sensualists as from being ascetics. Aristotle's somewhat mechanical doctrine of virtue as a meant expressed in a deeply-rooted instinct of the race.

1 This is so in Homer also, where Odyssey's hangs his inconstant handmaids simply on the ground that their unchastity has dishonoured his family (Od. xxii. 450: ι δαίμων ἀπαράμετρος: and 454: ἐνότατον δὲ ὁ παῖς, αὐτὸς τῆς γυναικὸς καὶ τῶν ἄνδρων τῶν γυναικῶν ἀτέστατον τὴν ἤλευσιν, ἀφήμονον περίκλης αὐτὸν συγγενήτευσιν ἢ ἐξ ἀνδρόν, ήτοι). See also Aristotle, Pol. 1266 a 34, 35.
2 E.g., the case of Alcibiades (Aphrod. iv. 14: οὕτως ἀλκibiάδης ὡσαμένος ἀτέστατος ἐστιν κακοτέρας, καὶ διόπλως καὶ λέγεται, αὐτὸς γὰρ πρὸς τὸν ἄρχοντα κάτι τὸν τύχον. It is worth noting, however, that Alcibiades, though addicted to the broken home, shows himself a remarkable exception to the general rule (cf. Plato, Protag. 324 E: οὐ δέχομαι κακοτέρας, αἰτείται μὲν τὴν ἀρχαῖαν ὑμνίμα σαφέσιν. See also the intolerable condensation of plagues and perils in the form of the model Greek gentleman (εἰς τοὺς εὐθυμούς), in Xen. Anab. vi. 17).
3 Cf. Xen. Mem. i. v. 4: ἐὰν γὰρ οὐχ ὑπὸ πάντα δεῖ ψυχήν ἔχοντα θυμὸν εἰς τὴν ἐγκακίαν ἀρέτης καταβαίνει, καταβαίνει γὰρ ἐν ζωῇ καὶ ἐν ἀσθενείᾳ τῆς κακοπάθειας καὶ τῆς μακράς καταπάθειας ἀπαντῶν. But this is not the case with Homer, where the king of the gods is also a model of the average Greek (οὐ δέχομαι κακοτέρας, αἰτείται μὲν τὴν ἀρχαῖαν ὑμνίμα σαφέσιν. See also the intolerable condensation of plagues and perils in the form of the model Greek gentleman (εἰς τοὺς εὐθυμούς), in Xen. Anab. vi. 17).
4 Cf. the case of the citizenship in B.S. viii. [1901-02] 1917; L. vii. 11. 422 ἀτέστατον δὲ ἐστιν δὲ τὸν τύχον κακοτέρας, καὶ διόπλως καὶ λέγεται, αὐτὸς γὰρ πρὸς τὸν ἄρχοντα κάτι τὸν τύχον. It is worth noting, however, that Alcibiades, though addicted to the broken home, shows himself a remarkable exception to the general rule (cf. Plato, Protag. 324 E: οὐ δέχομαι κακοτέρας, αἰτείται μὲν τὴν ἀρχαῖαν ὑμνίμα σαφέσιν. See also the intolerable condensation of plagues and perils in the form of the model Greek gentleman (εἰς τοὺς εὐθυμούς), in Xen. Anab. vi. 17).
5 See also the inscriptions published in B.A. viii. [1901-02] 1917; L. vii. 11. 422 ἀτέστατον δὲ ἐστιν δὲ τὸν τύχον κακοτέρας, καὶ διόπλως καὶ λέγεται, αὐτός γὰρ πρὸς τὸν ἄρχοντα κάτι τὸν τύχον. It is worth noting, however, that Alcibiades, though addicted to the broken home, shows himself a remarkable exception to the general rule (cf. Plato, Protag. 324 E: οὐ δέχομαι κακοτέρας, αἰτείται μὲν τὴν ἀρχαῖαν ὑμνίμα σαφέσιν. KaTtcTKevaxTp-evai;

However this may have been, it is the fact that
in post-Solonian Athens tiiose who followed this
profession paid a licence fee to the State, which
was farmed out in the usual way to reXwfat (also
TTopcoTeXcDcai).^

The superintendence of this tax was one of the
duties of the iarwdfioi.^ The non-existence of contagious disease for which they were responsible
made the policing of prostitutes in ancient times a
comparatively simple problem.
The vase-paintings of the early 6th cent., and later, indicate
the great importance of the traipai in the social life of the
time, 3 and furnish a score of names of courtesans then flourishing (see W. Klein, Die f/ricch. Vasen mit Meistersignatxtren'^,
Vienna, 1S87, passim, or P. Hartwig, Die griech. Meistemehalen,
Berlin, 1893, passim).
Sparta naturally stood in great contrast,
because her men had little time and little money to spend on
such things (I'lut. de Fort. Rom. 4 iatntep oi ^TrapTiarai Tr\v
'X^poSCnqv ^t'you<rt, StajSatVouo'ai' toi' Evpwra^, ret fiev euoirrpa

governing the institution of slavery in Athens and elsewhere (see art. SLAVERY). This class must have been largely recruited from the number of female infants 'pot-exposed,' i.e. cast out to their fate by fathers unwilling to rear them.1 Of this slave class the female born in slavery was adopted by the freedwoman Nicarette to stock her brothel (Dem. lxx. 18 f.), she being herself a slave, and paid the same with a slave's life, with the consent of the court, and for her daughters, apparently a common deception—

to enhance the price.

Often such slaves were instructed in accomplishments, and were then hired out as flute-girls, harpists, dancers, etc., at banquets, where, as we see from countless vase-paintings and literary references, ample opportunity was as a matter of course given for other services. This species of more or less educated prostitute treads upon the second, the courtesan, and, indeed, the conditions of Greek slave life, it was possible to rise from the one class to the other. This higher class consisted partly of freedwomen, partly of free-born aliens, more rarely of native-born Athenians,2 who for various reasons adopted this occupation, and partly of such as were set free by Sino in Terence (Andria, 69 f.). 'Its auit ingenium omnium hominum ab labore proclive ad ludibium' (77) was doubtless as familiar then as now; and that of Corinna, daughter of Crokre, forced by her mother into a life of shame (Luc. Dial. Mor. 6), is perhaps not less common. These independent courtesans, again, fell into varieties—from the ρόδον πόρος of Hesychus to the ἄδεη τελείας (Athen. 589) at the head of the profession in the hey-day of the neoclassics (see the story of Hierocles and Laia, in Aul. Gell. Noct. Att. i. 8).

In spite of her would-be apologists, Apasia (of Miletus) the concubine (παραλληλὰς) of Pericles, must still be taken as a type of the higher grade of ἀρχαῖα in the 6th century. The most absurd claims have been made on her account, both in ancient and in modern times (e.g., in the Meineke, generally ascribed to Plato), she is a rhetorical, instructress of both Socrates and Pericles. Cf. Xen. Hec. iii. 14: συντάγμα το αὐτοῦ Ἑρατεία προς τούς ἐν αὐτῷ ἀνδρείας ἀνα-ληπτομένους λέγεται. In fact, Meineke says Socrates, referring to the subject of female education—but surely he is speaking with his accustomed irony. She was doubtless, however, and highly gifted, and presumably had adventures with a very practical turn of mind; but that does not imply our acceptance of the gross stories and epithets associated with her, in the works of Herodotus and Heracleides (see Acharn. 284 f.; Plat. Per. 541 f.) Far more illuminating as to the real character of ancient Socraticism is the whole of the conversation of the Socrates with the ταρπόν Theodote, in which he discourses with her pleasantly and quite as a matter of course upon the general subject of professional women (ἔτεροι ἀνδρείας ἀλληλοκαθαρτοὶ). But not all interviews with ταρπόν were of so innocent a sort.

It is to the 4th cent. B.C., and later, that the most famous names of ταρπόν belong—e.g., Phryne (story of the orator Hyperideus unveling her bosom before the jury, and so securing her acquittal as the τήν ύποθήκην καὶ θησαυρὸν Αφροδίτης, in Athen. 590, where also are other examples of her insolence and extravagance); Thais, the evil genius of Alexander the Great at Persepolis (burning of the palace at Persepolis).2 (Cf. Xen. Hec. iii. 14, referring to the indispensable nature of such women, as the probable number of children thus exposed and as to the proportion of those who were rescued from death as a special miracle, to the occurrence of which fact such accident sometimes took place, can be drawn from the frequency of this motive in the New Comedy.)

2 That native-born Athenians did sometimes sink into the class of ταρπόν is certain, from Antiphanes, Hyp. frag. 1 Meineke, that the ἄστειον ταρπόν (a woman who either kept a house or acted as a midwife) was the same as the ἀνάθειον καὶ χειρουργόν, as well as from the apologies put forward in Dem. liv. 34 f., already quoted—even if we were not sold that one famous case, Ctesibius, a mistress of Demetrios Poliorcetes, was daughter of Cleon an Athenian, and presumably therfore herself of free birth (Athen. 577).

1 Cf. Aristoph. Frogs, 1190: ἑλέσθαν ἐν ἀρχαῖα, and Clouds, 533 ἔστη ἐν τοῖς ἄρχαί ζωῆς, 'she lived both as to the number of children thus exposed and as to the proportion of those who were rescued from death as a special miracle, to the occurrence of which fact such accident sometimes took place, can be drawn from the frequency of this motive in the New Comedy.)

2 That native-born Athenians did sometimes sink into the class of ταρπόν is certain, from Antiphanes, Hyp. frag. 1 Meineke, that the ἄστειον ταρπόν (a woman who either kept a house or acted as a midwife) was the same as the ἀνάθειον καὶ χειρουργόν, as well as from the apologies put forward in Dem. liv. 34 f., already quoted—even if we were not sold that one famous case, Ctesibius, a mistress of Demetrios Poliorcetes, was daughter of Cleon an Athenian, and presumably therfore herself of free birth (Athen. 577).

3 But the predominance of the courtesan in the New Comedy must not detract from the importance of the heroine, who is in fact a necessary outcome of the convention which tied the scene always in the street, into which respectable women could not venture, except under escort and upon rare occasion; into the plays mirror social, but not domestic, life, and work threadbare a few stock motives.
source of prostitution may have been generally closed (Macdonell and Keith, l. 488).

(b) In the law-books.—Manu (Law, ix. 259) directs that "for a hundred and fifteen in the Brahman is forbidden to touch food given by harlots, which excluded him from the higher worlds (iv. 206, 219). The same prohibition applies to food given by an unchaste woman, and libations of wine are not to be offered to a wife who through lust with many men (iv. 211, 220, v. 90).

(c) In the Buddhist age.—A Brahman was forbidden to witness dancing or hear music, the trade of the eunuchs (T. W. Rhys Davids, Buddhist India, London, 1885, p. 157). Unfortunately there are no direct references to prostitutes in the Jātaka show that they were tolerated and to a certain degree held in respect. The fees paid to some of them were exceedingly high (The Jātaka, Eng. tr., Cambridge, 1895, ii. 40, 261, i. 419; iv. 157); 700 courtesans are found in the palace of a king (vi. 145). Sakka, after giving money to a harlot, does not visit her, but rewards her continence by filling her house with jewels of seven hoards (i. 259 f.). One of this class is said to keep the five virtues (i. 414). On the other hand, the capacity of prostitutes are referred to, and it is regarded as a misfortune for a virtuous man to be reborn in a harlot's womb (vi. 117). Somadeva, who used much Buddhist material, writes: 'Thus, O King, even heathens are occasionally of noble character and faithful to kings as their own wives, much more than matrons of high birth; he also speaks of the famous eunuchs of Ujjainy, Devadatta, who had a place worthy of a king (Kathā-śāstra-sūtra, ed. C. H. Towne, Calcutta, 1880, i. 364, ii. 621).

In the Buddhist legends we read of Ambāpāta, the famous courtesan of Visula, and the princess Sādāvatī, the daughter of the king of Pāharpur, and the Manual of Buddhism, London, 1853, p. 244). An inscription of the W. Chalukya dynasty of Bābāni, early in the 8th cent. A.D., records gifts made by a prostitute to a temple (Bījī p. ii. (1898) 372, 396).

At the present day prostitutes are tolerated in India to an extent which can hardly be paralleled in any other part of the world. It is considered lucky to meet a prostitute at the beginning of a journey, probably because she can never become a wife. The trade, however, is fully organized (E. Thurston, Castes and Tribes of S. India, Madras, 1909, i. 139). One class of dancing-girls, known as mātany, are held in much respect, and among those castes in which girls are prostituted this is done after a regular session of the council (below, § 3).

(d) Under Muhammadan rule.—The Muhammadans kept prostitutes under supervision.

Under Akbar 'the prostitutes of the realm (who had collected at the capital, and could scarcely be counted, so large was their number) had a separate quarter of the town assigned to them, which was called Śāhāpīndra, or Devīvile. A Dārghah (superintendent) and a clerk were also appointed for it, who registered the names of such as went to prostitutes, or wanted to take some of them to their houses. People might indude in such connections, provided the toll collectors heard of it. But, without permission, no one was allowed to take dancing-girls to his house, except those who were under the special protection of the Mahārāja of Scindia (in Madras). After they had called on the temple of the god Virgin, they should first apply to His Majesty, and get his permission (Abul Fazl, Amā-i-Akbar, tr. by H. Blochmann, Calcutta, 1857, ii. 152).

Kāli Rāma (Munṣhakba-ī-īlābī (H. Elliot, Hist. of India, London, 1860, p. 333) states that the rules on the subject were copied from Persian regulations of reputation in the service of the Court were made ashamed of their occupation, and were advanced to the dignity of mantas. Public and private ceremonies were made portions of their performance. It is said that one day a number of singers and minstrels gathered together with great joy, and having fitted up a litter with a good deal of display, round which were grouped the public wallahs, they passed under the Emperor's jāhār-ba-kā- in order to see what had happened to them. Thrown down by the bear and the minstrel, the music shows that Music was dead and they were carrying his corpse for burial. Aurangzeb then directed them to place it deep in the ground, that no sound or cry might afterwards arise from it.'

According to Manucci (Storia do Mogor, ed. W. Irvine, London, 1907, II. 65), in the reign of ShahJahan, public and women enjoyed great liberty, and were found in great numbers in the places of public resort. At the beginning of his reign, Aurangzeb said nothing, but afterwards he ordered that they must marry or clear out of the realm. This was the cause that the palace and the harem were reduced to a regular state, and they were charged by some observers, that marrying or becoming a harlot was now as bad as dying a martyr. In Trivandrum, the 15th cent. is described by Ablur-razzāk, Māla'la-sa-dā'ā (Elliot, ii. 114 f.)."
higher class of cortesman, who is not allowed to sing and dance in public. Her duties in the temple are to sweep and purify the floor by washing it with cow-dung and water, and to wave a fly-whisk before the god. The male members of the caste, known as gopas, are forbidden to come in contact with the temple priests to avoid the goddess's displeasure.

In a temple at Lucknow, a bhangerin, a prostitute recruited from the untouchable caste, was allowed to enter the temple with consent of other members of the caste and received their blessing. She was then taken in procession to the temple of Anjaneya, where she sat on the women singing. She is given holy water (brihat) by the priest, and sits on the knees of three men and of one of her caste people. Rice is poured over her by basar prostitutes and married women, and the ceremony ends with a feast. She then makes her farewell sacrifice.

Such women are said to remain faithful to their protectors when kept as concubines, and it is asserted that they may be flogged and fined by the castemen if they prove false. A woman who does not enter into a connection more or less permanent with a man is known as prositute, provided her lover be not of a caste lower than her own. A basari, or dedicated prostitute, if she wishes to live a chaste life, can be married, and she then ceases to perform acrobatic feats in public. Her children born before the marriage are left with her relatives (monograph 13, Ethnographic Survey, Mysore, Bangalore, 1908, p. 12 f.). In the same province the Beda, Golla, Kurbba, Madiga, and other castes often dedicate their eldest daughter, in a family where no son has been born, as a basari prostitute, who is with her father's consent to be left unmarried, with the usual result (B. L. Rice, Mysore, rev. ed., Westminster, 1897, p. 256).

LITERATURE.—The authorities have been quoted in the article: see also Al-Biruni, India, ed. E. G. Sachau, London, 1916, ii. 143 ff.

W. CROOK.

PROSTITUTION (Roman).—The difference between Roman and Greek views on this subject flows not so much from a deeper appreciation of the family as from a deeper conception of personality and the value of the individual citizen as such, independent of sex. Doubtless there was hence reflected back upon the family a sentiment that contributed much to the enhancement of its dignity and authority; but the primary result was to create an attitude of mind, on the part of the state, towards free Roman women in general, and especially towards the 'wives' (matronae), position of which was one of dignity. There was a sense, however, that this had driven her to be a servant, but mistress ('ubi tu Gaius, ego Gaia,' ran the old marriage formula). She was denied neither freedom of movement nor share of social intercourse, within or without the house. Custom debarred her from direct access to public affairs, but her position was free from any suggestion of intentional personal abasement, though it was true that in the larger Roman system she was subject in law in the strictest degree to her husband or to another male tutor (see T. Mommsen, Hist. of Rome, Eng. tr., new ed., London, 1901, i. 74 f.). The Greek influence, when it was finally brought to bear upon Roman society, proved one of its

1 Cf. Cic. de Off. i. 54: 'nam cum sit hic nurture communem animasitum, ut habentur lobidinem Lucae, priina societas in ipso coniugio est, proxima in libera, deinde una domus, communem omnia; id antem est principium urbis et quasi seminarii rei publicae.'

2 Cf. Corn. Nepos, Praefat.: 'Contra ea plerique nostris moribus sunt decora, quae spad illos turpis putantur. Quem enim Romanorum undique vocant deurni et deurni, qui intercommunia materiae, non primun locum tenere aestimant, etque in celebratem versaturo quid multo fit alterius in Graecis. Nam neque in convivio adhibetur, non proponatur: neque sedet, nisi in interiore parte aedem, quae gynaecinitia appetit, utque non modo consteat propria sua esse.'

For freedom of social intercourse see Cic. pro Cal. 20: 'qui discrent uxoribus sae a causa reductas attestas esse Caelio'; cf. Plut. Rom. 20: 'ut de melius polia tue vagaente in tota" 

Διήνεμοι . . . Ιενισισια μεν δουλοι βαλευσικα, κτλ.: Cic. Verr. i. 94.
most powerful solvents, so that the tone of those grades of society which find expression in the literature of the Empire was in complete disaccord with that of the early Republic. It is, in fact, a striking phenomenon that, while the Greeks, on the one hand, maintained no profession of principle in reference to the intercourse of the sexes, but maintained upon the whole a high degree of outward decency, the Romans, on the other hand, whose principles, and for a long time their habits, were upon a higher plane, exhibited a declension which apparently reached a depth far below that ever attained by the Greeks, save in isolated cases. This difference must, in part, be explained by the existence in the Roman of some degeneration that has no parallel in the history of society in Greece, and one all the more grave as it was for the most part independent of economic pressure.

As a matter of strict principle, then, among the Romans prostitution was per se shameful (fornitum)—for both parties. That this was the Roman sentiment, as its best, is clear enough even from the very fact that Cicero's usual verbal insincerity as an advocate, denies it (pro Cael. 48: ‘Verum si quis est, qui eum meretricios amoribus interdixit injusti pulsat, et ille qualiter sedes necessario—navigo non modo ab huils sacellum licentia, verum etiam a malorum consciendi atque consentia. Quo enim hunc non factum est? quando reprehensum? quando non permisiuin? quando denique fuit at quod ilicet non faceret?’). Perhaps from the earlier existence of a use in Rome of the police regulation analogous to that found now in most European countries. Women adopting the career of a prostitute (meretricia, sorior, procuratrix) were required to register themselves before the assidly's office, and to take out a licence upon payment of a tax (licentia); and the public had access to the names, addresses, personal circumstances, whether her professional name and price, etc. Once placed upon the register, the name could never be erased, but remained as a permanent stain on the woman's name. That the moral tendency of the act of prostitution itself (quinquies corpore facere) was felt to operate completely all other aspects, so that rejection in marriage, sickness, debility, and general misfortune was the fate suffered by the Roman mind to draw upon its own duty of legal fictions in order to open a way to repentance and recovery for the prostitute is in startling contrast to the humane and reasonable attitude of the Greeks towards this class. From this same thoroughgoing attitude of the Romans springs also the minute regulations which imposed upon prostitutes a distinctive dress, dyed hair, or yellow wig, and other civil disabilities, designed to mark them out for public reproach and to realize their profession.

As wealth and luxury increased, the spiritual strength of the Republic declined, while Greek, and especially Oriental, models of profligacy, springing from a quite different religious and social conception, poured into Italy in an ever-swelling flood. These repressive regulations were of no avail to maintain the state of society so open to crime.

Of course they are frequently alluded to, especially by the poets, but not in such a way as to reveal any specifically Roman details, or to make it necessary here to multiply quotations which have already been the subject of wide prevalence of vice in Roman brothels and other meeting-places.

When Cicero is his purpose, his language is very different;—e.g., pro Mil. 55: ‘Inefficacia, semper exoleto, semper lupus docet;’ and cf. Cat. ii. 10.

When the two were worn the matrona, stilta, but must wear a topia of sad stuff (toga pulla); cf. Liv. Xut. ii. 60: ‘talem non summet damnavi tamen;’ Hor. Sat. i. 63: ‘quid impleam in ortu vestris, aut in exoleto, aut in lupus docet?’; and cf. Cic. Phil. ii. 44: ‘quid te a meretricio quaesta abdixit et, tanquam stultum delicat, in matrimonio stabili et certo concubavit.’

SECRET prostitutes from even the upper strata of society. Amid the general depravity prostitution ranked merely as one form, and that not the gravest, of immorality. As emperor, Tiberius tried to check it by more stringent enactments,1 but the violation of the law was looked upon in the same light as murder and treason was by the law of 132 B.C., and was finally abolished in a century later, by Constantine, when the old registers of the prostitutes were also consigned to destruction. Justinian, in the 6th cent., removed some of the civil disabilities of prostitutes (possibly only to enable himself to marry the reformed prostitute Theodora; see E. Gibbon, Decline and Fall, ed. J. B. Bury, London, 1898, iv. 215).

Probably the influence of Theodora is to be seen in the interesting experiment which he who overturned a palace on the Asiatic side of the Bosporus into a monastery as a rescue home for 500 reclaimed prostitutes of the capital. Here, to be saved from themselves, they were kept in a proper frame of mind, and were maintained by the income from the monastery, so that the experiment was a failure.

It marks, however, an approach to the modern attitude of charity and sympathy in dealing with the class, as contrasted with both its theoretical repudiation by the Romans and its frank acceptance by the Greeks. So far as our scanty knowledge goes, neither the Greeks nor the Romans had to face the problem of dealing with prostitution in the interests of national hygiene. The Roman system of registration and public supervision is of interest as it represents practically the ultimate form that, as yet, appears possible in dealing with this problem.

With the exception that there is no tax, and that the door to recovery is not legally closed, the procedure of most of the Continental peoples is simply a reversion to the Roman system.

The object of both is the same, namely, outward control of the phenomenon in the interests of public order and decency; to this, for modern societies, the protection of public health falls to be added. There has been further complication, towards the solution of which the ancient procedure can offer no suggestion.

LITERATURE.—Save for incidental references, mainly upon the general subject of social morality under the Republic and the Empire, nothing dealing with this specific topic is known by the present writer.

W. J. WOODHOUSE.

PROTAGORAS.—Protagoras was the most famous of the Greek sophists of the 5th cent. B.C. (see SOPHISTS).

1. Life and writings.—Protagoras was a native of Abdera in Thrace. Plato, our best authority, tells us that he was seventy years old when he died, and that he had spent forty years in the practice of his profession (Menon, 91 E), and he visited Athens not for the first time after the production (in 420 B.C.) of a play by Pherecrates. With such data as we have, his birth seems to fall between 500 and 480 B.C. The subjects

1 Tac. Ann. ii. 81: ‘gravissimus decretis libidinum meretricia cau
ta, ne quantum corpore facere, quae semper in plebis habebat, et quae semper in publico habebat, semper scortam et semper semper lupam et semper numerus pupas docet.’

2 Cf. W. E. H. Lecky, Hist. of European Morals, London, 1890, vol. i. p. 203: ‘As a matter of fact, there is no history when virtue was more rare than under the Caesars; but there has probably never been a period when vice was more extravagant or uncontrolled.’

3 Suet. Cat. 60: ‘ex capturis prostituturam quantum quaque una consultis meretur,’ etc.
that he taught included oratory, grammar and the right use of words (Plut. Themist. 267 C; Diog. Laert. ix. 53), the interpretation of Homer (Plato, Protag. 339 A ff.), and, generally, those accomplishments which enabled a Greek to take a prominent part in the politics of his native city (ib. 318 A). His popularity was unbounded (ib. 300 C, Theat. 161 C): Plato even pits him against Homer as an authority on the education and improvement of mankind (Rep. 600 C).

At the same time, like Socrates, Protagoras incurred the dislike—indeed the open hostility—of the Demagoge Anaxys (Menec. 91, 102 C ff.), who explained the publication of a work on the gods is connected with the traditional story which we find in Cicero (de Nat. Deor. i. 63) and earlier still in Timon (Sext. Emp. Adv. Math. ii. 55-57), that the Athenians condemned Protagoras and publicly burnt all the copies of his book which they could collect; and that he saved himself by flight, but on the voyage to Sicily he was drowned at sea. This account receives some slight support from the words adduced, e. g., by Plato (Theat. 171 D).

A few fragments, or at least the titles, survive of some sixteen works attributed by the ancients to Protagoras (Diog. Laert. ix. 55; H. Diels, Die Fragmente der Vorsokratiker, Berlin, 1906-10, p. 247). There was no doubt a connexion between theology and medicine, and the title of the work, which contained the famous maxim that man is the measure of all things, is quoted by Sext. Emp. (adv. Math. vii. 50) as καθαρότατα αρσενικά (sc. λόγου), but the reader of Plato is forced to infer from many allusions that the work was commonly known as the Truth of Protagoras (J. Bernays, Gesammelte Abhandlungen, Berlin, 1885, i. 117-121). Considering his great fame, it would be interesting to recover some specimens of his style; Gomperz conjectured that the apology for medicine, one of the lost works of the Hippocratesan corpus, is by Protagoras. With greater certainty peculiarities of his stately method can be inferred from Phantonic imitations (Protag. 316 C ff., 320 C-322 D, 333 D ff., 329 A-D, perhaps even 342 A ff., Theat. 165 E-168 C) and from the unmistakable allusions of Aristophanes in the Clouds (112-114, 658-671, 677-679), though the sophist is not named in that play.

In the dialogue of Plato named after him Protagoras speaks as an expert and a champion of customary morality—Plato's ἱστορική ἀπέρχεται. The human instincts of reverence and right (ἀλήθεια, δίκαιος) are the weapons by which helpless men has been protected against the teeth and claws of other animals (Protag. 322 C, 329 C). Man's history is a record of progress; the criminals of a civilized society would be virtuous if compared with downright savages (ib. 327 D). Hence the aim of legislators and educators is to displace harmful opinions by wholesome and profitable ones (Theat. 167 A ff.). Hence, too, the aim of education should be to reclaim the offender and to deter others from his offence (Protag. 324 A ff.). Virtue is inculcated in an enlightened community by public opinion, by good laws and institutions, forces working slowly (ib. 328 D ff.). Hence the flexibility and contradictions of this unwritten code the sophist has little conception. Indeed, when the Phantonic Socrates offers him a foundation in a bold schism, a principle of political principle (ib. 351 C ff.), he declines to accept it, and stands against it. The same vagueness is shown in the sophist's claim to turn the 'weaker' into the 'stronger' case (ὑπὸ τῶν μικρῶν κρίνει τῶν μεγάλων). The discussion is a fatal passion with Greeks, especially to win forensic right. But this pursuit of this branch of excellence impairs another—a scrupulous regard for right? Absolute inability to see where the Socratic elenchus will land him is a main feature of comic relief in Plato's presentation of Protagoras, as of other early sophists. What other weaknesses of his at the time, Protagoras took part in the protes of philosophers against the aesthetic opinions of the poets. His famous utopia runs thus: 'of the gods I cannot say whether they exist or not, nor of what may consist the nature of them, I do not know; but I do know especially the obscurity of the problem and the shortness of life' (Diog. Laert. ix. 55).

Here the nature of the gods is obviously the real problem, the agnostic disposition towards a deistic or even preorganic of odium, was in keeping with the highest thinking of an era of enlightenment. The most original opinion ascribed to Protagoras is of course that man is the measure of existence and nonexistence. Ever since its publication this maxim has been a subject of controversy, as Plato's Theaetetus proves. It seems to be an affirmation of the subjective element in all experience, all thought and language. There may have been 'implied' for at least two centuries in the very forms of giving evidence (ἀξιόλογον, εἰδικτημένον) were a perpetual reminder that in the law-courts, at any rate, in the investigation of facts, it was impossible to go beyond the individual. Some may that the maxim amounts to a recognition of the relativism of all judgments. It shows that opinion. There is nothing in it to forbid the conclusion that absolute knowledge is impossible, but that opinions are relatively true; and so Plato seems to have understood it. That its author never intended it to bear any destructive practical consequences is admitted by Plato (Theat. 165 B-168 C). Nor would it be fair to link it up, as Plato has done, with Heraclitean doctrine—all things are as they seem to all, for 'all things flow like a stream'. 3 In speaking, it is most improbable that the first fragment which appears in the writings of the Irenaean—may be inferred from the fact that he did not foresee, much less intended, all that acute metaphysicians like Plato and Aristotle have deduced from it. Even the psychological implications of the doctrine have never been perfectly understood at a time when no one could explain why perceptions of tastes and flavours were variable, while men agreed in their perception of weight. It seems safest, therefore, to make of Protagoras neither a positivist nor a pragmatist, whatever superficial analogies to these later doctrines may be ingeniously read into his maxim.

PROTECTION. — See Economics.

PROTESTANTISM. — 1. Derivation and definition. — The Lat. protestari, a post-Angustian word found in Quintilian and frequent in law, means 'to profess,' 'bear witness (or declare) openly,' so that it is equivalent to proferre; in both cases the preposition adds the idea of openness or publicity to that of witness or declaration. It has no inherent negative force as a protest against
something, though it is often used in law as a
declaration that the speaker's meaning has been
misunderstood.

Of the cognate English words, we find 'protesta-
tion' in Hampole (c. 1348), and thenceforth they
were used as another form of an open declaration.

Thus in Shakespeare, Much Ado about Nothing, v. i. 149: "Do me right, or I will protest your cowardice;" Madamet, v. ii. 119: "I will at once protest to the Pope of mani-
acles.

The negative meaning common in modern English
came in later. Thus a bill might be 'protested,'
(from 1622), i.e. an open declaration made that it
had been presented and not paid. There were also
'protestations' (later 'protests') in the Lords from
1626 and in the Civil War, though they were not
common till after the Restoration. Johnson,
however (1755), still defines 'protestation' as 'a
solemn declaration of resolution, fact, or opinion,'
though he notices the negative meaning under the
noun 'protest.

2. Theological meaning.—The word received
a technical meaning in theology from the protest
made by the Lutheran princes and some free cities
before the Diet at Speyer in 1529. An earlier Diet
at Worms in 1521 had put Luther and Mansel on the
Bond of Rome and ordered the suppression of heresy.
But the heresy spread nevertheless, and, when
another Diet met at Speyer in 1526, it was
supported by strong princes, and a comprome-
ise had to be made on the principle of 'Cujus regio,
ejus religio.' It was decided, and that unani-
mously, that, till a General Council met, every
prince should be free to make religious changes if
he thought fit. But by a second Diet at Speyer in
1529 the compromise was annulled; all further
interventions were forbidden to Lutheran princes,
and the Zwinglian doctrine was made unlawful.
Hereupon (19th April) the 'protestation' was
drawn up. In the cities (of Saxony, Branden-
burg, Brunswick-Lüneburg, Anhalt, Hesse) and
fourteen cities (some of them Zwinglian) declare
that they will not carry out the new edict or tolerate
the Mass in their dominions, further maintaining
that the unanimous decision of one Diet could not
be reversed by a mere majority in another, and
that, if insisted on according to Scripture and con-
ciousness, they could not in any case admit the
right of a majority to control them. There is no
question here of any particular doctrines—only an
assertion of the liberty of particular churches; the
actual doctrines of the princes were set forth next
year in the Confession of Augsburg.

3. Lutherans and Calvinists.—Thus 'Protes-
tants' at first meant Lutherans as opposed alike to
Papists and Zwinglians. The word was convenient
from a political standpoint, and came into use in
spite of Luther's own dislike of it, so that it soon
became the current name for Lutherans in Germany
and England. Then came a double development.
On one side the Romansists persisted in stigmatiz-
ing the heretics of the Reformation all over Europe
as Luther's, and thenceforth they came to adopt from the Lutherans the common
name of Protestants. The unifying force was the
consciousness of a common cause against Rome; but it worked slowly. The breach between Lutherans and Zwinglians was in 1529.
So four of the fourteen cities presented a separate
Confession (Tetrapolitana) at Augsburg, and
Zwingli sent a third. Calvin some years later
signed the Augsburg Confession of his own accord ;
but, on the whole, the second half of the 16th cen-
tury was a period when the Protestants hated each
other as they hated Rome. The Lutherans established their principle of 'Cujus regio, ejus religio' at the
Peace of Augsburg in 1555, and henceforth were
(supposed) respectable heretics, but the Calvin-
ists had no protection. They bore the brunt of
the battle with Rome, and they gained on the
Lutherans in Germany. So the quarrel was
bitter, and the misfortunes of the first period of the
Thirty Years' War (1618–24) were in great part
caused by the unwillingness of the other side to
help Calvinists, and it was only under the pres-
ure of the calamities which followed that they
learned to sink their differences under the common
name of Protestants.

4. England.—In England the Lutherans
had little influence after the time of Henry VIII.,
and their constitution is repudiated in Art. xxvii.
('only after an heavenly and spiritual manner'). The Reformers looked to Bullinger and Calvin, rather than to Melanchthon and Zwingli. In doctrine, then, the Church of England leaned
more to Calvin; but it had a political tie with
Lutheranism. Among the ever-changing phases of
Elizabeth's policy in her early years was the idea
of gaining something from the Peace of Augsburg
by therin will absolve off as substantially a
Lutheran ruler ordering the religion of her own
people like the German princes. The strange
tricks in her private chancell indicate this policy
rather than any learned knowledge of the
Erastian obedience of the Lutherans, and detested the ecclesiastical inde-
pendence of Calvinism. Thus there was a true
affinity between the Erastian church of Elizabeth
and the Erastian churches of N. Germany, and
English Churchmen of the official sort learned to
call themselves Protestants like the Lutherans,
while the Puritan section clung to Geneva, and
was not forward to adopt the name. It is not
found in any revision of the Book of Common
Prayer, nor was it recognized in any Act of Parlia-
ment; nor even the Canons of 1604 only claim that the
Church of England is 'a true and apostolical church.' But by 1608 we find mention of 'Papists, Protestant, Puritans, Brownists,' where the word is
used strictly of the Church in opposition to
Puritans as well as Romanists. In this sense it
became a watchword of the Caroline divines, and
was frankly adopted by Laud himself. Even
Chillingworth's Religio of Protestants a Safe Way
of Salvation (Oxford, 1638) has the Church in
view, and for the first time gives to a wider meaning only
because the supremacy of Scripture is the doctrine of
all the Churches of the Reformation. So, too,
when Charles I. declares his attachment to the
Protestant religion, he is disavowing Popery and
Puritanism together. So also Laud. But in the
Thirty Years' War did for Germany was done
for England by the Puritan policy of the Common-
wealth and the Protectorate and by the Romaniz-
ing policy of the Stuarts. In different ways both
brought the Nonconformists nearer to the Church
in a common consciousness of antagonism to the
common enemy, so that they began to be known as
Protestant dissenters in contrast with Popish
recusants and some of the extreme sectaries.
Thus Protestantism, as such was, is the social
phenomenon in every set ecumenism from the Reformation which could be considered passably orthodox.

The Quakers were included, but the claim of Socinians and Deists was more doubtful. They are not among the Protestant dissenters made subject to
the Act of Toleration, 1662. We find 'Protestant dissenters' in a bill of 1679, and constant mention of the
Protestant religion or the Protestant interest. At
the Revolution the Prince of Orange declares
(10th Oct. 1688) that he comes over as the
Protestant religion's champion; Delamere in
Cheshire rises in defence of it; and the Bill of
Rights limits the Crown to such persons as 'being
Protestants' shall make the declaration imposed on
members of Parliament in lieu of denying tran-
substantiation and disavowing the worship of the
Virgin Mary or any other saint and the sacrifice of the Mass as 'supertitious and idolatrous.

By the Act of Settlement the sovereignty must be a Protestant—perhaps a Lutheran like George 1.—but he must 'join in communion with the Church of England as it is established.' So the law still remains, except that the declaration of 1675 was abolished for members of Parliament in 1829, and softened for the King in 1911, though he is still required to be a Protestant.

5. The modern view.—The word has undergone no serious change of meaning since the end of the 17th century. But, being now opposed to Romanticism instead of to Puritanism, it was disliked by some of the High Churchmen a century ago, such as Alexander Knox; and it is now cordially defended by the Tractarians and their successors, not only as summing up most of the things that they chiefly hate, but even more as linking the Church of England with Churches of Christ which they count no better than unlawful assemblies. But, if we look at the general position—setting things instead of words—there can be no doubt that the official doctrine of the Church of England is as definitely Protestant as it can well be. To sum up in the words of Bishop Stable of Oxford:

"With characteristic frankness he [the compiler of the full Catholic character unembarrassed by any such committal (to the dogmatic utterances or disciplinary machinery of any of the Church doctrines that have called themselves) Protestant], would in the strongest way condemn the idea that would repudiate the name of Protestant as a mere name of negation, as well as the name of all the things from the negation is the whole or the most important part of our religious work and history. I should unhesitatingly reject the theory that regards Protestantism by itself, either at home or abroad, as a religious system devoid of spiritual constructive energy" (Visitation Charles, London, 1894, p. 1045).

LITERATURE.—It will be enough to name OED vii. 1594: 1. W. Wace, in Church and Faith (Essays on the teaching of the Church of England by various writers), Edinburgh and London, 1899; the ordinary histories of the Reformation, and for the Continent the elaborate art. by F. Katzenbusch, in PREP. xvi. 158 ff. II. M. G. WATKIN.

PROVERBS.—1. Definition.—While the formal definition of a proverb is difficult to frame, and every authority attempts to give his own, there is a general agreement as to the characteristics of proverbial sayings. Four qualities are necessary to constitute a proverb: brevity (or, as some prefer to put it, conciseness), sense, piquancy or salt (Trench, and popularity. Aristotle, in writing of proverbs, embodied these three of these properties in his definition, and pointed out the advantages of their conciseness (συνθεματα) and correctness (δεξιωσια), have been saved out of the wrecks and ruins of ancient philosophy. 1 More modern definitions, such as a short pithy saying in common and recognized use, 2 or 'much matter decocted into a few words,' 3 or 'the wisdom of many, and the wit of one,' 4 set forth the same elements in slightly varying phraseology. Mere brevity, however, will not give an expression the force and authority of a thousand. It must possess a serious thought, and expressions dealing with trivialities can never gain the force and prestige of proverbial sayings. By piquancy or salt we understand the wit that is embodied in a genuine adage. In its wit the proverb expresses a pungent criticism of life which frequently has a flavour of cynicism about it. On this quality depends the power of a proverb to do more than amuse the hearer. Its wit, like the barb of an arrow, makes the maxim stick in the memory. There are many sayings in all literatures which are not recognized as proverbs because they lack the element of popularity. To attain the rank of a proverb, a saying must either spring from the masses or be accepted by a people as true. In a profound sense it must be the vox populi. Eiselen, a German collector of proverbs, has emphasized this element in his definition: 'A proverb is a sentence coined with the public stamp, current and of acknowledged value among the people. To put it more briefly, a proverb is a household word of the people. James Howell, an English paronomiographer, incorporated in his collection 500 proverbial sayings which he himself invented, but, as they were not coined with the public stamp, they have never been used or quoted. A true proverb, then, is a spontaneous growth out of the soil of national character; it is in a sense autochthonous, and among the people who gave it birth it possesses a finality from which there is no appeal. This popular element is implied in the etymology of both the Latin and Greek terms. In the former language the term was proverbium, signifying 'a word uttered in public.' The synonym adagium, which is usually traced to the phrase ad aedem optimum, and from which we get our English 'adage,' besides connoting a popular origin, also suggests a moral tone and brings out the practical nature of the proverb. The Greek correlative is similar in import, παροιμια, signifying a trite roadside expression.

The stamp of public approval gives proverbs a profound influence even when they convey a false morality. A genuine proverb may not embody a true ethical principle, yet it is an index to what the people regard as true, and presents their ideals of life and conduct. Certain great names have a peculiar authority for some, and in sense an artificial, reason. All the sayings of the canonical book of Proverbs among Jews and Christians, those of the Vedie writings among the Hindus, and those that are embedded in the Qur'an among Muslims have yielded a tremendous authority, on account of the inspiration claimed for these books. Many of the sayings of Jesus are in the form of proverbs, and He frequently used proverbs to make His teaching impressive. He took some from Jewish sources and others from the current speech of the people; still others He coined Himself. The authority of these and their influence on ethics and religion are due to the unique position of authority in which the Founder of Christianity stands, to stand out of the religious the proverbial sayings of Jesus have exercised the widest and most pervasive influence of any group of proverbs.

2. Origin.—In discussing the origin of proverbs it is necessary to make a sharp distinction between the popular proverbial saying and the literary proverb, or gnomon. The latter is the product of reflection, and its final form is likely to be the result of considerable literary polishing, while the former is naive and was originally uttered spontaneously and in connection with some occasion or event that stirred the imagination. It is in keeping with its popular origin that the author of a genuine proverb is unknown; it is a spontaneous utterance which has been called forth by an unusual or stirring occasion and not experienced, or originated with the people and has gained circulation and authority through universal acceptance of its

1 J. Eiselen, Sprichworter des deutschen Volkes, Freiburg, 1840, p. x. 'Das Sprichwort ist ein mit öffentlichem Uebermenschen, auffallendem Glied, guten Correlation, wie das Wort derith men kndet.' (Second edition, Vol. 1.)

5 Proverbs and Old Sayed Saws and Adages, London, 1809.
PROVERBS

truth. The sages of Israel may have started with the popular proverb as the basis of their work, but their finished product shows evidence of careful later additions. The maxims are collected under the gnomes, and its lineage can very frequently be traced. If this distinction is maintained, the polished gems of the canonical book of Proverbs are gnomes. They are fruits of selective inspiration.

The genuine popular proverb takes us back to the infancy of races and civilizations; in their origins they belong to the age which gave birth to the folk-song and the ballad. The OT reveals the material of which the genesis of the folk-wisdom. An impressive event called it forth. The incongruity of the situation when Saul felt under the influence of the prophetic ecstasy produced such a profound impression on the popular mind that it led to the utterance of the proverb. Is Saul also among the prophets? (1 S 10:6). We also know an ancient Egyptian proverb which owes its origin to some historical event. Alluding to Merenptah's fame in Libya, it runs: 'The youth say to youth, concerning his affair, 'It has been done since the time of Re.'" Freytag thinks that many of the oldest Arabic proverbs arose in connexion with some notable event in the history of a tribe or some striking personal experience. The historical occasion that gives birth to famous proverbs is more easily traced in the Greek and Latin literatures. With the words, 'Don't move Caesaria' (μη κινείει Κατάκερα), the Greeks were accustomed to caution each other to give questions fraught with uncertain issues a wide berth. The allusion is historical and refers to the draining of the lake north of Caesarea contrary to the advice of the oracle, thus weakening the defences of the city. The famous Latin adage, "Romans sedendo vincit," sprang from the effective tactics of Hannibal's opponent, Fabius Maximus. The popular proverb, 'When you go to Rome, do as Rome does,' is an interesting instance of how an aphorism may grow out of an incident which was subsequently forgotten. Few who use it know that it had its origin in connexion with Monies, the mother of St. Augustine. As the Sabbath was a fast day in Milan according to prevailing Roman usage, but a fast at her native place of Tagaste, Monies was perplexed as to how she should observe it. St. Ambrose settled the case of conscience by uttering this oft-quoted adage.

Another group of proverbs were derived from riddles (q.v.), and it may well be that many of the maxims of the OT collection originated in this way. The adage of Pr 22:1, 'A good name is rather to be chosen than great riches, and loving favour than silver and gold,' is probably the finished form of an answer to a riddle. The riddle was probably propounded as follows: 'What is worth more than gold?' The answer would be, 'A good name.' Again, a proverb may be the condensation of a fable or parable into a single phrase. Thus arose the popular Greek adage, 'To play the fox to another fox' (έμπορευσταί πώς εμπορεύτηκαν). A popular maxim in modern times, 'Every cock on his own dunghill,' can be traced back to Seneca, who thus summed up the quintessence of one of Esop's fables ('Gallus in suo sterquilinio plinurum'). This process accounts for the genesis of English proverbs like 'sour grapes' and 'dog in the manger.'

Famous proverbs which owe their popularity to their well-balanced symmetrical phraseology have long individual histories behind them. This literary history is somewhat difficult to trace, and in connexion with the languages of antiquity. But the process by which a popular saying was cut and polished into a gem by a succession of artists may be seen in the case of Sterne's famous adage, 'God tempers the wind to the shorn lamb.' The same process is exemplified in the writings of George Herbert (1640) in the form, 'To a close-shorn sheep God gives wind by measure'; Herbert in turn borrowed it from the French, and it has been traced back to the Latin.

3. Form.—While the folk-proverb, when it originates, may not circulate in poetic dress, yet well-established proverbs and gnomes are almost invariably expressed either in rhetorical language or in poetic proper. The Hebrew proverbs of the OT canon, as well as those of Sirach, possess all the characteristic features of Hebrew poetry, the most notable of which is parallelism. Sumerian proverbs, among the most ancient that have come down to us, show a marked preference for some characteristic. Arabic proverbs are couched in the various rhymes of Arabic poetry. Gnomic poetry forms a large section of the ethical side of Sanskrit literature. The Chinese proverbs are in the form of couplets.

With the Hebrew it has been a favourite practice in the schools for the teacher to give one line and the scholar to furnish the second. The majority of Greek proverbs are metrical in form. The Greek gnomic poets, like Theognis and Solon, did for Greek literature what unknown poets did for the Hebrew—gave many of the popular proverbial sayings a literary setting and thereby invested them with a permanent influence. The usual meters of Greek proverbs are the anapestic, iambic, trochaic, and dacyleic. In modern literatures proverbs usually assume poetical form, for rhyme and alliteration lend charm not only to English proverbs but also to those of all modern nations. A few samples may suffice: 'A king's face should give grace; 'Slow help is no help'; 'Who goes in the body, unhappy goes a-sorrowing'; 'Qui prend, qui rend'; 'Chi va piano va sano, e va lontano'; 'Gute Wort find't gute Statt'; 'Wie die Arbeit, so der Lohn.' A popular Italian proverb combines the three qualities of brevity, rhyme, and alliteration: 'S'faringue, chi s'arlingue.' In the letter of Paul to the Hebrews Proverbs abound in certain figures of speech which add to their impressiveness. The two most characteristic of these figures are hyperbole and paradox. The fornications of the proverb is largely due to the employment of these figures of speech, which the Oriental especially affects. As an example of hyperbole let us cite an Arabic proverb: 'Fling him into the Nile and he will come up with a fish in his mouth,' or the German 'Wes Glück hat, dem kalbert ein Oebers' ('The lucky man's ox calves'); as a paradoxical proverb, note 'No answer is also an answer.'

4. Occurrence.—Proverbs are of universal occurrence; there is no speech or language in which they are not found. Going back to the remotest antiquity, this is true of the Semitic speech, which remains of Babylonia and Egypt. The oldest are found in a Sumerian text. Rawlinson, ii, 16, is the copy of a tablet inscribed with examples for instruction in Sumerian grammar, and a number of the proverbs are composed of a word or a verse. In all, this tablet has preserved eighteen proverbs and riddles, some of which are very

4 An excellent art. on classical proverbs is to be found in Quarterly Review, xxxv., (1869) 217 ff.
similar in structure to those of the OT. Among the Egyptians the viziers Kegnemne, Imhotep, and P'tahotep, of the Vth dynasty, put their wisdom into the form of proverbs. As these officials belonged to the King's household, their moral instruction with that conception may be gaines of the antiquity of proverbial literature among the Egyptians. Long before the days of Confucius the Chinese had embodied their wisdom in proverbs, and they were a favourite people for moral instruction with that age.

The proverb had reached a position of commanding influence among the Greeks prior to the great gnomic poets, Solon, Phocylides, and Theognis. The great lyric poets who preceded them, and the seven so-called wise men who followed, put into literary form the popular wisdom of preceding generations. An adequate testimony to this fact is the famous anthology, Sorgnadhara-Padhati, of the 14th century, containing 6000 verses culled from 284 different writers.\(^1\) Bohlingk collected 7615 verses of Sanskrit gnomics, and published them under the title Indische Sprache (Leipzig, 1870-74). Aphoristic ethical poetry was zealously cultivated among the Hindus. Turning to one of the standard collections of proverbs, the Mahabharata, and Ciceron’s De Amicitia; 2 a monument, a monumental dictionary of proverbs, we find catalogued in it proverbial sayings from every nook and corner of the world. The race, whether high or low in the scale of civilization, has always cherished and used them. Not only was this, proverbial and gnomic literature two of the seed-plots of Greek philosophy. The political and moral philosophy of the Hellenic race had its origins in the isolated maxims and proverbs of Greece and the gnomic poetry of Theognis and his contemporary, Phocylides (6th century B.C.).\(^3\)

While Greek philosophy outgrew these humble beginnings and developed into an elaborate metaphysical system, the spirit that produced the proverbs of Solomon and Sirech reached its full development within the pale of later Judaism. The number of proverbs was legion, and they were used by the learned rabbis, were current in social intercourse, and were the favourite means of imparting ethical instruction to the youth. The two Talmud, Jerusalem and Babylonian, the Mishnah, and the Midrashim, as well as the Targums, are rich in proverbs and proverbial sayings. They occur both in Aramaic and in Hebrew, touch upon almost every conceivable subject, and stretch over a period of more than 800 years of Jewish history, from Simon the Righteous (high priest, 310-291 B.C.) down to Rabbi Asher. The best known and most popular collection of Jewish proverb is found in the Mishne tract entitled Pirqui Aboth ('Sayings of the Fathers').\(^4\) Another famous collection is the Abbahu de B. Nathan. The former, usually bound with a Jewish prayer-book, contains the sayings and proverbs of 63 rabbis and teachers arranged chronologically and covering a period of 500 years, from 300 B.C. downwards. It's importance may be judged from the rule requiring a reading of one of its sections each Sabbath. The Abbahu de B. Nathan, a Tosefta or Haggada of the Mishne, contains Ababhou, consisting of 41 chapters which contain writings on proverbs and their explanations, reached its final form in the 5th century A.D.

The Jews of this period delighted in proverbs. A quotation from the Midrash Rabbah to Canticles will give an idea of the esteem in which they were held:

> Let not a proverb be despised in thine eyes, for by means of a proverb one is able to understand the words of the Torah (Malk. Cant. 16).

It was all the more highly esteemed if it could be supported by a proof text from the OT. In this

1 M. Jäger, Aesyrisches Räthsel und Sprichworte, B.A.E.S. II (1891) 274 ff.

2 This Sanskrit work is analyzed in ZDMG xxvii. (1873).

3 They are found in the verses of Hesiod and Homer, among the lines of the lyrist Pindar, the gnomic poets Solon and Theognis, the great tragedians and comic poets. The moral of many of the stories of the Hound of the Baskervilles was summed up in a proverb line which gained currency as a proverb. The great Latin poets loved the proverb, and many proverbs that are common in the modern world go back to Horace, Juvenal, or Terence; e.g., the Frenchman characterizes the favourite of fortune as 'le fils de la poule blanche,' a phrase which can be traced to Juvenal's 'gallina filius alce.' Shakespeare has given popularity and authority to many a striking sentence which has become a proverb in cultu.

4 Another famous collection is the Abbahu de B. Nathan. The former, usually bound with a Jewish prayer-book, contains the sayings and proverbs of 63 rabbis and teachers arranged chronologically and covering a period of 500 years, from 300 B.C. downwards. It's importance may be judged from the rule requiring a reading of one of its sections each Sabbath. The Abbahu de B. Nathan, a Tosefta or Haggada of the Mishne, contains Ababhou, consisting of 41 chapters which contain writings on proverbs and their explanations, reached its final form in the 5th century A.D.

The Jews of this period delighted in proverbs. A quotation from the Midrash Rabbah to Canticles will give an idea of the esteem in which they were held:

> Let not a proverb be despised in thine eyes, for by means of a proverb one is able to understand the words of the Torah (Malk. Cant. 16).

It was all the more highly esteemed if it could be supported by a proof text from the OT. In this

2 This Sanskrit work is analyzed in ZDMG xxvii. (1873).
Our investigation leads to the conclusion that among Orientals and peoples of primitive culture a gnomic literature forms the foundations of moral and political philosophy. In races of advanced civilization and culture it plays no part in the teaching of formal schools, but continues to exert an influence over the character and conception of character. Proverbs continue to be employed by poets and religious teachers to impress upon the minds of the masses fundamental principles of morality and noble living. The proverb was often a florid and picturesque description of human life and the people generally because they constitute the hoard of a nation's wisdom, the silent unconscious accumulation that grows up in a long lapse of time.

LITERATURE.—R. C. Trench, Proverbs and their Lessons, London and New York, 1865 (the best general work in English, with a valuable bibliography including a list of proverbial collections in various languages); G. Gerber, Die Sprache als Kunst, Berlin, 1855 (the author discusses the proverb as a literary form, p. 397–442); Erasmus, Adagiorum Chilidades, Venice, 1508 (a great treasure-house of classical proverbs from which all subsequent writers and collectors have borrowed); G. Strassollo, La Sapienza del Mondo, 3 vols., Turin, 1858 (an elaborate encyclopaedia of proverbs; and, an edition of the Adagiorum, translated into Italian); H. Bois, Le Poëme gnomique chez les Helvetes (Paris, 1865), Toutain; important works have been mentioned in the article and notes.

JAMES A. KELSO.

PROVIDENCE.—I. USE OF THE WORD.—The English word 'providence' is derived from the Latin providentia, foresight, and, in practice applied to thoughtful preparation for future needs. As used in religion, Providence is understood in a theistic sense to denote the care of God for His creatures, His general supervision over them, and the ordering of the whole course of things for their good. There is no corresponding word in Hebrew, though the thought is present throughout the OT. In Greek προβαίνεσθαι is used freely in classical literature for forethought, human and divine. It is employed by Herodotus, Xenophon, and Plato as an expression of the watchful care of the gods, and it forms one of the names under which Athene was worshipped at Delphi. It occurs twice in Wis (14: 1; Thy providence, O Father, guideth'), the vessel amidst the waves (Job 19: 27; lawless men are exalted from the eternal providence'). In the NT προβαίνεσθαι is found twice only (Ac 24: 20, Ro 13: 3), in both cases to describe human provision. But the doctrine of the Divine ordering of the affairs of the world pervades all the NT writings. In a very wide sense some outward or internal arrangements seem to be in the control of a Deity, which responsible teachers would not countenance.

In the more restricted area of Christian theology Divine Providence is theoretically distinguished from Divine grace on the one hand, from God's preservation of all His creatures on the one hand, and on the other, from His moral government. The latter is said to concern the character and education of men as moral creatures, their welfare and destiny, while Providence is concerned with the affairs and events of life and the way in which a Divine purpose is accomplished in and through them. The two are, however, almost inseparable even in thought. The Christian doctrine is one of faith, resting upon the attributes and character of God generally, but specifically in His foreknowledge and providence. It implies a God of unbounded wisdom, power, and goodness, who unceasingly directs human affairs, great and small, for the accomplishment of the highest spiritual ends. Divine action depends on a Divine purpose; and this perfectly explains the Divine nature and perfections. Christian faith holds that God rules and overrules all that
taketh place in the universe, so as ultimately to realize His own eternal purposes. It is always to be understood, however, that while such a thing implies a measure of symbolism. As in creation God is not a Divine 'artificer,' though the phraseology employed may seem sometimes to imply this, so in Providence He does not need to 'plan' and scheme, in any meaning of the term, as in sub specie aeternitatis. But, allowing for the imperfection of human speech, the truth as to the relation between God and the world is best conveyed by some such phraseology.

II. Historical. — 1. Introductory. — Beliefs implying some kind of living relation between divine and human beings are found in all religions; in proportion as these die down, the character of the system changes from a religion to a philosophy. Even in fetishism, or in Cilician description of Setebos, some kind of purpose is discernible, some measure of protection is granted to worshippers who take the steps necessary to propitiate the ruling power. In polytheism, with its gods many and lords many, such a word as 'Baalim' may stand simply for unknown forces in nature or for particular deities who quite arbitrarily reward their favourite devotees. But, as in Greek mythology, an order may be discernible in the pantheon. Such a measure of superiority may be assigned to Zeus, a power of which as thus outlined, is blind or intelligent. The Buddhist idea of karma — the inexorable linking of all acts with their consequences — excludes Providence. Karma does not indeed, as has been said, necessarily lie outside the pale of religion proper. A moral order may be bound up with it; a saviour of a sort may appear, and there may be, in other ways than by nirvāṇa, an end beyond the end. But in none of these cases can the word 'Providence' be applied in its usual acceptation, since this implies intelligent purpose and an end, presumably good and beneficent, together with active and constant operation for the attainment of clearly conceived designs.

2. In the OT. — The OT conception of life is dominated by the thought of Divine Providence in some form or other. The deists, who entertained the idea of God's purposes and methods and of man's relation to them. In the early stages of Israel's history these were necessarily crude and partial. Tribal and national ideas of deity prevailed, and only after the Exile was the God of Israel identified with the God of the whole earth. Without attempting in this sketch accurately to distinguish the stages of development, it may be said that, throughout the whole, God is recognized as accomplishing His purposes for men (1) in the ordinary course of nature, and (2) by means of special interventions, or miracles. Ps 104 gives a striking illustration of the belief that God in nature works for the benefit of all His creatures, making winds His messengers and lightning His minister. In Jer 31:29-32 the succession of day and night is viewed as part of a beneficent Divine 'covenant' with man, which cannot be violated or modified. The great symbolic picture of the new covenant (Mal 3:1-5) is understood as a new form of sovereign Providence. Miracles are special proofs that God, who can do whatever He wills, makes all forces to subserve His designs, especially for His own people. He works, however, not as fate, mere chance, or headstrong will; man's choice and voluntary action is presupposed; appeals are made for obedience, and disobedience will be punished. Ultimate control, however, lies with the All-Sovereign, who moulds His material as a potter the clay; in dealing with the headstrong wills of men, — and this is the essential characteristic of Joseph shows how actions intended for evil were made to accomplish good. The moral of this and nearly all OT stories is summed up in Pr 16:17: 'A man's heart deviseth his way: but Jehovah directeth all his ways.'

Even where exceptions arise so serious that it would appear either that the idea of superintendence is a mistake, or that God has forgotten, or that 'my way is hid from Jehovah,' the godly man will not dissipate his energies in vain. Some standing riddles of Providence were explicitly raised e.g., the visiting of the sins of the fathers upon the children, the sufferings of the righteous, and the prosperity of the wicked. These problems were faced by the prophets Jeremiah and Ezekiel, in certain Psalms, and in the book of Job, more or less unsuccessfully. The book of Ecclesiastes stands by itself, and its main drift has always been disputed. Its presence in the canon is probably due to the view that the awkward knots presented in earlier chapters were cut by the sharp knife applied to them all in 12:7. But some of the sceptical suggestions made in Qoheleth were recognized in passing moods by the writers of such Psalms as 40, 76, 77, and 88, who hint at a possible reconciliation of their belief in a Providence both wise and kind.

3. In the extra-canonical writings. — In the extracanonical writings of the 1st and 2nd centuries B.C. Greek and other external influences are occasionally manifest, but they show no weakening of belief in God's righteous government of the world. Anthropomorphic expressions become less frequent, and the transcendence of God is emphasized, but the moral qualities of the Deity — righteousness and loving-kindness — are as fully maintained as in the canonical books. In Wis 8:16 Divine wisdom is identical with Providence, which 'ordereth all things graciously,' and in 11:29 the same power is said to have 'ordered all things by measure, number and weight.' Delays in the execution of judgment are due to the fact that 'Thou, being sovereign over thy strength, judgest in gentleness, and with great forbearance dost thou govern us.' A power of choice is given to man, for the Lord who may have 'left his works undone', or 'that before man is life and death; and whosoever he liketh, it shall be given him.' (Sir 16:5). The language of Josephus in a much-quoted passage is not quite clear, but he seems to ascribe to the Pharisees a belief in 'fate, which co-operates in every action,' while the Sadducees 'ascribe all evil to man's free choice.' (BJ II. viii. 14, Ant. XIII. v. 9). The chief differences, however, in the Jewish doctrine of Providence during this period are due to a growing belief in a future life and in judgment beyond the grave, as well as to the general tenor of Apocalyptic teaching concerning the relation of the present and the coming age. In 2 Mac 7 the hope is several times reiterated that 'the King of the heavens' will execute 'his laws unto an eternal renewal of life.' (vv. 25, 36 etc.)

4. In the NT. — The NT is continuous with the OT, but its doctrine of Providence is more minute, more personal, more tender. The teaching of Jesus is the key-note. Not the Lord of heaven and earth, mindful of Israel alone among the nations, is there celebrated, but 'your Father which is in heaven,' who clothes the lilies with beauty, and without whose will not a sparrow falls. The Lord's Prayer is addressed to a Father who can and will care for both the bodies and the souls of His children. The impartiality of the Creator
under a ‘reign of law’ is recognized in Mt 5:8, as well as the special response which He makes to the belief of his hearer in his divine origin (Mt 22:28).

Rash conclusions concerning the character of those upon whom grievous calamities have fallen are condemned (1 K 18:1-3); the anomalies and inequalities of earthly conditions will be rectified at the great Day of Judgment, is to control the rewards and punishments then to be allotted. The parables of the Tares, of Dives and Lazarus, and those recorded in Mt 25 are sufficient indications of this.

The Apostles in their teaching follow the lines thus laid down. St. Paul occasionally affords a glimpse into his philosophy of history, as in Ro 9-11 and 1 Co 15:-23. The teaching of 1 Peter on suffering, of Hebrews on the two Covenants and their lessons, of 2 Peter on Divine forbearance, and of the Apocalypse on present and future judgments shows how largely the early Church in times of severe persecution found its theodicy in expectations of a coming age. The OT teaching concerning the Divine purposes in ordering the course of this world is for the most part preserved in the NT with special emphasis on the redeeming love, as well as the judicial righteousness, of God. But nothing less than a revolution was created by the revelation of a future life and the Resurrection and Second Coming of Him who had abolished death and brought life and immortality to light through the gospel. Whilst the same elements are preserved in the spiritual landscape, the focus of the picture is so altered, and its proportions and values are so different, that this is what is called the new. Problems of Providence almost disappear in the light of grace and the glory which shines into the present life from beyond the grave.

5. In Greco-Roman teaching.—Greco-Roman teaching on what corresponds to a doctrine of Providence is chiefly represented in the Stoic schools. Earlier traditions are found in popular mythologies, which present for the most part a superficial view of life and human affairs. The schools of philosophy represented by Herakleitos and Anaxagoras inculcated a belief in the Eternal Reason, while lofty views of justice and retribution appear in the great Greek dramatists. Plato stands for the supremacy of the Right and the Good, for a World-Reason, and a World-Process, the deep reason of which is the Law. But he taught no doctrine of the personal care of a personal God. Aristotle followed on similar lines, and may be said to have taught monotheism without God. He believed in order, harmony, unity of control in the course of the world, but the fact that his interpreters still debate concerning the connotation of the term ‘God’ in his writings speaks for itself. Cicero represents the best side of paganism when he makes Balbus say that, granted the existence of the gods, it must be acknowledged that the administration of the world is carried on ‘eorum consilio’ (De Nat. Deor. ii. 30).

Epicurus and Zeno represent opposite poles of thought. The Epicurean held that fear of the gods was servile, that those who wish to live in serenity care nothing for the gods, as the gods, if there be such, care nothing for them. The Stoic, on the other hand, emphasized the unity of life and the will of Providence, though without theistic implications. His doctrine is a form of pantheistic monism, the world being a single substance, a kind of self-evolution of the Deity. God was but a mode of matter, or matter a mode of God. The two systems thus meet. Stoicism and Christianity is superficial and largely a matter of phraseology, though the coincidence of words and phrases is often very striking. Lightfoot, in his essay on

Paul and Seneca (Philippiens, London, 1878, pp. 270-288), has illustrated this subject at length. Parts of Cleante’s Human to Zeno might be illustrated by a theist believing in Providential government. But the God of Stoicism is synonymous with nature, necessity, fate, the all. The Stoic said ‘God is spirit,’ but his πνεῦμα was an etherealized form of God, a spirit. The Stoic’s God is alive. The Providence of the Stoics was a kind of causal nexus running through the whole universe. All that happens is through determination, ἐκπροήνυς, that which is fixed by fate. The glorification of the world was a superficial, external characteristic of the Stoic. It shows that no personal interest or care was ascribed to the abstraction called God. To ‘live according to nature’ meant that each man formed part of a mighty and orderly system, in harmony with which it was his duty to live, submissive to that 'universal of which Marcus says:

‘O Nature! From thee are all things, in thee all things subsist, and to thee all tend’ (Meditations, lv. 19).

Neo-Platonism exhibits more affinity with Christianity on the mystical side, but its speculative doctrine of an immanent Neoplatonism stands diametrically opposed to such a relation between God and the world as is implied by a fatherly Providence.

6. Patriotic and Scholastic.—In the Patriotic and Scholastic periods of the Christian Church interest, so far as our subject is concerned, circles chiefly round the great standing problems of the existence of evil and of predestination versus free will. A general doctrine of Providence is assumed by Calvin in his teachings on grace and the belief in God. The Greek Fathers from Clement and Origen onwards taught human freedom and responsibility, and were disposed to explain the presence of evil in the world by describing it as negative, not as an essential substance. The teaching of predestination in the West was in practice held side by side with a belief in Providence, Augustine furnishing a striking example of this. In a famous passage (Conf. bk. vii. chs. 11, 18) he describes God as the only really evil being at the same time ‘the good’ and ‘partial good’ (see also Soliloq. i. 21). But, combined with these distinctly Neo-Platonic elements, Augustine taught a clear and elaborate doctrine of Providence as controlling events in their utmost details. His treatise de Civitate Dei formulates a philosophy of History, and maintains a God-centered conception. Scholasticism, by its intimate blending of philosophy and theology, did much to develop Christian doctrine on the relation between God and the world. Thomas Aquinus brought all his resources to bear on questions of this kind. His position is that of a modified predestinationism. The Divine foreordination which he teaches leaves room—at the expense of some inconsistency—both for human free will and for a doctrine of Providence which theoretically embraces all details in human history. Roman Catholic doctrine as formulated at Trent is based on Aquinas, and exhibits God as Ruler and Guardian of men in the ministration of individual life, as well as in the broad outlines of national history.

7. Protestant.—Protestantism manifested little divergence on the great fundamental questions of natural theology. Luther, Calvin, and Zwingli alike understood by Providence a Divine foreordination, which included the operations of man as well as the divine. Theirs was a practical faith. The actions of wicked men are so overruled by Divine wisdom and power that the presence of evil in the world is no blot upon God’s character and government. Few attempted to work out the theistic problems of Malebranche, which implied the continuous interposition of the Deity and treated finite things as
affording only "occasions" for Divine operations, may be mentioned as one hypothesis. It was not accepted by many, and was obviously open to the charge of implying a kind of perpetual miracle. It made way for the more reasonable theory of 'concurrence' (see below). The rationalism (q.e.v.) of the 18th. cent. produced both the Theodote of Leibniz, with his "ultimate principles of the concurrence of all its imperfections, the best of all possible worlds, and the caustic scepticism of Voltaire, who in Candide satirized an optimism which could accept the earthquake of Lisbon with a light heart. It was left for the 19th. cent. to prove that "the fact nor the sneer of the cynic was adequate to deal with the facts of life and history.

III. Modern Conceptions. — 1. 19th. cent. theology. — The changes discernible in the course of the 19th. cent. were produced in the main by the following causes, themselves more or less closely connected: (1) a change in the conception of God, which may be described as a passing from deism to theism, from a belief in a transcendent Deity, set over against the world which He originally created, to a God immanent as well as transcendent, informing and sustaining a created universe, which continues to be entirely dependent on His indwelling power; the cold rationalism which was sometimes associated with such a change displaced belief in One who meets the craving of the human spirit for union and communion with the living God; (2) the influence of modern physical science, which in the first instance attacked the mechanism of the universe, but which ultimately, through its doctrine of evolution, revealed the world as an organism developing under the influence of indwelling life; (3) philosophical tendencies of an idealistic type, operative mainly at the close of the century. These affected very deeply the view taken of the relation between God and the world, and consequently the meaning of Providence. As a matter of fact, in the Christian theology of the period the name 'God' covered various undefined meanings, ranging from bare theism to views which approached pantheism. The prevalent orthodox opinion was described by the term concursus, adapted from the Schoolmen, implying a joint activity of God and man, so that the effect of every act is produced not by divine but divine-creative influence. There is one efficiency of God and the creature, the evil in sinful deeds being due to man alone.

2. The crucial question of to-day. — The significance and bearings of 'concurrence' had certainly not been thought out. The scientific discoveries and philosophical activities of the 19th. cent. forced upon theologians a number of questions which they were only partly prepared to answer. The worlds of theology, philosophy, physical science, and ordinary practical life had been so far apart that what may be called the necessary exosmosis and endosmosis of ideas was not effected. Such intercommunication is still far from complete, but the process has been carried far enough to show that the complex questions raised by the term 'Providence' can be answered only by a new and nuanced understanding of the relations between God and man.

Hume, among other questions which roused men from dogmatic slumber, put this very searching one: in the many cases in which the material is wholly empirical? If so, all depends on the definition of experience. 'What are the facts on which an inquiry into Providence — in the sense of belief in an Orderer of human life, both omnipotent and beneficent — can be based? As it is, they are clearly insufficient. The whole experience of man must be taken into account, and mere colligation of happenings will not suffice. Their interpretation is all-important, and in the process postulates are employed concerning which fundamental differences of opinion exist. The hypothesis of blind force as the originating and sustaining cause of the universe may be read into what are called facts, as well as the hypothesis of a celestial Arbiter, or of an indwelling as well as overruling Deity of the universe. The hypothesis, of course, implied the question, Which of these theories best accounts for all the facts of human experience, and what doctrine of Providence, or the maintenance of a Divine purpose in human affairs, is warranted in the light of the evidence? Why is it, then, that the doctrine is one of faith, is the faith reasonably based upon all the facts, physical, moral, and spiritual, of human life? Is it from this standpoint that the subject has been approached during the close of the 19th and the opening of the 20th century.

Does the theory of an overruling Providence, all-wise, almighty, and all-good, 'work'? That is, does it give a permanently satisfactory account of the facts of life, and result in a permanently satisfying explanation of them from a moral and spiritual point of view? If it be granted to the theist that there is a God, who operates within, as well as over, the existing order, do the facts warrant a belief that He has power and wisdom enough to correspondingly order the whole and create it beneficial enough to bear out the statement that He is as gracious as He is powerful and wise? No doctrine of Providence can satisfy the modern mind which cannot frankly meet this question. But the issues raised are so vast and complex, and they are so distinctly personal and ethical, rather than philosophical and scientific, that they are, as they always have been, differently determined by different inquirers.

3. General Providence. — The answers given by the best representatives of modern Protestant theology may be described under two headings—general and special (or particular) Providence. Certain general principles in the ordering of human affairs which imply a controlling Deity are such as these: (1) God works by law, i.e. by a regular and uniform, not by an irregular and arbitrary, method; and this recognized order, while it raises serious difficulties in particular cases, is obviously advantageous to the welfare of the whole. But the Divine design is not in any way the simple result of a plastic material substance, but upon the partially independent and largely recalcitrant wills of men. Hence conflict is discernible, contradictions appear, and at best, delay arises in the accomplishment of results. The principles of (2) solidarity and (3) sacrifice are also discernible. These imply that men as a race stand or fall together; that, in the family, in society, in the nation, and as time advances in the history of the race, individuals are made to realize the importance of self-denial, self-sacrifice, and it may be self-surrender, for the good of the whole. The relation between the parts and the whole in the organism, imperfectly understood at first, and still ignored in thought and practice by many, becomes increasingly clear as the knowledge and experience of mankind extend. And the twin principles of solidarity and sacrifice are pillars upon which any doctrine of Providence must ultimately rest. (4) While advance in the accomplishment of Divine design is slow and impeded by only too obvious retrogression, progress is on the whole discernible, though the goal which by hypothesis is being aimed at can be reached only by advance of an example imperfect but a perfect kind. The above considerations belong to the doctrine of Providence. (5) The believer in a special Christian revelation turns naturally to that as normative and determin-
ative amidst the baffling complexities of human
history. Faith in Christ holds a clue to the
infinite which unaided reason disdains to see.
Whether Christian faith can be proved to be
in itself reasonable or not depends upon the extent
to which the Christian solution, resting upon the
Incarnation, the Cross, and the Resurrection, can
be demonstrated to be true.

4. 'Special Providence.'—The term 'special
Providence' dates from the time of the Schoolmen,
who distinguished between Providence universal,
general, particular, special, and most special.
Divinity was brought upon the idea by the
way in which it was viewed and the
inferences drawn from supposed Divine
intervention in particular cases. But it is obvious that the
Providence which does not concern itself with species
and genus as well as with universum, and with
the individual as well as with the race, is none at
all. A deity who is 'careful of the type' and
'careless of the single life' does not exercise pro-
vidence in the usual acceptation of the word.
The doctrine of special Providence means that God is
able and willing, not only to promote general well-
being, but also to secure to every one who trusts
and obeys Him that all things shall work together
for his true personal welfare. God does not gener-
alize without particularizing. Such a process is as
meaningless in the realm of individual
creatures in the realm of morals. The Father in heaven
makes His sun to shine on evil and good alike;
He operates by general laws. But He also
orders their working in the natural and spiritual
world, taking the whole thing all in
made, sooner or later, to contribute to the allaying
welfare of the faithful servant of God. In
this ordered whole there is no distinction of small
and great, as the words are often understood.
The criterion of magnitude and importance is to be
found in the spiritual world. The care for the
welfare of the individual does not abrogate general
laws. A doctrine of special Providence does not
imply the deliverance of the individual from
specific dangers or the granting to him of specific
advantages, but it does mean that man has a fully differ-
ental signification for different men. Opportunities
proverbially come to him who is ready to use them.
And all things may 'work together for good to
themselves that love God,' in a sense that is not, and
cannot be, limited to those who are specially found
in union with Himself and in harmony with His
great designs.

It may be said that some belief of this kind is essen-
tial to a theistic religion. It is tested in practice by a belief in the efficacy of prayer
and by a corresponding doctrine of values in personal,
social, national, and racial life. It cannot be proved by a
priori reasoning or established by a
complete induction from the events of experience,
especially as understood by those for whom the
word 'spiritual' has little or no meaning. But it
represents a reasonable faith, not a creduulous or
superstitious attitude towards the universe, because
it is open to receive all well-attested facts and
furnishes the best explanation of experience as a
whole, when studied from a moral and spiritual
point of view.

IV. PROBLEMS RAISED.—The difficulties in the
way of the acceptance of a doctrine of Providence are in
the main those raised against theism (q.v.). This
theory is more prominent in those who are
in the prominence of the
in spite of the prevalence of pain, failure, death,
and other factors of existence, of which under the
rule of a perfectly good God only partial
explanations can be given. The doctrine of Providence is
the feature of thatism most frequently assailed and
least difficult to defend, making, as it does, the
lofty claim that all human activities are subordi-
nated to the accomplishment of the Divine will and
to purposes of perfect benevolence. Some of the
problems raised are metaphysical and concern
the relation of the One to the many, or the compati-
bility of Divine foreknowledge with human free
will. Others are ethical and can be satisfactorily
dealt with only as parts of a complex whole (see
Ethics). These demands must be
met.

1. Evolution and design.—Evolution as part of
the Divine method in the genesis and history of
life is an inseparable part of the theism. It does not
exclude purpose. The study of processes need
not interfere—though in practice it may often do
so—with a belief in ends. The principles of evolu-
tion as traced in the lower organisms can be
applied to human society only with very important
modifications; but, so far as evolutionary methods
are discernible, they do not interfere with design.
Though they may destroy the evidence for certain
separate and specific designs and ends, they help
greatly in building up a conception of one vast
purpose, which, as yet only hinted at, is that Man is
on this planet the consummation of life, and it is quite consistent with all that is known of
his development to hold that by the operation of
Providence the history of mankind is being so
organized that the human race may realize its highest con-
ceiveable capacity.

2. Immanence and transcendence.—The idea of
Divine immanence, which has gained such hold of
recent years, may seem to undermine belief in
Providence—a doctrine essentially dependent on
Divine transcendence. The theist claims to main-
tain both doctrines side by side. If immanence is
accepted as sometimes taught, it approaches
pantheism, and the possibility of Providence pro-
portionately disappears. A professed theist, who
yet ignores or denies the transcendence of a personal
God, has no real belief in Providence. But even
Matthew Arnold's 'The Eternal, not ourselves,
that makes for righteousness' at least prepares the
way for a doctrine which Shakespeare's 'divinity
that doth apply itself to mortal ends, removes the
will,' carries a stage further. Also, 'immanence'
is a word only recently adopted to express, not
quite happily, the fact that the Divine relation to
the creature, and especially the course of human
history, is not necessarily contradicted by the modern
contemporary writers frequently does, imply move-
ment in one or more of the following directions:
(a) a proposition against undue reliance on Divine
intervention from without, especially in
immanence, the acceptance of self-limitation on the part of the
Deity as beginning in creation and continuous
PSYCHICAL RESEARCH

throughout in His relation with the creature; (e) hence the admission that the course of human history, whilst ordered for good, is not the best possible or conceivable. Man has a measure of power to delay, or annul, a Divine work which he cannot ultimately prevent. If the action of Providence is discernible in the destruction of the Armada or the basishment of Napoleon to St. Helena, account must also be given of the murder of Lincoln at a critical moment in the history of the United States, or of the death or life of the egocentric of the German Emperor Frederick III. and the succession of so different a ruler as William II. (d) Arguments for or against a belief in the Divine control of human affairs can never be satisfactorily based on isolated events. It is the power to compel all seeming and real discordos into universal harmony that is asserted; and this by means of an indwelling life, rather than a merely external control and mastery.

Divine omnipotence.—Discussions concerning the nature of Divine omniscience and omnipotence, and the relation of these to man's freedom of choice, cannot be dealt with here (see Free Will, God, Predestination). It may be said, however, in a word that the doctrine of omnipotence has often been attributed to the creaturely will. The reality of the creaturely will may be real and operative within limits without impugning the doctrine of Divine control. As Herbert puts it,

'Either thy command, or thy permission,
Lay hands on all: they are thy right or left.'

(The Temple.—Providence.)

A line in the context of the same poem puts the truth still more succinctly;

'All things have their will, yet none but thine.'

4. Some moral problems.—One large class of perpetually recurring problems arises from the constitution of nature as a whole, man forming only a part of this, and sometimes a distinctly subordinate part. The phenomena of physical pain and death fall to be considered under this heading. The theistic contention is that the facts point not to essential dualism in the order of nature, but to the development of designs which include the welfare of the human race as a whole, but as a relative rather than as an absolute end. The existence and course of moral evil or Error which will constitute a still graver difficulty, which is discussed in Art. GOOD AND EVIL, but which does not necessitate either, on the one hand, an explanation of sin as mere negation or, on the other, a denial of the holy love of God.

5. Immortality.—No doctrine of Providence can be complete which does not deal with the question of immortality. If life beyond the grave is wholly denied, our estimate of human nature and the significance of human life is altogether changed. Natural theology cannot prove immortality, but it can build up a strong argument in its favour, 'since a contrary supposition is negatived by all that we know of the habits and methods of the cosmic process of Evolution' (J. Tykel, Life Everlasting, London, 1901, p. 86 f.). But, at the best, strong and confident hope is all that can be reached on the basis of natural theology, and hope cannot be used to establish a doctrine of Providence. If, however, the Christian revelation is to be trusted, the solution of the most perplexing relation to the Divine government of the world may be postponed until the dawn of a future life illumines them. Enough if it be true concerning God as revealed in Christ that 'of Him, through Him, and in Him are all things' (Phil. iv. 19), that the far-off Divine event to which the whole creation moves' will be realized in the End beyond the end, when the Son has delivered up the Kingdom to the Father and God is all in all.

PSYCHICAL RESEARCH.—During the ages of universal belief in ghosts and spirits, phenomena were commonly attributed to their agency. In antiquity visions, hauntings, hallucinations, and clairvoyance were, as a matter of course, referred to spirits. The old Romans practised crystallogamy and hydromancy, i.e. clairvoyance by gazing in crystals and at the surface of still water. They knew also the 'divining rod' in the form of the pendulum explorateur. The forked rod for centuries has been used to discover treasures, and even to trace criminals to their hiding-places; and the belief in premonition, received in dreams or in waking dreams at ages older than Gurney's 'Census of Hallucination.'

But these and other unusual phenomena, real or alleged, readily explicable through spirits while the belief in their existence was unshaken, grew in the hysteric period. The troubled mind was lost, and clairvoyance were, as a matter of course, referred to spirits. The old Romans practised crystallogamy and hydromancy, i.e. clairvoyance by gazing in crystals and at the surface of still water. They knew also the 'divining rod' in the form of the pendulum explorateur. issued contain extensive reports upon telepathy (thought- and feeling-transference), automatism of various sorts (divining-rod, table-moving, automatic writing, slate-writing, etc.), clairvoyance, levitation, psychical rappings, phenomena of premonitions, spirit-communications, and other topics.

For convenience the facts studied may be roughly classified as physical and psychical. The first class includes levitation and translation (of tables, of attendants, of bodies), evaporation (of ghosts and other objects), the production of noises, music, etc. To the second class belong premonitory or otherwise significant visions (crystal-gazing, apparitions), the discovery of occult or means of the written clairvoyance, clairaudience, slate-writing, and the alleged ‘messages’ from spirits expressed through a ‘medium.’

The outcome of the work of the S.P.R. with regard to the physical phenomena may be conservatively summed up as the establishment of the improbability of there being anything in them but conscious or unconscious fraud—unconscious when the medium performs while in a trance. The evidence for this unfavourable verdict cannot be adduced here. But it is clear that the conditions under which the performances of ‘physical’ mediums are conducted, the difficulty of obtaining their consent to satisfactory test-conditions, and what happens when those conditions are accepted, are so brief the case of the latest and best studied great claimant to the possession of mysterious power, Eusapia Palladino.

Palladino, an Italian peasant woman, who had from her early youth an extraordinary faculty of powers, became known to the S.P.R. in 1913 as a series of sittings held in Milan before a meeting of chemists. Her power was detected therapeutically, and was under investigation by a number of noted chemists, but also her evoked avarice to really scientific control, and the impotency to which she is reduced when she submits to conditions of test that are not favorable to his experiments, the investigation of Palladino’s possession of an unknown power. It was found that, whenever the two feet of the table nearest to her, one of the feet was lifted, and an increase in her weight, corresponding to the weight of the table, and whenever the two feet opposite the end at which she was seated were raised. This was evidenced by the apparatus. It is just what would be expected on the supposition that the table was moving. The table might be the case of the former cases the weight of the table rested on her body, and in the latter she pressed upon the near end of the table in order to cause the raising of the opposite end. Her success in defeating ‘without contact’ a delicate balance gave way to complete failure when it was protected in various ways. It was, moreover, discovered that a long hair and a pin were among the apparatus apparently required for the performance of this feat.

These and similarly suspicious or confounding facts might, it seems, have convinced the committee that they were investigating merely a very clever prestidigitator; yet their researches were not finished. They were directed to examine the apparatus and the possession of an unknown power. It is argued that deception in a medium does not preclude the possession of supernormal power, and that the demonstration of even occasional deception is not sufficient warrant for judging all the tests to be tricks. The argument is based on the combination of frequency of deception, kinds of performance, and the number of the required conditions. The committee has been permitted to examine the apparatus and the possession of a medium’s power. This combination of factors is realized in Palladino’s case. The most suspicious test in the French investigators he operated under the following conditions. The room in which the experiments were made was dark, or at times, quite dark. The darker the room, the more the control was exercised by the performances. The control of the medium’s hands was theoretically secured by two persons, each holding one of hers; but in practice she insisted, when she chose, upon the right place to hand her hands on those of the controllers, and even, at times, to give them gentle tape instead of remaining in uninterrupted contact with them. Corresponding conditions existed as to the control of the table. The various statements she was making were with those of the controllers. She refused to have pieces of tape seven centimetres long sewed between her hands and the table, and the controllers agreed to allow observers to be stationed in the room elsewhere than around the table. After the first flash-light photographs had been taken, the S.P.R. committee refused to permit any to be taken outside of it, in order to prevent anyone from photographic the apparatus. In the second sitting in Milan, after she was caught at tricks of the same sort as those in which she was:

(1) every one of the conditions that she maintained against the work of deception, and to be necessarily familiar with the apparatus. Why must there be a cabinet closed in front of a curtain? Why must the stand, the other objects, be the legs of her table or feet? Why the poor illumination? Why was she not willing to suffer the annoyance of an unexpected flash of light of a safe control of her hands and feet? Were she occasionally honest, she might, it seems, occasionally dispense with some or all of these suspicious conditions. That certain requirements must be observed in order to make possible the manifestation of any power is not disputed. But why is it that those demanded are precisely those that would afford the medium a chance of deceit? We need not be deterred from a negative conclusion by the writer’s declaration that they cannot possibly understand how, in light sufficient for observation and with her hands and feet under control, Palladino could by normal means accomplish the same effects. It is quite possible to show how easy it would be for the them to have their sittings anywhere they chose, without anyone having to recognize their faces in the air appearing on the medium’s neck and head. Their judgment as to the sufficient of hands and of the location of the medium’s hands while under control can evidently not be relied upon.

What is true of Palladino is true in substance of all mediums, so far as the production of physical phenomena is concerned. Every one of them, with the single exception of Daniel Dunglas Home, has been detected in deception. The distinguished personality of this famous medium inspired too much respect among the small and carefully selected circle before whom he performed to permit of the suspicion of trickery. He was, therefore, spared the humiliation of an investigation implying the possibility of fraud.

Certain of the wonder-excitng phenomena recently subjected to scientific study are complicating being examined and by means of mediums, and even in some cases in the agent of unusual susceptibility to certain sensory stimuli. It has been established, e.g., that the movements of the rod which indicates the presence of water is unconsciously imparted to the rod. These are movements of the object, by a person in contact with one knowing its location, is achieved by the ‘reading’ of slight unconscious movements. But automatism is only the beginning of an explanation of these phenomena. Why should the hands of the dowsers move when over water, and how is it that movements seemingly too slight to offer any guidance are, nevertheless, in the experiments referred to, sufficient to lead the percipient to the hidden object? The existence of the percipient of an invisible medium of kind, the pertinent explanation. Should cases occur which this explanation does not fit, the possibility of telepathic communication between the persons in contact, or even perception of the mind-perceivable, or can the person in contact him, would have to be considered. Neither one nor the other of these explanations is applicable to the dowser. Vision, or another kind of perception of the water or the object is impossible, interposition has been suggested as a possible explanation; but, before reconnoitre is had to clairvoyance, it may be demanded that the fact itself be more firmly established than it now is. The doubter must, however, admit that the reported experiments (W. F. Barrett, ‘On the so-called Divining Rod,' _Proc._
The greatest achievement of the psychical researchers is the well-nigh unquestionable demonstration of occasional communication between living persons without any known intermediary (telepathy). The evidence is now of such quality and quantity even particular sceptical investigators find it impossible to deny its adequacy. The evidence consists of experimental and of spontaneous communications. Among the notable experiments are those conducted by Prof. and Mrs. H. Sidgwick, in which a percipient named numbers of two digits taken out of a bag by the former. Of 644 trials 133 were entirely successful—i.e. the two digits were correctly given; and in 14 trials the right digits were given, but in the reverse order. None of the tricks known to an experienced prestidigitator could apparently find application in this, or in several other instances of the same sort.

In Phantoms of the Living Edmund Gurney has published over 200 well-attested instances of spontaneous hallucinations. These phenomena are termed 'Hallucination' and the subsequent more elaborate census of a committee of the S.P.R. apparently prove that the number of veridical hallucinations is much greater than is indicated by the rule of elenct of the S.P.R. x. (1894) 303. It must, moreover, be acknowledged that, when hallucinations include several veridical incidents not logically connected, none of which is ordinary or to be naturally expected by the percipient, a small number of such cases is sufficient to exclude coincidence as an explanation.

But, even were it possible to dismiss these spontaneous, premonitory hallucinations as due to coincidence, mistake, or deceit, there would yet remain the weighty experimental evidence for thought-telepathy. Nevertheless, the critical investigator may well stop short of complete assurance when he considers that these experiments are only sporadically successful. The only persons able to produce, whenever desired, alleged telepathic feats either are definitely known to be deceivers or are open to serious suspicion. No fact may be incorporated in any science unless the conditions of its appearance are known sufficiently to make possible either its reproduction or the circumstantial prediction of its recurrence. Conviction of the reality of telepathy will not become general among men of science until one or the other of these conditions is realized.

As to the tentative explanation of telepathy, we may say here merely that the dominant tendency is to seek for a physical explanation on the analogy of the wireless transmission of electric energy. Vibrations of some sort, produced by a brain in a particular physiological state, are supposed to be transmitted to another brain in a condition that makes it an appropriate receiver. The main difficulty in the way of this theory seems to be the distance (half the circumference of the earth) through which these waves would at times reach the receiving brain. But, until we know more about this transmission and acknowledge the insufficiency of little force in the objection that its energy is insufficient.

Clairvoyance, or, as it is also called, teleesthesia, is commonly produced by gazing in a crystal or at other perfect know and skill. This may have been able to reproduce correctly, remains for future investigations to disclose. As long as we can affirm with Podmore that 'the trance personalities have never told us anything which was not possibly, scarcely anything which was not prob-
ably, within the knowledge of some living person' (p. 312), telepathy will appear the more plausible and the less revolutionary hypothesis. But who will venture to formulate the test which will measure particular phenomena as not within the 'possibly known' to some one living anywhere on the surface of the globe?

The telepathic hypothesis of spirit-messages received suggests the knapsack of meaningless assertions from the 'revelations' made by the alleged spirits regarding their state and the circumstances of their existence. They have been fairly loquacious; yet none of them, not even those from whom much could have been expected, have revealed anything more definite of the spirits' nature than the insignificance of their remarks concerning the other life is the pertinacious effort of these alleged spirits to avoid answering the many and pointed questions addressed to them on that subject. From Richard Hodgson, the late secretary of the S.P.R., nothing enlightening has been learned, despite his haste in giving sign of his existence. For several years after his death Mrs. Piper scarcely held a sitting without some manifestation of what professed to be her influence. Of trifling incidents which may be useful in establishing his identity he talked abundantly; but, when questioned concerning the circumstances of his existence, he either drivelled or excused himself clumsily and departed. Frederic Myers and William James have been equally disquieting.

It has been urged that the spirits may find it difficult to work with the muscular mechanism of the medium; a disincarnate soul may be inefficient in the matter of physical control for a time not fully conscious and muddled. The fact is, however, that spirits do communicate a great many things; it takes volumes to record their utterances! The difficulties are apparently of such peculiar nature that nothing concerning the other life, and only things that have taken place on this earth, transpire. None of the hypotheses offered accounts for this puzzling aspect of the communications—not even the latest suggestion which would shift the blame from the spirit to the medium. Here we are asked to admit that, because of the peculiar condition of spirit-existence, the spirit's mental content is transmitted whole to the medium—in a lump, as it were—instead of coming out in the organized and selected form which his questions demand. Were it so, it would be small wonder that the medium should grow confused, contradict himself, and speak irreverently. But why, when he knows that the sitter seeks information on things above, does the medium not succeed once in a while in choosing in the total consciousness of the spirit something which would gratify the sitter's curiosity? Why are the things picked out always trifling, meaningless, or ridiculous? To this pertinent question no satisfactory answer has ever been given. The limitation of the knapsack of meanings of spirit to earthly facts points to an earthly origin of the medium's information.

One may, perhaps, venture to quote William James as a fair representative of those among the well-informed who regard the mediumship death mark as unsolved. Shortly before his death he wrote:

'For twenty-five years I have been in touch with the literature of Psychic Research, and I have been acquainted with numerous Researchers ... yet I am theoretically no further than I was at the beginning' (American Magazine, lviii. [1900] 28).

As to those who regard the results of the S.P.R. as proving survival, they must admit that no amount of optimism and ingenuity in explanation can hide the repulsiveness of such glimpses of the future life as they have caught and its lack of the essential features of the Christian conception. In any case, then, the belief in the Christian hereafter, elaborated by humanity under the pressure of exalted desires, remains entirely unbuttressed.

If, after thirty-four years of activity, many of the mysteries which the S.P.R. set out to explore are still unfathomed, much has, nevertheless, been explained. Thus the mischief which mystery works upon credulous humanity has been lessened by the extension of the field of scientific control. This is particularly true with regard to the various forms of automaticism. But the greatest accomplishment to record is the approximate demonstration that, under circumstances still mostly unknown, the human mind may be directed by other than the usual means, perhaps by direct communication between brains (telepathy) at practically any earthly distance from each other. This dark opening is indeed portentous. It may at any time lead to discoveries which will dwarf into insignificance any of the previous achievements of science.

JAMES H. LEUBA.

PSYCHOLOGY.—I. DEFINITION AND SCOPE.

1. Psychology the study of the world of experiences. Our cursory glance at the literature of this subject shows that it deals chiefly with the direct impressions of sense, such as colours, sounds, tastes, and smells; with their complex integrations, such as visual forms in one, two, or three dimensions, groups of consonant and dissonant tones, verbal sequence, melody, and the localization of these sensory experiences; with our apprehension and appreciation of space; with our perception of objects and our general notions regarding them; with memory, imagination, thinking; with feeling, passion, and sentiment; with voluntary activities of all kinds, whether ideal or practical; and with a number of general questions arising out of these topics. It does not deal with the parts and processes of the material world, but with all our reactions to it. One might almost say that the real world, so far as it is known to us, is the world of psychology. Or, if the difficulty of separating the material objective world from our activity with it is pointed out, we may say that psychology deals with all of the world that is immediately or directly before us; or with the world in so far as it is momentarily dependent upon our own activity; if we shut our eyes, all colours and their forms and localizations vanish from us as actualities; if we cease to remember, the things of the past are no longer with us; when love takes the place of hate, the object which is hateful vanishes from us as a world. Or, if the difficulty of separating the material objective world from our activity with it is pointed out, we may say that psychology deals with all of the world that is immediately or directly before us; or with the world in so far as it is momentarily dependent upon our own activity; if we shut our eyes, all colours and their forms and localizations vanish from us as actualities; if we cease to remember, the things of the past are no longer with us; when love takes the place of hate, the object which is hateful vanishes from us as a world.

This obvious distinction between the world in so far as it is dependent upon itself and upon us is commonly expressed by saying that, whereas the natural sciences study the world of nature, psychology is the world of mind as it appears to us. The objects which psychology studies are known as experiences. There are many other special sciences that deal with experiences; but psychology is the fundamental one. It holds the same place in the world of mind as physics does in the world of nature. It is the basic mental science.
In such a statement of the subject-matter of psychology as this three terms inevitably emerge into prominence: 'nature,' 'experience,' and 'self.' The world appears to us in experience. Experience is that aspect of the world that is (more or less accurately) the object of our activity. The world is the manifold of implications of experiences that is not momentarily dependent upon our activity. We are that which, over against the fleeting medium of experience, partakes somewhat of the permanence of the world.

Now, if it is commonly admitted that the primary object of psychology is the study of experience, the further question must arise as to what concern psychology has with the relation of experience to the world and to the self.

2. Relation of experience to the world.—(a) Psychology and epistemology.—In its broadest form the relation to the world is the problem of epistemology—not, How in actual fact do we become aware of the world? (that is a purely psychological problem), but, By what right do we assert the existence of a world independent, to whatever extent, of experience (and of the self)? It might well be asserted that the only possible answer to the question of right is the correct answer to the question of how. That an answer that is often made to the effect that psychology can have no legitimate concern with truth or error. It is the business of logic to establish correct conclusions, and perhaps to classify fallacies; psychology will record and describe with impartiality the correct conclusion drawn by one man and the wrong conclusion drawn by another. Because the problem of psychology includes both the 'correct' and the 'false' process, it will make generalizations about experience, valid or invalid, for what is logically true or rational. And in any case it requires a separate, not descriptive but normative, discipline to distinguish between the true and the false. That seems to be the line of argument taken by those who hold this view. They often give further support to their view by reference to the unconcern of natural science for truth, beauty, good, or weal. Two stars disrupt each other—it is a case of impact or tidal motion. The beauty of it is a problem in the chemistry of coloured compounds. The woe of mortal disease may be the struggle of two forms of life-force equally valid as biological energies.

That is all quite true, of course. But, though the sciences of medicine study health and disease impartially—if not indeed disease rather than health—and make generalizations valid for both, do they not also strive to win a special body of generalizations valid for health alone? Similarly, though the psychology of cognition will speak of the forms common to both truth and error, will they not also separate the variations peculiar to truth from those peculiar to error? If there is none such, then how does the other discipline proceed to distinguish between truth and error? If a general rule that is valid for the general methods of scientific procedure, can gain knowledge of the ways of truth, will not a special, introspective, experimental method that looks microscopically through the experience of sickness, of experimentation, and to distinguish between the end? If a man by introspection cannot discern the forms of truth, how will they ever be discerned? And, if the method is introspective, will it not be improved as much by the exact methods of experimentation as the two are the forms of the same discipline? Psychology have been? The discipline that distinguishes between the true and the false does not make or create the truth any more than it makes the falsehood or than a chemist makes or creates new organic compounds. And yet this, of course, does no prejudice to the possibility that there may be many aspects of knowledge that are much broader in their scope and relations than are the minute aspects of knowledge, such as come within the range of a few seconds' duration. These broad aspects may be studied by a special broad method, just as certain broad aspects of health are studied by certain broad (statistical) methods which ignore the single individual. But the broad aspects rest in the end scientifically upon the narrow ones in all regions.

Psychology, therefore, has full right to all that it can accomplish regarding the relation of experience to the world, and no discipline that concerns itself with that relation can afford to ignore the relevant work of psychology.

(b) Psychology and physiology.—In so far as psychology is concerned with the proximate relation of experience to the world—the relation to the body and specially to the nervous system of the individual—its science merges into that of psychophysics. The science which holds the other end of the relation is physiology. Much obscurity prevails regarding the relation of physiology and psychology, so that it is necessary to review it here in spite of its simple mixture.

Psychology is the scientific study of experience, physiology that of the functions or activities of the body. Whatever asserts the existence, the time, the manner, the properties, or anything whatever, directly about an experience is an item of psychological science. Whatever asserts anything about the body or a part of it other than its topography and morphology is an item of physiological science. Consequently, the work of psychology consists in the increase of psychological sciences, in the increase of statements about experience. An assertion regarding a touch-organ, an eye, an ear, or a nerve is an item of physiology, no matter how it was gathered, whether by the microscopical examination of the organ, or by inference from the observation of sensations of vision or of sound, or of loss of memory, or what not.

This obvious distinction is not in itself important in an exposition of psychology. Most people would agree to it at once. But they generally object to do anything by physiology, and to let it, and so to dispel their favourite prejudices. It is, e.g., a common prejudice of scientists especially interested in physiology that psychology claims to be able to do what they already know they cannot yet do. It tries to show how we can know the truth, but with flimsy, superficial methods, such as the asking of questions, the recording of reaction times; ignoring all the while, e.g., such a flagrant fact as that the occurrence of intelligence is dependent upon the proper functioning of the thyroid gland, and so on. It is in face of such a mistake that it is so necessary to point out that the fact regarding the thyroid gland belongs to psycho-physics, and that it does not add anything to our knowledge of psychological science. Much physiology has definitely excluded any consideration of experiences from the scope of reference of their science. That is all the more reason why they should admit the scientific study of the field of experience as the task of psychology.
gathering of facts of observation, but, when they come to the problem of explanation, they are often completely diverted to the terms of physiological explanation, ignoring, it may be, altogether their duty of gaining psychological systematization for the facts gathered—in other words, a psychological explanation. This prejudice commonly governs professed psychologists even in dealing with questions relating to higher experiences, such as memory, attention, etc. In the field of sensory experience it is almost universal.

The psychologist is in his holding that, if he, specially active in the direct study of the functions of the body, and not ignorant of the indirect sound of physiological knowledge, cannot advance a true theory of neural action in some special department, such a theory will hardly be deduced solely or chiefly from indirect sources. On the other hand, the psychologist, who is specially active in the direct study of experiences, is more likely to be able to systematize these completely in his special department, and so to explain them psychologically, than he is to be able to deduce from them, in their un-systematized and therefore unregulated and haphazard state, the completion of the knowledge and for the systematization of a neural field that has not been specially the object of his direct study. All this is, of course, without prejudice to the fact that one man may be equally fitted for, and may do equally complete, work in some field of both psychology and physiology. If so, he is merely formally two scientists in one, and must in both capacities work as perfectly, without prejudice, in the interests of each science as he would if he were a specialist in one only.

Psychology, then, is primarily a pure psychology, the scientific study of experiences in terms of experiences, involving their complete description, analysis, classification, and systematization. In the connecting science of epistemology it has equal rights with physiology. In the connecting science of epistemology it has equal rights with any philosophical discipline which may concern itself with that science—and so on for all other sciences in which psychology may be related to other sciences.

3. Experience in relation to the self.—Having dealt thus with experience in itself and in relation to the world, we have now only to deal with experience in relation to the self. But there is this difference between the world and the self, that, whereas there are highly developed sciences other than psychology that deal with the world, there is no other distinct science than psychology that deals with the self. In fact, psychology is by name the science of the soul, or self, that which is of the nature of experience perhaps, but certainly transcends the single, momentary, fleeting experience.

We might, then, expect psychology to include a special field devoted to the study of the self. A science of psychological literature, however, will hardly reveal this field. In fact, there are many who flatly deny that there is any such thing strictly as a self, distinguishable from the sum total, or field, or stream, of experiences. And, where there is no such thing, there is no existent model of the frequent difference of view as to the nature of the self.

About the popular view there is no doubt. The self is something more than the experience of any moment. Though in sleep its activity is tempo-

rary, in illness, yet persistence, survival, to itself through years, and it is the leader of all the mind's activity. It thinks, observes, feels, and senses. And yet common sense in this region often gets into difficulties; it has to distinguish between the true and false, better and worse, selves. Its doubts about the independent nature of the self reveal themselves in frequent scepticism as to the survival of the self beyond the life of the organism. The popular self, then, is quite problematical. After Hume's leading it is commonly agreed that there is no unity of experience, no common reference of introspection. What we mean by the self may therefore be the unity of experience in detail, or the continuous unity of it throughout life, or a certain logical or real implication of experience.

(a) Primary and Secondary Argument against the view that the self is to be identified either with the sum total of experience or with the stream of experience that by no conceivable means could a mere series of experiences turn into a consciousness of that was even a unity, much less the sum total of experience simply could not exist as a sum total, unless we suppose that some miracle of unification is perpetually happening. The stream of experiences can be unified only in so far as it is stream-for-a-self. It is only through the presentation to one self, through the common relation to one self, that the mass becomes individual.

It is true that we cannot rationalize the process of unification or synthesis that we find broadcast throughout the frame of human knowledge, the synthesis of atoms to a molecule, of molecules to a cell, or of cells to an organism. But, admitting that, we have the strength to perceive that a reference to one subject is impotent and irrelevant. It is irrelevant because it blandly begs the question. How do experiences ever arrive before one subject's gaze? And what is this gaze? It is impotent, because no amount of reference to one subject will explain the great variety of forms in which experiences integrate to units, or the laws of this integration. If it is difficult to conceive of an experience by itself having an object, it is just as difficult to conceive the rationality of a subject thinking objects through experiences. In short, the hypothesis of the self as a unifying form, though it undoubtedly gives a sense of great comfort and satisfaction to many minds, is nevertheless useless. It is of no service whatever in a scientific sense, and that must be the final test in a science of psychology. Its acceptance cannot be advanced on this ground.

The doctrine is really an inheritance from Kant. The leading idea of his philosophic reconstruction of experience was the postulation, not of one single-all-important synthesis (Hume), but of a whole hierarchy of them, forming an easily exhaustible system. But Kant failed to draw the proper inferences from this idea and from what success he achieved in applying it in detail. He failed especially to see that the data of experience and the forms that emerge from them must synthesize themselves from below upwards according to common laws. In the search for a source of synthesis he then looked upwards in experience instead of downwards, and found the synthetic unity of apperception, the consciousness of 'I think.' The efficient reason, however, is nothing but the notion of synthesis itself; and so nothing was gained by his whole procedure. At the same time, almost everything was lost. For the confusion into which Kant worked himself in his various deductions was a confusion which we now know that all such deductions are hopeless undertakings. So the very valuable idea with which Kant started was emasculated beyond further usefulness. In his successors, and especially in Hegel, it was degraded to the status of dogmatic and metaphysical forms, whose only claim to actuality was the vague atmosphere of logical connexion that pervaded them. At the same time, the universal function ascribed by Kant to the synthetic unity of apperception was exaggerated until the real world seemed to fade utterly away and only
the self remained in its universe of experience. Had Kant succeeded in solving the problem of the scheme of synthesis in experience from below upwards, there is no doubt that he would never have developed his phenomenalism, nor would the idealistic extravaganzas of his successors ever have been provided.

(b) The metaphysical Ego.—So much, then, for the self as the fount of unity in experience in its details. There is, of course, just as little reason for assuming that the self is itself the ultimate source, which would give unity to the data of experience of a lifetime. If experience cannot raise its own unity upon its own foundations and upon the hierarchy of special integrations just discussed, no notion of self will ever inspire the data of experience, which are as the sands of the sea for number, into one coherent whole. All this mysticism of the self is nothing but a failure to grasp the problem of the system of experience positivistically and scientifically. As it stands, and is expanded still, it is a diabolical barrier to proper progress in psychology. For it cannot yield any fruit of detail problems, and so it clings the minds of those who hold it.

As to the implications of experience, they are rather the result of psychological study than a part of the philosophy of any sort. We are chiefly concerned to draw all legitimate inferences from his data, implications regarding the self, whether they be logical or real, will follow of themselves. There is no fear of anything being ignored here. The intensity of the individual's struggle for existence and his desire to survive indefinitely will coerce him into probing for all possible reasons for believing in the perpetuation of his self. Every possible reason, however improbable, will be hopefully probed and analyzed.

It is, finally, sometimes said that psychology does not fulfill its duty, which is to study the self and its states, not to study the objective contents of experience, such as colours, sounds, concepts, thoughts, and memories. Quite possible; but the other things are more clearly there, and call for study. They are what most psychologists now study chiefly. If any one can develop a method of demonstrating the existence of the self, in some sense clearly distinguishable from experience and its states, then this is the ultimate step toward taking the self as the starting point of all science. Our knowledge of it progressively larger, his success will surely be highly acclaimed. Thus far, however, in the opinion of the writer, no one has done so. The field of psychology, therefore, is properly described exclusively as a study of experiences in the systems in which we find them and of the relations of these experiences and their systems to the fields which in the universe surround experience or rest in part upon it. These are, apart from the biological (process) sciences already referred to, the (product) sciences of history, linguistics, aesthetics, and the like, and the social sciences of political philosophy, and economy, social economics, etc. (cf. art. CONSCIOUSNESS for fuller discussion of the problem of the usual definition of experience.)

II. THE SENSORY-COGNITIVE SYSTEM. — I. Theories as to the constituents of experience.—The task of psychology, as Ward has said, is to ascertain the ultimate constituents of all experience and their determinants and interrelations. The matter is still under dispute, but it is possible to maintain with perhaps increasing show of probability that the ultimate constituents of all experiences are sensations. Where this theory goes astray is in supposing that sensations that do not directly reveal themselves as sensations in some subtle way aggregates of more or less obscure and attenuated sensations, we have the ancient doctrine of sensationalism. That doctrine is now commonly held either to be insufficient to account for the facts or to involve too great assumptions regarding the variability of appearance of sensations in aggregations. Obviously, too, the proof of the presence in all experiences of a constituent element seems co-extensive with the experiences discerned in aggregate—which is the chief line of proof followed by sensationalists—does not exclude the alternative theory that all experiences are either single or multiple sensations, or perceptions, and sensations, and sensations of sensations. Here the only interest is the sensibility that it is the lowest rung on an indefinite ladder of integrative processes, one that cannot be further resolved by

Another line of theorists hold that there are other ultimate, irreducible constituents of experience than sensations—feelings, thoughts, etc. But this type of theory need not be taken to have proved anything more than that feelings, thoughts, and the rest are special points, units, or parts of a certain range of experience, just as cells are special and, in many senses, unique parts of the body, and are held by many to be irreducible wholly to the next lower units of matter—molecules and their laws. The barriers of psychology are many such limits. For it has for its task a negative proof. The best policy for united work is obviously the plea that, while feelings and thoughts may be reducible to lower grade units, this reduction has not yet been satisfactorily accomplished. Thus all theorists may work forward together, each supplementing the other's outlook, observation, and interpretation. Whatever the outcome may be, the theoretical work of psychology may well be set up as if it would ultimately converge on the sensationalistic ideal, when that is re-animated by the substitution of integration for aggregation.

Certain other theories refuse to consider any such analytic, dissecting, and devitalizing outlook as these. They stand fast by the indivisibility and qualitative unity of experience, its ever changing and developing wholeness and completeness, which are only brought to the inert forms of the above theories by the destructive work of the abstracting intellect. In life of the at least great use of the earlier notions of the biologists. The organic unity of experience was constantly emphasized. Experience is an organism in which every part detectable by abstraction stands in living, moving interaction with every other, and is inseparable from it without the destruction of the (spirit of the whole). Doubtless; but modern biologists are not deterred by this thought from a progressive analysis and synthetic reconstruction of the wonderful life of the organism. They do not allow themselves to be held up in their progress by the contemplative admiration of completeness and unity. A recent feature of this type of theory clothes itself anew in biological terminology, taking as its prototype of action the movement and unity and the insight of the intellect of the instinct—a very fine doctrine for those who love to linger on the hill-tops of philosophy, chanting the wonders of the stars, the clouds, the trees, and the clover, and yearning to embrace the whole of life, but ever refreshing to the tired mind, but hardly the way of progress. The world, no doubt, is full of wondrous forces; but we happen to be soldiers of the intellect and must do what we best can.

A third group of theoretics hold that there is somewhat aside from the main drift of psychological work, looks upon experience as not ours, not subjective or mental, coming between our self and a real world; but as really of the world, objective, physical, the same in staff as the things that we

---

1 EBRI, xvi. 2 Psychology, xxi. 849.
call material. In a certain sense the difference is only a matter of words, and, provided such a theory has the interest to study experiences or objects in detail, the same results will emerge as are found by the most 'orthodox' psychological speculations. But in its older form of objective idealism this line of doctrine acted almost as an excuse for not investigating the minute, systematic build of objects (experiences). If the alleged experiences were real, then the study of them might well be left to the scientists. And, if there were a science that might be called experimental psychology, then that title was in a sense a misnomer; the science was really a branch of physiology, obviously no psychological sensations certainly are objects, and the form the theory shows a special interest in the minute build of objects or of the first physical data. For knowledge is required to show how these data are so directly related to, or continuous with, the material things. Science as they seem to our common sense to be. This group of theorists is obviously forced into the attempt to make a special plea for, and a special study of, the self. For one can hardly solemnly go the length of asserting, 'What is there nothing but the objective, the physical, and its complexities—no self and no personal activity.' These views evidently carry us back to the problem of the self already discussed. They do not yet affect the usual work of psychology (or, so says that the physicists do not promote). If the field of work and the drift of fact and theory are clear, psychology may leave the classificatory names to the wider comprehension of philosophy. When we have all the knowledge of fact required for exhaustive systematization and understanding, we shall hardly object seriously to any useful drawing of boundaries and naming of provinces.

2. Sensations and their attributes.—The ultimate constituents of all experiences, then, are probably sensations. Sensations are indicated in the universe of things as being the simplest experiences that are directly dependent upon the stimulation of a sense-organ or of a sensory nerve. They are familiar in the five senses of man; but the work of later years has shown that number considerably. The senses may be divided into three groups.

(a) Simplest senses of the skin.—The first contains the simplest and perhaps most primitive senses of the skin and, in an irregular way, of the viscera. It includes touch, cold, pain, warmth. Itch and tickling are related to pain and touch respectively. The problem of the psychological description of the simplest experiences of these senses is a useful preliminary and guide to the psychological definition of sensation in general. It is the important problem of the attributes of sensation.

There are at least six attributes. (1) Quality is the name for the radial difference between the sensations of different senses—e.g., colour, sound, touch. And there is a second, that number considerably. (2) The variant known as intensity is too familiar to require any indication. These two attributes have been universally admitted and are readily acceptable by all as distinct properties of, or variants in, the simplest experiences.

The next most frequently admitted attribute is (3) extensity. A colour mass is extensive; so is the warmth felt in a bath or the pain of cold, as contrasted with the pain of a pin's prick. Some folk feel a repugnance of a kind to the assertion that our experiences are extended or spread out. But that is merely traditional prejudice. Thought may not be extensive, but sensations certainly are; only it is not the spatial kind of extensity that is meant, but another 'kind' or sub-class of extensity. The attribute of extensity has not always been admitted. Some have tried to derive it from groups of qualitative and intensive differences; but the attempt was never convincing; hence the gradual recognition of the primacy of extensity.

Now, those who thus admitted extensity usually proceeded to attempt to develop a further attribute of localization out of those three. The cover for the act of determining the location of sensation involved in this attempt has been since Lotze's time the term 'local sign,' the idea being that the skin is of such different texture, etc., at different parts that a touch at one part would be distinguishable from another at another part of the skin, etc., by the tact of the two sign differences. But the same faculty attaches to this attempt at derivation as to the previous one. The intellect can by no device convert into local signs what are after all only groups of items devoid of any sort of arrangement. These must must what they are, unless the intellect can correlate them with a spatial order otherwise provided. And then the spatial order so obtained would not become inherent in the sensory complex, as would be required. This attempt fails, as it should.

For it implies no definite construction, form, shape, or extent, but only extensity as a variable magnitude. If this magnitude is at the same time to have form or shape, it must be supposed to include others derived from it. But the magnitude cannot be definite without the help of explicit orders. This is then, the fourth attribute—(4) order. It is not to be confounded with spatial order, as which it appears most definitely before our cognition in the sensory experience of the skin. It is the basis of the spatial construction. Space, as we shall see, is a form or complication of sensory order.

Two other parallel attributes are the basis of our temporal differential of sensory experience, namely (5) duration and (6) temporal order. The former order may be distinguished from (6) as systemic order, because it is the kind of order that depends psycho-physically upon a system of elementary sense-organs (receivers).

Another attribute has been proposed by Titchener—clearness. But there are great difficulties in the way of its acceptance. A sensationistic system, of course, as already indicated, requires some primary variant to account for the apparently great variety and complexity of any obvious aggregates of sensations. But an integrative system, full of variously directed streams of action and of different levels, the one more remote from the other than a third, can probably account for all the facts without such a difficult attribute. This first easy group of sensations has an appendage in the sense or senses of taste. No new primary fact is met in it.

(b) Articular, muscular, and organic senses.—The sensation here is the articular, the muscular, and the organic (a medley of hunger, thirst, lust, mania, etc.). The difficulty consists in precisely determining the attributes of each and the obscurity in detecting their presence. Thus the quality of articular sensations has been generally held to be their indication of position. And a class of positional qualities has even been distinguished for the attributes of each and the 'positional' variation must be classed as the ordinal attribute, while the difference of movement does not constitute a separate sense at all, as we shall see later. The obscurity attaching to articular sensations on the other hand, concerns their intensity. But we can with care produce
intensive differences in this sensation, and we then recognize that the obscurity is not in Titchener's sense attributive, but is only apparent. Failing to recognize the fact that the physiological basis of intensive differences in this sense is almost lacking — or may be present only in the case — and expecting intensive variations that we do not find, we call these variations obscure, just as visual presentations are when we try to read in the gloaming. We feel that we cannot detect fully all that is there, and therefore go back to the idea that there is more than there is, and we drop the term 'obscure.'

(c) Senses of sound, sight, and smell. — The third group of senses presents very complex and very different cases that can be made to conform completely to the formula of attributes only after elaborate study. The senses here are sound, sight, and smell.

The present writer has given 1 a re-interpretation of the sense of sound on the basis of the formula of the six attributes which completely alters the view of this sense and brings it into perfect conformity with the psychology (and, by inference, with the physiology) of the other senses. It may be dogmatically indicated here. There is one quality in sounds which distinguishes it from sight and smell. Intensity is not itself a quality. It may be classed as quality — pitch — it is really the attribute of order, while the extensity of sounds is apparent in their volumes, which run parallel to the pitch series, low tones being large and bulky, high tones thin and small. These volumes, however, are really extents or masses of sensation, so that tones are not the primary particles of this sense, but are well-rounded, balanced, symmetrical masses of sound, in which one (hypothetical) particle (or a few) is prominent in a central position, and is known as the pitch of the tone. Thus all audible tones may be reduced to a single series of particles of sound sensation, the lowest tone involving the whole series, and the higher ones progressively less and less of the series, the end particle on one side being common to all tones. This is only another way of expressing the fact that, as we rise in the tonal scale, the pitch series moves progressively to one side.

There is no need to attempt to reduce noises to tones. For noises are themselves masses of sound-particles. They differ from tones only in their irregularity and want of balance and in their lack of a prominent ordinal centre, i.e. pitch. All degrees of variation, however, from tone to noise are obviously possible.

In the sense of vision the systemic attributes of extensity and order offer no difficulty. That attaches only to the attributes of intensity and quality. We have interesting and highly developed physiological theories of vision, of which the most familiar are those of H. L. E. von Helmholtz and of E. Hering. But we have still to get a satisfactory psychological account of the elements of this sense.

The sense of smell is specially peculiar because of the fact that we seem unable as yet to give a complete survey of its qualities. We are unable to tell whether the enumeration that we already have is complete. This merely means that we have not yet hit the key to the psychological analysis of this sense.

In spite of these outstanding difficulties, we may look forward to bringing the attributes and varieties of aggregation of the elements of all the senses some day; at least to make full agonies about another. This solution may be expected to conform at least closely to the formula of six attributes indicated above.

3. Modes and laws of integration. — The other

1 The Psychology of Sound.

The task of pure science in psychology is to ascertain the laws of the interaction of these probable ultimate constituents of experience; or, better, to determine their modes and laws of integration. The problem of these modes has been before the minds of psychologists for some time; in the recent years the figure-qualities described by C. von Ehrenfels. A melody, e.g., must be something more than the sum or sequence of the tones that form it. For it remains the same melody even when it is raised or lowered. Therefore for them to be a melody, the first version occurs in the second. And a square is a square, whether it be given in blue colour or red, or even in tactual sensation. Similar distinctions and arguments are found in older philosophical literature. Kant's forms of sense and of understanding are essentially the same idea. They are something more than any data that they may include or synthesize; they are the mind's own work or contribution to the build of knowledge; they cannot come from without; they are, as we may say, purely integrative 'processes' of experience.

Following Kant's suggestions farther, we may think of these integrations as a hierarchy co-extensive with experience—a scheme that, as being in experience directly and physiologically, and may well be completely described by our science before very long. Moreover, it is one that should bring with its gradual discovery a sense of its own completeness and necessity. 2

Unlike Kant, however, we cannot hope to succeed unless we can put our scheme of integrative processes into relation to the properties or attributes of the elementary data of experience—the sensations. This connexion is expressed in the following two laws of experience.

(1) The integrative product is to bear a close resemblance to the lower-level product or to the attribute upon whose integration it rests. We cannot, e.g., expect localizations to rest upon differences of intensity or of quality or of both, but only upon differences of order. In such a connexion there would be no inner coherence, insight, 'necessity' (Kant), or whatever it might be called, that makes our experience coherent in all its parts instead of a mere mechanical conglomeration.

(2) Wherever similar attributes (or integrative processes) are possible, we cannot expect to find products both introspectively and functionally similar to one another. Thus, if the integration of visual orders gives systemic intervals and motions, then, if pitch is really properly classified as ordinal, we must expect to find differences of pitch integrating to similar products. And these are to be found, namely, (tonal) interval and (a certain aspect of) melody.

(3) A third law states a fact that has already been referred to and is of the greatest importance, namely that the integrative product is an addition to the mass of integrating experiences, whose existence and continuance within the integrative process it in no way impairs. It is this fact that makes sense and movement different from the scheme of sensationalism and that now expanded. At the same time, this addition to experience gives a place within experience to all that has been claimed and taught regarding the creative synthesis or evolution of experience. However, a new interpretation or description of experience may claim to be more scientific than others, insofar as it is more positivistic. It does not gather all the creative talents of experience in a greedy hand and bestow them upon the experiences of an absolute creation, perception, or what not. It leaves them all in their places. It lets psychical creation come forth in its order, just as the natural and biological sciences set forth the order of natural creation.

4. Scheme of integration forms. — No proper
exposition of the different forms of sensory and of cognitive integration can be given in this short article. But a scheme of these forms may help to bring some comprehensive arrangement into the mass of data that the reader will find in the chapters of textbooks of psychology dealing with sensory and cognitive experience. Of the six attributes the chief integrating one is order. Differences in systemic order alone give systemic distance, differences in temporal order temporal distance or time interval. The unity of simultaneous and progressive differences in these two ordinal attributes is motion. These three integrate all vary in magnitude—size or speed. Differences are found in all the senses that show distinct variations in the attribute of order—touch and the other skin sensations, articulation, sound, and sight. All senses give differences of temporal order, but some give them much better than others. So we have specially temporal, or rhythmic, senses. Obviously motion will be limited to the senses that give distance well. No other attribute than order integrates well, or even at all perhaps. An exception seems to occur in vision. It is found to involve differences of brightness and seems to be a new character supervening upon these differences. It also obeys a further law of integration in that it supervenes both upon simultaneously (binocularly) and upon successively (unocularly) presented stimuli. This law appears to be observed in all integrations that do not involve differences in temporal order, which, as we know them, are always successive. But the problem of lustre is not quite clear; lustre may, in fact, belong to a higher level of integration, which is called bisystemic, because it involves two systems of elementary sense-organs, or two ordinal systems, of the same kind—e.g., two eyes, two ears.

This bisystemic level gives, in vision, a new third dimension to the forms that are found in the plane field of vision of one eye. With two eyes simultaneously, or with one eye successively, we see solidity, i.e. stereoscopically. Binocular hearing is similar, but simpler. It gives a new (transverse) line of centers. The physiological series of each ear is a single (longitudinal) dimension. The combined use of these two (not mathematical, but merely narrow) lines allows of (transverse) oscillation of emphasis from one side (or ear) to the other, and so gives the impression of a very imperfect one, for our correspondingly weak power of localizing sounds round the head.

The next level of integration is intersystemic; it holds between systems of different kinds of senses. This kind of integration is still more difficult for the individual to acquire than the preceding. We may express the problem materially by asking how the impressions of the different senses ever meet together in the vast brain, so as to form a unitary whole. Although the problem has been as great a question to the mind as the question becomes specially acute when we turn to examine the physiological origin of the object. Take the old stock example of the orange. How do the different sensations given by an orange strike on to our mind in the child's mind? Not by mere simultaneous association, for not all things that are merely together in the mind associate together. There must be a specific basis that regulates association.

A minute study of visual bisystemic integration shows that this basis is the identity or similarity of the plane forms or figures that appear in the integrating systems of the two eyes. Similarly, the systems of the different senses may be supposed to unite to form a new sensory field by the integration of their systems by means of the very similar forms and motions that are impressed upon the different senses by one and the same real object. Thus too the contributions of the different senses are brought together to form units of perception—e.g., the page.

The interaction of the distances and forms presented within the system of a single sense offers a rich field for study. This is most apparent in the many visual illusions (p. u.) now so familiar. These are brought simply because they parts, when presented together, modify one another and so appear otherwise than they do when presented alone. They are chiefly illusions of distance or size, and of direction—a derivative of distance.

The scheme of sensory cognitive integrations may be summed up schematically as on next page.

5. The higher cognitive powers. — (a) The psycho-physical problem. — The cognitive work of experience appears as a great hierarchy, developing upwards by its own initiative from the data given by the senses—we say 'by its own initiative,' because in such a scheme we do not need to postulate any sort of developing agent to work out the problem of cognition. We may study the whole process positivistically, just as the physical, chemical, and biological sciences study the course of development within their spheres. We may speak of 'development' because the 'higher' unity is a more comprehensive and also (we may confidently assert) later than the unities of the lower levels.

Thus, e.g., we need make no speculative references to the brain for a basis of integration. Whether there is in the brain a parallel or proceeding, real, unitifying process or not is a question for the physiologist to settle. An answer to it, whether positive or negative, can in no way affect the work of psychology in the study of the integrative process as it is in experience. Whether parallelism or interaction be the true answer to the psycho-physical problem is not very important for the present, for the simple reason that it will be very long before proper material for an answer is to hand. On the other hand, a psychical agent, such as the mind, is quite useless or, at any rate, glass rôle of thought may be dispensed with. In that theory thought is held to be an indispensable accompaniment or attribute of sensation. It comes with it in some germ-like form, and over and through sensation, as it were, it spies out the object or cause of sensation. How could an experience have or know an object, if it were not so? How could it even if it were so? we may ask in reply.

The scheme propounded, on the other hand, offers a direct basis for constructive work on the 'references' of thought. An integrated state is always attached to, and so refers to, the basis upon which it is integrated. A melody is not a unity that is just present along with tones, as the title-phrase of our six say more or less, it is intimately blended into the being of the tones, as it were. It is this intimacy of connexion that makes a psychologist like Titchener altogether overlook the presence of something new in the melody when it is to him a mere simultaneous association, for not all things that are merely together in the mind associate together. There must be a specific basis that regulates association.

We may, in conclusion, ask how much the '1st' of the reference is external to the other. How much is it mental?
The stage of perception (q.v.) at which the cause of a percept comes into view is certainly not the earliest form of perception, where the integrator is nothing but an it-centre of sensory experience, but a rather advanced stage in which there is some conceptual concentration of individual perceptions and some of the 'knowledge about' that then supervenes. This 'knowledge about' is not the result of an excursion or observation beyond the confines of experience, as the cause-idea might suggest, but merely the attachment to one another of experiences above the first perceptual stages by the same or similar mechanism as produced these first stages, whereby the higher integration is attained that we know as abstract knowledge or conception (q.v.). All these abstract units must not, however, be supposed to have to hang in the air above the sensory levels of integrations, as if they were the gases of corruption mounting upwards from them. They are attached or refer downwards to their basis through a continuous line of integration, just as the other integrative products do. And it is just this attachment which puts substance, cause, and interaction, particles or parts of various levels—atoms, molecules, and the rest—into the objects of perception.

(5) Development in man and animals.—The study of development (q.v.) is readily accessible in this way. If a certain level of integration can by indirect evidence—of conduct, learning-by-experiment, and so on—be proved to exist in any animal, we know what earlier levels of experience are implied in it. Research thus far seems to have shown conclusively that no animal other than man shows any evidence of commanding the conceptual level of integration. But recognition and, still more, perception are by no means excluded among the higher animals. The task of deciding in each particular case is very difficult, involving a great deal of very elaborate and precautious experimentation.

To the further important question why every animal that is well endowed with efficient sense-organs does not develop to as high an integrative level of experience as man, psychology is unable as yet to give a definite answer. This appears the more strange as man seems in certain respects to be possessor of senses which compare unfavourably with those of many other mammals. This is especially so in the case of smell and of hearing. In vision we are relatively efficient. But in one important respect we have a great advantage; we are possessors of mobile hands and fingers. The significance of this is that it endows us with a second highly elaborate and clear field of tri-dimensional forms, namely the tactial-articular. The other mammals, with the exception of our nearest relatives, use their articular sense almost only for the general purpose of postures and bodily movement, while their touch is imprisoned behind their masses of fur.

There can be no doubt that the possession of a plurality of tri-dimensional senses is highly important for development. For hearing is only weakly dimensional, and smell in ourselves (and possibly in the other mammals as well) is not so at all. All our other senses, apart from the visual and articular, are only vaguely dimensional, inactive, and of poor discriminatory power. But, as we have seen, the correlation and integration of active and complex dimensional senses are required for the proper development of sensory space, and that in its turn is the gateway to the higher cognitive powers. So we may maintain as probable the view that the height of development of the 'mind' depends largely upon the extent of variation given in the elementary data of the senses. And we should, therefore, expect to find that the size of the brain depends not so much upon the room required for the cerebral mechanisms of conception as upon the size of the parts required for the bia- and tri-dimensional senses of fine discrimination. Of course neural centres may also be required for all integrative levels. But these are problems which we must leave to the physiologist.

6. Memory and imagery.—With memory (q.v.)
another aspect of experience comes into view that is of the greatest importance. It seems clear that there can be no memory work except upon the basis of the spontaneous integrations of experience.

Memory is not mechanical association of contiguous parts of an aggregate, as sensationalism is inclined to suppose. Much, if not all, has yet to be done before the springs of memory are clearly exposed. But there is a growing tendency of evidence and conviction to show that memory presupposes some form of integrative activity which may be called the associative integrative complex, the existence of which is untenable except as a formula that presupposes but ignores this integrative activity.

But if this is granted, there seems no doubt that association gives experiences a new grip of one another, so that, even when an integrative unity is dissolved by lapsing as an actuality, it can be reinstated from a part of its original foundations by the extra bond established before the integration lapsed. And, as we know, repetitive contemplation of the integrative complex helps to make associations more powerful and enduring.

The experimental study of memory in recent years has greatly extended our knowledge of the conditions affecting strength of association. By association with it we can extend the scope of integrations, so as to make them include a wider scope of experiences than they otherwise would spontaneously at any one moment. If integration gives height of growth to experience, as we might say, then memory gives it breadth. And the growth that can be attained in breadth by effort is enormous.

At the same time this redintegrative action of memory makes it possible for an integrative product to be revived from the side, as it were, instead of from the original foundations. The revival of these lower springs does not seem to be necessary in memory work. A concept, e.g., cannot be got originally except from below. And yet in the fluent operations of thought, which depend so much upon the work of memory, that concept may be revived, and used as an essential link in the process of thought, without the revival of any of its sources of integration, even in the form of imagery.

The great issue we may pass directly to the question of the value of imagery. An older evaluation of imagery considered it as a mere trace or record of previous direct impressions of sense-sensations now called up accidentally owing to the associative linking that supervened to bind it and the present reviving sensation together when both were previously present as sensations. But that view is almost certainly wrong. Imagery is revived more often because of the integrative complexes into which it was as sensation wrought up, and because it is now wanted for the redintegrative and new integrative processes of thought. Thus, when one is asked, 'Does the water-line of a ship rise or fall as it passes from fresh water to salt?', the reason why an image-scene of a ship passing from river-mouth to the open sea in some form or other in almost every one's mind is that such a scene presents all the material of the question in a natural and familiar scheme, each concept attached to its own peg, the mind has then to work backwards to the question and then to revive what material is readily available in it, so that some of that material may perhaps cohere well with the points of the question and thus yield the answer. And, according to the drift of the drift of the drift (and all other drifts too) a person will even see the ship rising or falling in his mind's eye. Compare with that easy question such a one as this: 'John is twice as old as Mary was when he was as old as Mary is. If John is 21, how old is Mary?' Conceptually the two questions are probably equally easy; but image is readily forthcoming in the second to hold all the concepts and their relations together in the mind and make action between them easy. When one says that the process presupposes the existence of the complex in the mind, the answer might be, 'whether the question is to its outcome, or rather the verbal expression of its outcome. The thought involved in answering the question is partly the memory work, partly the trying of the memory and the memory addictions together to see if they will not give the desired conclusion. A complex implied by the question.

Now, one is tempted to elaborate the point and to show the question grouping for its answer, like the tentacles of an octopus searching in some dark cave for what is movable and appetizing. And the reader may feel impatient at the futility of trying to make the mind work like a machine. It is the self that thinks and searches; is it not? The self is the proper that searches and sees fitness and judges? It is the self that attends, at least, for study. It is difficult to see how one self could do so many different things. We ought at least to have the case for the self put more convincingly before us than hitherto. This will doubtless be done, if it can be done. But this much may be said, even if he fails. It is probable that the self will not seem to find that line of construction the most hopeful at the present time. Of course, very much further study by experimental and systematic methods is required if the complex field of cognitive activity is to be fully understood.

III. EMOTIVE ASPECTS.—Thus far we have dealt with the sensory-cognitive range of experience. We have now to consider the emotive aspects of it.

1. Integrative theory of feeling.—One of the most thorough views of feeling is incorporated in the three-aspects theory, according to which every experience has three aspects—cognitive, emotive, conative; knowing, feeling, and will. Or these three are merely one and the same experience from different points of view. Now there can be no hesitation about rejecting this theory so far as concerns feeling. Feeling is not an aspect of every experience; it is an experience definitely distinguishable from every other. Nor does it even occur that every other aspect is felt regularly. Any one familiar with the experimental practice of introspection knows that he is not constantly feeling pleasure or displeasure. In fact, he will have found that he is in a state of feeling rather seldom than otherwise. While complexes and trains of experience pass by without any feeling of pleasantness or of unpleasantness appearing. It is for this reason that the theory of feeling as an attribute of sensation has also been rejected.

The difficulty has been at all times to know where to place feeling. The attributive theory is the only attempt that has been made to give it a definite place in the sensory cognitive range. The older sensationalists tried to work it into their field by placing it in sensation and not as mental chemistry. In this a group of sensations was held to turn by combination into an experience that did not at all resemble sensation, just as the gases hydrogen and oxygen combine to form water. This activity in general does not really be groups of tactual or organic sensations and yet not appear as such. That theory has been rightly rejected by everybody and has wrongly created a prejudice against every deprivation for the most common of experience from such a science as chemistry.

But even in recent times an attempt has been made to show that feeling is psychologically a sensation. It has quality—pleasantness and un-
pleasance—and intensity; and the two problematical attributes of extensiveness and localization (supposed in this theory to be an attribute) can be made pleasurable with an effort; feeling is not located at the beautiful picture and in the beautiful sound, but it seems to be spread out in the head being enjoyed. If by the category of feeling is known, at least we may suppose that one does exist. Only it would not appear on the periphery, but would probably be concealed within the peripheral sense-organs or within the central nervous system, revealing to us how sensations and emotions are related. It is also not clear whether as usual (pleasantly) or far away from the range of their normal functions (unpleasantly).

This theory of feeling-sensations has not found many supporters—not that it has been definitely proved to be wrong; but it is too supposititious and speculative. Something as plausible and more in accord with the psychical facts is imaginable.

We need not discuss the theory that looks upon feeling as an irreducible element of experience. This view is the natural outcome of many fruitless attempts to resolve feeling into sensations or the like. But it does not preclude renewed attempts at reduction in general, and in particular an integrative theory of feeling is still a possibility.

Titchener has attempted to carry this theory of feeling as an element to its logical conclusion—a psychological definition of feeling as characterized by a different set of attributes from that peculiar to sensation. His important point is that feeling lacks the attributes of extensiveness possessed by sensation. We shall not renew the discussion of clearness. What we may notice now specially is the subtle difficulty of positing elements of experience of which one possesses attributes that another lacks. Besides, the subtlety of the non-clearness and unpleasantness of feeling and of the difficulty of observing feeling are we not looking for a mare's nest, as it were? Suppose motion were regarded as a specific experience by such a theorist as Titchener. What would he say about its quality and intensity? Would they be non-existent or non-clear? And would motion, then, have only two attributes of extensiveness and localization? Or would it also be said to lack clearness? Probably no one is ever in doubt as to whether he is pleased or not. But it seems to be a matter of doubt as to whether he is in doubt about how pleased he is. Then, if all that and nothing else is clear, probably there is nothing else in feeling to be clear about. Feeling would then be very like motion, as it appears within an integrative theory. It is just motion (its quality, if you like), and it has magnitude—speed. So feeling has quality and magnitude—intensity.

The work of an integrative theory of feeling really begins when the double basis of feeling has to be shown up, and also the difference in the parts of that basis that integrates to form feeling. There are many lines of evidence that converge to support this theory and to make it at least probable as an advance beyond the more conservative theories. The difficulty is that of experience. But their exposition is too long to be given here.

2. Problem of the emotions.—We may consider briefly the other great division of the emotive life—love. The attempt here is to lose sight of the slight movements of the soul, as it were; emotions are rolling waves and storms whose troubles reach far down into the deep waters. And the scientific problems of emotion are equally deep and agitated. The attempt here is to bring the scientific fruitfulness of the theory and the scientific fruitfulness by, in such a way as to be applicable everywhere. And then, as has been so often deduced, Shakespeare's work is the accidental product of a swarm of channe variations.
As well might one truly think that, if a fount of type were cast into the air often enough, it would come down one day as King Lear. These reminiscences of scientific speculation carry us back to a line of thought that is far from rare, although it was certainly universal among biologists a decade or two ago than it is now. But, as far as the outlook upon pure psychology is concerned, it has changed very little. It means, after all, only that a coherent sphere of law has not yet been articulated, and that the recognition of it as such has been made very much less likely by the success of the theory of chance variations in the neighbouring sphere of biology. It is pleasant to think that such an absurd doctrine has so often been rejected by the professing philosophers of the mind.

But we must not be content with vague 'spiritual' terms and generally 'ideal' expressions. We must carry over the methods and spirit of the natural sciences into the systematic, constructive work of psychology and show how purely psychological laws will yield us a satisfactory understanding of the world of spirit, just as purely material laws give us a satisfactory knowledge of the world of matter. That is to say, the natural world can be worked by no agents or guides, so far as science is concerned at least. Of course, science is only the systematic mirroring of realities in cognition. Being other than what it pictures, it is only indirectly the reflection and being that are the essence, as against the form, of its objects. Nor can psychical evolutions and actions be worked by spiritual agents or guides, so far as the science of mind is concerned. We can only observe and generalise on laws of mind or psychical stuff and to explain particular psychical phenomena properly according to them, as the ways of science demand. Then we may let matter and mind come into cogntional harmony with one another, as they undoubtedly can and will, in due course.

And a psychology on these lines of construction is in no sense a descent to a lower level, an abandonment of higher ideals. It is rather a confidence and claim in the equal primacy of the two spheres of human knowledge, in the derivation of laws alongside any other part of the universal universe. We have every right to expect that the world of experience will be as amenable to the strict ways of science as the world of matter upon which it is, as we know it, dependent.

IV. CONATION.—The only other sphere of experience to be mentioned is conation. In so far as that is conation within experience, as in attending, remembering, thinking, and the like, the study of it is continuous with that sketched in the preceding pages. In so far as conation involves muscular movement, we enter upon a new region of special difficulty. Here psychology is still struggling with the barest facts and first principles, as the dearth of information on the subject shows. Of the textbooks indicates. The reader must simply be referred to special treatises on the subject.

The primary question is an introspective one: What precisely lies before the mind's observation in the case of voluntary movement in general? It seems as if we make a coherent, systematic whole of all the facts gathered by the experimental pursuit of this problem? One of the common earlier answers to the question has been disproved. We do not necessarily anticipate our voluntary movement in a mental image of it and will movement from that basis. But the true psychological formula of voluntary movement has still to be determined. The way to knowledge is probably blocked in this, as in other regions of experience, by the confused notions left from the wrecks of previous theories.
A study of the behaviour of savage man towards disease shows that it consists almost entirely of measures which, when successful, must have acted through the mind, especially by means of faith and suggestion. A leech who treats a case of headache on the assumption that it has been caused by a malformation of a vein, or by the presence of some noxious agent, which he thinks can be removed by a blister, is evidently acting purely through these agencies. In other cases faith and suggestion only assist a process which acts in a different way. Thus, a leech who treats a case of constipation on the assumption that the trouble is due to the presence of a snake or octopus in the abdomen will produce a good effect by the mechanical action of manipulations designed to destroy the imaginary animal, but in such a case faith and suggestion also play some part. Most of the cases in which leaves, bark, or roots are employed by lowly peoples to cure disease we can be confident that success is due purely to faith and suggestion. The history of pharmacology reveals a similar process. Medicaments supposed to act upon disease have failed to justify their reputation when subjected to scientific study and have evidently owed their reputation for medicinal virtue to faith and suggestion. While both faith and suggestion are processes inextricably interwoven with the employment of therapeutic measures from the earliest stages of medicine down to the present time, these agencies have taken many other and more direct forms. They have been the subject of much discussion and much criticism by those who rationalize religion is that they act through faith and suggestion, and the systems of healing which are continually coming into existence in opposition to the orthodox medicine of modern civilized peoples owe their success largely, if not entirely, to the power and efficacy of these agencies.

The large measure of success which these movements obtain in popular opinion is due to their exploitation, wittingly or unwittingly, of the fact that orthodox medicine has failed to meet a standard of recognition.

1. Scope.—It is often supposed that psycho-therapeutics, whether belonging to orthodox medicine or to some form of faith-healing, is especially applicable in cases of hysteria or similar diseases. There is, however, hardly a variety of disease for which this mode of treatment may not be useful. It is customary in medicine to distinguish between organic and functional disease, though these are, in fact, merely categories convenient for practical purposes, which pass insensibly into one another and are difficult to define. Roughly, by functional disease is meant disease for which existing knowledge does not allow us to assign any structural or chemical basis, which has been found to be of value in the treatment. There are other diseases, such as so-called idiopathic epilepsy, of the physical basis of which we are ignorant, which are characterized by a tendency towards permanent loss of function and death, and these are also usually the subject of psycho-therapeutic treatment. In general, functional category. Organic diseases, on the other hand, are those whose structural or chemical basis has been discovered. They again fall into two main groups: those which tend towards permanent loss of function and death, and those which lead to temporary loss of function. In addition a few mixed forms occur. Nothing is more frequent than the occurrence of functional disturbance as an accompaniment of organic disease, the real nature of which it often conceals or obscures.

It is in the treatment of functional disease and of the functional accompaniments of organic disease that psycho-therapeutic measures are most obviously applicable, but the scope of their usefulness is far from being limited to these. When it is claimed that some form of psycho-therapeutic action, performed by physician or priest, has cured a case of organic disease, it will often be found that all that has been done is to remove the functional disorders which so often accompany organic disease. Psycho-therapeutics, therefore, are useful not only in the treatment of organic conditions themselves, though the investigation of cases like these is attended by such difficulties that the mode of action is still surrounded by much doubt. We know that suggestion, especially in the form of hypnosis, can produce changes in organic processes and especially in the circulation. If such an organic change as a blister can be produced by suggestion, it is easy to understand how other organic changes can be ameliorated or removed by similar means.

A more frequent cause of the success of psycho-therapeutic measures in organic disease depends on the fact that many forms of progressive organic disease—even so grave an illness as cancer—are liable to periods of retardation or quiescence. Disease a long period of remission, during which some noxious agent which has found its way into the body and the mechanism of the body itself. Progressive disease is that in which the external agents have the upper hand in this struggle. Any factor which raises the efficiency of the intrinsic forces, or, in other words, which reinforces the vitality of the patient, may diminish the ravages of the destroying agent and lead to retardation or quiescence of the disease; or may even in some cases turn the tide into recovery. If, therefore, we consider that the agents which cause functional disorders have been discovered and are thus amenable to medical treatment, the fact that these agents may produce changes in the nervous system and are classified together as nervous disturbance, and that many measures have been found to be efficacious against them, it is clear that psycho-therapy is therefore as wide as medicine itself. It is especially applicable, however, in those states which depend on diminished efficiency of the nervous system and are classified together as nervous conditions.
affections of the body due to mental conditions it is necessary to discover the causes by which this morbid state has been produced. The history of medicine has been one of gradual progress from the pretended ignorance of the treatment of formerly the conditions by which symptoms are produced.

In this progress the treatment of disorders of the mind has lagged far behind that of bodily disease. There are many practitioners of medicine who, although fully recognizing the importance of etiology in bodily disease, fail to recognize that it applies equally to the mind, and they continue to treat symptoms as they arise or practise a purely empirical system of therapeutics.

To those who accept the two principles which have just been considered, every case of mental disorder or of bodily disorder consequent upon mental conditions is the outcome of the mental life-history of the patient, and the conditions to which it is due can be discovered only by the investigation of that history.

A third principle, now widely accepted by workers who otherwise differ greatly from one another, is that mental disease is predominantly due to the conflict of an emotional aspect of the mind. It is believed that in the search for the conditions which have produced an abnormal mental state it is necessary to get back to experience which has been associated with a state of mental conflict, and it need hardly be said that either this emotional tone must have been of an unpleasant kind in itself or the unpleasantness must have arisen out of consequences which the experience has brought in its train.

This view is that according to which the intellectual disturbance in a case of mental disease depends on a process of rationalization through which the patient endeavours to account to himself for his morbid emotional condition. The direction taken by this process of rationalization is often such as leads to the formation of those beliefs at variance with reality which we call delusions.

A principle which actuates more than one system of psycho-therapeutics, but is still far from being in general acceptance, is that a mental disorder is predominantly due to experience which has passed out of manifest consciousness. It is customary to speak of the body of experience which does not enter into manifest consciousness as a "repressed" or "suppressed" body which passes off into manifest consciousness through an intermediate region of subconsciousness.

Putting aside the largely verbal question whether this body of apparently forgotten experience is or is not to be regarded as forming part of the mind, we are met with the far more vital problem concerned with the distinction between experience which is merely lying dormant, ready to appear in manifest consciousness whenever the suitable stimulus arises, and experience which has come to stand in that relation to manifest consciousness which is known as dissociation. A dissociated body of experience is one which has been separated from the body of experience making up manifest consciousness through some kind of active process—a process resembling in many respects that known as inhibition in neurology. Such dissociated experience is not recalled even by otherwise suitable stimuli in normal mental conditions, but emerges only under abnormal op. The usual unconscious conditions to bring it to the surface. A good example of such a dissociated mental state is that which occurs in the deeper stages of hypnotism. One of the most vexed problems of psycho-therapeutics turns on the question how far such dissociated bodies of experience, when accompanied by an unpleasant tone of feeling, act as the basis of bodily and mental disorder. One theory of the role taken by such unconscious experience in the production of mental disorder which is now especially prominent is that of Freud's theory of the unconscious.

Freud's theory of the unconscious.—From the point of view which concerns psycho-therapeutics, the most important part of Freud's system is his theory of forgetting. According to Freud, forgetting is not a passive process, but one which, at any rate in so far as unpleasant experience is concerned, depends on an active process of repression. It is held that unpleasant experience which has passed out of memory to such an extent that it cannot turn up in the form thus taken is a part of the mechanism of everyday life has not ceased to exist, but continues to exert an influence upon the mind. It may express itself more or less continuously in the form of a phobia, a tic, somnambulism, dreams, etc., or, after a long period of quiescence, it may show itself under the influence of some shock or strain as a paralysis, contracture, affection of sensibility, or some form of mental disturbance. The disturbance, whatever its nature, is held to be the result of the repression of unpleasantly colored experience, now generally known as a complex, and the general personality of the patient.

Freud has not been content merely to ascribe abnormal bodily and mental conditions to such factors, but has felt it to be of importance to come to terms with the theory of the mechanism by which the suppressed experience or complex produces its effects. He supposes that its modes of expression are governed by a mechanism of control which, using a metaphorical phrase," allows the suppressed body of experience to find its way to manifest consciousness only in some indirect and often symbolic manner.

Two special features of the psychology upon which the Freudian system of therapeutics is based may be considered here: (a) the importance of the experience of early childhood and (b) the role of sexuality in the production of morbid mental states.

(a) According to the earlier views of Freud, the suppressed experience of childhood forms the chief factor in the production of morbid mental states, where these are expressed either as phobias or as the sexual experience, dating back to the earliest period of the experience of early childhood. The trend of modern work has been to accentuate the importance of recent traumatata in the production of morbid mental states and to make of less account the experience of early life. This movement should not be allowed, however, to go too far and obscure the great extent to which early experience is responsible for the phobias, tics, and tendencies to morbid modes of thought, and still more of feeling, which form so fertile a soil for the growth of morbid mental states in later life.

(b) Another principle of the Freudian psychology which has led to much controversy, and has through the exaggeration of its importance gone far to wreck the immediate success of the whole construction, is concerned with the role of the sexual experience in the production of morbid mental states. Freud has come to the conclusion that the bodies of suppressed experience which he believes to underlie mental disorder invariably centre in incidents of the sexual life. So far as he himself is concerned, the form thus taken by his psychology of the morbid rests largely on an extension of the
connotation of the term 'sexual' far beyond the customary, but, in the hands of his disciples and to a large extent in his own, the theory has come to deal almost exclusively with crude sexual experience, morbid mental states being ascribed to the working of suppressed sexual desires, and especially of perversive tendencies. There is no question that disorder of the sexual life, especially when its nature leads to repression, takes a vast part in the causation of mental disorder and of functional symptoms. To Freud and his co-workers, the sexual is also the origin of all faith and the principle, ascribed by them, of all religions. These beliefs are founded on the idea that the sexual is the cause of moral and religious belief, and that religion is a form of sexual instinct. This belief is supported by the fact that the more closely we examine cases in which the cure of disease is accompanied by changes in sexual beliefs, the more the belief in the universality of religious causation becomes the residue which cannot be ascribed to some category of natural causation. The more highly developed the religion, the more do its leaders themselves adopt the theory of natural causation and ascribe successful results of their operations to the working of faith and suggestion.

(b) Human agency. — There is a widespread belief among the peoples of the earth that human beings are able to cure disease by their own powers. This is usually associated with the belief in the causal action of disease by magical rites, manual and verbal. In such cases the cure is effected either by inducing the sorcerer to remove his spell or by employing some other human agent, believed to be more powerful than the sorcerer, to counteract the spell or to avert its consequences. In many of these cases the belief attaches in large measure to the objects or words which are used in the curative rites, and it is probable that the powers ascribed to these objects and words can often be traced back to the belief in an existent ghostly agency. It is certain, however, that efficacy is largely ascribed to the personality of the sorcerer. Some degree of confusion between personality and measures runs through the whole history of medicine, both in its present time and in the most civilized communities, the efficacy of therapeutic measures and of religious rites in connexion with disease is largely ascribed by the less educated members of the community to the personality of the physician or priest. Here, even more clearly than in the case of supernatural agency, the trend of modern opinion is to ascribe the efficacy of personality to the action of faith and suggestion.

(c) Faith and suggestion. — In modern writings on therapeutics and allied subjects it is not unusual to find that the action of faith and suggestion, or, if they are distinguished, faith is regarded as a form of suggestion or is held to act through suggestion. This attitude is the result of a tendency to make the scope of suggestion so wide as to include nearly every process by which the mind is acted upon by another mind, by an object of the environment, or even by itself (auto-suggestion). When it is said that faith acts through suggestion, it is meant that through the process of belief, which is the main element in faith, a deity, person, or object produces a certain effect upon the mind which is classified with other effects ascribed to suggestion. Belief is an active and conative process, differing fundamentally from the condition of passive acceptance or acquiescence, which is the main of the causes for which the concept of suggestion was originally framed. Though the two processes are poles apart psychologically, they are often combined. Suggestion often produces its effects through faith, but this is very different from faith being an explanation. We could not do well, or perhaps with more justice, say that suggestion is explained by faith. The fact is that they are two distinct processes, differing essentially from one another in psychological character and producing different results in the individual.

Both faith and suggestion are of the greatest importance in psycho-therapeutics. It is undoubtedly to them that the remedies employed by savage and barbarous peoples owe their efficacy,
and they continue to be operative in the most modern forms of medicine where the confidence of the patient in his physician is generally acknowledged to be the first and most important step towards therapeutic success. The whole history of medicine from the stage of its close association with magic or religion to its full emergence as an independent social institution, the personality of the healer has been of predominant importance. It is through faith in this personality, both its presence and influence in the patient’s mind, that the process of suggestion that therapeutic measures attain a large proportion of their success.

The influence of faith and suggestion pervades the whole system of treatment of the sick. Not a dose of medicine, not even a measure of diagnosis, can be used without bringing it into action. Their effect often begins even before the physician has seen his patient, and usually they are the more efficacious the more unwittingly they are employed. There are many practitioners of the medical art, among both savage and civilized peoples, whose measures would lose most of their efficacy if they realized the true mode of action of the remedies in which they have so profoundly faith. Here, as in so many other phases of life, it is side-measures that are especially likely to fail. A physician who understands the real nature of psycho-therapeutic activity and who is wholly ignorant in this respect will succeed. The unsuccessful practitioner will not realize the correct mode of action of his faith measures in his medications and diatetic remedies without having acquired a sound knowledge of the processes upon which the success of these remedies so largely depends.

Catharsis.—The two factors, faith and suggestion, run as manifold threads throughout the whole texture of psycho-therapeutics. They are of special importance where the mind is intact or where, more correctly, the mental disorder shows itself by some physical manifestation rather than in some overt disorder of the mind itself. The agency now to be considered is of especial importance where disorder of the mind is due to some mental injury which produces a condition of anxiety. Catharsis is the most important psycho-therapeutic measure. It is the process of cleansing the mind of its blemishes, of its faith measures in its medications and its diatetic remedies without having acquired a sound knowledge of the processes upon which the success of these remedies so largely depends.

The term ‘catharsis’ should properly be limited to the agency by which a pent-up grief, anxiety, or shame is relieved by the process of confession and that in which a mental conflict is resolved by measures which bring to manifest consciousness some element of suppressed experience.

(e) Autogosis.—Another most important element in the production of mental disorder, and in the forgotten experience, is that the subject learns the better to know himself. An important factor in the production of mental disorder, still more important in keeping it in being when it has already been there is that the patient fails to understand his condition. His real problem is enveloped by a sense of mystery which greatly accentuates the emotional state upon which his troubles primarily depend. The process by which the patient learns to understand the real state of his mind and the conditions by which this state has been produced forms a very important therapeutic agency which may be called ‘autogosis.’

Autogosis as a therapeutic agency includes a large number of processes. Owing to the ignorance of the healer and the patient about the whole history of medicine from the stage of its close association with magic or religion to its full emergence as an independent social institution, the personality of the healer has been of predominant importance. It is through faith in this personality, both its presence and influence in the patient’s mind, that the process of suggestion that therapeutic measures attain a large proportion of their success.

The influence of faith and suggestion pervades the whole system of treatment of the sick. Not a dose of medicine, not even a measure of diagnosis, can be used without bringing it into action. Their effect often begins even before the physician has seen his patient, and usually they are the more efficacious the more unwittingly they are employed. There are many practitioners of the medical art, among both savage and civilized peoples, whose measures would lose most of their efficacy if they realized the true mode of action of the remedies in which they have so profoundly faith. Here, as in so many other phases of life, it is side-measures that are especially likely to fail. A physician who understands the real nature of psycho-therapeutic activity and who is wholly ignorant in this respect will succeed. The unsuccessful practitioner will not realize the correct mode of action of his faith measures in his medications and diatetic remedies without having acquired a sound knowledge of the processes upon which the success of these remedies so largely depends.

Another value of autogosis depends on the wholly mistaken estimate of the gravity of offenses against morality which frequently accompany states of mental disorder. It is noteworthy that those who, from the fear of infamy or of offending, who seem to pass as a rule through periods of mental stress without suffering. The persons whose neuresthetic or melancholic state centres in some old moral delinquency are usually persons into whose personal history, perhaps have only once lapsed from virtue, or may have been 'only innocent partners in, or even mere spectators of, some immoral act; sometimes they have offended only in thought and not in deed. It is in the early stages of the malady before the condition of anxiety has become habitual and some unnatural explanation has been systematized to form a delusion. Old injuries of this kind usually produce their effect after some strain and stress which lower vitality and produce disorder of various bodily processes. The awakening of the old mental injury only serves to aggravate and perpetuate the psychic state, thus preparing the individual to be capable of the trauma brought to bear by a pathological condition accentuates the condition by which it has been produced. By the process of autogosis this vicious circle may be broken or weakened and an opportunity given for a movement towards recovery.

Of greater interest and of more importance is the process by which the patient is led to understand how his disorder has developed. Many mental disorders are only exaggerations of tendencies towards modes of feeling, thought, and action which go far back into the life-history of the sufferer. If he can be led to see where he has strayed from normal paths and can learn to know the factors to which this straying has been due, a long step will have been taken towards recovery. If the patient learns that his disease is only the expression of an exaggeration of a wide-spread trend of feeling, thought, or action, his condition will not be described as a mental disorder, or as idiocy, or as cruelty, or as insanity, but will assume proportions which can be faced rationally and dispassionately.

The instances of autogosis just considered are examples in which mental conditions underlying pathological states are present. One of the more interesting problems of psycho-therapeutics at the present time is to discover how far the process of autogosis can be extended to include past experience which has wholly disappeared from the conscious mental life. It stands beyond

1 The present writer owes this term to Dr. William Brown.
all doubt that past experience which has taken so little part in the conscious mental life of a person that it seems to be wholly forgotten may reappear in consciousness during the state of anxiety following some period of physical and mental strain. Moreover, this unconscious, impure, or repressed image, which has been so nearly forgotten that the patient may not remember its coming to consciousness, perhaps for years before the period of stress which again brings it to the surface. The doubtful point is whether this series can be extended to include past experience which has so wholly passed from consciousness that it can be brought to the surface only by special means, such as hypnotism, or by the process called psycho-analysis.

(f) Sympathy.—Of the agencies common to the work of physician, priest, and teacher none is more important than that to which the name 'sublimation' has been given. The process of autognosis often shows the presence of some faulty trend of thought and action which is capable of being redirected toward healthy ends. Many nervous and mental disorders depend, at any rate in part, on tendencies which are altogether anti-social, or, while suitable to one kind of civilization, are out of place in the society into which the sufferer has been born. In such a case sublimation furnishes an alternative to satisfaction or repression.

One of the chief directions which may be taken by the process of sublimation is towards religion. The specific sublimated energy is used to motivate actions which make up the psychological basis of religion; often can be substituted for those associated with the anti-social trend. Less frequently, the sentiments and emotions associated with art can be utilized, or the morbid energy may be directed into some other channel of activity. The great importance of religion in the process of sublimation, and in the whole field of psycho-therapeutics, is that it is able to satisfy both emotional and practical needs, its specific emotions satisfying one kind of human need, while the capacities of the individual satisfy others. An additional value which attaches to religion as a means of sublimating morbid energies is due to the fact that in their historical development modern religious systems have brought religion and moral teaching into close relation with one another, so that a definite system of beliefs opposed to various anti-social trends serves to rationalize and fortify the process of sublimation. The relative failure of art, as compared with religion, in the process of sublimation is largely due to the absence of any such association between its specific emotion and moral teaching, most followers of art explicitly denying the connexion with morality which forms so definite a part of the system of religion.

(g) Reason.—One of the most difficult problems of psycho-therapeutics is to assign its proper place to reason as a therapeutic agency. It is a universal experience of those who have had to deal with the insane that the task of bringing a reason a patient out of his delusions, and this holds also to a large extent of the obsessions and hypochondriac fancies which are so frequent a feature of the broad borderland between sanity and insanity. By the patient's difficulty in adopting the role of an advocate, so that the only result may be the strengthening of his delusion or fancy. Where reasoning does good, it is often only through the influence of faith and suggestion, in which case the reasons given by the physician or priest only reinforce processes of other kinds which act through emotional or instinctive channels. While reason is thus of little direct use, and may even be harmful, it forms a most important element in other psycho-therapeutic agencies, especially in autognosis. Once the true emotional cause of a morbid state has been discovered and explained to the patient, the exercise of his own reason comes to form an essential element in his amendment or recovery. There is in all the direct influence on the thought of the reason by one who does not understand the real underlying conditions of the malady and reason exerted when these conditions have been discovered and are themselves the material from which the reasoning starts and upon which it acts. As with other therapeutic agencies reason is useless or harmful only when it is employed in ignorance of the real nature of the morbid state upon which the physician or priest is acting. Here, as in other branches of medicine, the proper use of the remedy depends on the exactness of the diagnosis.

(b) Sympathy. — The nature of the action of sympathy in psycho-therapeutics raises a problem of considerable difficulty. The sympathy of the physician is essential in gaining the confidence of the patient and in making the process of psycho-therapeutics, but, unless very judiciously expressed, sympathy will have a bad effect. It has long been recognized that removal from his or her ordinary surroundings is in most cases essential if a nervous or hysterical patient is to have the best chance of recovery. One very important reason for this is the necessity of removal from the almost invariably injudicious sympathy of relatives and friends by which the attention of the patient is absorbed, and this is accentuated the physician himself should always be on his guard lest an excess of sympathy should increase the attitude of self-regard which is one of the main characteristics of many forms of neurosis. Cases are frequent in which at one stage or another it may be useful to act towards a patient in an apparently unsympathetic manner. In so far as sympathy can be regarded as a direct therapeutic agent, it is as capable of harm as of good. It is in paying the way towards the employment of other agencies that its importance in psycho-therapeutics is most definitely shown.

(i) Occupation. — In some systems of psycho-therapeutics work has been put in a foremost place. It has been held that the chief need in cases of neurosis is that the mind should be occupied in work of a kind which will direct the attention of the patient away from the morbid activities of his mind and body. Since a prominent feature of many cases is abnormal preoccupation in some unhealthy trend of thought and feeling, such a course would seem at first sight to be sound, if not obvious. In practice, however, the will to work is present perhaps in excess among persons suffering from a disease which calls for psychical treatment; while in a still larger number the case is such a lack of interest or such bodily or mental weakness as to make the effort to work even harmful. In such cases it is necessary to restrain rather than encourage activity. In most cases, however, work in a direction which will not prove to be in danger of acquiring a habit of inactivity, and occupation then becomes a most important therapeutic agent. In other cases in which the process of autognosis shows the presence of sloth or mis-directed energy, however, occupation then becomes of the utmost importance in psycho-therapeutics.

4. Psycho-therapeutic measures. —The lines of treatment adopted by one who practices psycho-
therapeutics will depend on his beliefs concerning the nature of the agencies by which disease is produced and cured. If he believes in the efficiency of superman, his treatment will consist of religious rites of prayer, sacrifice, and propitiation, together in many cases with other rites, such as those of purification, confession, penance, and atonement, designed to put both patient and priest in a state of spiritual relationship towards the superman being whose help is being sought. By some Churches these various rites have been combined so as to form organized systems in which large numbers of the sick undertake pilgrimages to places believed to have a curative influence.

Similarly, if one believes in human agency as the cause of disease and the means for its removal, either he will adopt measures designed to propitiate the person by whom the disease is believed to have been produced or he will employ, or induce others to employ, measures designed to neutralize those of the sorcerer to whose actions the disease is ascribed.

If the physician believes in suggestion, he will employ this agency actively in one of its many forms. In the case of hypnotism, his treatment will consist chiefly in measures designed to bring the patient to a sound knowledge of himself and of the conditions by which his disease has been produced and can be remedied. If he believes in occupation, he will set the patient to tasks designed to turn the morbidly directed energy into this channel.

The discussion of psycho-therapeutic agencies in the preceding section will have pointed the way to other treatment, but few measures may be more fully considered.

(a) Hypnotism.—It is now generally accepted that hypnotism as a therapeutic measure is only a mode of utilizing suggestion, the chief feature of the hypnotic state being a condition of heightened suggestibility. Closely allied to hypnotism is the condition, known as hypnoidal suggestion, in which a patient is placed under conditions especially designed to enhance his receptiveness for the influence of suggestion.

A prominent characteristic of hypnotism is the production of a state of dissociation, so that, on coming out of the state, the patient has no conscious recollection of any suggestions which may have been made by, or to any other person who has communicated in any way with the hypnotized subject. Nevertheless, the suggestions will act in the manner intended by the hypnotizer, and other events may be recalled when the patient is again hypnotized or may revive in dreams or under other conditions. In the state of hypnoidal suggestion there may also be some degree of dissociation, but the patient, at any rate in its slighter degrees, is aware of the suggestions and other experience.

Perhaps the most debated question of psycho-therapeutics is how far it is legitimate to practise hypnotism and hypnoidal suggestion. The physician who recognizes that every word that he utters may carry a suggestion will naturally utilize this agency as much as possible. The question which is disputed is how far it is legitimate to accentuate the influence of suggestion by the production of the dissociation which characterizes the hypnotic state, or to give suggestions to the patient in such a way that he is led to believe that some force wholly independent of the hypnotizer has caused the disease. One of the points on which the question turns is how far hypnotism produces a harmful effect. It is generally acknowledged that a person who has once been hypnotized can be more easily hypnotized a second time, not only by the original hypnotizer, but also by others if a definite counter-suggestion has not been given. This definite change in the character of a person can hardly be altogether for the good, to say the least. Moreover, it often happens that a definite craving to be hypnotized is set up, though it is clai ped by advocates of hypnotism that this happens only when the agency is employed unskillfully. Since, however, we can be confident that, if hypnotism became a regular part of medical practice, it could not be employed unskilfully, a vista of possibilities is opened which it is not pleasant to contemplate.

These arguments are especially directed against the habitual employment of hypnotism as a remedy for minor ailments. The great disease category is that of cases of functional disease due to shock such as have been so frequent in the great European war. There is no question that symptoms can be removed, sometimes by a single hypnotic treatment. It may be argued, on the one hand, that experience has shown that these cases tend to recover quickly by other means. On the other hand, it may be argued that the cases, having been produced by a sudden shock quite irrespective of the disease of the person, should be treated by some equally drastic remedy. We do not know enough at present of the history of such cases to allow any decisive answer concerning this problem. We must await the investigation of the after-history of the many cases in which hypnotism has been employed during the war.

The chief objection to the employment of hypnotism is not, however, its possible harmfulness or the dangers of unskillful application, but rests on the fact that hypnotism in the case of suggestion and hypnotism ignores a fundamental principle of medicine in that these agencies are directed towards the symptoms of disease and do not touch the morbid process to which the symptoms are ultimately due.

The action of a physician who hypnotizes for headache is no more legitimate than that of the practitioner who administers aspirin or morphia for these symptoms without inquiring into the conditions by which the headaches and sleeplessness are being produced. Both actions are examples of a slipped and short-sighted employment of therapeutic agencies. The most recent systems of psycho-therapeutics hold that in the treatment of mental disorder, as in other branches of medicine, it is our duty to discover causes and to remove or amend symptoms by discovering and attacking the deeper and less obvious states upon which the symptoms depend. Hypnotism may be used to discover causes and may thus be an instrument in autogenesis, but, as more usually employed, it merely touches the surface and ignores, or even obstructs, inquiry by which the true nature of the malady may be revealed.

(b) Psycho-analysis.—This word has been very unfortunately chosen, for every physician who endeavours to employ this method upon patients which have produced an abnormal mental state must of necessity carry out a process of psychical analysis. The term is so widely used, however, for the system initiated by Freud that its use can hardly be avoided. By psycho-analysis we mean primarily the process by which the physician discovers the ‘complex’ or body of forgotten experience which
PUBERTY

is believed to underlie abnormal mental states or abnormal bodily states ascribed to mental conditions. The word applies primarily to the method of diagnosis by which the conditions underlying a morbid mental condition are discovered. If, according to the earlier ideas of the Freudian school, the diagnosis is itself sufficient to bring about a cure, its use included also a system of therapeutics. According to Freud, a complex cannot be discovered by the ordinary methods of inquiry. He further suggests that isolation of such abnormalities of conduct as forgetting, slips of the tongue or pen, and apparently meaningless acts. The investigation of these processes forms one of the chief departments of psycho-analysis.

In addition to these more or less indirect means of analysis, two other methods have been widely employed. In one, known as the method of free association, the patient has to express freely every thought that comes into his mind in response to an idea suggested by his symptoms. In addition, the method, which is due especially to Jung, the patient is given a number of words in succession and is asked to express as rapidly as possible the ideas that each word calls up in his mind. It is felt that this type of reaction will under suitable conditions bring to light unconscious ideas which his patient has rejected. If the given word arouses ideas in close relation with the complex; and, if a series of words is repeated, the responses on the second occasion will not agree with those of the first when the patient has been asked to express freely. In the method of free association the patient is put into as tranquil a state as possible and the experience succeeds the better the more the condition approaches a minor degree of the hypnotic state, in which thoughts aroused by immediate association are controlled as little as possible by voluntary control.

The method of closed association with reaction-time has a narrower scope and is chiefly useful in providing clues for other lines of analysis. If employed without full knowledge of its purpose on the part of the patient, it savours too much of the methods of the detective and may do harm by interfering with the state of confidence between physician and patient which is the first condition of success in psycho-therapeutics.

A third method is used for the body of measures which the physician employs as the result of the processes by which he has led his patient to a knowledge of himself and of the conditions which have produced his morbid state. In rare cases sufficient may be so intelligent and balanced that the mere requirement of such knowledge may itself be sufficient to enable him to shake off his morbid symptoms and set him on the path leading to a healthy mental life. This holds good, not only when the experience which he has come to understand belongs to his fully conscious mental life, but also, and perhaps still more conspicuously, in those cases in which the process of psycho-analysis has brought to light some long-forgotten experience. In most cases, however, the full therapeutic value of autopsychosis is brought out only through a process of re-education in which the patient is led to understand how his newly acquired knowledge of himself can be utilized. He has to be shown how to readjust his life in the light of this new knowledge. He may then find that he can live in the body of channels which the physician, the teacher, the social reformer, and the priest, are the prospect that principles of action and modes of inquiry discovered by any one of these may be helpful to the others that makes the most fruitful fruit of modern medicine. The modern measures of the physician are little more than his adoption of modes of treatment which have long been familiar, in the form of confession, to the priest. While the physician may learn much from the long accumulated experience of the priest, the priest may be helped by such a study of the psychology of confession as his special knowledge and experience allow the physician to undertake. Moreover, the experience of both priest and physician may be utilized to those who are interested in the regulation and improvement of social conditions.

The great interest of modern trends in psycho-therapeutics is that at this late stage of social welfare work to be again applying psycho-therapeutics and medicine into that intimate relation to one another which existed in their early history. We have here a typical case of social evolution in which social processes once so closely combined with civic duties as to be. Hence, it is not surprising that another have followed widely divergent paths only to meet again as each has come to spread its branches widely over the whole field of social activity.

W. H. R. RIVERS.

PUBERTY.—Puberty is the period of life at which reproductive power is attained. Its commencement is marked by certain external signs, and it is characterized by certain physiological, mental and moral changes.

1. The age at which it is reached varies considerably in the case of both sexes; and these variations occur not only in different races but in different individuals of the same race.

I. INITIATION AND PUBERTY.—It is a familiar feature of uncivilized societies that those of their members who are of the same sex, age, or occupation,

1 Of these the most marked are, in females, enlargement of the breasts, the appearance of pubic hairs, and the appearance of the menstural flow; and, in males, the breaking of the voice, and the growth of hair on the arms, faces, and body.

2 As to the intellectual development of the body to which puberty has special relation, see art. ADOLESCENCE and the authorities there cited. See also E. A. C. CAYKING, The Mystic Rose, London, 1902, p. 198.

3. A. van Gennep, Les Rites de passage, p. 85 ff. These variations are due to the influence of race, climate, diet, housing, clothing, occupation, temperament, mode of life, and state of health (H. Floss and M. Bartels, Das Web in der Natur und Volkerkunde, 1. 421 f.).

4 Thus, in Egypt, the average age at which menstruation begins is, according to the authorities there cited, another 10-13 years, while, among the Somal, is 16 years. For 584 women of Tokyo the figures were: at 11 years, 35; at 12 years, 30; at 13 years, 70; at 14 years, 254; at 15 years, 226; at 17 years, 63; at 18 years, 44; at 19 years, 19; at 20 years, 2 (Floss and Bartels, IX. 435 ff.; van Gennep, p. 99).
tion, or who have been participants in the same rite at the same time, or who are affected by initiation. The idea was to form themselves into subordinate social groups, membership of which confers special rights, imposes special duties, secures special privileges, and exposes to special supernatural influences. To attain ingress from or entrance into such a group requires as its necessary prerequisite the observance of certain customs, or the performance of certain rites; and we find, accordingly, that, in many instances, admission into the ranks of the mature is restricted to those who have undergone the appropriate preparation.

In the case of rites of marriage (or of the mark separation from childhood and entrance upon manhood or womanhood the name of 'rites of puberty.' And yet it is only certain to that certain rites that the name can be accurately applied; for in the case of two or more of the ranks in persons is, in many instances, determined not by arrival at puberty, but by something having no necessary connexion with it, such as attainment of a certain age or possession of a certain capacity or quality. Out of all these factors, the ground for distinguishing the use of the name has, we venture to think, been pushed too far by van Gennep. At the same time, he has done good service in insisting on the limits of its applicability; and, accordingly, we shall confine our attention in this Work to those rites which are more closely analogous to what is called the celebration of puberty, and in which the determinative period is determined in point of time by reference to puberty.

It is, however, to be kept in view that, in some instances, a rite which is undoubtedly a rite of puberty does not occupy the place usual in the structure of puberty, is attained, while, in others, it is postponed for reasons of convenience or by force of circumstances.

In cases in which initiation is spread over a long course of years it may be that none or some only of the rites are puberty rites.;

In Fiji uncircumcised youths were regarded as unclean (R. Thompson, The Fijians, London, 1908, p. 210); and among some of the tribes of Central India an uninitiated was regarded as taboo. Thus, a child who had not undergone the rites of hair-shaving or ear-piercing was treated as subject to tribal restrictions as to food, etc. (W. Crooke, 'The Hair-Tribes of the Central Indian Hills,' JAF xxviii., (1898) 240, R. J. Eyre (Journals of Experiments of Discovery into Central Australia, London, 1854, ii. 201) says of a S. Australian blackfellow, 'The real secret of the navigation of the sea by the natives have not deemed him worthy of receiving the honours of their ceremonies, and still call him boy or youth, although he is an educated man.' (Spencer and Gillen, The Central Australians, London, 1904, p. 530).

s. Such as to carry arms (J. Grimm, Deutsche Rechtswissenschaft, Göttingen, 1881, p. 413) or prowess in war or foray (van Gennep, p. 125).

3. See the account of the ceremony of the Yulin tribe (below, II), and W. E. Roth, Ethnological Studies among the N. W. Central Queensland Aboriginals, Brisbane and London, 1897, p. 170 ff.

4. It is postponed sometimes until a sufficient number of candidates has been collected (L. Fison and A. W. Howitt, Kamilaroi and Kurnabi, Melbourne, 1889, p. 192), and sometimes until sufficient food is secured for the operation, which is the part of the ceremony (M. Krieger, New-Guinea, Berlin, 1899, p. 167; W. S. and K. Rottledge, With a Prehistoric Famine at Askinya of British East Africa, London, 1909, p. 151), or to pay the superintendent of the rite (B. T. Somerville, Notes on some Queensland Tribes, JAF xxi., (1904) 201), or, in the event that the chief's son is old enough (G. McCaull Thomas, Hist. of S. Africa, London, 1863-55, iii. 285). In some instances the ceremony of circumcision takes place four years after initiation, A. J. Jaffers, The Life of a S. African Tribe, London, 1912, i. 74; W. C. Wallace, Door-Eating among the Bechuana, JAF xxxiv. (1909) 229), while in others it is suspended owing to the occurrence of a calamity (Theal, loc. cit.), such as war, famine, etc., or because of a quarrel at the Stone Enclosure, of Wainimala, Fiji, JAF xiv. (1885) 19.

5. Spencer-Gillen, p. 231. Among the A-Kamba the children of both sexes are circumcised when about five or six years old, and a second ceremony is performed at puberty (C. W. Hobley, The Ethnology of the A-Kamba and other E. African Tribes, Cambridge, 1910, p. 69). Similarly, among some of the northern

and sometimes a puberty rite loses its original significance by being merged in a rite of another kind.

II. DESCRIPTION OF PUBERTY RITES.—A rite of puberty is sometimes a simple rite, consisting merely of a dance, a feast, or a procession through the street, and sometimes it is a complex rite, including within it or accompanied by subordinate ceremonies.

Thus the northern tribes of Central Australia celebrate two rites—circumcision and subincision—which are obligatory on all males, and which always take place, preceding the Urabunna tribe the novice who has undergone both operations is shown some of the sacred totemic ceremonies, and receives instructions in respect of the rules for the conduct of all to the operators; and they, by touching his mouth with a piece of wax, release him from his sexual impurity.

In one of the northern central tribes—the Lakanka—the novice is subjected, not to any mutilation, but to hard usage as kicks and blows, and to a test of strength, endurance, and courage; and finally he is shown and given a sacred bull-roarer which he may not show to his younger brothers or any woman. Among the Yum of S.E. Australia, who practice neither circumcision nor subincision, a tooth is knocked out as a test of manhood, and during the ceremonies is frequently heard. Its sound represents the thunder, which is the voice of Daramul. The chief rite is followed by dances, in which, sometimes, propositions, and other solemnities, of which one of the most important is the mock burial and resurrection of a novice. If a novice is subjected to certain food restrictions. Charcoal dust is the covering of the body during the ceremonies; and, when, at the close, it is washed off as a symbolic act of the piercing of the earth connecting the men's and the women's quarters. The youths are painted and invested with the belt of manhood, and retire into the bush, where the men who have charge of the ceremonies instruct them in the use of the learned names of the totemic names. The novices do not take their place as men in the community until the medicine-men are satisfied of their initiation, when they are permitted to marry.

Among some of the Victorian tribes the chief rite consists of a fight between the novices of two tribes which are at feud, and sometimes a tribe of Central Australia the throwing up ceremony precedes circumcision (see below, p. 333).

1. See below, III. 1 (f) note, and J. Kohler, 'Das Recht der Papua,' ZTRW xiv. (1900) 381 (Tambi Islanders).

2. See also J. Buchhaus des Buchhansch der Kelachie, Berlin, 1907, p. 104 f.

4. In the Yoruba tribe the men are circumcised when 18 years, the women when 10; in the Ijaw the men are circumcised when 20, the women when 10 years.

5. See Spencer-Gillen, p. 328 f. Among some of the tribes of N.W. Central Queensland (Koth, p. 170 f.), and S.E. Australia (Howitt, pp. 530, 532), initiation is not considered to be a ceremony of puberty, when the moustache and beard begin to show. In the case of the Dieri it is performed at the age of nine or ten years, when the novice receives a new name, and it is followed some years afterwards by subincision, in virtue of which the youth becomes a 'thorough man.' (ib. p. 656 f.). In the case of the Arunta and other tribes the rite of painting the boy and throwing him into the air is performed when he is ten or twelve years old. He may be circumcised at any time after puberty (Spencer-Gillen, pp. 214-219).

10. In the case of the ceremony in which Howitt took part there were twelve years between the operation on two were done, on the boy of age, while the third was older and had an incipient moustache (Howitt, p. 317). 11. Spencer-Gillen, pp. 366, 401; cf. pp. 343, 490. Beliefs fundamentally the same are found in all Australian tribes (Howitt, ibid.; cf. p. 396). See also Krieger, p. 167; J. Holmes, 'Initiation Ceremonies of the N. N. Blackfoot,' JAF xxxvi. (1893) 355.

12. The ceremonies are intended to impress and terrify the boy in such a manner that the lesson may be indelible, and may govern the whole of his future life. But the initiations also to amuse in the intervals of the severe training (Howitt, p. 383).

among others, of painting the natives and cutting their hair in a peculiar fashion, while, in some instances, plucking out the hair of the inside of the arm as a mark of knighting out.

Women, while usually taking part in the preliminaries to, and accompaniments of, the rite, are excluded from its actual performance.

As to the initiation of girls, we may observe that the ceremony of rubbing the breasts with fat and ochre,1 and the operation of cutting and piercing the vagina, followed by sexual intercourse with men who stand to them in certain relationships,2 appear to be components of the ceremony of women's pubescence, in the air and subincision. Among the Arunta and Jpirras tribes, a girl, during her first menstruation, is secluded at a spot apart from the women's camp, unvisited by men,1 while at Upper Yarra she is, at the same period, tied with cords too tight to permit of natural pain, but not so tight to cause death, until the flow has ceased.3 Among the Dieri the practice of knocking out two of the lower middle front teeth is not confined to girls.

III. CHARACTERISTIC FEATURES OF PUBERTY RITES.—In the preceding paragraph we have noted the main characteristics of a few of the puberty rites practised by some of the Australian tribes, and found that they included mutilations, the imposition of certain taboos, the performance of various ablutions, and sometimes in the case of females as well.4 It takes place sometimes on arrival at puberty,5 and sometimes at stated intervals.6 Occasionally it is postponed owing to special circumstances.

(b) Knocking out teeth.—Among the Murrumbidgee, Murray, and Goulburn tribes two of the incisor teeth of the lower jaw are knocked out in the case of boys on arrival at puberty;7 and among the Batoka there prevails the custom of knocking out upper front teeth of both girls and boys at the same period.17

1 Howitt, pp. 602 f., 610, 613.  
2 Spencer-Gillen, p. 351. The Warramunga tribe is an exception. These women's rites are also found in many other groups of tribes.

16 Brough Smyth, i. 62-66.  
17 Livingstone, p. 532 f. A somewhat similar usage is practised by the Sidi in the case of girls before marriage.

(c) Filing the teeth.—In Makasar the teeth of both sexes are filled at puberty, and a five days' tabu in respect of certain foods is imposed.4 It is said that among the kedah Semang the teeth are filled at puberty, and that the operation of filing them is a custom practised by the Malays at or about the same time of life.5 The custom of painting the teeth of the Thonga girls at puberty is dying out.4 (d) Perforating the lips or ears.—Puberty rites in the case of girls have become more or less obsolete.6 The lower lip for the later insertion of an ornament among the Tlingits,7 and the piercing of the ears among the Tsimshians.8 The ears of the Thonga boys were pierced at puberty.9

(e) Scarcification, tatting, etc.—Among the Ba-Miula scars are made on the face and body of both males and females at puberty.10 Part of the puberty rites to which the girls of the Abipones are subjected consists in pricking them with thorns, ashes mixed with the blood being rubbed into the punctures so as to render them indelible. The operation must be borne without wining.11 Very similar accounts are given of the rites in the case of girls among the Charrua, Minanes, and Pagayuas,12 the Tupis,13 and certain tribes of the Orinoco.14 Among the women of these latter groups, when adult or nearly so, are tattooed on the arms and back.9 In British New Guinea the completion of a girl's tatting is a sign of her maturity;15 and in Raitee, one of the Society Islands, it was considered a disgrace to be without the tattoo marks of puberty.16 Among the Bushmen incisions were made on the forehead and between the shoulders, and charcoal was rubbed into them, as the final puberty rite in the case of boys;17 and among the Ba-Ronga women tatuing begins to be in connection with marriage or, at least, nubility.18

(f) Dilatatio vaginae, artificial dejeoration.—In the case of girls in Azima Land, the vagina is enlarged on arrival at puberty;18 a similar practice prevails among the Wa-yao of British Central

speech with certain persons only is permitted, or it is confined to whispering. In other cases archaic or foreign words are used during the ceremonies. (c) Sometimes the cases are to be found in which the novices are prohibited from feeding themselves, scratching themselves with their hands, touching the hair or face, touching the ground with their feet, looking upon the sun or fire, or looking at certain things, such as looking back, washing, working, or sleeping.

3. Tests of endurance, etc.—In many cases the novices are forced to practise a rigid fast. Thus, among the Musquakie Indians, the youth under goes a fast at puberty, wandering alone until he dreams what his medicine is to be, and, sometimes, what his vocation is. Sometimes the novices are forced to remain in deep water, or to thrust their heads through collars of thorns, or are gagged and stung with nettles or stinging ants, or are exposed to the bite of venomous ants, or are deprived of sleep, or are bound so tightly as to suffer great pain. Among the Thonga they must suffer cold, thirst, and cruel punishments. Sometimes they are prohibited from kissing, or from entering houses in the morning; or, or from being touched by a forbidden, in others while in a special food is prohibited.

(d) In relation to speech.—We have seen that among some of the northern tribes of Central Africa there was the under-riding of alienation. A similar prohibition prevails at Tutu, Torres Straits, in the Elenwa District, Papuan Gulf, and among some of the Brazilian tribes. Sometimes

3. It is very doubtful if this instance refers to a puberty rites.
4. It has been observed that where marriage follows closely after infancy it is difficult to determine whether the custom really belongs to the puberty rites, or to those of marriage. It will be admitted that as puberty rites gradually become simplified or altogether obsolete such a custom could only maintain existence as part of the marriage rites (K. Sidney Hartland, Concerning the Rite at the Temple of Mylitta, in Anthropological Essays presented to E. B. Tylor, Oxford, 1907, p. 198; cf. Crawley, p. 313; G. A. Wilken, 'Folktale bij verlovingen en huwelijken bij de volken van den Indischen Archipel,' in Bijdragen tot de Taal-, Land- en Volkenkunde van Nederlandsch-Indie, t. i. (1896) 441.

5. See above, II, 1.
6. JAI xxvii. 4; Howitt, p. 430.
7. Holmes, JAI xxviii. 429f. Holmes tells that the novices are permitted to walk abroad, but that, when they do so, they are encased in plates of glass under a face mask.

13. Krapf, p. 215; see also Junod, i. 179; and Dalton, p. 243, 251.
4. Ceremonial daubing, masking, painting, etc.; ceremonial dress.—We have seen that coal dust is the appropriate covering during some of the Australian ceremonies. It is put to a similar use in Yan and Tuta. The face, shoulders, and chest of the woman are daubed with white clay. In some instances the novice is masked, while among some of the tribes of Central Australia he is painted with distinctive patterns. Among the Hupa, 21 the Tinglit2 and the Beechunans, and the Kaliras2 the girls—and, among the Kosa, the boys—wear a distinctive dress; in N.W. Central Queensland the novices are decorated with necklets and feathers.22

5. Dances and pantomimic representations.—Dances are sometimes the sole ceremony at puberty. They are much more frequently an important part of puberty rites.23 Elaborate pantomimic representations take place during the Central and S.E. Australian solemnities,24 one of the most important of which is that of mock burial and resurrection. There are masked and unmasked pantomimics25 and symbolic representations representing deification26 and new birth.27

6. Naming anew.—Among the Wa-yao a new name is given at circumcision, and the old name is discarded. The Kosa abandon it. It is given by the father after the one of the sixteenth to twentieth times which happens to be in bloom when she arrives at puberty.28 On the occurrence of the same event the Inca girl receives a name from her chief relative.29 Among the Javan of Johor30 and some of the E. African tribes31 initiation is considered at puberty. Among some of the Australian tribes an individual32 or a sacred 33 name is given at recognition is regarded as a disease; and elsewhere as the result of connection with the moon in the shape of a young man (Seligman, p. 206; cf. J. Roscoe, Further Notes on the Manners and Customs of the Baganda, JAFI xxiii. 39). For other explanations see Crawley, pp. 101, 192, 196.

hair-cutting.—The Tupi girls wore cotton strings round wrist and waist to show that they were marriageable, and the girls of Kye, and among the Herero received a special dress at puberty. 1 When an Orton girl approaches maturity, she gathers up her hair in a knot, 2 and among the Southern Slavs a girl at the same period winds her hair close. 3 Among the Masaguas and Indians a girl is secluded at puberty, and at the close of her seclusion is washed and dressed in new clothes, 4 and the practice of clothing, ornamenting, and decorating the girls at the conclusion of the ceremonies is widely prevalent. 5 Sometimes the head-dress is composed of the roots of blood, or with the symbol of the shaman's familiar spirit. 6 In many instances the boys receive some badge of manhood on the completion of the rites, and are clothed in new garments, and weapons are presented.

In one case the novice must, after the completion of the ceremony, visit another tribe and is feasted on his return. 7 Bathing or washing frequently forms part of the ceremony, especially at the final stage. Thus, among some of the Victorian tribes, the novice is given over to the women, who wash off the clay and charcoal with which he has been daubed, paint him, and dance before him. He is now a man. These practices prevail in Kandemans, 8 Wilhelmsland, 9 at Torres Straits, 10 and among many African tribes. 11 Among the Swahili the girl is symbolically cleansed by being rubbed with powdered sandal-wood. 12 Dancing and singing takes place sometimes at the commencement 13 and sometimes at the close 14 of the ceremonies. Among the Narrang-ga tribe the hair and the beard of the novice are pricked out on three successive occasions. 15

(b) Marriage, funeral.—In many instances the end of the ceremonies is marked by feasting 21 and dacing, 1 and is frequently made the occasion of great licence. 16

(1) Marriage ceremony, religious service.—Sometimes the final ceremony consists in purification 18 or dis-enchantment 19 by a medicine-man, or in performing a religious service over the novice. 20

(2) Sexual intercourse.—In many instances sexual intercourse is permitted to the novice after the ceremony. 21

10. Destruction of things used during the ceremonies.—Among the Pitta-Pitta tribes of Queens-land 22 and the Thonga of N. Africa 23 the encloser used during the rites is burnt when they are ended; and the Macauls destroy everything that the novice has used or written, in order to symbolically remove all traces of his race.

A similar practice prevails among some of the tribes of S. Africa. 24

11.Privileges secured by initiation.—Among the most important of these are the rights to eat certain articles of food previously forbidden, 25 to join the young men's camp, 26 to take part in the sacred ceremonies 27 and in the dances and de-liberations of the men, 28 to marry, 29 and, in many instances, to assume the position of a full-grown man. 30 Many of these privileges are acquired by purchase from the old men of the tribe, and they are often worth as much as to purchase a wife or to purchase for woman to marry. 31

IV. OBJECT OF THE RITES.—We have seen that a rite of puberty may include or indeed consist of the ceremony of circumcision. In certain races the circumcision is not exclusively employed as such a rite. Circumcision, e.g., serves many other ends than to indicate an important epoch in the life of a member of a community. But, where it is practised as a rite of puberty, while it may and does operate to effect the purification or change of identity or purposes other than those of a rite of puberty. Still, when employed as such a rite, they express the notion of severance from the past and entrance upon a new sphere of life. In the terminological type of the ceremonies intended to effect purification or change of identity or purposes other than those of a rite of puberty.
some, at all events, of the mutilations inflicted, and in the instructions given we see a preparation for this new life—an attempt to form the character of the servant of the household and a fellow member of the community; and we see in the feasting, dancing, and sexual intercourse which frequently take place as the final stages of the ritual his introduction into the corporate life of the community.

PUBLICANI—PUPPETS

PUBLICANI, or Puppetani (a corrupted form of Paulician).—This is the designation under which the Cathari (see ALLEGROGENES) are frequently referred to by both French and English writers in the 12th and 13th centuries. Schmidt considers that the name, in this form, was introduced by the Crusaders, in evidence of which he cites Tudebod (Recueil des historiens des croisades, iii. [1866] 26) and G. de Villehardouin, Collection des origines nationales de France, Paris, 1824—28, iii. 150.

PUNISHMENT.—See Crimes and Punishments, Rewards and Punishments.

PUPPETS.—From the earliest times human effigies of a varying degree of realism have been fashioned by man which, from their character or their purpose, do not fall within the categories of idol—objects or abstractions. What may have been the object of the ivory and bone human figures of the paleolithic age cannot be stated with any certainty, but it is not improbable that they had a magical intent. The physical peculiarities of the figures, those seen as divided into two groups, one of which shows marked steatopygia, indicate that the aim of the artist was a realistic reproduction of the human form. In this respect the figures of the paleolithic period differ from many human effigies produced by savage peoples, from lack of skill or indifference, often show signs of little attention to accurate reproduction of form.

Among the ancient Egyptians models formed a regular feature in a separate and distinct category of works or carved ornaments of wood or ivory for votive personages. These figures, representing men engaged in occupations of a mental type such as writing, medicine, domestic work, or baking, as well as the oarsmen of the model boat, were buried with the dead to serve as his ministers in the after life, while the unibart figures were intended to take his place as labourers in the sacred fields of Osiris. They were a substitute for the slaves and other members of the household who, in accordance with primitive custom, were once sacrificed at the death of the master of the house. This substitution of a puppet or doll for human or animal sacrifice is not confined to Egypt. In the Malay Peninsula the sacrificial tray which is prepared on all ceremonial occasions for the propitiation of the spirits holds, among other offerings, coconut-leaf models of animals and dough models of human figures. Their intention is clearly indicated by the fact that the dough models of human beings are actually known by the name of substitute dolls (W. W. Skect, Malay Magic, London, 1900, pp. 72, 433). In India the Lushai Kuki class, in a very solemn, but rare, form of sacrifice to the spirits of woods and streams in cases of sickness—a sacrifice of which use is made only when other means have failed—prepare two small clay figures representing a man and a woman, which are placed on a platform; they then sacrifice a pig and make the blood run over the platform. The flesh of this pig is thrown to the pigs. Similar customs are known in a tribe in the Lushai Kuki Chans, London, 1912, p. 74. On the Nile a doll is used in the sacrifice to Osiris, and another doll is placed on a platform, usually an old ant-hill, and the farmer and his household march round it, striking it with a whip and shouting an appropriate song. A doll is used in the sacrifice by the women of the Llapis Clans, in the ceremony which took place on the Tiber, where a straw puppet was employed, in each case in substitution for a human being (G.P., pt. vii., Spirits of the Corn and of the Wild, London, 1915, ii. 107).

The spiritual basis of the use of models as substitutes appears in other connexions.

In cases of serious illness in the Malay Peninsula the wandering soul is channeled into a dough figure as an intermediate step to its restoration to the body; or dough figures, animal as well as human, may be made in the presence of a patient, a thread acting as the conductor under the influence of a charm (Skeat, pp. 421 f., 4521 f.). From among the Achænli tribes of the Lower Kuk, sacrifices of figures of dough in the shape of a boy and in the shape of a girl are offered to the spirit of the boy or girl, for the purpose of averting the calamity in the semblance of a child's doll. Inside the figure is a made of the points used in hunting. Sometimes a small, nonresting-place of the ancestral spirit (A. Werner, Natives of British Central Africa, London, 1906, p. 69). It is possible that a curious compromise was made between the idea of the spirit and the idea of the male ancestor (N. A. Charnplic, Aboriginal Siberia: A Study in Social Anthropology, Oxford, 1917, p. 217).

In European belief the embodiment of a spirit in a puppet appears in the custom of fashioning a doll from the last bit of dough, which is then used as a curative charm. This custom is wide-spreading among primitive peoples (see art. HASTIES). Among the Alikuya a sun-dried clay figure is produced at the harvest following the annual festival (J. T. Noble, With a Prehistoric People, London, 1910, p. 100 f.), which may with probability be regarded as the analogue of the corn-doll, the material substance representing the corn-spirit. This view of the custom, however, is a matter of inference, and the fact that the dancers appear to be denoting the corn-spirit of a dead ancestor, who lives and is elevated before them would suggest that it is passing into the category of idols. On the other hand, the fetishes in human form of W. Africa and the Dinka in the form of a corn doll are instances of that effect of the dough figure which appears to be independent of any specific purpose of the dough. A wooden fetish figure, e.g., of Bambalá origin, now in the British Museum, is said to have supernatural value unless some scarlet cord (British Museum Handbook of the Ethnographical Collection, London, 1910, p. 360).

How far the belief in the endowment of a puppet with a personality may be carried appears in the customs connected with the female fetish Nantaba, an appanage of the king in Uganda, which has to be provided on his accession by his father's mother's clan.

This fetish consists of a gourd in which the wind is supposed to be caught at a ceremony in which a tree is cut down and a goat sacrificed. The man who carries the fetish back to the king is regarded as guardian of the fetish. A young woman who is a covenent. The image is provided with a hut and a guardman—a king—a priest, and a woman—a priestess. Nantaba and carry her into the sun when she desires it. The king's wives come and sit around her, hoping to gain favour with the children. At the death of the king the fetish is thrown away (J. Roscoe, "Nantaba, the Female Fetish of the King of Uganda," Man, viii. [1898], no. 74). The relation of Nantaba and fertility can be paralleled by the use of puppets to promote fertility and well-being in other connexions, especially in relation to the crops. One instance, that of the corn-doll and the corn-spirit, has been mentioned above.

In Liberia settle figures are employed to promote the fertility of the crops. These figures are the relics of an earlier culture, but, when found in wind or elsewhere by the present natives, they are regarded as the souls of the ancestors, who is placed on a platform, usually an old ant-hill, and the farmer and his household march round it, striking it with a whip and chanting an appropriate song. Among the women they model a small figure of a naked human being, to which they can attribute the qualities of fertility or of cultural indiscrete songs. After this collection of alms, which may last for three or four days, the image, which is called Jekomwaa, the rain-god, is viewed as the soul of the figure, and it is made a figure himself and place it in the fields, after spreading for further instances elsewhere see G.P., pt. ii., Taboo and the Perils of the Soul, London, 1911, pp. 83 f., 62 f.
on them leaves, ashes, and flowers which he has received in return from the women who have ploughed, Omens and Superstitions of S. India, London, 1912, p. 307).

In these cases the image is one element in a whole which forms the fertility charm. It may, however, also be employed purely for protective purposes.

In S. India the crops are protected against the supposed dangers of an eclipse by images made, as in the rain-charm, of ashes from a potter's kiln—images regarded probably as sympathetic. The figures are placed on four sides of the field (Thurston, p. 41). The parallel with the termitaria and with the making of figures is rendered closer by certain physical peculiarities in the efts used for protective purposes in other connexions mentioned below.

Puppets are used to ward off evil influences of various kinds.

In Car Nicobar a wooden figure is used to scare evil spirits (British Museum Handbook of the Ethnog., p. 77). In the case of a child among the Lushai Kuki class a village to which it is feared the disease will spread is protected by a gateway across the road on which are straw figures of men and women which are burnt. The same practice is apparent parallel to the Priapus figures, however, is found in S. India, where, at the Mangalore races, a figure of a man with enormous genitals is carried in procession and at the Cannanore races, where the procession is headed by figures of a man and woman in cars, figures of boys and girls are employed (Thurston, p. 114). In this district, again, the employment of puppets to avert misfortunes is closely connected with the 'evil eye.' Dolls made of wood were covered with black cloth, splashed with white and black paint, sometimes representing a man and woman embracing, are kept in various fields or fields near to the figure away from the land, by which is practically to avert the ‘evil eye.' Figures of all kinds, but especially grotesque, indecent, or immoral, are made, may be put in fields or forests near to a village, in some cases, when in the state of erection, to catch the eye of the passerby, and distract it from the main structure (ib. 111 f.). It is believed that if the image is thus placed to point to an obvious European parallel to this form of the custom of averting the evil eye by some peculiarity or protective sign.

The doll in use depends upon sympathetic action. The employment of the waxen image which was melted, pricked by pins, or otherwise injured was one of the commonest practices attributed to witches in European superstitition. It is one of a number based on the belief in the possibility of harmful action on a human being at a distance.

In Japan nails are driven into a straw image, which is buried under the place on which the victim sleeps. In order to make a debtor pay his debts a brom, inverted, is made into an image to represent him; it is then knocked down and beheaded. The creditor draws a picture of the messenger and demands that he pay his debt. A wife penalizes her husband for infidelity by nailing an effigy to a tree (W. L. Hindburch, 'Notes on some Japanese Superstitions,' Journ. Folk-S. I, 1912, no. 62). Similarly, in S. India, when a Parivaram woman commits adultery with a man outside the caste, she is punished with a figure which is an image of her husband. The images eyes of which thorns are driven before it is thrown away outside the village, or if a girl in the village has a wooden figure made, into which nails are driven, a hole cut above the navel, into which a lead plate, with the name and star of the person and a charm written on it, is sometimes inserted, and it is cast into the sea. A favourite practice of the S. Indian magician, however, is to mould an image of a plastic material, such as dough or clay, which is buried at night in the Hindu cremation ground after thorns or nails have been driven into it, or is nailed on a tree. Sometimes the corpse of a child which is dug up and reburied, is used instead of a figure (Thurston, pp. 245, 247, 254). The Lushai Kuki class use bamboo splinters to drive into the image, and the Brazilian Tupi race use firewood. Some are buried while powerful charms are recited (Shakespeare, p. 109; Skoet, pp. 429, 509 f.).

The interest on the ceremonial and magical use of the doll has tended to divert the attention of observers from its use as a child's plaything. Not only is this use widespread, but it is also of great antiquity.

Among the objects which have been found in children's graves are the doll-like effigies both of animal and of human form which show some considerable degree of development; the limbs are often separately made but the arms or legs are sometimes omitted (Guide to Egy. Collection in British Museum, London, 1900, p. 75). Children's dolls have also been found in the Burmese caves and monuments by Sir E. Arnot (Proc. Royal Soc. of Arts, 5th Ser. American Archeology, London, 1912, p. 147), and it has been pointed out that some peoples, such as the Zulu of N. Africa, use wooden doll-like figures to reenact at the age of six or seven, a ceremony which is no longer required for ceremonial purposes (see E. Lovett, The Child's Doll: its Origin, Legend, and Folklore, London, 1915, p. 10).

It has been suggested that the child's doll is a derivative from the ceremonial doll. In some cases, it is held further, the form would support this view.

Among the Yao of Central Africa, e.g., the dolls show very little resemblance to the human form and may have been originally employed by the subject of the Thonga chiefs already mentioned (Werner, p. 60).

On the other hand, it must be remembered that both the savage and the child indulge freely in make-believe, and indeed very few of the children's dolls found in the present time find a place as toys among the children. In the Sûdan a piece of stick with heaps of clay for the head and the swell of the hips is dressed up in native costume (R. A. Gates, 'Soudanese Dolls,' Mon, iii, [1902], no. 22). On the coast of Africa, a piece of firewood or a manioc root serves the purpose, and these were even preferred to more realistic European dolls by some children. In the cannibalistic tribes of New Guinea, as in the Casqui and the Amazons, the large number of children's games is probably almost equally reasonable.

On the Lower Congo a doll made of a piece of firewood or a root and made as superrigid and superelevated as possible is frequently carried by the little girls just as they themselves have been treated by their mothers. They dress them in strings of beads, hang a few feathers on the head, and tie the head and the body with strings as beads are carried (Weeks, p. 350). The Bolonki girls, infact, call their dolls dona, 'babes' (Weeks, Among Congo Natives, London, 1911, p. 10). The Yâmbi make for a kind of wooden doll with the rounded end covered with scarlet seeds, fitted on a stick and with knotted string for hair (H. A. Bunel, Life of a S. African Tribe, Neschätel, 1912-13, f. 173).

In Tunis among the Hausa the use of a doll as plaything is carried further. The offerings in the medicine-house to the younger bori, 'the children of spots,' which cause rashes and sore eyes, consist of nuts, sugar, toys, and sweets, covered with a white cloth, to which are attached two dolls, 'the playthings of Mal-Vastra.' These bori in all probability are spirits of dead children (Joh. Travancere, The Ban of the Bori, London, 1914, pp. 269, 275).

Puppet-plays resembling the fantoccini and Puppine are not uncommon among primitive peoples. In the Indonesian area they are a constant entertainment. The various plays which are also purchased and performed at private meetings are the most interesting, both of the spirit plays which represent historical dramas (Brit. Mus. Handbook Ethnog. Collection, p. 101). The thubbo thubbo of W. Africa is almost an exact parallel to the Punch and Judy show, presenting a number of scenes involving Rachella Damahul, like Punch, when called upon to meet his obligations, evades payment and maltreats his creditors (D. Alexander, 'Dubbo Dubbo; or Notes on Punch and Judy as seen in Bornu,' Man, x, [1910], no. 25), used.

LITERATURE.—See the works cited throughout.

PURANAS.—1. Introduction.—The Purânas form a class of books written in Sanskrit, and are supposed to have been appended to the Indian Veda and other genealogies, and accounts of kings and râjas, religious belief, worship, observances, and philosophy, personal, social, and political ordinances, and opinions about all kinds of miscellaneous phenomena, and to have illustrated the tales, legends, old songs, anecdotes, and fables. They present the general or popular exposition of those subjects, while the Vedâ literature contains the strictly Brahmanic thought and teaching in religious matters, which is, in the main, the pure and unmixed Sanskrit of one of the eighteen in number. No Purâna recorded earlier than the thirteenth century A.D.

1The word râja denotes in the Purânas a holy ascetic sage, sometimes semi-divine but, when human, generally a very powerful magician with much magic, but is always human, and often of lower rank than râja.
treats of all those subjects, though some are very wide indeed in their scope, while others confine
to narrow limits; but, taken collectively, they may be described as a popular encyclopedia
of ancient and medieval Hinduisn, religious,
philosophical, historical, personal, social, and
political.

The word purāṇa is Sanskrit and means
'ancient'; and the title Purāṇa signifies 'Ancient
Lore,' indicating that these books profess to
decide ancient lore as handed down to the
modern age by part tradition. Its fuller form is Purāṇa-saṁhi-
ṭā, 'Collection of Ancient Lore.' The eighteen
Purāṇas, according to the list which occurs most
often, are these—the Brāhma, Padma, Viṣṇu,
Śiva, Bhāgavata, Nārāyaṇa, Mārkandeya, Agni,
Bhāṣya, Brhamavaivarta, Liṅga, Varāha,
Skanda, Vāmanā, Kūrma, Matsya, Garuda, and
Brāhmaṇḍa. This list omits the well-known Viṣṇu,
but there can be little doubt that the Viṣṇu
and Brāhmaṇḍa were one originally and have
become differentiated; for they agree, almost word
for word, in the great bulk of their contents. The
name Brāhmaṇḍa then in that list must be taken
to include its twin, the Viṣṇu, and the Kūrma calls it
the name of the Viṣṇu-Brāhmaṇḍa. The Matsya, Garuda,
and Viṣṇu, are distinct, and, in order to preserve the
total eighteen, omit one of the others, the Śiva or the Vāmanā.
Altogether, then, there are really nineteen. The
Matsya (iii. 11-58) declares the number of verses
in each Purāṇa, and so also the Viṣṇu (iv. 2-11),
but not quite completely. They agree, or nearly
agree, as regards most of them, but differ widely
about the Brāhma; and the Matsya alone gives
the length of the Viṣṇu, Agni, and Liṅga; both
omitting the Śiva. These figures, however, do not
altogether agree with the dimensions of the present
Purāṇas, being generally excessive, and are merely
round totals mostly reckoned in thousands. Each
Purāṇa is constructed as a discourse delivered by
some person of authority to one or more hearers;
the subjects are expounded, often in the form of
question and answer, and not always methodically;
and into the narration are woven stories and dis-
courses uttered by other persons—with the result
that the whole often appears inconsistent, and marred
by anachronisms. They are mainly in verse, which is generally the
simple kālōka or canṭavṛtta, but passages sometimes occur in
prose.

Origin and development.—An account of how
the Purāṇas came into existence is given by the
Brāhmaṇḍa (ii. xxxiv. 1), Viṣṇu (ix. 4), and Viṣṇu
(iii. iv., vi.); that in the Bhāgavata (xii. vii. 4-7)
is late and untrustworthy. The great ṛṣi Krṣṇa
Dvāpāyana divided the single Veda into four
Vedas and arranged them. Hence he obtained the
name Viṣṇu, 'the arranger,' by which he is generally
known. He lived and did that about the end of
the Dvāpāra age, about the time of the great
Bhārata battle. He then entrusted them to his
four Brahman disciples, one of whom,
Pāṇa became the teacher of the Pāṇeṇa, Viṣṇapaṇa
of the Vajraveda, Jānini of the Sāmaveda,
and Sumanu of the Atharveda. Then with
tables, anecdotes, songs, and lore concerning the
age he compiled a Purāṇa-saṁhitā, and taught
it to his fifth disciple, the sūta, or 'bard,' Romahā-
raṇa or Lomahāraṇa (the two names are the
same). After completing that work he composed the
great epic, the Mahābhārata, and made Romahā-
raṇa discourse on it in both the epic (which he
is generally understood the epic) and the Purāṇa.

Statements occur sometimes that he taught a
particular Purāṇa to his Brahman disciples, but
these appear to be late assertions. The sūta
Romahāraṇa divided that Purāṇa into six parts
or versions and taught them to his six disciples,
Sumati Ātriya, Agnivarchas Bhāradvāj, Mitrayu
Vāṣītha, Akyātravāna Kāśyapa, Sāvamsa
Samadita, and Śuṣāman Sāṁspāyana. The last three
made each a further saṁhitā, or collection. The
sūta's sūta the Purāṇa was called the Brāhma-
ṇḍa collection (saṁhitā), and those of his three
disciples were named after them, the Kāṇḍapala,
Śaṁvara, and Sāṁspāyana-kalika. Vyāsa's
original Purāṇa is not further mentioned and may
indeed have been lost, but Vyāsa put together
the various collections made by the sūta and his three
disciples were regarded as the four original collections,
the 'root-saṁhitās' as they were called. They
were all to the same effect, but differed in their
sections. Sāvamsa's version was noted for the correctness of
its expressions, and Sāṁspāyana's for its stirring
style. All were divided into four parts, and all except Sāṁspāyana's contained 4000 verses.
None of them is now in existence, but several of the disciples appear in some of the present
Purāṇas. The sūta had a son called Ugrārasvā and
saṁvi, a Rahamahāraṇa, 'son of the sūta Romansa-
raṇa,' and taught him also the Purāṇa. Such is
the account given, and it is not improbable. The
sūta was a bard, and the origin of the sūta is
placed in the past. Thus, though some say
the Purāṇas are not likely to have come into existence at the sacrifice
of a prince,Vyāsa, son of Vena (e.g. Viṣṇu,
xxiii. 137-148), whose stories are often narrated.
The antiquity, of course, genuine, because bards
have existed from the earliest times. The term
sūta was afterwards applied to the offspring of
a father of the Kātiya, or military caste, and
a Brāhma mother, but he had nothing to do with
the original sūtas. It was their duty, as
the Viṣṇu (v. 31 f.) and Purāṇa (v. i. 27 f.) explain,
to preserve the genealogies of the gods, rājas,
great kings, and famous men. These were matters of
ancient tradition, for which the Purāṇa
and Itihāsa would be the appropriate receptacles,
and thus these works would be naturally entrusted to
the sūta Romansharaṇa. His descendants had the
right of reciting the Purāṇa for their livelihood,
but the account states that the Purāṇa passed into
the hands of his disciples, of whom five at least
were Brāhman, and five more defective.

The foregoing account does not say how the
present eighteen Purāṇas were developed, and
their origin is explained by another and inconsistent
statement, that there was originally one
Purāṇa, and this himself divided it into four
(e.g. Matsya, iii. 9 f.). This is certainly spurious,
and the reason for it seems to have been rivalry
between the advocates of the Vedas and those of
the Purāṇas, the eighteen Purāṇas being thus
divided equally with the four Vedas. Every Purāṇa,
in fact, says that it is 'of equal measure with the
Veda,' thus placing itself in the same rank as
the Vedas, and indeed the Purāṇa is sometimes
called the fifth Veda (Viṣṇu, i. 18). In the
Purāṇa teaching of all kinds is often put into the
mouth of a single Brahma; and indeed, the Viṣṇu (iv.
200) and Viṣṇu (v. i. 35) aver that a Brāhma was not really wise if he did not know
the Purāṇa. Further, the Brāhman put forward a
claim to primeval antiquity for the Vedas, and
then for the Purāṇa, and this was bad faith; and
it with a claim on their own behalf to equal or
prior antiquity. Thus the Mārkandeya (xlv. 20 f.)
says that in the very beginning it and the Vedas
issued from Brāhma's mouth; and the Brāh-
man himself, in the Viṣṇu (vi. 100) and Padma,
and Śiva ascribes to the Purāṇa, and the Vedas
and Sūtra states that he remembered the
Purāṇa then, the first of all the scriptures, before the
Vedas issued from his mouth. Moreover, the
Brāhmans claimed the monopoly of religious revela-
tion and worship, and the Purāṇas outdid that
by declaring that to recite or even listen to them delivered a man from all sin, the Mārkaṇḍeya proclaims (his opponents) to be akin to a benefit superior to all the Vedas. There was thus a clear rivalry between the Purāṇas and the Vedas, and, in asserting priority for the Purāṇa, or ancient, tradition over the Vedas, the Purāṇas were right to claim. The Purāṇas are four-sided, or fourfold, consisting of the twenty-eight Purāṇas. The first stage of Purāṇa creation was prior to the existence of the Vedas, for the Vedas themselves are a corollary of the Purāṇas, which could have been remembered only through tradition. Tradition has always existed from the remotest antiquity, as far back as man preserved any memories of his ancestors. This is a platitudinous, yet it must not be overlooked when examining the Purāṇas, though what value the present Purāṇas have in that respect is a different question (see below, 2).

In accordance with such extant claims, all the Purāṇas except three, the Liṅga, Nārāyaṇa, and Vāmanam, assert that they were originally declared by some god in primeval time. Those three say that they were first declared by some great Purāṇa. Accordingly, each Purāṇa had to provide a succession of persons through whom it was handed down. Most of them form the chain perfunctorily of a few links, but the Brāhmaṇa (iv. vv. 58-66) and Purāṇa (xii. xv. 40-41) give a long chain, which occur, partly at least, in chronological order. Apart from fabulous occasions, nearly every Purāṇa particularizes the occasion when fearedly the Purāṇa was actually recited. The Viṣṇu gives this circumstantial account:

After the great Dvārakā battle the Prāṇavas were succeeded on the throne of the Purāṇas at Hastinapurā (on the Ganges, north-east of Delhi) by Arjuna’s grandson Parīkṣit, and he by his son Janamejaya, to whom the Mahābhārata was professedly recited. The Viṣṇu says that the Rāṣṭras dwelling in Naimiśa forest on the river Gomati (the modern Gomti in Oudh) offered a sacrifice to the sun god. In the Tankali (a modern Ceylon) approximately in Kuruṇekara (the country 70 miles north-west of Delhi), and the Viṣṇu Kumarapala went there and at their request recited to it them, during the reign of Janamejaya, the great-grandson Adhismita (sīra),—a century or rather more after the great battle (i.e. 12-13, xxv. 218 f.).

The Mārkaṇḍeya says almost the same of itself, and the Brāhmaṇa suggests much the same. The other Purāṇas fall off from this account, and the measure of their falling off agrees with their probable posteriority. Most of the others later than the Mārkaṇḍeya and Nārāyaṇa for instance, the Purāṇa makes the sacrifice last 1,000 years. The Nārāyaṇa removes the scene to Śiddhārman (on the Ganges, and the Purāṇa gives no particular.

Four Purāṇas drop that account altogether. The Viṣṇu, Mārkaṇḍeya, and Vāmanam say that they were declared by the Purāṇa Parīkṣita, Brāhmaṇa, and Pulastya respectively, and the Bhaṭavāya says that it was recited by Vyāsa’s Brāhmaṇa disciple Sumantu to Janamejaya’s son, King Sātānaka.

3. The five original subjects.—Most of the Purāṇas declare that a Purāṇa should treat of five subjects: original creation (sūrga), dissolution and re-creation (pratiṣṭhā), the periods of the Manvantarās (i.e. the times of the cycle of ages), ancient genealogies (cintāmaṇi), and accounts of peculiarities (vāyava). These appear to have been the original subjects of the Purāṇas, and were so specially their province that the epithet ‘having five characteristic subjects’ was an old synonym for Purāṇa, and the subject of Purāṇa is usually in construction apart from these subjects was not one of their primary aims, nor do they appear to have been composed for sectarian purposes originally. Sectarian designs seem rather to have been an after-thought, and the Purāṇas are almost exclusively the Purāṇas, which are frankly sectarian.

The first three of these subjects are closely connected and may be considered together. The touching is neither uniform nor consistent, but seems to combine different schemes. Its general purport is the following:

It postulates the primordial essence called prakṛti and pradhāna, spirit called puruṣa, and the god Brāhma (or Brahma), with whom are associated Vīṣṇu, Siva, and Puruṣottama. The Purvottamā, or Brahma (or Puruṣottama), contained the three qualities, goodness (vātta), passion (rajas), and darkness (tama), in equilibrium. If first appeared the principle of individuality (ātman), then the five senses and the mind (tanās), sound (ahāna), taste (raja), sight (jñāna), and smell, which become the five sense organs respectively as the five elements (bhūṭa), ether, air, light, water, and solid elements. From this five organs arose the sense of touch (bhīța-sārga).

In the third stage the ten organs of sense and action and the mind proceed from the intellectual prin-

ciples, and the mind was confined to the creation (bhīța-sārga). All these three principles and elements, through the influence of spirit, combined and formed an egg, the egg of Brahma (or Puruṣottama), which became the universe. It brought the world into existence as the fourth stage, and so created the universe as the fourth, and so created the universe as the fourth. This universe was divided into the six great sections, Jīva, the living beings, and the six great divisions, the world of Brahma (or Puruṣottama), that of Viṣṇu, that of Siva, the earth, fire, and water, and the sky. These Seven of these were especially known as the ‘seven rājas’ (sātāpa), who held a unique and permanent position in cosmicogony. The Rudras are generally identified with Siva. Next Brahma created the first Manu Svāyambhuva, and a woman Svāyambhuva, their sons, Sūrya, the sun, and Deva, the daughter. Dakṣa married her and had 24 daughters, of whom 13 were married to Brahma (righteousness) and bore 260 sons. These there are the eight, the seven, and the Dakṣa. The other Hind-born sons and Agni (fire) and the forefathers, and one named Sāl became Siva’s wife. But this account is complicated by a further story that Dakṣa was born in Indra’s lineage as Dakṣa Pracetavana, and then created movable and immovable things, tipics and quadrupeds, and also beget 60 daughters, of whom 10 were married to Dakṣa, and 13 to Marīchi’s son, Kātyāyaṇa, 27 to the moon, and 10 to others. Then Dakṣa, by his wife, created the six kingdoms, the gods, animals, birds, and trees; and thereforeforward living creatures were engendered sexually.

Creation naturally involves the question of the ages.

Time is divided into various great periods. A human year is a day and night of the gods, and the divine year consists of 360 human years. These great periods are divided into ten, and the seven as well as the ten are divided into four periods. That is, the seven periods of the cyclic ages are divided into four periods. This is the reckoning generally set out, but variations are sometimes introduced into it, and the word yoga and kalpa are sometimes used loosely. While the word yoga is generally used for Brāhma’s duration and hold that Viṣṇu and Siva outlive his great duration, and the word kalpa is introduced by some to which of these two endures longer according to their view whether Viṣṇu or Siva is the greater.

One ‘four-age’ period succeeds to another. When a Manu ceases to exist, the world becomes confused during which life ceases in the world, and the Manus, minor gods (all save Brahma, Viṣṇu, and Siva), some of the gods, the earth, the sun, and the moon are destroyed, and are restored to the highest celestial sphere, and remain there for the duration of a Katya age in order to preserve life. Then they resume their activities and are saved. The Katya age is followed by the next Manvantara, restoring all life in the world. So the Manus are saved, and the Katya age is followed by the next Manvantara, restoring all life in the world. So the Manus are saved, and the two whole chapters are burnt called naśadhitam pratiṣṭhā. The three worlds are burnt
up by fire, and a deluge of rain dissolves everything into one vast ocean, called by the Puranas Ksuryat, which is divided into four ocean, and the three qualities become incoht in equilibrium, yet the seven great reis are said to persist in certain celestial worlds, which are in the category of moral deities, watching over the seven reis of creation, and as regards them further dissolution is spoken of, called by the Puranas prakrti. It is through this process that the universe prakrti disappears. Half of Brahma's life has expired, and the second half has begun in its first kalpa called the varaha, in which the universe is passed away. The cyclic order of the universe, i.e., varahas, Svarejhees, Autama, Tamasa, Raivata, and Chaksasa; and the Vaivasvata is the present Manus. The theory of the universe is simply the repetition of the same cycle, and as the gods have developed into the doctrine that succession implied repetition, that everything repeats itself in the entire universe, the Indian system in its 'four-age' periods. Brahma, Vishnu, and Siva outlined the dissolutions, and their existence was so vast that they were regarded as practically eternal; but Indra and the other gods were subordinate and temporary, holding their deity for a mantvantara only. Each mantvantara thus has its own subordinate gods and its own Manus, great reis and kings, who all come into existence at its beginning and pass away at its end. This scheme is carried out into each detail that their names are set out, not only for the present mantvantara, but also for the past six and the seven that are yet future.

Since the Vedas were arranged and the Puranas composed, during the Vaivasvata age, this theory required that the same had been done in every Dvapara age of the 'four-age' periods, and that a Vyasa had appeared for that purpose. Hence it was necessary to propound a list of those Vyasas. The mention of the names of Vyasa's who ruled between the hands down the Brhamava and Vyasa, reduced to 28 by combining two names at one stage, seems to have suggested the idea that 28 Dvaparas had occurred. Certainly, however, that list (e.g., Vyasa, xxi. 114, etc.) is spoken of in various periods with the names of the 28 Vyasa; and consequently 27 'four-age' periods have elapsed in the Vaivasvata mantvantara, and we are now living near the end of the Kali, or last age of the 28th period.

The mention of Vyasa, as we have above mentioned, had seven sons, who became sovereigns of the seven continents (dibhas) of which the earth consists, and their progeny peopled them. Thus the subject of geography is introduced. It is not always treated fully, but the general scheme stands.

The earth consists of a central circular continent named Jambu-dvipa, around which the other continents form a series of smaller continents, the Chandra-dvipa, Plaka-dvipa, Prayyana-Sika, and Puskara, the outermost; and these continents are separated by a similar series of six circular oceans alternating with seven series of seven continents in the form of butter (gha), curdled milk, and milk respectively. Each continent and each ocean is twice the size of the earth. The central earth is always subject to the law of the four ages. It was assigned to Priyavarta's son, Agnibhra, and has nine countries which were named after his nine sons. Haiyta is in the middle, and is flanked on the west by Retumala and on the east by Bhadravana. Along the north of these lie Kamyaka, the Northern Kurus, and Hiramayya; and along the south lies Haryarva, Nabhli, and Kampilura. In the middle of Haiyta is the immense fabulous mountain Meru, on which are the gods' abodes, with Brahma in the centre. Various mountains, forests, and lakes are mentioned in these countries. The Ganges flows down Meru and divides into four great streams, which flow away, the Sita east, the Alahanduna south, the Vadhika west, and the Sonsi, or Bhadrata, north. Nabhli's country was named Bhrata after his grandson Bhrata, but this is a mere fancy. Bhrata again has nine divisions named Indra-dvipa, Vamana-dvipa, Ferbho-dvipa, Guvervara, Somaya, Geravara, Saumaya, Ghambhavara, and Yauuna, and another which appears to be India proper and is more strictly called Bhrata. The accounts tell us the earth itself, its dimensions, mountains, rivers, and peoples, which some Puranas set out in copious lists. The subject of cosmogony leads, on the one site, to a notice of the solar and lunar systems, and on the other, a description mainly mythological of the sun, moon, planets, stars, and the rest. The writings of the five special subjects of the Puranas are ancient genealogies and accounts of persons mentioned therein. They profess to give ancient history as handed down by tradition, and they certainly give only the approach to modern history and tradition that is furnished by the Sanskrit books. They are full of interest, but lie rather outside the scope of this article, and can therefore only be touched briefly. They begin with the progeny of the great rsi, which is mythical, and pass on to the genealogies of the chief dynasties of kings who reigned for centuries in N. India and lists of the great Brahman families. That the genealogies are not spurious but have some historical value is proved by the fact that in the other old traditions of religious teachers for general instruction; the latter were composed by royal bard and ballad-makers, i.e., sittas, and were handed down by them. The distinction is important. The Puranas thus drew their subject matter from a great source of sattas (guruvyl kath) provided general instruction and pleasure, and it is often said that princes and munis entertained themselves with their recital. The traditions found in the Puranas were not primarily borrowed from the Mahabharata, for they contain old tales and genealogies which are not to be found in that epic, and the stories which appear in both are not always narrated in the same way. Both are based on the same body of ancient tradition, and the Puranas incorporated old matters independently, though probably later additions to the Puranas have been borrowed from the epic, and possibly also vice versa. Of the stories told about ancient kings and rsi some appear to be ancient, but others are certainly either later from the epics or at best genuine tradition seriously corrupted. They may generally be broadly divided into two classes: those that appear to be Kasyatriya stories, i.e., stories narrating occur- ences from the point of view of the royal and military clans, and those that are Brahmanical, the difference between them being similar to the distinction between tales of chivalry and legends of the saints. References to the heroes of the epics are not infrequent, but its story is not narrated except in the few cases where an abstract of it is given, as in the Agni, Padma, and Garuda, which also summarize the Harivanshas.

4. Additions, interpolations, and losses.—The Puranas, like the epics, have grown by continual additions and interpolations, as abundant evidence shows, both direct and indirect. The Liinga (ii. 1v. 36 f.), e.g., says that it contains 108 chapters in its first part and 46 in its second; this is correct as regards the former, but the latter now contains 102 chapters. According to the Bhavaga (i. 103-105) says that it contained 12,000 verses and was augmented by various stories to 50,000, just as the Skanda was amplified. The indirect evidence is of various kinds. (a) Many passages in the Puranas which they could not all do unless the enumeration were an addition made after all the eighteen had become established. In the Padma, which professes to have been recited by the sita, pt. vi. contains pt. iv., from which it is separated by a section in separate by the sita's son. (b) The same matter is sometimes told more than once; thus the story of the sun is told twice in the Markan-
dya and that of Jalandhara is told twice in pt. vi. of the Padma. (c) Some of the stories are mentioned in the Padma, but with the difference that a few contradictions occur which dilate on the sanctity of Puraottamanaksetra in Orissa. (d) There are differences in language in some Purânas, certain passages being marked by irregularities in grammar and metre not found in the remainder of the same work. (e) Different and sometimes inconsistent doctrines occur in various places even in one and the same Purâna, as is noticeable in the two parts of the Kûrama. Addition and interpolation have been practised continually; thus the Gândiva quotes from the Markandeya and Vajâyâvalyka's law-book; and, since the Bhavisya professes to deal with the future, the edition published lately in Bombay has boldly brought its prophetic account down to the 19th cent. besides incorporating a summary of the Biblical account from Adam to Abraham. It often happens that the same passage is found in several Purânas, so that they either borrowed from one another or borrowed from a common original. Indeed, it almost seems from many peculiarities, such, e.g., as that noticed above in the case of the Padma and the triple structure of the Vîvana, as if there had been different Purânas bearing the same name, or as if a particular Purâna existed with different and constantly changing introductions and formed into a whole. On the other hand, there have been losses, as much evidence shows. In the Padma, e.g., pt. v, says that the Padma which it introduces consisted of five sections, but the part contains only the first section called the Paukkaranava, and the other four appear to be missing, while the entire Padma has six parts. Again, a comparison of Brahmândâda, iii. lxiv. 103f., with the corresponding passage in the Vîyâg (cei.x. 101-291) shows that about 190 verses of the Vîyâg are extolled in the first section, a statement which accords in the contents of the Purânas accords with these conclusions, for in several there is no logical scheme, and matters are expounded piecemeal as if by additions. On the other hand, some Purânas deal with their subject without a consistent plan, such as the Viyâga, Agni, and Bhâgavata, betraying apparently a late stage, when the matter had been co-ordinated and systematized. The Vîyâga is one of the best arranged, yet it hardly professes to be complete, and, indeed, that it is not so, is evident out of the four 'root-Purânas' mentioned above. 5. Additional subjects.—The Purânas claim to expound, besides the five characteristic subjects, the four subjects which comprise all human endeavour—righteousness (dharma), wealth (artha), love (kama), and final emancipation from existence (moksa). These, with the copious religious teaching now found in the Purânas, are Brahmanical additions to the original five subjects. Of the four ages the Krta was the golden age when righteousness was perfect, but it deteriorated through the Tretâ and Dwâpara, until it has well-nigh perished in this evil Kali age. This is figuratively expressed in the adage that dharma had four legs for its support in the Krta age, three in the Tretâ, two in the Dwâpara, and has but one in the Kali age. 6. Theology.—The theology taught is heterogeneous, and most deities that enjoyed a certain amount of popular acceptance can be found praised in certain Purânas. Of the Vedic gods, Indra and Agni retain a prominent position, and Agni is ranked as one of the chief of the gods, i.e. generally of the subordinate gods, those other than Brahmâ, Viṣṇu, and Siva. Varûpa is the god of the ocean and appears at times, but Mitra has disappeared. The sun (Sûrya) holds the first place among the deities, and the dev- rant, Savi, Aditya, and Puṣan are freely given to him. He is highly extolled in the Brahmâ, Markandeya, Agni, Padma, and Gândiva, but his worship is most fully inculcated in the Bhûkesâya (i. xviii. 5f.), which says that it was introduced by the god in the celestial plane to cut off the Pâñjâb by Kûra's son, Sûmâla, who suffered from leprosy and was cured by worshipping the sun. It calls the sun's priests nayâga and bhûgâja. The sun's children were Manu Vaîavasvata, Yana, and the Aśvins, who are celestial physicians. Yana is the god of the dead, especially of the wicked dead, and holds a dread position as the punisher of sinners in his hells. Viṣṇu, also called Mâtrîsâvan, is a god of some note. Soma is the moon. Brahmâ is the divine priest. The gandharvas are celestial musicians, and the uparâsas are celestial nymphs and courtisans, who often play the part of beguiling gîyas, whose austerities (tāpasya) awakened fear in the gods. On the evil side were the auras, who were demons. Dietâs, danaavas, and râkshas were prominent in the earlier traditions hostile races, sometimes uncivilized and always hated and dreaded; hence these names took on the meaning of 'demons,' especially in passages that appear to be late, where they and also auras are treated sometimes as interchangeable. Midway was Kubera Vaîshâvana, the god of riches, whose attendants were the gâyukas and gûlûkâyas. In late Purânas or passages local cults are commended, such as the worship of Ganesha, the snake-god, and the yakṣas, with their sondra, the holy basil; and the veneration of the cow is noticed in the Padma (v. xlv. 122-190). The three chief gods are Brahmâ, Viṣṇu, and Siva. Brahmâ is the creator of the world, Viṣṇu its preserver, and Siva its destroyer. Brahmac is sometimes extolled as the highest, as the Markandeya (xlv.f.), but is generally held to be inferior to Viṣṇu and Siva, and the relative supremacy of these two is the higher theology taught. The Purânas are sometimes classified according to their theological leanings. There were the Saiva, who enjoyed Siva, the Brahmâ, who enjoyed Brahmac, and the Vaisnavas, who enjoyed Viṣṇu. Some Purânas display this character, though Sarasvati is praised here and there and a high position is sometimes accorded to the forefathers (see below, (c)). The Padma (vt. colxiv. 81-84) says much the same, and distributes the Purânas in sixes thus:—as śâttvika, the Viṣṇu, Nârâyaṇa, Bhâgavata, Gândiva, Padma, and Vyâeha; as tâmasa, the Matya, Kûrama, Liṅga, Siva, Agni, and Skanda; and, as râjasa, the Brahmânda, Brahmacuvviata, Mârkaṇḍeya, Bhârâma, Vîvana, and Dwâpara. The Viyâga must be understood to be included in the Brahmânda. But this division is only roughly true, because the Agni, e.g., gives instruction about the worship of both Viṣṇu and Siva. The Padma (loc. cit. 86f.) further declares that the śâttvika is only a final emancipation from existence, the râjasa to heaven, and the tâmasa to hell; but this estimate is merely Vâsînvate, for the Śîva (ii. li. 63), which is classified lowest as tâmasa, declares that a man who reads it completely will be completely released at death. While he is alive, and that the gods attain tâjere only by attaching themselves to Siva. The Śaivite Purânas show a difference from the Vâsînvate in that, though they make Siva supreme, they almost suggest that the exaltation of Siva was a later doctrine imposed on that of Viṣṇu's supremacy, as appears indeed to be implied in the Śîva Purâna (i. li. 5-11).
The rival advocacy of Viṣṇu and Śiva was carried to the farthest length, and the partisan Purāṇas sometimes introduce these gods them- selves as disputants, but others less acknowledged are also mentioned—indeed, the Garuda and Bhāgavata mention 22, and add that his incarnations were really immemorial. The superlative work attributed to Viṣṇa naturally created the belief that he was no ordinary god, and it may probably be that he is often called an incarnation of Viṣṇu, and so also all the other Viṣṇus mentioned above; while the Kūrma in its second part (xi. 136 f.) makes him an incarnation of Śiva also.

(b) Śiva and Viṣṇu differ markedly from that of Viṣṇu. Viṣṇu is celestial and takes no immediate part in terrestrial affairs except when incarnated, but Śiva is largely a terrestrial god. He is often spoken of as dwelling humanely on the Himālayas or in Benares and as practising human asceticism. Similarly with their wives. Viṣṇu’s wife, Laksṇī, is a beautiful abstraction, but Śiva’s wife, Umā or Pārvatī, is very realistic. She was Sātī re-born as the daughter of the Himālaya range. Śiva’s woolly and western appearance and his wilder temperament of conversation are often introduced and sometimes narrated at length, yet always in wholly human fashion. They had two sons, Skanda or Kārttikeya, and Gaṇeṣa, the god of wisdom. Śiva takes an active part in the affairs of the mundane world, and between the gods and the demons, who are always terrestrial, even when the nether world is their special abode. Śiva and Rādha are synonymous. Pārvatī, especially in her terrible forms, and Skanda also join in the battles. Stories of this kind are often narrated, such as the destruction of Tripura and of the demons Andhaka, Sumbha, Nīśumbha, Maḥiṣa, and Jaladhara. Her victory over the demons is the theme of the Devībhāgāvatya in the Mārkandeya Purāṇa—a gnomic story much esteemed by the worshippers of Kālī, who is identified with her; and the worship of her as Durgā is inculcated in the Purāṇas, Brahmaṇavai- varta, and Garuda. Śiva was worshipped as Pāṇāṭi, ‘the lord of cattle’, beneath whom all the gods and all creatures ranked; he was called and this Pāṇāṭa cult is commended in the Saivite Purāṇas, but reprobated in others. Śiva had thus no genuine incarnations, yet his worshippers prophesied that he had 28 incarnations contemporary with the 28 principal forms of Viṣṇu, and one of the 28 in the Viṣṇu (xxiii. 114 ff.), Linga, and Śiva, but they were merely vṛis who expounded yoga, ascetic devotion. Siva’s linga, the phallos, is often mentioned and extolled, and its worship is well established in Purāṇas that appear to be late, and especially in the Linga (tr. xvi. 13-21), which exalts Śiva in this form as above all gods and as containing everything. Instructions are given about its construction, establishment, and worship. The female counterpart, the joiṣ, is not noticed much, and then only, the late Purāṇas. The Viśvāmitra identifies it with Pārvatī, but the Purāṇa with Sītā. The saktis, ‘female energies’, are not often mentioned and then generally as somewhat abstract conceptions. They probably form Kāli, Yārāṇī (xx. 2 ff.) and Mārkandeya (lxxvii.), they are identified with, or related closely to, Pārvatī in the Kūrma. The worship of the saktis, however, existed, for the Kūrma (i. xxx. 25) reproaches the Vanāchārī, or obscene, with saktis.

(c) Pṛśa.—As already mentioned, the forefathers (pitr, ‘father’) are accorded high dignity sometimes. This term means a man’s dead ancestors, but in this connexion denotes a class, comprising seven groups, of abstract forefathers, divine and nearly, personal, for they are always spoken of
collectively. The Brahmanda (II. xxii., III. ix.–xii.) and Vayu (I., lvi., lxxi.–lxxvi.) especially magnify them, and similar references occur in the Matsya (xiii., xv.), Markandeya (xvi. f.), Padma, and Garuda. They are linked with the gods and even called the earliest gods; they and the gods stand to each other in reciprocal relationship as fathers, and they are also the gods' gods, to whom the gods offer sacrifice. They and the gods come into existence with each movement, and pass upward to a high celestial world at its close, but apparently do not perish till the universal dissolution.

They perpetuate in some undefined way the existence of mankind through the ages. They have a path in the sky, and they confer on pilgrims occasional absolutions. This teaching appears to be ancient, and is not found in the latest Puranas.

See Ancestor-Worship (Indian).

(d) Heresy. —Heretics and heretical teaching are often alluded to. Such teaching is always sharply contrasted with theIdeological, or philosophical, theory in the form of Jainism and more particularly Buddhism, though often without being named; and the distinction between them is not always made or observed. Books that teach heretical doctrines are called 'scriptures' (saurdras), and are accounted for as the work of Visnu or Siva, or both, or Parvati, intended to beguile haters of the gods and Vedas to destruction. The longest notice of such teaching occurs in the Vayu (III. xvii. f.), but is largely fanciful, for the Jainism and Buddhism originate in the Narayana valley. The Garuda (I. 32) says that Visnu became incarnate as a Jina's son named Budhha in Behar; and the Agni (xvi. 1–3) says, as Sudhodana's son who begged dasyus, 'demons,' to become Buddhists. The Kirtam (I. xvi. 117) denounces also the Paicharratas (who are followers of Visnu) and more particularly the Saivite sects, Kâpâlas, Bhairavas, Pâpakûtas, and Yamalas.

The Brahmanda (III. xiv. 39–42) and Vayu (Ixxviiii. 30–32) speak of the nakedness among the naked and such like both Buddhist and Jain orders, also Brahmins who pretentiously wore matted locks or shaved their heads, and those, too, who pretentiously observed religious exercises or uttered profane words.

7. Dharna. —Under the head of dharna, 'righteousness,' the Puranas provide a great deal of religious teaching, both popular and what is more strictly Brahmanical. All deeds, both good and evil, produce necessary consequences, which a man must undergo. Good deeds may raise a man after death to swarga, 'heaven'; evil deeds certainly entail punishment. The doctrine of sin and its punishment is clearly laid down. At times lists of sins are set out, together with the punishments by which they may be expiated and the specific punishments provided for them in the various hells. Also, and sometimes in this connexion, a description of the hells is given with more or less fullness and ingenuity. As regards the popular teaching, the most striking features are ruthlessness and the provident care to make religious practice and the acquisition of blessings easy for all. It deals with sacred places (tirthas) and pilgrimages to them, religious exercises, gifts, prayers, and sacrifice. The emphasis is on certain religious practices, and the provisions are expressly declared to be available to women and the lowest classes, thus disregarding mere caste and personal limitations.

8. Tirthas, etc. —The subject of tirthas and the benefits which they confer on pilgrims occupies a very large space, being a favourite subject, for it offered absolutions and inducements to the people and brought profit to the Brahmins. Sometimes itineraries are set out, instructing the pilgrim what shrines to visit in order that he would gain thereby; and at other times these matters are woven into a discourse on some point of belief or conduct as edifying illustrations. Some Puranas deal with tirthas comprehensively, while others advocate the merits of particular spots; and in connexion with each important tirtha is generally narrated the tale which explained its fame and merits. The sacred places in N. India receive most attention and praise; Benares, Allahabad, and Gaya were the chief centres, and each is often praised to the supreme. But the doctrine of tirthas was firmly established in the Deccan also, and many places there are extolled. The rivers Narbada and Godavari attained a sanctity hardly inferior to that of the Ganges, and were crowded with tirthas.

The merits of the Narbada are expounded in the Matsya (clxxvi.–cxciv.), Agni (cxiii.), Padma, and Kirtma (II. xxxix.–xli.), and those of the Godavari in the Brahma (lxx.–clxxv.) especially. The object of pilgrimage in the Brahmanical religion is possibly a real basis, but generally are mythological or fanciful; and all the resources of Hindu mythology with its myriad deities and semi-divine beings, together with acentions from Brahmans, monks, and experts, were thrown into the conversion of the monkey Hanuman, were available either for the new localization of some old legend or for the fabrication of pious fables, in order to furnish a tirtha with a title to sanctity. Pilgrimages were not then, and are not now, a necessary component of devotion and expense may have been burdensome sometimes, yet these were far outweighed by the benefits promised. Some places conferred heavenly joys hereafter, others delivered the pilgrim from the evil of being born again, and others bestowed plenary absolution from all sin; and many shrines proclaimed their power to free even from the deadly sin of brahmanicide. Gifts also procured blessings for the donors and were lucrative to the Brahmins. The making of gifts is warmly commended, and sometimes expounded with great detail, as in the Bhairavi and Matsya, as regards both their manifold varieties, from the most costly munificence to simple almsgiving, and also the occasions when and the procedure with which they should be made. Purificatory exercises (vrata) are lauded as procuring benefits, especially those prescribed for certain auspicious days and months, and this subject is sometimes expounded minutely, as in the Matsya, Agni, Garuda, Padma, and Bhairavi. Even occult practices to effect both good and harm are commended and explained, such as mystical formulae, magical spells, and prophylactic verses, in the later Puranas such as the Agni, Brahmanavarta, and Garuda.

The readiness displayed in all these ways to provide relief from sin and enable every one to acquire substantial future blessings was carried so far that in the Matsya (bxx. 2) and Padma (III. 1. 5) the question how a man could gain final emancipation is put, with the least amount of asceticism is naively asked and soberly answered. It may well be surmised that these features of popular religion were not haphazard. Brahmanism evidently found it expedient to support, at least in some measure, the religious worship of the people, and this suggests that it was outbidding other claims to popular favour. But, whether deliberately provided or not, these easy ways of practising religion and reaping blessings must have presented strong attractions to a people who were so well provided with the self-regimen that Buddhism required of its adherents in this life and the dreary
future existences that it announced for the ordinary man. It is probable, therefore, that all this popular teaching contained in the Purāṇas materially helped the Brahmān to stem the spread of Buddhism and finally to oust it from general acceptance.

9. Caste and ritual.—The special Brahmanical instruction lays down the rules governing the castes. Ordinarily the castes are taken as—four—the ancient theoretical number—viz., the Brahmans, the Kṣatriyas, the Vaiśyas, and the Śudras, who comprised all the lowest strata; yet the existence of other castes, whose origin is theoretically explained as the intermixture of those four castes, is noticed at times, though only in a general way. For the most part it is the Brāhmaṇ’s life that is considered worthy of description, and the duties of the other castes are summed up briefly. The Brāhmaṇ’s four stages, as the religious student, the married householder, the forest recluse, and the ascetic mendicant, are explained, often at much length. Directions are often given about sacrifices, purifications, sacred texts, and various rites and ceremonies, especially the brāhddhā. Information is offered about images and their worship, and the treatment of Brahma, Vishnu, and Śiva. Elaborate instruction is sometimes set out about ‘virtuous custom,’ or correct behaviour in all matters, religious, social, and personal. All these subjects appear to be later additions, and are generally expanded in the encyclopedic Agni.

10. Kāma.—Next may be mentioned the subject of kāma, ‘love,’ in so far as it is noticed in the Purāṇas. It may be regarded as illustrated by many stories. Such treatment as it receives deals mainly with women. Rules are laid down about marriage, and personal characteristics are sometimes described. The care that a wife should show towards her husband and relatives is explained in the Bhavishya; and as examples of perfect wifehood are often cited Sītā, the much-tried wife of Rāma, and Sāvitṛ, who saved her husband Satyavan by her devotion. The practice of sūti—a widow’s immolating herself on her husband’s funeral pyre—is alluded to sometimes, but ordinarily the subject of widowhood is left untouched and is passed over in silence. Lastly, rules are laid down even for courtesans, which is said were originally given to Kṛṣṇa’s wives after his death.

11. Artha, etc.—The subject of artha, ‘wealth,’ is not itself discussed in the Purāṇas, but the welfare of a king and his subjects falls partly under this title and partly under dharma, and is the subject of works called artha-kāśātras. This is dealt with under the title of rāja-dharma, ‘the righteous functions of kings,’ and is expanded with regard to a king’s personal and religious duties, civil, criminal, fiscal, and military administration, the conduct of war and peace, and the safeguarding of his realm from calamities. The Mātṛya treats the same fully, and also the Agni, as expounded by Puṣkara; while the Garuda lays down wise maxims, both generally and with special reference to kings. Here may be also noticed various other subjects that are somewhat or somewhat connected with the Agni, and its treatise on medicine and veterinary science, architecture (which is also in the Mātṛya), the scrutiny of gems, astrology, and grammar. The Agni further treats of archery, poetry, metre, the drama, and the fable, and also the Vāyu (lxxvii.) discourse on music, generally in connexion with the fabled visit of an ancient king of Gujārāt to Brahmā’s court, where the gandharvas were the musicians.

12. Mokṣa.—The fourth additional subject is mokṣa (q.v.), ‘final emancipation from existence.’ Transmigration was believed in unquestioningly, and every man had to experience and so consume the consequences of his actions in subsequent lives. Some shrines promised deliverance from existence; others, generally religious rites such as ascensions, pilgrimages, and such like conduces merely to amelioration of future existence. That was as much as the ordinary man was capable of, but did not satisfy earnest souls who desired to be rid of re-appearances in the transmigration of the Soul. To attain to this was the highest aim of philosophical religion, and two ways to this end were taught, namely, yoga, ‘complete ascetic meditation on and devotion to the Supreme Soul,’ and bhakti, ‘loving faith.’ Pure ascetic self-mortification (tapas) could enable a man to acquire and exercise superhuman knowledge, faculties, and powers; and that is often described and held up to admiration in the marvellous stories of the ancient past; but there its fruit is treated rather as an object in itself, for the doctrine of final emancipation was not the highest aim of human aspiration in ancient times as it became established later. The yoga that achieved final emancipation was twofold: (1) jāhana-yoga, ‘the yoga of spiritual knowledge,’ and (2) bhakti-yoga, ‘the yoga of devotional love.’ The yoga of spiritual knowledge was elaborate and usually consisted of repeated, meditative devotion, rejecting all works; and (2) karma-yoga, ‘the yoga of works,’ which consisted in the full and single-minded performance of all one’s earthly duties, and was also called Śākhāyoga. Both kinds are taught and are contrasted sometimes, but on the whole the yoga of spiritual knowledge is more highly commended.

The Vāyu, Brahma, Viṣṇu, and Īśā give instruction about yoga, especially the yoga of spiritual knowledge, and the Viṣṇu extols it highly. On the other hand, the Mātṛya (iii.) lavishes the yoga of works as far superior to that of spiritual knowledge, and declares that it is the yoga of works that produces such knowledge and the yoga of such knowledge, and that there can be no spiritual knowledge without it. The Kārma (i. iii. 21–27), however, commends a middle course in a combination of both, because works lead on to spiritual knowledge. The other path, bhakti, is connected indeed with śraddhā, but more especially with Śiva and Kṛṣṇa, who are completely identified. Faith in Śiva is alluded to incidentally in various Purāṇas, and is inculcated in the Īśā (i. viii.) and in the Sīva (vi. viii.), which bases it on knowledge. Faith in Viṣṇu is not only alluded to incidentally, but is enjoined in the Brahma, Brahma-nāṁśa-varta, and Garuda, is expounded in its various forms in the Padma (iv. lxxv.), and is the special theme of the Bhagavata. The Brahma (cecxviii. 8–13) says that one rises through faith in Agni, the sun, and Śiva successively to faith in Viṣṇu, that men of even the very lowest classes can possess it, and that man fails to reach it because of Viṣṇu’s māyā, ‘illusion.’ The teaching of the Bhagavad-gītā on these subjects is summarized in the Agni (cecxlix.), Garuda and Padma, and Brahma. Faith in Viṣṇu is also expounded in the Brahma (v. xv. 163–192) similarly to faith in Viṣṇu; and faith in the sun is inculcated in the Bhāṣya (i. xviii. f.). The Padma, moreover, in a late allegory personifying bhakti, etc., as a beautiful woman, describes bhakti in detail.

Bhakti was born in Drāviḍa, grew up in Kāśṭākā, became worn out in Māhārāṣṭra and Gūrjarā, sought refuge with her two sons, Śiva (spiritual knowledge) and Viṣṇu (passionate bhakti), and finally remained her vigour the whole of India (x. cxxiv. 61–65); and it concludes, ‘Enough of vratas, tirthas, yāgas, sacrifices and the like, I go not, namely, faith alone indeed bestows final emancipation’ (Yt. ecx. 22).

13. Age of the Purāṇas.—The age of the Purāṇas is a question much disputed and quite unsettled. In a general way it is not difficult to perceive differences of age in the Purāṇas collec-
tively and in the component parts of a single Purāṇa; but the Purāṇas (except the latest), as they exist now, can hardly be assigned to any definite age, because additions and modifications have been made, as shown above, and they now possess confused results of many centuries. While, then, it is required that the different strata in their contents should be distinguished as far as possible, the important question is, not so much What date do the latest additions prove for any Purāṇa? as What dates do its component features indicate? Tradition says, as already mentioned, that Vyāsā, who was alive at the time of the great Bharata battle, and his disciple, the śilā, compiled the first Purāṇa. That a collection of ancient traditions was made not long after that period receives strong confirmation from two patent facts: (1) that the royal genealogies (which are given in most Purāṇas) terminate at that stage, the three chief lines only being continued later in a few Purāṇas, and then professedly as a prophetic addition; and (2) that stories of the kings mentioned in the genealogies stop short at that stage except as regards the next two Parārva kings, Parīkṣit and Janamejaya. These two facts suggest strongly that during the great battle Vyāsā was present, at a time which determined the lower limit of ancient tradition, i.e. when ancient tradition was collected regarding genealogies and stories about kings—the two out of the five subjects characteristic of Purāṇas that admit of chronological scrutiny. Hence it is probable that the first Purāṇa was compiled about that time, and the four root-Purāṇas soon afterwards. Those original Purāṇas do not exist now as such; the present Purāṇas have been developed out of the Vyāsā's and expressly asserts about itself; yet portions of those Purāṇas may survive embedded in existing Purāṇas, and there is no good reason to doubt that the royal genealogies and their incidental notices of kings mentioned therein are really ancient matter. Purāṇas are cited as authorities, and a Bhāsya in particular, in the Apastamba Dharmasūtra, which is not later than the 3rd cent. B.C. and may be nearly two centuries older. Moreover, epigraphic evidence, in the shape of verses quoted in land-grants which are dated, shows that even Purāṇas which do not appear to be early must have been in existence in the 4th cent. A.D. at the latest. On the other hand, some Purāṇas are no doubt later still, and the Bhāgavata (probably not before 8th cent. A.D.) is the most striking instance of such. Further, whatever the age of any Purāṇa may be substantially, it has undoubtedly been augmented and modified later than the 4th century. Various points which touch the relative age of the Purāṇas have been noticed in the course of this article, but, until the Purāṇas have been studied far more carefully than they hitherto have been (and they deserve such study), it is impossible to form anything positive about their ages. A preliminary estimate of the older matter, however, may be offered thus. The oldest appear to be the Brahmaṇa and Viṣṇu, and the Matsya also, though it has large later additions. The latest seem to be the Brahmāmeruṣya, Śīra, Viṣṇu, and the Bhāgavata, the last of which may be called the 'Bible of the worshippers of Viṣṇu.' The others appear to be intermediate, and among them an early place may probably be assigned to the Mārkaṇḍeya and Brahmaṇa, the last oft-styled the Ancient, or the Purāṇa, though a large part of its contents is certainly not ancient. The Purana has old matter in so far as it has affinities with the Matsya, but the bulk of it is late, and some of its tales show a stage of transition to the modern fables of the Panchatantra and Hitopadeśa.

14. Upaparāṇas.—Besides the Purāṇas proper there is a class of similar but later and inferior works called Upaparāṇas. minor Purāṇas. They are also said to be oftentimes unreal, as their names are given thus in the Kārma (L. i.), Garuda (exx.), and Padma Purāṇa (IV. ex.) Satakṣamāra, Narāśima, Skanda, Śivadharma, Purastas, Narāśya, Kāpiṇa, Viṣṇu, Ujana, Brhadādatri, and Parāśurāma. The Kārma and Garuda say that these were declared by the nṛnus, but the Padma attributes them to Mann to give them spurious antiquity. Some of them have been published, but they have not been studied. LITERATURE.—Mainly the Purāṇas themselves. See also H. H. Wilson's tr. of the Vīma Purāṇa, ed. Farnham Hall, 5 vols., London, 1885; and thePreface, ed. E. Burnouf, Paris, 1840, i. preface; M. Monier-Williams, Indian Wisdom, London, 1875, pp. 49S-501; A. Purification (Introductory and Primitive).—I. Introductory remarks.—Among the more prominent factors both in the regulation of primitive life and in the determination of the character of religious ritual are the conception of the state of purity and the attendant ceremonies regarded as the proper means of keeping the individual in that state, and for its recovery should it be impaired. It must be noted, however, that purity as conceived by the primitive mind has a wider significance than is usually attached to the modern use of the term among civilized peoples, in which emphasis is laid on the positive side of its meaning, purity being almost regarded as the equivalent of continence or chastity. The difference is sometimes expressed by applying to the primitive idea the epithet 'ceremonial,' and further by pointing out the non-ethical character of ceremonial purity or 'ceremonial uncleanness.' But, apart from the question whether it is correct to deny the term 'ethical' to any body of rules governing conduct, it would be more correct to describe ceremonial purity as pre-ethical in that, as will appear, in certain respects it provides the basis for higher moral codes.

Owing to the emphasis on the negative and
purification, which is generally characteristic in primitive rules of conduct, it is as a negative state rather than a positive idea that purity governs primitive action, while purificatory ceremonies have as their object protection from harmful influence rather than the attainment of rightousness. The inherent act, whose purifying process would be defined by the primitive savage as one which resulted from such a course of action that defilement, whether intentional or by inadvertent act, had been avoided.

This is closely bound up with the class of ideas and rules of conduct described by the generalized term ‘tabu.’ Infringement of tabu, whether voluntary or involuntary, renders the individual subject to spiritual influence or, to use the Melanesian term, an adverse mana. As such he not only is a danger to himself, but may transmit the danger to others, and may affect the whole community. Hence certain restrictions are imposed upon him: he is isolated, his actions are regarded as reprehensible, and he may not come within the dwellings of the community—for example, in such a matter as the food-supply—until such time as he has been freed from danger by a purificatory ceremony or, in a case in which defilement is so great that the individual and the community are paramount, the adverse influence has been removed by his own law or death.

2. Loss of purity by defilement.—(a) Death.—Ceremonial defilement is closely connected with the tabus of cleansing human beings, both social and natural, such as birth, initiation, puberty, marriage, and death. The ceremonies which accompany these crises are to a great degree both directly and indirectly purificatory in purpose. The natives' primitive mind, the greatest pollution of all—which is so strong that it commonly puts an end for a time to all activity over a social circle of varying extent. As the Bhatunga say, ‘the uncleanness of death kills if it is not properly treated.’ Not only the corpse, but the possessions of the deceased, are regarded as infected with danger, which must be averted by ceremonial treatment. Many customs testify to the peril which is supposed to attach to contact with a dead body. There is a reluctance to handle it.

Among the Ni-Li-Lt the liftable spirit of the body of the deceased is regarded as performed by the shaman, whose innate magical qualities are regarded as in themselves sufficient to accomplish the reversion. Before the ceremonial purification of the corpse, the officials of the north-west the duty of disposing of the body is performed by grave-diggers, who themselves become unclean and must for some days observe certain restrictions with regard to food, relations with women, and the like. Among the Bhatunga the grave-diggers, who are employed because of the great danger involved should relatives handle the body, plug their nostrils with the leaves of a strongly-scented plant as a protection against the dangerous influences of the corpse. They must undergo a rite of ablation and, with their wives, they are subjected to vapour baths. They also suffer from disabilities such as those mentioned in the case of the N. American Indians. They eat with special spoons, and for five days must not eat even the commonest food.

The wide-spread custom of placing implements, weapons, etc., in the grave for the use of the spirit is also no doubt to some extent an outcome of an idea that they are ‘unlucky,’ while the custom, almost equally wide-spread, of avoiding the use of the natives’ dead body, is also closely related. This distinction to afford an opportunity for an adverse influence to make itself felt by the use of a word which is associated with the ‘uncleant.’ Such possessions as are not devoted to the spirit of the dead are frequently destroyed.

The Louchoux crush and break the dead man’s beads. Among the Thompson Indians the teppe in which a man died is burned, or, if death took place in the more permanent hut, it is washed with water in which juniper or tobacco has been steeped. In the lodge no one sleeps in the dead man’s place for a considerable period. In Uganda the hut in which the queen, the king’s mother, or one of his wives until died was destroyed. When a man dies, the main post of his house is taken down and set on end next to the double doorway, which had been previously ceremonially cleaned. The food and the gardens belonging to the dead man must also be purified.

In these instances, which could be multiplied indefinitely, it appears that material things which have been in intimate contact with the deceased are dangerous to those who handle them. The same danger attaches with added intensity to human beings, first those in his immediate circle—his wives and those directly connected with his activities—and ultimately the whole community. Each is a centre of danger to others until a purificatory ceremony has removed the defilement. Hence the restrictions which surround any one who has become polluted aim at segregating him or her from the remainder of the community.

Certain mourning customs, signs of grief and bereavement, such as allowing the hair and nails to grow and the wearing of special clothes, mark the mourners as a class apart; the resumption of their ordinary duties and attire marks their return to a state of purity.

In addition to the custom of segregation, general among primitive peoples, special regulations, varying according to the locality and people, may have to be observed.

Among the various tribes of the Déné and Salish the segregation period extends in the case of mourners to a period of two moons, but in the case of widows for twelve months. The possibility that they may affect the food supply adversely by their action is recognized, and precautions against such a contingency are taken. Custom ordains that the period of mourning vary from four days to four months, during which no fresh meat or hot food must be eaten; food must not be handled or cut, but must be ingested from a plate, and any food which, though thrown away after four days, must be used for drinking. Not only must a widower refrain from eating venison, flesh of any kind, or fresh fish, and from smoking, but should he touch another man’s net or fish from his place, the net and the station become useless for the season. Both widows and widowers are regarded as specially unclean; the former may retire to the woods for a period of one year, performing purificatory ceremonies, and in some cases remaining there, while the latter must in some cases watch the place where the corpse was buried for a like period, eating no fresh meat in that time.

Among the Bhatunga widows form a secret society. Until the great mourning period endures, only the women, in the case of the former, the front of the mortuary hut, and the period of mourning of all the widows lasts for one year. Before another husband could be taken, the first had to have been ‘purified of his last infection of death,’ had to be performed, in which a stranger, ignorant of the circumstances, was deceived by the woman, and, by a ceremonial act in the bush which was not completed, took upon himself the pollution and had to be purified in turn. Pollution by death is sufficiently strong to attack the members of the family who are absent even so far away as Johannesburg. A relative who returned home even months after the death could not enter the village or eat any food in it until purified. This people in fact recognize grades of impurity following on death, in which the degrees are first the widows, then the grave-diggers, and the community, and lastly relatives and wife’s relatives in other villages. At the death of the headman the body was absolutely burned, and the pollution in the case of an ordinary death was not sufficiently grave to require such an extreme measure, the community was simply regarded as infected in a general way. The custom of shaving the hair, and the warriors were unable to go out to battle until they, holding their assegais, had taken part in a purification ceremony in which the king’s mother, or one of his wives and died, medicine-man. No fire could be kept burning in the village except that of the sick, whilst the chief, or cine-man with fire from the mortuary hut. This was used by the whole village for its requirements until the fifth day, when it was put out and the chief’s house was de-noimated from which the people lighted their fires. This was a part of the cerernonial purification of the village.

1 Hill-Tout, pp. 129 f., 200 f.
3 Journ. 1, 144 f.
4 This is not incompatible with the explanation that mourning clothes are a disguise against spirits. This custom emphasizes the danger to the infected person.
5 Hill-Tout, p. 106 f.
Among the Kikuyu the Eskimo the restrictions which followed death were very distinctly of a protective character. Not only was the corpse buried as quickly as possible, but the relatives were careful to keep every one thoroughly cross-examined and every visitation of any kind closely scrutinized. No man who was in a state of pollution by death was allowed to attend the funeral, and every effort was made to prevent any communication of the disease by direct or indirect means.

Among the Todas, owing to the peculiar ritual importance of the head, the head of the deceased was kept in the midst of the ceremonial defilement, great stringency prevailing in the regulations to be observed after a death. A special hut is provided for the body of the Tadah, and the Tadah of this period is a special dairy with three rooms, set aside for mortuary purposes. All who are near the corpse are impure, while the whole humanly of any one who comes to the village in which the relics of the deceased—a lack of hair and a piece of skull—are kept, in the period between the first and the second ceremonials, are polluted. All who attend the funeral, unless they take up their position at a distance, are affected in like manner, while the whole herd of buffalo loses his office. The pep—the ceremonial portion of the dairy product which preserves ritual continence from day to day—is thrown away, and new pep is prepared. Relatives of the deceased remain in a state of impurity until the moon after the second ceremonial has disappeared.

The break in continuity brought about by death, which is marked among the Todas by the casting away of the pep and the preparation of new pep, frequently finds expression in a cessation of all normal activities. Action is rendered unlucky or useless. The death of a man is followed by the Rastus on the day on which a chief dies is defiled.

The pollution of death is intensified if it be due to violence, even though the killing may be justifiable or accidental.

In the Chamorro an accidental death must be followed by a purificatory ceremony, while among the Aikikuy, although the death of a member of another tribe entails no disabilities, the life of a Chamorro man is taken by a ceremony in which the slayer eats with the brother of the slain, and the ghost, in the shape of a wild cat, partakes of part of the food eaten. The ghost at the poet of a tree is immune from the consequences of their act. As the Bughong say, they are hopeful that he will be removed.

Consequently, Bughong warriors, on their return from an expedition, must remain at the capital for some days, wear old clothes, eat from old or broken vessels, and have special food, partaking of hot meals until they have been purified. The Aewas warrior must not sleep in the hut until he has washed in a stream with tinctured with medicine, while the Batacu must be purified by his chief. On the Wadraea river, British New Guinea, when a Chinook man is killed, a special hut is kept by the hunters and those near the place of sacrifice.

The Chinook murderer is strictly quarantined; no one eats with him, nor is he allowed to enter another house until he has been purified. The Pinus Indian who has slain an Apache is not allowed to look at a brain and foot after staying six days in which he is undergoing purification.

Contact with the murderer must transfer his unclean state to others.

Among the Aikikuy, if a homicide sleeps and eats in a village, those who entertain him are polluted to such a degree that they must have recourse to the medicine-man.2 Some form of penalty may be imposed, whether the killing is regarded as sin or not.

In Rajanahal, if two men quarrel and wound the other, the guilty man is fined a hog or a fowl, but the intention is purificatory as well as penal; the blood of the fine is sprinkled over the wounded man to prevent him from being possessed by a devil.2

It has sometimes been thought that the disabilities which follow murder are an embodiment of horror at the intentional spilling of that precious substance, blood. Now, while it is undoubtedly true that blood is highly taboo, and while the importance attached to it in various purificatory ceremonies should not be minimized, the character and ceremonial value, yet the explanation of the purificatory and disabling given by natives themselves appears to minimize the importance of the spilling of blood in death by violence, while emphasizing the fact that those who are guilty of the death of a human being are subject to attacks from the spirits of whom they have slain, and that through them the danger may be transmitted to the whole community. The penalty, e.g., which follows omission of the purificatory ceremony is usually madness caused by the spirit of the dead.

The Bughong warriors are pursued by their slain enemies, who would drive them mad if the proper precautions were not taken. The Batacu warriors are anointed with the gall of a sacrificial ox, this preventing the ghost from pursuing them.

On the other hand, there is a connexion between the ghost and blood in the explanation given by the Kai of German New Guinea.

They say that the souls of the slain follow the returning warriors to recover those parts of the souls which cling to the blood.2

Not only is it the souls of those slain in battle that are feared; the soul of the murdered man pursues his murderer.

Among the Eskimo of N. Greenland the victim’s soul drives the murderer mad, and it may tear him to pieces, should he venture far on the ice.3

It would be possible to multiply instances to show that that which renders the man unclean—unless it is expelled by a ceremony or by the act of a supreme source—is not the fact that there is blood upon him, that he is physiologically unclean, but the fact that he is the storm-centre of a dangerous force which, unless appeased or sterilized, will prove harmful to himself and to all with whom he comes into contact.

When these conditions may arise after any death for which an individual is responsible, it is clear that intention, which constitutes the murder, is, from a ceremonial point of view, of little importance; the belief of the Chukchi is that the Chukchi who venture across the sea on the following day the couple must repair to an ant hill and there set fire to the bracelet.4

Cf. also art. DEATH (Introductory and Primitive).

(6) Childbirth.—Childbirth is another of the important events in human life. It is marked by its intimate and peculiar character and by experience as requiring special measures for the protection of the mother and child, sometimes of the father, and of the other members of the community.

It is commonly held that it is held to be an attack of certain spirits of an extremely virulent and dangerous character, themselves women who have been murdercd by their husbands or have committed suicide. The belief in the danger of attack by these and other spirits is probably to be regarded as the explanation of the peculiar customs which are observed by the Naskapi and the Mahay in the period of impurity, lasting for 44 days after labour, to mount daily, and sometimes two or three times a day a platform upon

as a period of seclusion, a special diet, frequent ablutions, the use of pigment for the body, and bodily mutilation such as circumcision or the loss of a tooth, ear, or nose, as well as mourning and the wearing of black, all of which would regulate it, bring about the separation from a former status and the entry on a new phase of life.

In some cases among the tribes of Australia the novices are regarded as having died. Among the American tribes (e.g., the Shawnees) not only did the initiates observe a special dietetic, but there was also a period of abstaining from sex or sexual intercourse—an obvious and common method of purification. In the Kurnaal initiation mothers and sons sprinkled one another with water or milk, and the father was required to mark the secretion of semen on his legs. If he did not do so, he was required to take a new name at initiation. In the Fijian nanga rites, at the close of the ceremonies, all the initiates went to the river bank and washed off the black paint with which they had been smeared.

At the time of cases of motherhood, a少量 accentuated girls during their period of Impurity were rigorously secluded from the rays of the sun, and frequently were not allowed to touch the earth with their bare bodies. This was the case in Loango. Girls of the Zulu and kindred tribes, should they perceive that they have attained pubescence while away from home, were not allowed to hide in the woods lest they should be seen by a man, and to cover their heads lest the sun should shrivel them up. At nightfall they ran home, avoiding the paths, and were secluded for a fortnight, during which time they and the girls who waited on them were not allowed to drink water, and were kept in the dark. In Ireland pacific girls were confined for four or five years in cages, in which they were kept in the dark, and were not allowed to set eyes on a man.

In the Bamboing niobility customs followed in the case of girls among the native tribes. When the period of menstruation was over, the appearance of the nenes. Three or four girls who ran away to an adoptive mother lived in association; each morning they were covered in a long cloak and cap to which the head was not allowed to set eyes on a man.

At the time of the ceremonial of stepping over a leaf and part of the garb of the holy man the boy is usually embraced in male and female. The use of an umbrella by the Toda woman to keep off the rays of the sun is connected with a widespread belief that a sunbeam appears in connexion with female puberty, that neither the mother nor her offspring should see the sun. In Korea the rays of the sun are believed to destroy the eyes of the child, which is likely to be born deaf, and look at the sun, and avoids looking at the star or other body called Keit, which is believed to be the near sun. The ceremony is intended for this purpose, and is carried out by the Teivaiid division of the Toda husband assists his wife in her seclusion when the child is born. He himself becomes unclothed and remains with her at the hut. The intention of some of these Toda customs is obscure, but the ceremonial of stepping over a leaf is to be regarded as a case of transference of evil, the wist-burning is purificatory, while the 'buttermilk ceremony' is a ceremonial re-introduction of a person in a transitory state to a sacred substance.

The object of the Ekkino ceremonies is more obscure. Here too the boy is surrounded by an umbrella, which appears in connexion with female puberty, that neither the mother nor her offspring should see the sun. In Korea the rays of the sun are believed to destroy the eyes of the child, which is likely to be born deaf, and look at the sun, and avoids looking at the star or other body called Keit, which is believed to be the near sun. Circumcision, like other forms of initiation, being a ceremony introducing the novice to a new social status in life, is usually followed by a period of seclusion or withdrawal, in itself a purification, but it also as a rule included some element of a more obvious kind, such as the taking of emetics, washing, plastering with clay, the individual being exposed to the dangers of spiritual influences with which he or she was to be brought into contact. The position of the uncircumcised in Fiji was indicated by the fact that they were regarded as unclean and not allowed to carry food for the chief.

(d) Marriage.—The ritual observances which precede, accompany, and follow the marriage ceremony are of such a character as to indicate that, when this important stage in the individual life is reached, all parties interested in the marriage are particularly liable to spiritual influences. Although some of the practices are more obviously of a purificatory character than others, as a whole they are intended to minimize the danger (1) of contact between the individuals, and (2) of the entry into life on a new phase of life. On both grounds marriage is brought

within the category of the crises in human life which require the observance of purificatory rites. An instance to guard against the first-named danger usually takes the form of seclusion. It is almost invariably the case among primitive peoples that, from the time of betrothal until the actual ceremony, bride and bridgroom do not meet in the individual the segregation which takes place between the sexes as a whole at puberty or initiation.

In New Guineas betrothed persons may not see one another. The only communication between the two is that of the medicine-man, while the Malay fiancee makes every endeavour to avoid her future husband. The Wa-taveta bride is 'sealed' to the bride's family, and the payment of the first or of the bride-price, and until the price is complete must see no man.4

Measures may be taken to prepare for contact between the parties, just as initiation prepares for sexual maturity.

Lonnda girls, e.g., are excised eight days before marriage by the medicine-man, while the ceremony performed on girls at puberty among Central Australian tribes is actually the marriage rite and initiation ceremony.5

It is significant that re-marriage of a widow or whoresons requires less elaborate ceremony. This, especially if taken in conjunction with the fact that in the case of either a medicine-man or other person of essentially magical quality, such as a chief, is sometimes exacted from a virgin, and precludes marriage, suggests that the ritual precedent on marriage is a preparation for entry on new social ground not so pertinent in some degree of the conception that the sexual act involves uncleanness.

The ceremonies which accompany the marriage rite indicate that those who are in contact with the bride have been involved in the danger. It is usual to take some measure of precaution to avert the influence of the spirits during the marriage process.

In Nias the bridegroom the 'best man' walks three times round the party, against the sun, holding a holy picture. He then scratches the ground with a knife, cursing evil spirits and all unholy persons. Guns are fired during the procession to or from the church—a custom at one time followed in the north of England.8 In Manchuria the bridal procession is preceded by some of them holding a red cloth to ward off evil, the arrival of the bride's sedan-chair at the groom's house is signalled by fumigating, and the chair itself is afterwards purified with incense.9

A common preliminary is lustration. In S. Celebes the bridegroom bathes in holy water, and the bride, after the bath, is carried in a sedan-chair over water over her head. The Matahehe bride pokes her head over the groom's house while he is anviing at his house,11 while among the Malays lustration continues for three days after the ceremony; at the actual wedding the groom is smeared with incense and the smearing with the neutralizing 'rice paste,' which forms such an important element as a purificatory or protective agent in all the magical-religious observances of Malay life.12 In all Muhammadan countries purification by water in the bath and painting with henna are among the more important of the preliminaries to the wedding rite. The bath usually takes place a day or two before the departure for the groom's house. In Egypt the bride goes in state through the streets in a procession as elaborate as means allow, accompanied by her friends.13

The custom of cutting the hair or of wearing old clothes by the bridegroom occurs as an occasion for, or forms part of, a purificatory rite, also occurs in connexion with marriage.

Among the Muhammadan tribes of N. W. India both bride and bridgroom wear old clothes for some days before marriage.1 The head of the Kafir bride is shaved while the Pijian bride cuts off a long lock of hair or shaves her head.2

Notwithstanding the great variety of marriage rites and ceremonies, they agree to a great extent in the same manner as the preliminary rites in having as their object the prevention of the transmission of harmful influence from one individual to another and the averting of the influence of malicious spirits. The ceremonies may be supplementary to those preliminary rites, marking especially the separation from the former life with all its circumstances and magical influences. Of such, lustration, cutting the hair, and the abandonment of old clothes are significant instances. Or they may be protective, as the use of the veil and of the oblong slab of wood or the custom of fire-ceremonies among the tribes, where one of the most important days of the wedding ceremony is that on which the smearing of hands and feet with henna, antimony, etc., takes place.3 Another form of protective rite at the wedding in some tribes of Morocco is the taping of the bride with a sword on the wedding night by the bridgroom to drive away evil spirits.4

Finally, the wedding observances may be purificatory in neutralizing or preparing the individual for the future life upon which he or she is about to enter. In this category would fall such customs as the ceremonial intercourse by men of the tribe, as in Australia, or by the chief or the medicine-man, as in America, sometimes by the bridegroom, as among the Papuans.5 The customs of substituting a bride, which occurs, e.g., among the Buni Amer, and of marriage to a tree preceding the actual marriage, such as occurs among the Mundas,6 have the same protective and preparatory object.

After the ceremony bridgroom or bride or both may still continue to be regarded as impure and a danger to others. It is not uncommon for a further period of seclusion to follow marriage.

Among the Arabs of Mount Sinai the bride must remain in her house for a fortnight.7 In the Aru Islands and Ceram those who are in contact with the bridal party are shut up for some days,8 and among some of the Bedawin the bride may not leave the house or touch any work for three years.9

(c) Sexual relations.—Notwithstanding the pre- and post-nuptial looseness of sexual relations found among many peoples, among others irregularities, and in particular incest in the wider sense in which it includes all the rules of exogamy, are regarded as a great pollution especially to be avoided on account of its effect not merely upon the individual but upon the life of the community. The infecting influence is removed by death, segregation, casting out from the community, or other purificatory process, such as sacrifice, smearing with the blood of the victim, lustration, etc. This class of crime is closely connected with the well-being of the crops. At certain periods of the crops' growth married couples are forbidden to go into the fields, thus ensuring that no impure influence falls upon the crops.10

PURIFICATION

In ancient Greece the olive was planted by virgins or pure boys. In some cases, such workers, the Gorgoidea, were men who had taken oaths of their marital fidelity.1 The Kareens believed that illicit love blighted the crop; the guilty man in his anxiety to save the crop gathered himself of having destroyed the productiveness of the country, and went on to say: 2 Now I repair the mountains, now I heal the barrenness, and the land and the crops not fail of crops.2 In Rajmahal the adulterer furnished a hog to avert plague to the ravages of tigers.3

In some cases incest was regarded as the cause of barrenness.

This was the case among the Dinkas and Bathongas, while among the latter people as well as among the Akikuyu marriage of a son with his sister was forbidden. As for the forbidden marriage, a special ceremony which purified the uncleanness and loosed the bond of relationships,4 in Dinkas first hiskins may only attend the ceremony of bergaput.5 The Sukla of New Britain considered the pollution of pre-nuptial uncleasity so great that not only was it fatal to the parties unless they were purifled, but their mere presence was sufficient to tarnish the instruments of the sacred dance,6 while among some Dayak tribes the father of the adulterer was killed by drowning which happened a month before the atonement.7

The frequency with which death by drowning or the use of substitutes, either sacrificial animals or personal possessions, follows sexual crime, and especially incest, is due to the fact that the degree of defilement is so great that even shedding the blood of the guilty is avoided in order that the earth may not be polluted. Consequently among the South Samoys a woman becomes a taboo, not only to herself but to her husband, who has to abstain from the sword, but incest by clubbing or throttling.8

The importance of sexual purity is further indicated by the numerous occasions upon which it is emphasized as a condition of a certain course of action or its absence is regarded as a deterrent. In Morocco no man who is not clean in regard to sexual matters may enter a granary or vegetable-garden.9 No sexual act may be committed in a holy place, nor must a person so polluted remain within a holy place. Among the Todas otherwise he will go blind, become lame, or go mad, he or his family will die or his cattle will die.10 A person sexually unclean may not pray. An act usually con

[12] F. K. W.  

1 The inferior female sex. Violation of the rules governing the relations of the sexes usually requires some ritual act of expiation. Although in some cases such violations may be regarded only as breaches of correct social behaviour, the observance and the ritual are such as to appear to be derived originally from a tabu connected with danger, and especially with danger arising out of impurity.

A typical attitude finds its expression in Morocco, where women, because of their uncleanness, are subject to many tabus. They are forbidden to enter the bathing-floors or granary for fear of defiling the virtue of the temple, and they are not allowed to work in a vegetable-garden or to ride beasts of burden, and they are injurious to bees and must not handle them. In some places, should they enter a shop, its prosperity will be destroyed, and they are not allowed to visit certain holy places or to attend the festivals where the sacred fighting men11

In Nukubia, if a woman sat on or passed near an object which had become tabu by contact with man, it could not be used again, and she was put to death.2 Among the people of the Rajmahal, women, who had been the property of the beltherer, were set free and left to enjoy a life of idleness.3

The differentiation which extends to occupation is also in many cases enforced by consequences which are explicitly stated to involve either a condition of impurity or something analogous to such a condition.

Pastoral and cattle-keeping peoples, especially in Africa, frequently debar their women from tending the flocks and herds. The Todas, who are conspicuous among pastoral tribes for their abstinence from the work of the dairy, and the tabu which keeps them and their characteristic domestic implements apart from contact with the cattle and the woman who has used them, destroy the women's use of cattle paths, are a case in point.4 Among the Bantu of S. Africa women are not allowed to touch the cattle.5 As already stated, palestine boys and girls who were allowed to handle milk were allowed to touch milk. Some of the pastoral tribes of the Sudda and E. Africa forbade women, especially at certain times, and those sexually impure to come into contact with the milk, and among the Dinkas even old men were not allowed to milk the cows, this duty devolving on boys and girls who had not yet attained the age of puberty.6 The same applies to men in the case of women's occupations. Tapi-making, e.g., is taboo to women, while the men are not forbidden to touch milk. The case of men's most important occupations—hunting and fighting—a certain period of abstinence must be observed by the men as the other sex; continence for a varying period is often a necessary precaution. In certain S. African tribes the warriors must abstain from sexual intercourse with women. An abstinence of some preparatory abstinence of some weeks is required.7 In New Guinea warriors are not allowed to see or approach a woman.

In both hunting and war success depends upon the observance of these tabus. The purificatory ritual underlying these disabilities and exclusions is only more clearly indicated when it appears that women are debarred from participation in religious ceremonies. In the Sandwich Islands women were not allowed to share in religious worship because their touch polluted the offerings; while, if a Hindu widow touched an image, its divinity was

destroyed and it had to be thrown away. Australian women were not allowed to see a man under her pain of death, and in Fiji they could not enter any temple. Reference to the customs attendant on the attainment of puberty, to initiation ceremonies—rites of passage fraught with magico-religious significance—will show the importance attached to the protection of one sex from the evil of the other, even when conveyed by such a means as the sight.

Among the Baotuo, e.g., no woman may come near the boys at puberty, a practice alluded to above of confining the pubescent girls in seclusion both protects them from harm—among the Vagai this is the consequence most generally feared—and at the same time prevents defilement being conveyed to others. In New Ireland girls are kept in cages from puberty to marriage; during this period they must be seen by no males except their relatives; and in Cyram no males must come near girls at the puberty ceremonies.

The aim of preserving purity is, however, most clearly marked in the case of sexual crises such as menstruation, when both segregation and a subsequent ceremony are almost invariably practised. Among the Pueblo Indians a man will fall ill if he touch a woman during menstruation; among the Thonga of the Island of Yap, there are special houses for menstruating women. Among the Baotuo the woman separates from her husband, wears old clothes, and has her hair shaved, for the purpose, and at the termination of the period purifies her hands.

(g) Contact of sacred and profane.—Apart from the impurity which is the result of some specific act or contact, there is also an impurity which attaches normally to the individual, and becomes especially pronounced when he is brought into relation with things or persons of a tabu or sacred character. This belief is responsible for such regulations as those which govern the relations of castes in India and for the secrecy surrounding the practice of the rites of the mystic religions of Greece. A tabu, a prohition, an exclusion is addressed to non-initiates, such as the Procell estre, profani of the Sylh. Instances of such beliefs are of frequent occurrence among primitive races.

Among the Polynesians the tabu character of a chief is violated by the touch of an inferior, although in this case the danger falls upon the inferior. On the other hand, in Eate the sacred man who comes into contact with numen (ceremonial uncleanness) destroys his sacredness. In Uraga, before building a house, the builder(LP:) the gods in which he purifies himself. On the other hand, the chief and his belongings are very often regarded as sacred and therefore as dangerous for human beings. For instance, Tonga islands any one who touched a chief contracted tabu; it was removed by touching a sacred object, or in case of death by a certain number of a sacred plant. The sacredness of the chief in the Malay Peninsula also resided in the royal regalia, and any one touching it was visited with serious illness or death. Even the ordinary individual may in some degree possess this quality.

In New Zealand any one who touched the head of another received 'sacredness' from the contact.

The impurity of the ordinary individual is responsible for the purificatory element in a number of ceremonies.

In the case of the ceremony of pouring drugs on the roof of the hut practised by the Thongs the purification takes on a protective character. In the Mambura ceremony which precedes the circumcision of Kikuyu youths in the Masai fashion those who were present purified themselves by licking a little of the diatomaceous earth used in their purification ceremonies, thus acquiring themselves the property of bearing the sacredness. The candidates themselves were purified by an elder with his principal wife, two sisters, and another elder; after smearing them with faeces, the other elder spat on them, and sprayed them from his mouth. This purified them and at the same time protected them from the dangers of the Kikuyu. The miscellaneous uses of the sacredness which might otherwise pass from spectator to candidate.

A most striking example of the influence of the relation of a sacred object or person to the sacredness of the persons in the Toda, the whole of whose elaborate ritual and (it would not be too much) of whose social life is directed too. The gods are directed towards securing the ceremonial purity of the sacred herds, the sacred dairy, the vessels, and the milk, and of those who handle the sacred vessels. In the rites which are performed as part of the sacredness of the same, the purification of the rule and methods to attain this object varying according to the degree of sacredness of each dairy. In the rice dairy, e.g., the sacred vessels are always kept in a separate room, and the milk reaches them only by transfer to and from an intermediate vessel kept in the temple. The priests or dairymen, of whom there are four grades, are admitted to office only after an elaborate ordination, which in effect is a purification, removing them from the ranks of ordinary men to a state of fitness for sacred office, while their conduct is governed by regulations such as those which permit only certain grades of priest to dwell in the village and only at certain times, or that which entails that a priest who attends a funeral should cease from that moment to be used for the purposes of purification. On the other hand, this is the milk, a sacred substance, is to be used by the profane, and in the migration ceremonies, when the dairies are moved from one ceremonial to another, these are passed to the profane view. It has therefore been conjectured that the aim of much of the ritual is to avert the dangers of profanation and preserve the sacred substance for consumption by those who are themselves unclean.

(4) Contact of old and new; strangers; strange customs.—It is a familiar dogma of primitive thought that the new purification means for the first time entails peculiar dangers. Reference has already been made to this belief in connexion with other matters above. Its importance lies in the fact that it involves an endeavour to protect the society against an impurity which the direction of the pollution of the former state is cast off. This is especially the case in seasonal festivals such as harvest, when it is held desirable to avoid all contact between the new crops and the old, or the influences connected with the old, in order that the former may not lose their virtue or harm those who consume them.

The peculiar rapan rites of the Fijians appear to have been in part an initiation and in part a purificatory ceremony. In certain elements they were purificatory. The firstfruit ceremonies of the Cherokee were accompanied by the clearing out and purification of the whole village, the taking of emetics, the throwing away of old and the wearing of new clothes, and other measures. The devil-driving ceremonies at harvest or at the end of the harvest season were similarly intended to offer a similar protection and sometimes a remedy for indigent crops.

On the other hand, it is not only necessary to observe certain precautions to safeguard the virtues of the new crop; it is almost equally important that it should be neutralized or prepared for consumption by a purificatory process. This is the object of many of the firstfruit ceremonies which are observed.

The Bathonga regard it as dangerous for the subjects of the king to eat certain foods before they have undergone the inna, or purification, according to the rank of the person. In certain cases they were purificatory. The firstfruit ceremonies of the Cherokee were accompanied by the clearing out and purification of the whole village, the taking of emetics, the throwing away of old and the wearing of new clothes, and other measures. The devil-driving ceremonies at harvest or at the end of the harvest season were similarly intended to offer a similar protection and sometimes a remedy for indigent crops.

A limitation of time in which entry upon a new state requires special preparation is on the removal of a village from one site to another, when each dwelling and the community as a whole must be purified.

A related idea, which, however, in its application is the converse of these practices, governs the preparation that must be taken in entering new ground or a new country. Here it is not a case of the new being protected from the pollution of the old, but of the old being purificatory as protected from its dangers. It is therefore customary for a purificatory ceremony to be performed before

Thomson, Fijians, pp. 166 ff., 210 ff.
J. L. L. F. A. 1943.
F. P. N. 1901.
crossing the borders from the known to the unknown. That which is outside or strange is powerful for evil unless neutralized is a familiar belief.

Among the Batangas it is believed that those who travel outside their own country are peculiarly open to danger from foreign spiritual influence, and in particular from demonic possession. Warriors returning from battle or traders are said to be charged with small evil gods, which they bring strange influences with them. They are, therefore, fumigated or purified in some other way. In the same manner those entering a house from abroad should perform some ceremony, even if it were only to remove their shoes, which would purify the incomer from the evil with which otherwise he might contaminate those within, while the threshold, door-posts, and lintel—important as points of contact with the outer world—are smeared with blood or sprinkled with water when any member of the household or of the community has become a source of pollution, or a horseshoe is suspended over the door to keep out evil and bring good luck.

The danger of entering a new country is as great as that which attaches to those who come thence. In Australia, when one tribe approaches another, the members carry lighted sticks to purify the air. Just as the Spartan kings of old sent fire from the hearth to drive the men before them to the frontier, where they sacrificed. This attitude toward a foreign country and those who come from it is not without its parallel, best expressed in that passage in the Vedas which is the basis of the rule that higher castes lose caste if they cross the sea or journey beyond the recognized borders of their land. Manu 4.1 says: 'That land on which the black antelope naturally grazes is held fit for the performance of sacrifices; but the land of foreigners becomes holy whenever a man, Ksatriyas, and Vaisyas invariably dwell in the above-mentioned regions: Suta may select whichever he chooses.' In the Brahmanas it is said that Agni, the fire-god, flashed with fire over five rivers and as far as he burnt the Aryan could live.

(i) Illness.—Illness, frequently attributed to the influence of spirits or to violation of the regulations of ceremonial purity, may itself be regarded as a source of delusion for others.

In Borneo the Kayans hang leaves of long (a species of calat...t) and a large sun-bird egg next to the sick person, so that it is tabu. In returning thanks for recovery from a long illness an altar consisting of a bamboo is set up; the upper half of the split and a fresh sun-bird egg is inserted.

While the use of the egg suggests a propitiatory offering to the toh, or spirits, upon whom rests the responsibility for punishing the infringement of any tabu, the use of the split bamboo may be connected through which the mourners step in a funeral ceremony (see below), and further with the custom of passing through a fissure in a tree as a charm in the case of deformity or illness. The purificatory intention of the ceremony in which propitiatory offerings of eggs and fowls are made to the toh when a man is infringing upon the ban of the toh is tabu, the sick person. When the sick person is tabu, the sick person.

The Beni Amur cure their sick by bathing them in the blood of a girl or some animal; or the blood of a goat is poured over the man's head or body. Changing the name, a method of putting away the past at a critical moment, was one means employed by the Dayak to rid himself of dangerous influences after a serious illness. In Fiji disease was often introduced by women, and strangers were therefore quarantined and sometimes killed. In the Marquesas on one occasion the natives of Noa Atoll dissolved a meal of water and sea-fowl in a warmed copper vessel at the end of a conference held at sea; one man in each Marquesan canoe been handed a handful of ashes wrapped in leaves, which he scattered over the rear, the party who was the last to return.

In the same manner among the people of the Marquesas a man who had chewed a scented bark and spat it over the visitors and his own party. The use of the sweat-house in America as a cure for diseases is practiced by the natives; though not necessarily under the name, its use in ceremonial purification is frequent. The vapour bath also appears in African ceremonial. Among the Batangas it is practiced both as a means of purification and as a cure when a ritual defilement is feared, and after death. Further, among the same people, burning the dead body is an ancient practice of the country, and to dispense the bloods which have made him sick so that they cannot return to him violently. This ceremony is also obligatory after weaning. The drugs themselves of the medicine-man are subjected to an annual ceremony in which they are purified and renewed by the addition of new material (part of which is dried and part roasted, the whole village assembling to inhale the smoke); a goat is sacrificed, and prompt squeezed on the burning drugs to prevent the magic. The purpose is to drive away the evils and misfortunes of the old year and prepare the community for the year to come, in the words of the medicine-man, in order that it may not happen that his gods, if he is not among primitive peoples. Not only is the ceremonial character of these beliefs clear, but at the same time it is apparent that any attempt to ward off these consequences is frequently undertaken as much in the interest of the community as in that of the individual.

Sometimes the consequences of impurity are conceived only in a vague way: ill-luck or danger follows transgression. At other times the form which the danger will take is pointed out to him from others, or it may be confined to the one person concerned.

An instance in the first category occurs in Rajahmundry, where incest is followed by plague or the ravages of tigers. The same offence among the people of the Marquesas, especially when the act is committed by a child, is punished by the introduction of the laws of exogamy, leads to great disasters, people being killed by lightning and women dying in childbirth. On the other hand, misfortune is often thought to be brought about by one's own actions, or may be the consequence. The Dinkas and the Batangas regard incest as the cause of the eradication of the plants and the destruction of New Britain the death of both guilty parties ensues as a result of the fatal pollution that they have contracted. Barrenness is frequently regarded as a cause of the institution of regulations governing conduct at puberty. It is necessary that a Baga girl should immediately inform her parents of her condition, that her father may perform the ceremonial act of jumping over her mother at the end of the period; otherwise barrenness follows. The Akumus hold that a like result follows disregard from disregard of the prohibition of the use of public paths to girls at their first menstruation. This comes about if they should leave to pass blood of the path and man rear large beds to prevent their use after they have been made. Among the Thompson Indians, again, should any of the purificatory ceremonies which should follow the act be neglected, it is believed that the culprits will suffer from sore throat, loss of voice, loss of sight. An Akikuyu who is under the ban of tabu must be relieved, or he will suffer from boils and probably die. In New Zealand the breaking of a tabu entailed punishment of the culprit and all his connections, the damnation of all, and the destruction of deadly sickness or disease. A Thonga hunter who failed to perform the requisite rites after killing an elephant ran the risk of losing his head over the fire at the closing of the year. But, while a similar nagative, if his wife were travelling with him at London, 1879, p. 420. The disease is similar to the 'running of the bloods,' a malady common among the natives of the islands of the South Pacific, which is also thought to be caused by the spirits. See G. E. Montague, The Ethnology of A-Kamba and other Eastern African Tribes, Cambridge, 1910, p. 65. 

Among the Bantu, who were initiated in the naga rites, they became insane.3

This form of senility is not uncommonly associated with the secondary veneration to which the disintegration of the tabu is the work of the spirits of the dead.

Tsonga warriors, until purified, are in great danger from the spirits and the run the risk of becoming insane, and for the same period, in health all members of the community cut their hair to a degree of shortness determined by their connexion with the deceased.4 Among the Greenfields the spirit of a murdered man will torment his murder until it frightens him to death, or, if he goes on the ice after neglect of the rites and slaying, may become insane.5

That the fear of ghosts or spirits lay at the root of the purificatory ceremony and that those who were ceremonially impure were peculiarly susceptible to their attacks is in many cases either expressly stated or implied. In addition to the cases of insanity, disease, or death caused by spirits is to be feared, attention may be called to the ceremonial as a whole of those Indian tribes of N. America to which reference has already been made. In some matters it is directly stated that the prescriptions are appended from the ghost; in others the character of the belief is such as to justify the same explanation.

The guests at the funeral feasts, e.g., would not eat, drink, or smoke. In one instance, a Bantu would sleep for five or six days for fear of ghosts. Widows underwent a ceremonial purification in order that they might be long-lived and innumerable, and on second husbands, who were allowed to house tribes a protective breech-cloth was worn for some days. The sleeping-place of a dead man in the hut was not occupied for a considerable period, and then first by an adult male for four nights in succession.7 In Africa—e.g., in Uganda, among the Bantu, and among other peoples—the purificatory ceremonial is intended to lay the ghost and prevent its troubling those upon whom lies the responsibility of causing death.8

That fear for the community rather than for the individual is the motive of potent that reference is suggested by the number of prohibitions connected with food and the precautions taken to preserve the food-supply from contamination. Food should on no account come into contact with impure persons.

Natives of the Missiri tribe can only eat food when it is exposed to view.9 Reference has been made above to the precautions taken in Morocco to protect the corn from the adverse influence of impurity, and in many African cases and those polluted by sexual intercourse. After a death the Bantongs perform a ceremonial purification the food which belonged to the dead man.

Everywhere, in eating and drinking, the impure must avoid touching food with their hands or follow certain rules which mitigate the danger.

Among the American Indian tribes those who take part in a burial or who are near relatives to the deceased must refrain from fresh meat for a period; their food should be cold and not cut with a knife, but torn with the teeth; they must be fed by others or by serving food from the same vessel out of which they drank from the special vessel which they carry with them.10 In Samoa relatives of the deceased must be fed by others. The Bantongs require their dead parents to be eaten by others, whereas, though they have helped bury the corpse, or those suffering from a disease which is the result of eating the flesh of a person who died, they are not allowed to touch the corpse.11 In some cases they are not allowed to drink from the same vessel.12 Among the Thompson Indians, if an unpurified wild gathered berries, the whole crop would fall off the bushes or wither up. If a hunter transferred a trout from one pond to another, he had to remove the pollution of his touch by chewing deer-fat and spitting some of it on the fish before he let it go, bidding it farewell and telling it to propagate its kind.13

The protection is that contact with pollution would endanger a whole species or class. If is, however, particularly in connexion with sexual impurity that the prosperity of the crops is involved. Illicit love is held to blight the crops, while at certain seasons legitimate relations must be avoided.14

In Arabia those who tended the incense-trees were required to be free from the pollution of sexual relation and of death. Whenever the incense-trees became crossed the crops were the consequence of adultery.15 Among the Karena hort crops were the consequence of adultery.16 If the Batak found an unpurified husband, whom they were afraid that he would commit fornication; otherwise the crops failed.17 The purificatory ceremony of Celebes in which the blood of the sacrificial goat or buffalo, as the case might be, was poured on the field intended to preserve or restore fertility.18 Along the Dayaks incest and bigness, and among the Torajas of Central Celebes unnatural unions, were believed to be the cause of incessant rainfall.19

Laxity in sexual matters or acts in contravention of sexual tabus involved other penalties, in particular, the sympathy of the gods, which implied that the conduct of the wife affected the success or safety of the husband while he was absent at war or on the chase is of frequent occurrence.20

The Dayaks believed that, if the wife was unfaithful, the husband would die.21 Among the Engip, the wife of one by which the consequence by sympathy falls upon another as well as the couple who commit the sin occurs among some of the Kavir.22 When a community moves its village to a new site, sexual relations are forbidden until renewed ritual as part of the purificatory ceremony. In its connexion with the purificatory ceremonial of this tabu is followed by the illness or paralysis of the headman, while the woman herself becomes barren, and the work of the community begins again.23

4. The purification ceremony.—(a) Water. One of the mediums most frequently employed to dispel impurity, as well as one of the simplest, is water either in aspersion or in ablation.

One of the duties of the Eskimo mother is to wash herself completely after the birth.1 The Malays purify mother and child by washing in warm water two or three times a day, which is repeated morning and evening for some time.2 The first act of the Uganda mother, on leaving the hut after inclusion, is to wash herself in water which she uses for the husband, and with it she washes the private parts of his body.

Bathing at the public bath has already been mentioned above as one of the more important items in the ceremonial preceding marriage in Muhammadan countries. In Morocco at Fez the bride is purified with water and henna. On the fifth, fourth, and third days before the wedding she goes to the hot bath, and on the last occasion seven buckets of lukewarm water are poured on her by seven women, 'so that she shall have no quarrel with her husband.'3 In S. Celebes the bridegrooms bathe in holy water, while the bride is fumigated.4 In Abyssinia for several days before the marriage the bride performs ablations and restricts her diet,5 while the Matabele bride, on arriving at the bridegroom's hut, pours water over him.6

The physical contact in such cases probably both suggests the remedy and is responsible for its

Purification

Introduction and Primitive

simplicity. On the other hand, simple lustration may be employed where the idea of purificatory cleansing can be brought home to one of ingrained and essential impurity.

In Ireland, according to the legend, in the kingdom of Munster, the crops were blighted by the incest of the king and his sister. The medicine-man was summoned. They might be burned and their ashes cast into the stream. One of the princes was saved by being sent out of the kingdom to a hermit, who purified him daily by placing him on a white cow with red ears and pouring water over him.1

Water may be used, possibly to some extent in a symbolic sense, as the final mark of separation from impurity, and for a critical stage in the life history of the individual. As has already been stated, initiation ceremonies usually include, as part of their ceremonial, some form of purificatory operation.

The Kural initiation ceremony, in which the boys and their mothers sprinkle one another with water, signifies, it is said, that the boys are no longer under their mothers' control.2 The House of Tants practices a ceremonial purification of half-a-dozen boys and girls before the harvest. They are shut up in a large house for a period during which they are brought every twenty-four hours to make them strong, and brought the firi dances as well as their duty to totem and clan. At the end of the period the medicine-man is called in to examine the mounds, and if he rules that the girls are not ready, he sends for the medicine-man of the Thonga. In both cases the washing is medicinal.3

The last instance presents two features which commonly occur: (1) the fortification of the purificatory agent by medicine, and (2) the intervention of the medicine-man, the purifier of these sacred matters. Both these elements tend to become more prominent as greater attention is paid to the spiritual or magical side, the manifestatiun of which, however, is still conceived as material and to be treated on material lines.

At a Boloki funeral a trench about 20 ft. long is dug, and the mourners take up their position on the side nearer the grave. Then the medicine-man pours water into one end of the trench, and the medicine-man then helps the mourners over the trench as the water runs down.4

In this ceremony the idea of the cleansing power of water has given way to that of the magical efficacy of running water as a barrier which the noxious influence of the ghosts is unable to pass. On the other hand, the two ideas combine in the Thonga cure for childlessness in which the medicine-man pours water over a married couple who have no children.5 The class of regular or professional hunters also fortified with drugs the water used in the purificatory ceremony performed before they set out on a journey.

A pot of drugs was cooked, in the froth of which the hunter washed his face. He then put the pot on the roof and allowed the water to drip on him as he entered the hut. The medicine-man at the same time uttered a prayer and incantation: "Go and be happy. Though the rain will fall on you, though the dew makes you wet, when you sleep you will be everywhere as in a hut," and so forth, making it clear that the object of the ceremony was to protect him from the dangers of the bush.6

That this ceremony is purificatory rather than protective, as might be thought from the character of the prayer, is indicated by the further condition which must be observed to secure not merely success but also safety in hunting. Sometimes a fowl is sacrificed, but only children may eat it; the hunter himself must not touch salt mud, and must abstain from sexual relations; i.e., he must in all respects be pure.

Water is used in various ways in a number of ceremonies connected with special seasons of the year. For example, the Thonga allow the bringing in of the harvest or the last shoot, or an individual may be attacked with water, usually by women. As a general rule these practices must be regarded as rain charms. Sometimes, however, they have a purificatory intention.

In Burma, a festival occurs in April, when a great feast lasting several days took place, in order to wash away the impurities of the past and commence the new year free from stain. It was customary on the last day of the festival to throw water over every man they met, and for the men to rector. A visitor, on entering the house of a dignitary, was at once dried with a towel, and the men and women who attended them were washed with water, a little of which was poured into the hand of the host, who sprinkled it over his face and hands. The women had a little rose-water over the host, and then over each of the guests, after which a water light began.7

(b) Other detergents.—In the use of water as a purifying agent one might be tempted to assume an obvious connexion in idea with its effect in cleansing physical impurity. The same idea may be at the root of the use of other materials.

In the Rlai islands the warriors smear themselves with the juice of a destructing plant. The Aiskyauni remove Thames by a process of lustration which in the more serious cases is performed by the medicine-man or the native council. The slaughter of a sheep accompanies the ceremony, and they smear themselves or are smeared by the medicine-man with the contents of the retort. It is rather the meaning of mourning or after a period of seclusion due to ceremonial impurity. In the New Britain native hut the uncleanness of priests themselves of the taht by drinking sea-water in which nut and ginger have been shredded. They are then thrown into the sea and, on emergence, throw away their dripping clothes.8

(c) Changing clothes, cutting hair, nails, etc.

The Fakimo mother after childbirth begins to herself a new suit of clothes. The Thonga women were rigorously secluded from her husband at the regular periods, sleeps on a special mat, and wears special clothes which she brought with her at her marriage. At the end of the period she puts on her ordinary clothes once more. A woman who loses an infant is deeply and, and she may also undergo a period of fast. She then has the "months" duration she undergoes purification in a ceremonial sexual act by her husband, and then buys new clothes.9

New clothes, however, are rather a sign of the termination of a period of uncleanness than a purification. In mourning they mark the close of the period of danger to others—the final putting off of the pollution of death.

At the end of the ceremony of the warriors every- thing that they had used during the taboo period was tied in a bundle with their clothes and hung up a tree at some distance from the village, and left to rot.10 Among the Baganda, after the termination of the mourning for a woman, the freshly-taken human head was required and in which every one had been burned. A bird of prey would be brought, and for the months' duration she undergoes purification in a ceremonial sexual act by her husband, and then buys new clothes.11

The complete severance with the old and impure life which is brought about by this purification ceremony is further marked in some cases by changes or modifications of the toilet. On the death of a relative the eyebrows or head may be shaved, as in the case of the Buganda warriors mentioned above, whose heads are shaved on their return from battle; or, on the contrary, the hair and finger- and toe-nails may be allowed to grow. The lustrations cut their hair completely for the death of a near relative, the operation being performed by a doctor or some one who knows the correct method.6 The father and mother of the deceased, among the Baganda, allow their hair and nails to grow until the purification ceremony, when they are cut and thrown in bark cloths. They are kept until the men go to war. At the end of the period of mourning for the king all shaved their heads, cut their nails, and put on new clothes.12 The Lilliebots on the fifth day after a burial—a period spent in fasting and ceremonial ablation—had their hair cut by the mortuary shaman who prepared the corpse for burial. They then returned to their houses and were allowed to eat meats and vegetables, while the hair which had been cut was rolled up into a ball, taken into the forest, and fastened to a tree.

(d) Artificial Process of purification.

Other methods, based in an equal degree on getting rid of the skin and improving the skin, the former, or improving the life of the body, are the

rid of all influence of the past, depend upon an artificial stimulation of natural processes.

Before the new season’s corn can be eaten, an emetic must be taken. Before the first and last, and also at birth, an emetic is given to the infant (8). Pastoral and cow-keeping tribes in Africa, such as the Masai or the Sandi, require a certain period of time to pass before they begin eating, in which some course of meat, in either of vegetables, and the drinking of milk. The Shawanese boys during the period of their preparation for initiation took emetics at regular intervals. The Seminole took ‘black drink,’ which was supposed to efface from their minds all wrongs that they had done, and to end the period of mourning. (9) Lilloot widowers induced vomiting by means of a stick thrust down the throat. (4)

(e) The sweat-bath.—Among N. American Indians the employment of the sweat-bath is almost universal as a means of removing physical impurities. It also serves by analogy to remove spiritual influences, to cure illness, and to remove ceremonial impurity. A widow during the period of her mourning and of delitement was followed in Car Nicobar.

A man possessed of devils was rubbed all over with a pig’s blood and beaten with leaves, the idea being that the devils would leave the body, which was bound up and smeared with tights tied tightly with string. Before daybreak all the packets of devils were thrown into the sea.

The most essential ceremony of driving out the devils is sometimes practised on an extensive scale, especially at critical seasons of the year such as before or after a harvest.

The Igorot practised an annual expulsion of evils, while at the Jesuit school of Tibau in Car Nicobar all old and burned heads, pots, pans, and utensils were broken, all cabins swept clean, provisions destroyed, and all fires extinguished. The war-boys took to the woods and remained there, apparently in a hibernating intercourse, while all malefactors were pardoned. On the festival day all classes of persons were ordered to bathe in the river, and the new corn cooked and eaten. (9) On the other hand, the Nicobarese method of dealing with the physical side of the belief finds its analogy in the Navaho custom of scrubbing the body with a bundle of stuff and blowing away the evil from the bundle through the smoke-holes of the dwelling, (10) or the New Hebrides custom of sprinkling or pouring water from a cocoanut or of drawing a forked branch of a particular plant over the body. (11)

The tribes of X.W. Canada—e.g., the Chipewyan, after a death passed through rose-bushes, the object no doubt being to leave the impurity behind them as the thorns entangled the flesh or remained on the rose-buds. The Chipewyan slept in the beds on which they slept during the period of impurity were in a state of readiness to entangle the ghost whose attacks they feared. They also ate the fire-two mornings and afternoons and fresh twigs morning and evening for a period of one year. (0)

(g) The use of blood.—Blood, being of extreme importance in ritual, not unusually figures prominently in many purificatory acts, both as a cleansing agent and as a symbol.

The Caribs washed the new-born infant in some of the blood of the father. (12) But the blood with which the ceremony is performed is more commonly that of the newborn, guilty or unclean in part as an expiation of their offence. In cases of adultery—e.g., that in Raja Mahal cited above—both parties are sprinkled with the blood of the hog furnished by the lover. Among the Dayaka the incessant rain caused by sexual irregularity is stayed by the use of the blood of a pig to purify the earth and stone for the moral guilt. (13) The pollution may again result from the passage of a dog over the bed where the deceased was entombed to entangle the ghost with which attacks they feared. They also ate the fire-two mornings and afternoons and fresh twigs morning and evening for a period of one year. (0)

Incest the tribes of Ormone purify the household with the blood of pig and fowls, the property of the offends, 2 while in Darom every blood of sacrificial animal is smeared in a tree and which the relatives of both slayer and slain and all present are smeared. (3)

Blood is also used as a medium of purification in other cases than sexual irregularity—e.g., death from other than natural causes, when the blood of a sacrificial animal may be used.

In the Camerons an accidental death is expelled by the sacrifice of a fowl, the head of which the relatives of both slayer and slain and all present are smeared. (3)

Blood is also used in the interesting ceremony called ‘the purifying’ which forms a part of the compleated Toda funeral rites.

At the second funeral, which takes place some time after the first and simpler ceremony, the blood of a buffalo is mixed in a cup with powdered turd-bark. A Teivali man, dressed in the mantle of the deceased and many ornaments, accompanied by a seer or (dairymen-priest), walks to a female buffalo-calf under one year old, the seer or throwing the blood from the cup as he passes her, the buffalo-calf, which is smeared with lard, comes in contact with a female buffalo-calf 4

(b) Death or excommunication of of the use of blood in purification ceremonies appears to be due to one of two distinct trains of thought.

In some cases, such as those already cited, the use of blood seems to be dictated largely, if not entirely, by a belief in its purificatory qualities. If, however, these cases are examined more closely and especially in relation to the general character of the belief in purification, it will appear that this belief in all probability is a growth from the desire to rid the community of an individual whose conduct is not accepted by the community in which he lives. As this usually involves in serious cases the death or exile of the offender, what is objectively a purification of the community becomes subjectively a punishment. This connexion between punishment and purification is particularly apparent in the case of sexual crime. While the purificatory ceremony involves the use of sacrificial blood, the animal to be sacrificed must be furnished by the offenders. This may in itself be sufficient to indicate the punishment incident.

In Raja Mahal, as stated, the pig required by the ceremonial is furnished by the adulterer. Among the Nias of Sumatra, who regard the sexual order as being regarded as a form of child sacrifice, the culprits are buried in a narrow grave with their heads projecting and are then stabbed in the throat with knives, then the intestines, etc., are carried about and burned. Among the pagan tribes of Sarawak a bamboo is driven through the hearts of the offenders into the ground, where it is left to take root. But it is said that this is rarely done, because it is difficult to get any one to assume the responsibility of taking life. Therefore another custom is to cut the offenders in a case of rape and throw them into a river.

(i) Substitution of expiatory victim.—Among the Torajas of the Celebes adultery is punished by the spear, but inceit by throttling. This averson from holding the blood of the inoffensive is not to be presumed, to be attributed to a fear that the blood of a person already infected is noxious in an enhanced degree—so much so that sometimes a goat or buffalo is sacriﬁced and the blood mixed with water is poured on the feet and weeps the hands, the spirit is unharmed. This doctrine of substitution is frequently encountered in connexion with sexual crimes. It is clear that it is a case of substitution arising out of a disinculination to spill the blood of the guilty, and not primarily a propitiatory offering.
PURIFICATION (Babylonian)

In the Dayak ceremony of berogopit, preparatory to the marriage of first cousins,1 the couple go to the river and fill a saucepan or pot with water in it. They also fling a plate and chopper into the water. A pig is sacrificed on the bank, and the carcass, when drained of blood, is thrown into the water. The pair then go back to their village, the pig is smeared with blood, eggs are sent flowing down stream, and the pair, as they come out of the water, are attacked by the Ellis blood enemies. Among the Kayans, in a closely analogous practice, the idea of substitution or representing a sin by another is expressed.2 The pig is killed, the pair smeared with blood, eggs are sent flowing down stream, and the pair, as they come out of the water, are attacked by the Ellis blood enemies. Among the Kayans, in a closely analogous practice, the idea of substitution or representing a sin by another is expressed.3

(2) Transference of impurity; the scapegoat.—The principle of the transmissibility of impurity was sometimes called into play in order to remove the defilement. It was transferred to some one who was already taboo.4

In New Zealand, any one touched the head of another, the head being a peculiarly 'sacred' part of the body, he became taboo. He purified himself by rubbing his hands on fern-root, which was thought to have a purifying influence in the female line.5 In Tonga, if a man ate tabooed food, he saved himself from the evil consequences by placing the foot of a chief on his stomach.6

The idea of transference also appears in the custom of the scapegoat. In Fiji a tabeled person wiped his hands on a pig, which became sacred to the chief, while in Uganda at the end of the period of mourning for a king a 'scapegoat,' along with a cow, a goat, a dog, a fowl, and the dust and fire from the king's house, was sacrificed by the women, so that the animals were maimed and left to die. This practice was held to remove all uncleanliness from king and queen.7

The same idea underlies the practice of sinning ('p.v.'). by which the sins of the dead are assumed by any other person who may eat a cake and other food prepared for the purpose.8

PURIFICATION (Babylonian). Purification may be considered as including any ceremony or ritual observed in conjunction with a view to purifying or cleansing a person, place, or thing from the ritual consequences of impurity. Impurity was a bar to communion with the deity, often to social intercourse, and was sometimes a real danger to the health and well-being of the person or community. Most writers who refer to purification among the Babylonians and Assyrians are influenced by the OT views on the subject, for which see PURIFICATION (Hebrew). Consequently, some chiefly seek for parallels to the Hebrew treatment of clean and unclean. Moreover, it is wise to compare the usages connected with purification in all the religions and civilizations where they can be recognized. The subject of rites, exorcisms, and other ritual ceremonies is already dealt with in art. BABYLONIANS AND ASSYRIANS, vol. ii, especially pp. 316-318. For the Babylonian attitude to offences against chastity the art. CHASTITY (Semitic-Egyptian). vol. iii. p. 498, § 3 should be compared with CHASTITY (Introductory). For the Babylonian conception of sin and the need to be purified from it compare CONFESSION (Assyro-Babylonian), vol. iii. pp. 825-827. The way in which disease was regarded may be gathered from art. DISEASE AND MEDICINE (Assyro-Babylonian). vol. iv, pp. 741-747. The connexion of exaltation and atonement is dealt with in art. EXPATRIATION AND ATONEMENT (Babylonian), vol. v. pp. 657-660. HOLINESS (Semitic), vol. vi. pp. 751-769, illuminates the ideas of cleanliness and purity, and their opposites.

No further treatment of the subject has come down to us amid the mass of cuneiform literature, mostly fragmentary, which, however, supplies instruction

and formulae for many cases presumably involving the need for purification. From this mass of
exorcisms, medical receipts, prayers, hymns, spells, and magic ceremonies we have to deduce what
was held up by the Babylonian view of its impurity and what was the method of cleansing or removal of that
impurity.

This is a long and by no means easy task—long because of the enormous amount of material to be
considered, and also because much of it is merely implicit and admits of so many different estimates of
its implications. We have rarely much security that we estimate rightly the intention of the
ceremony, which may really have been directed to a completely different aim.

The sufferer may have been the victim of some
affliction and quite mistaken as to its origin and
cause; indeed, it is likely after all to have been purely imaginary. If the supposed or implied
case of his distress was really what he suspected, we
may fairly charge the ancient Babylonian with being very nervous about himself. But we may
well believe that the Babylonian ministers of religion exercised their ingenuity in inventing
many cases of conscience and providing remedies for them, for the simple reason that they
had to serve the demands of those who came to them for help and comfort. To

judge from what we already know, every abnormal experience must have given the Babylonian un-
reason, as to his health of body or soul. Certainly the belief in demons and their power to plague
humanity, the suspicion of having offended the gods, or broken tabu, must have added many
terrors to the natural feelings of discomfort and apprehension, the prickings of conscience or
despondency. The Babylonian was indeed in no means easy to say wherein he had offended, nor
against whom, and his good intentions were but a
slight solace to a man who believed that he might be
called to suffer not only for unwitting misdeeds but also from the malice of devils or men. So
he hastened to the priest or soothsayer, the magician
or astrologer, to discover for him his offence or the
evil influence that was upon him. He may have
gone in turn to all and certainly was called upon
to offer many things of them.

When the modes of his evil case, it seems probable that purification was the first
requisite. But that was not all. When the thing
to be removed from the man had been recognized as
sin, disease, anger of the gods, possession by
devils, or the spell of some witch, a further treat-
ment appropriate to the case awaited the victim.
An obstinate case might have to undergo all the
treatments in turn. But none was likely to take
effect if he had not been purified.

In itself purification might be a washing with
pure water. This requirement was strongly in-
sisted upon. Pure water must be procured from
the Tigris or the Euphrates or, even better, from the
mouth of the rivers, where their waters met and
where were the Isles of the Blessed. The water
must have been kept in a vessel 'pres-
served faithfully in the abyss.' The abyss, apu,
was properly the cosmic sea which underlay the
whole earth, on whose bosom the earth rode, to
which things belonged that they had dug down
their palace foundations, the fresh water sea from
which arose the springs and rivers. But in every
great temple stood the 'great sea'—the laver, also
called apu, like Solomon's brazen sea. Doubtless,
it was this temple abyss which held the pure water
reference which, in all the cases, the 'sweet or good city.' But, in default of such holy
water, the water of wells was allowed, if only it
were consecrated by a correct incantation.

Pure water was often modified by the addition
of herbs or aromatic woods. What these were is
difficult to ascertain from their names, such as
binu, 'herb of Dilbat' (perhaps the place of Venus
Ishtar), a date-stone, straw, gutun, ungu aban
ninkiti, pepper, birring, set uruk (possibly to see to the priest), GAM-GAM scent,
burrashe (possibly cypress). The binu plant is
thought to be 'tamarisk.' It is probable that
such additions had magical efficacy. The washing
of the hands was repeated often, accompanied by
different incantations, usually cited by their first
lines, of which we often know no more, but which
we may hope gradually to know completely. But
to follow out in detail the various accompaniments
of the hand-washing would demand a treatise.

It does not seem in any case to have been
necessary to bathe the whole person; usually
the hands sufficed, though the head or forehead
is sometimes ordered. Special cases demanded
cleansing of the mouth, and the water was some-
times drunk. Sprinkling sufficed occasionally. A
proper time had to be determined, which was the
object of divination and the subject of omens. The
literature of these fit times is extensive and usually
obscure. Often it is prescribed that the ceremony
shall be performed in a clean place, in the open
country or the desert would do. But for perfect
security a bit ringi was built. This was a 'wash-
ing-house,' or lustration-chamber, and was often
attached to a house in the city, possibly to a priest's
house or for the convenience of a worshipper pay-
ning for its use. There was a distinct ritual for the
bit
ringi, whither the polluted should be taken. The

ceremony was performed in special vestments of a
sable hue, worn both by the suppliant and by the
minister.

Apparent the motive of the washing was the
symbolical removal of the contamination and often
its symbolical transfer by the water to some object,
rendered by incantation a representation of the
supposed author of the trouble—e.g., a clay or wax
image of the witch. This image could then be
buried, burned, or otherwise destroyed, and the
sufferer freed from his uncleanness. But in this
case also the methods are most varied, and no
exhaustive treatment is possible here.

It is not clear just how much of the treatment
was merely purification. A sick person had to be
purified before he could be cured, for without
purity he could not expect the cure to work at all.
But the full cure may be regarded in his case as a
purification. Hence the word has been used to
cover all the processes by which a man who believed
that his distress came under the head of unclean-
ness was relieved of his ailment. As he did not
confine the idea of uncleanness to any very simple
category, it is hard to say what cleansed him of it,
and the whole of the above-named articles must be
read to exhaust the already recognized ideas of
purification. It is dangerous to attempt clasifica-
tion of the kinds of uncleanness. But analogy
suggests some classes.

Sexual impurity is very hard to define. On the
one hand, all sexual intercourse involved the

necessity for purification. But, on the other
hand, the Babylonians seem to have allowed even
homosexuality. It is difficult, therefore, to state
wherein consisted the impurity of irregular inter-
course. The word, which in genuine cases, leading to the reaction of lassitude, was productive of the suspicion that the patient was under a spell or a demon. This may
have been extended by fear to all cases of indul-
gence. But we must know more before we can
fairly enumerate our material, with all its fullness,
have many omissions, which may or may not be
significant.

Fear of consequences, when there was so much
to fear, hard to distinguish from consciousness of
wrong-doing, was evidently the motive to declare
PURIFICATION (Buddhist)

The religious movement which is known as early Buddhism did not take as its central doctrine an ideal of purity to be aimed at by a system of ritual purification. Its own keynotes are those of individual enlightenment, of release, of spiritual vision, and of movement to a goal discerned thereby. But early Buddhism largely made itself felt as a protest and reaction against a system, or systems, of elaborate rites and practices cultivated for the express purpose of obtaining absolute and purificatory results in this life, and its deadly mechanism and in the deeds wrought by it. As formulated doctrine, a religion was referred to as dhamma, but, as end gained by ritual works, it was referred to as suddhi (or viśuddhi, 'purity', 'purification', 'sanctification'). Buddhism laid down its own dhamma as insight into truth, and as path or means of attainment. But we see it turning aside from these to take account of the prevailing notion of ritual purification. It condemned the methods in practice; it substituted inward spiritual growth for external symbols, and upheld its own 'vision' and 'way' as the true kādāgasa.

Salvation envisaged as (vi-)suddhi, when Buddhism arose, appears in many of the early Pali documents, as the belief or 'view' of Brahmans and recluses:

'The views of recluses and brahmans, not of us, who deem that suddhi is by moral conduct, that suddhi is by religious discipline, or both' (Dhamma-sangani, p. 1065).

With us alone is suddhi, so they declare; in other norms (dhammas) in Vishuddi (Sutta-Nipata, 824).

'We are not so (to be reached)' (Psalm of the Brahmans, 893).

The celebrant in many a sacrifice, I esteemed fire, oblations made;

'These be the pure and holy rites!' I'm mouched. (ib. 341).

'Some recluses and brahmans hold that purity is by dieting ... by transmigration ... by rebirths ... by oblations, being by an(Getting down an(putting) fire (Majjhima-Nikaya, i. 507).

'Lo! ye who blindly worship constellations of heaven, Ye who fostering fire in cool grove wait upon Agni. Deeming ye thus might find the illumination (suddhi)' (Psalm of the Sistars, 140).

The rites and practices to gain suddhi—otherwise referred to as release (moksha or v.)—from deserts—of three kinds: (1) asceticism, (2) fire-rital, (3) baptism, or frequent immersion in any convenient (usually) running water. Thus the dietimg alluded to above consisted in reducing the daily food to a minimum vegetable diet, even to a single bean. The next was, again, the tepos ('anxiety') of the five fires (one on each side and the sun overhead), and all the petty acts of self-thwarting and self-denial enumerated in Digha-Nikaya, i. 165 f. (Dialogues of the Buddha, i. 228). They were less characteristic of Brahmans than of recluses generally, whether these were Brahmans or not. Nevertheless in the antitheses a Brāhman is made to say:

'Painful the penances I sought for heaven, All ignorant of purity's truth' (Psalms of the Brothers, 219).

Protest against the belief that such practices made for real purity finds expression in a suutta describing the Buddha resting in the sense of enlightenment and of deliverance from his own self-torturing exercises that had brought him no light. The tempter assails him by suggesting doubt:

'His penitential task abandoning, Behind the sons of men are purified, The impure facethat he is pure, When he hath strayed from path of purity.' (The Buddha)

Full well I understood how any rites Austere, aimed at the overthrow of death, Belong to matters useless for our gods. Yea, nothing good they bring along with them, Like oar and rudder in a ship on land. But the goal, concentration and insight— The Path to Enlightenment—these were my tasks; That Path creating and developing, I have attained the purity supreme.' (Sutta-pitaka, i. 169).

A more typical Brāhman view, however, is that of the Brahâvârāja referred to as Suddhika ('purity-man,' 'purifier'): Though he be virtuous and penance work, There is in all the world no brahmin found Thus rendered pure,

In Vedâlore expert and in the course His class lays down—thus is he purified, Untouchable men.

This expertise in the latter field (charanā, explained by the commentary as gottcharanā, the practice of the clan or gens—in Sanskrit, charâraṇa) includes (a) all religious observances peculiar to the Brâhmans, and (b) all 'colour' or class regulations. The specific differences marking off the four social classes of early India one from another are called colour-purity (chatu-vaśīṇi suddhi in Majjhima, i. 132. The Brāhman claimed priority in class on account of his preeminence, of the superiority of his origin (Brahmâ), of his office, and of restrictive rules, and of his particular sanctification (Love of Man, x. 2 (SBE xxv. 1866) 402). The Buddha, as against such a claim, affirmed that social worth depended solely on character and quality of work. There was no 'colour' bar to purity, social or religious:

'And be he noble, brahmin, commoner, Or labouring man, or of a parish class— With his own effort, puts forth all strength, Advances with an ev'ry-vigorous stride, He may attain the purity supreme.' (Sutta-pitaka, i. 169).

Of religious observances, which every Brāhman house-father was qualified to celebrate (see art. BRAHMAN), none appeared to incur the protestant diappraisal of early Buddhism so often as those of oblations to fire and of ceremonial bathing. Both are denounced as merely external, and therefore misdirected and futile. Let the uttás speak for themselves:

'The Buddha)

'Nay, brahmin, deem not that by mere wood-laying Comes purity. Such things are all external. To him who thus purification seeketh By things without, none is made pure, the wise say.

I lay no wood, brahmin, for fires on altars. Only I circumvent the fire I build. Ever my fire burns, ever tense and ardent, I, Arahant, work out the life that's holy.' (Sutta-pitaka, i. 169).

Again, to a matron who was making her regular food-offering to Brahmâ, while her son, a saïntly bhikkhu, stayed without on his round for alms, the Buddha says:

'Far hence, O brahminise, is Brahmâ's world, ... And Brahmâ feeds not on food like that ...'

4 ibid. "this is suddhi."
PURIFICATION (Buddhist) 469

Four. What is the nurture of the bodying? (ib.)

Let him enjoy the choice meats thou hast served! (ib. 1. 141.)

Another of the ritualistic Buddhist statues in the form of a Buddha. (Photo.)

The Buddha to go bathing in the Bhabuk river.

In the anthologies Sister Punnā pours ridicule on a Brähman seeking a shining purity in the water, in which he must inevitably be excelled by any animal having its habitat in that element (Psalm of the Ladies, ixx.)

The quoted passages throw some light on the attitude by Buddhism of ethical purity unaided by ritual symbols. Some further testimony will assist in cobbling our ideas of purity, and prove their application of it to their own specific doctrines.

We find the purification idea applied to the possibility of mellioration in all rational beings. The Buddha maintains, against a current sceptical doctrine, either deteriorative (became defiled) or advanced (became refined) through a sufficient cause. This was the hedonically mixed nature of the factors of life. In other words, our experience is sufficiently pleasant to make the things of this world seductive, and sufficiently painful to make much better (Sabbattā, iii. 69 f.). This is called the 'twofold doctrine hard to penetrate' (Dīgha, iii. 274).

How did Buddhism conceive the nature of defilement (sākyilīs, upakālīs) and its opposite? Consciousness, or heart (cākto), was not considered as intrinsically impure. Though 'formless' or immaterial, it was likened to a radiant or flashing clarity, infinitely swift and plastic in procedure, but liable to defilement by adventitious influences (Anguttara, i. 5-11). These made their advent on occasion of sense. In reacting to sense-impressions, a number of mental adjuncts were held to come into play, such as feeling, volition, emotions, etc. Prominent among these were the three roots or causes (root causes) of moral activity—appetite or lust, ennui, dullness or mental intelligence. The corresponding three opposites might come into play instead—disinterestedness, love, intelligence or insight. The karma from previous lives would influence the present instance; nurture and training would modify the adjacent or underlying life. But defilement consisted in the three immoral conditions exerting themselves in response to the calls of sense. That defilement is fully described, e.g., in the Amagandha Sutta (Sutta-Nipata, SBE 18).

The typical ceremonial bathing in the Ganges at the spring-festival of Phalg (Psalm of the Brethren, p. 153).

x. [1881] 40 f., as consisting in violence and injustice, sensuality, covetousness, and deceit, obstinacy and conceit, etc. Again, sixteen forms of defilements are given in the Vatthapama-Sutta (Majjhima, i. 36 f.).

Purification from all these spiritual defilements consisted, as the latter sutta shows, in a mental awakening (1) to new ideals, (2) to the nature of defilements, and in a moral upbuilding and subsequent tranquillisation, the defiling tendencies having been ejected. The process of course took time, and was held to be perfected only by progress along the 'Four Paths,' i.e. stages of the path to spiritual perfection. It is illustrated (ib.) negatively and positively by a well-cleaned cloth taking on a fine dye, or again by refining in fire:

'Twofold purity, undefiled as the moon when clear of blotting (cloud) (Sutta-Nipata, 360).

We have seen Buddhism using purity ritual as metaphor to emphasize the inwardness of its ideal. More appropriate is the figure borrowed from that craft of the purity of the scribe; the monastic discipline was modelled, to wit, medicine. The possible effects of certain airmen for which the physician prescribes purging and cathartics (varmanā, virechānā) are compared (Anguttara, v. 218 f.) with the sure remedy for all sufferings in the 'Aryan Eightfold Path' of the perfect life. The converse is described, not as purified, but as emancipated or released—a more characteristic Buddhist ideal, as has been stated above, than that of purification.

Once annexed, the ideal of purity was applied to every kind of proficiency of heart and head. The name of purity (kori-parisuddha) in conduct was to exercise self-reference—not to do unto others what would be disagreeable if done to one's self (Sabbattā, v. 225 f.). The inward purifying fire referred to by the Buddha (see above) is explained, so as his insight. Vision and insight have to be 'cleansed,' but different temperaments are stated to attain this ideal in different ways (ib. iv. 191-190). Mystical or supernormal sight and hearing are such (ib. i. 372), purified through the joy of the right view (ekdyano) as well as 'divine' ( dibba, godlike, or spiritual). Achievements of this kind are attributed, in varying degrees, to recluses graduating in saintship. But none of the emphasis of Christian mysticism on the purity or clarity as such is to be found in the Buddhist canon.

Finally, three special applications of the purity ideal may be noted, namely, to morals, to the work of teaching, and to the sumnum bonum.

Thus observance of the five rules for the order are technically called 'the five purities' (Vinaya, v. 132; cf. Vinaya Texts (SBE xii. [1881]), i. 15, 55, etc.).

'Perfection of teaching' is such as is undertaken because of the excellence of the doctrine's ideal and method, and out of love and compassion felt by the teacher (Sabbattā, ii. 199).

'Purity' is again annexed as one of the 44 synonyms for salvation or nibbāna (ib. iv. 372), and this is at times referred to as 'the purity supreme.' Thus, the avowed sovereign means of attaining it was that of the exercises in self-knowledge known as the 'Four Applications of Mindfulness' (Dīgha, ii. XXII.):

'... the path that leads only to the purification of beings ... to the realization of nibbāna.' (The translation 'one and only path' in that work (ekdyano) is not correct.)
Insight into impurity, suffering, and non-existence of soul are called no less 'the path to purity' (Dhavanapada, 227-279; Psalms of the Brethren, 676-678)—a phrase that became immortalized for all Buddhists of the Theravada, teaching down to the present day as the scripture of Buddhism's classic work, the Visuddhi-Magga.

LITERATURE.—All the texts and translations quoted are named in the text, and all, except those in SBE and in SBE, are among the Pali Text Society's publications.

C. A. F. RHYS DAVIDS.

PURIFICATION (Chinese).—The technical term usually employed by the Chinese to denote the rites connected with ceremonial purity is a word which represents the Chinese chih. The word is used, especially among Buddhists, to denote the practice of abstinence from animal food; but it implies much more than this. The written character for chih is a modification of another character chi (radical 210); indeed, in classical literature chi is used where modern writers would use chih and this fact provides us with an unmistakable clue to the original ideas which the term was intended to convey. Chi means 'upper,' 'to attack,' 'to advance,' 'to make even,' 'to equalize,' 'to establish uniformity;' and, when used in an ethical sense, it implies the due regulation or adjustment of the whole personality—physical, intellectual, and moral. The process of purification (chih) was not merely a preparation essential preliminary to the exercise of priestly or sacrificial functions, and it implied fasting, self-control, and an inward purity of which physical cleanliness and spotless raiment were outward and visible signs.

1. THE STATE RITUAL.—The principal authority for sacrificial and other religious rites in ancient China is the Li Chi (SBE xxvii. and xxviii. 1885). In that Chou dynasty classic we find the greatest stress laid on the necessity for gravity, sincerity, and reverence in all who take part in such rites. We are told that sacrifice is not 'a thing coming to a man from without; it issues from within him, and has its birth in his heart.' Religious ceremony is not merely an external show, nor should it be an act by way of retrospective anticipation of reward; it is the outward expression of inward feelings, and, unless those feelings are of a pure and disinterested character, the ritual in which they find expression will necessarily lack dignity. The whole character of the act involved in the exalted position of those who should preside over sacrifices (SBE xxvii. 61 f., xxviii. 226 f.). But even men of the noblest character must not occupy themselves with sacred things without scrupulous self-preparation; hence, when the time came for offering a sacrifice, the man wisely gave himself to the work of purification (SBE xxviii. 230). To effect this purification, he had to guard himself against all noxious and unclean things and to keep his desires under strict control. He shunned music, because music would cause mental distraction and excitement. He kept all wayward thoughts out of his mind, and concentrated his attention on the way of rectitude. He refrained from unnecessary movements of his hands and feet. He strove to bring his intellect and his moral sentiments to their highest degree of clarity and refinement. When he had succeeded in conducting himself in this manner for the required number of days, he was in a fit condition to enter into communion with spiritual beings (ib. 239 f.).

Of this purificatory process there were two stages. The lower stage, known as san chih, 'lax purification,' lasted for seven days; the higher, known as chin chih, 'strict purification,' occupied the three days immediately preceding the performance of the sacrificial ceremony. The process involved bathing (mu yu), the wearing of clean raiment, restriction to the simplest food, and abstinence from sexual relations. The person undergoing 'strict' chin chih was separated from his family and was confined to himself in apartments other than those which he usually occupied. He wore unadorned garments of a black colour, because these were regarded as consonant with, or symbolic of, the solemn nature of his undertaking; which should not be thought of as the unseen world (SBE xxvii. 448; see also J. Legge, The Chinese Classics, i., Oxford,1899, p. 248).

Great stress was laid on the inutility of attending merely to the external aspects of the purificatory rites. Mencius implies that a well-regulated mind was far more important than outward comeliness and correctness, when he tells us that even a leper (or a person of external repulsiveness) may sacrifice to God, provided he carried out the rules of chin chih in the proper spirit.

The sacrificial rites for which purification was and still is considered necessary are mainly those connected with the cult of ancestors, and purification is therefore theoretically binding upon all heads of families and others whose business it is to officiate at any sacrificial function, whether for the spirit-tablets in the ancestral temple. But the rule applies with equal force to the stately ceremonies which are or were conducted by the emperor or his deputies in connexion with the cult of canonical sages and heroes such as Confucius, Kuan-Ti, and Yu-Fei; the worship of the Supreme Deity and the divinities of earth, mountains, rivers, and other nature-spirits; and the propitiation of the spiritual beings whose function it is to distribute the rainfall, ensure the fertility of trees and crops, and prevent the growth of crops, and to regulate the seasonal changes. The impressive ceremony of the worship of Shang-ti (the Supreme Being) at the winter solstice took place at the marble Altar of Heaven, which is situated in the midst of a wooded park in the southern section of the city of Peking. The theoretical sanctity of the emperor's person did not exempt him from the duty of undergoing chin chih before he was qualified to act as high-priest for myriad-peopled China.

Three days before the ceremony his majesty moved into a building called the chih kung, 'purification palace,' situated within the Palatine, there to remain. He was not to be expected to remain two days and nights. On the third day he proceeded to the sacred enclosure of the Altar of Heaven, and was encircled with consecrated music. The priests, under the vigilant of the last three of 'strict purification.' Similar purificatory rites were in ancient times performed by the emperor at the beginning of the four seasons.

Three days before the festival of Li-Ch'uan (Beginning of Spring) the Grand Recorder informed the emperor that 'on such and such a day the spring will begin.' Therupon 'the son of Heaven devotes himself to self-purification, and on the day he leads in person the three ducal ministers, his nine high ministers, the five great ministers (who are at court), and his Great officers, to meet the spring in the eastern suburb.'

The emperor's duties and prerogatives in connexion with these State rituals were to some extent shared by his college of ministers, through the emperor, pair were separated from one another during the period of purification. The third month of spring a ceremony took place in which the emperor acted alone.

In this month orders are given to the foresters throughout the country not to allow the cutting down of the mulberry trees and silk-worm oaks. . . . The trunks and branches with the fruit are pulled up and thrown into the reed-reed swamps, so that a new growth may arise herefrom, and so many cocoons may be produced that the Chinese may have a surplus of silk.
stands (for the worms and cocoons) are got ready. The queen, after vigil and fasting, goes in person to the eastern fields to watch the reaping (SBE xxvii. 222). This was done in order that the women of China might be encouraged to feel that, when they laboured at one of the great national industries—the production of silk—they were following the example of the first lady in the land. Similar recognition was accorded by the emperor to the industry of agriculture; for the custom was that in the first month of spring the emperor prayed to heaven for bountiful harvests, and this was followed on the 20th day by an upholding of the plough, turned up three furrows (SBE xxvii. 254 f.). This rite has been kept up till our own day.

2. Purification in Confucianism.—A modern writer has hazarded the statement that in Confucianism fasting is perhaps 'wholly unrecognized' (Eliff, x. 193). This remark is by no means accurate, for ritual fasting is an essential part of the rites of purification referred to in the Li Chi, and the Li Chi ranks as a Confucian classic. In his translation of the following remark attributed to Confucius himself:

'Vigil and fasting are required (as a preparation) for serving the spirit (in sacrifice); the day and night in which to appear before it is after the emperor's return; the observances were appointed lest the people should think on these things without reverence' (SBE xxvii. 251).

For Confucius we have ample evidence that Confucius by no means ignored these ritual observances. In a classical passage we are told that there were three things which Confucius took very seriously and in which he showed the greatest reverence and circumspection. These were purification (chaj), warfare, and disease (Legge, i. 198). The selection is not so whimsical and arbitrary as might be supposed. The third, it will be observed, concerns the individual human life, which it mars or cuts short; the second affects the welfare of society and the rise and fall of states; while the first is associated with the solemn rites that are believed to open a channel of communication between living men and the spiritual world. From another passage we learn that Confucius 'purified himself with fasting; he went out to court to announce the murder of a feudal prince' (Legge rightly points out in connexion with this passage that the Chinese phrase (one yii) represented by these words 'implies all the fasting and all the ceremonies that precede the great occasion' (I. 254). In the same classic (the Lun Yu) we read that Confucius, when undergoing chaj, arrayed himself in clean linen cloth, changed his diet, and sat elsewhere than in his usual seat (Legge, i. 293). In the classic usually known to Europeans as The Doctrine of the Mean Confucius is represented as having uttered the following words:

'Now actively do the spiritual beings manifest their powers! They are beyond the ability of eyes to see or ears to hear, yet they are inpernicous in all things. It is for them that men purify themselves and do rich array and establish the rites of sacrifice and worship.'

Not only was purification known to and practised by Confucius and his disciples and contemporaries; it also forms part of the ritual of the cult of which Confucius himself is the central figure. The chief seat of this cult is the imposing temple at Chi-fou in Shantung. The temple stands near the enclosure which contains the sage's tomb, and adjoins the palace of the ennobled representative of the Confucian sect— the Yen Hui, P'ang Tzu, Zhi, the extended sagehood. As the rites of the Confucian cult throughout the empire are modelled on those practised at Chi-fou, special interest is attached to a book called the Sheng Men Li Yi Yo Chih, 'Records of the Ritual and Music of the Holy Temple,' which is in two small volumes printed from wooden blocks preserved in the temple pre-

incts. The latest edition of this work was published in 1887 under the editorial supervision of a committee composed wholly of the sage's reputed descendants. From this handbook we may gather authoritative information concerning the place occupied by purificatory rites in the Confucian ceremonial.

Fifteen days before the date fixed for the sacrificial ceremony the emperor proceeds to the Confucian temple (the temple of the earth and its rituals) carries out a rite technically known as the 'purification preparations,' which is usually popularly known as 'wiping the sheep,' or 'sheep washing.' The duke and his assistants, arrayed in their royal robes of office, go to the park in which the animals are kept (the kuo-chi), and there wash and anoint the victims for the forthcoming sacrifice. These animals are then ceremonially washed with warm water, and every day thereafter they are washed in the same manner, until the rite is repeated. On the same day a proclamation is issued at one of the temple-gates, called the Yang-kang-men, 'the gate of going upwards,' whereby the temple officials and all whose duty it is to take part in the ceremonies are called upon to prepare themselves for the rites of purification, which is the 'first' form begin on the tenth day before the sacrifice. From the tenth day onwards the temple-officers go daily to the temple to wash, and there goes on a thorough cleansing of it. The temple yards are weeded, and all dust and rubbish are carefully removed from it. This process is technically known as 'purification of the house.' On the third day before the ceremony the ministers enter upon the period of 'strict' chaj. At noon on this day there is a solemn sacrifice and a banquet for the high officials, and one of the chief respects paid to the ritual is the payment of an 'on the head of a person by the head of another' to the officiating assistants, to one of the temple-gates known as the Tung-wen-men, where they stand in order of precedence. The persons who are to enter the temple are then pronounced fit to enter, and are allowed to about to enter upon three days' chaj, then perform the triple preparation. Thereafter, while they prepare themselves for the sacrifice, reads about to enter upon three days' chaj, then perform the triple preparation. Thereafter, while they prepare themselves for the sacrifice, the 'spirit-tables' (kuow-ho) or 'purification lodgings,' where they are under the supervision of officials who after dark go out and leave them alone with lamp in hand to see that there no unnecessary breach of rules.

Into the details of the sacrificial ceremony itself we need not enter. The culminating moment arrives when the sacrificial animals are solemnly placed in front of the 'spirit-tables' of Confucius. The object is to be served as sacrifices by the officers of the state, only by persons in a state of ceremonial purity, and the privilege falls therefore to those who have just completed their three days' chaj, or Those who have done so are not allowed to approach the altar with the sacrificial meats and fruits until a full and elaborate rite of purification has been performed.

From a richly-garnished vessel (chiu le) the minister takes a bullelful of clean water and transfers it to a smaller vessel (hwan-chou), which the Mystic, who is usually the emperor himself, pours out on a four-legged wooden stand. The officier (chung-huan-kuan) who is to take the offerings up to the altar then goes through the form of pouring the water into a vessel of wine and sprinkling it. One of its long narrow strip of fringed cloth from a bamboo basket (Ian), kneads down, and passes the cloth to the chih-huan-chien who uses it to dry his hands. The latter then proceeds to wash seven goblets (chiu) which are to hold the sacrificial wine. The chiu is a three-legged cup with two ears and a projecting lip. Three of the seven are intended for the altar of Confucius; the other four are destined for the altar of the four subordinate sages who are associated with Confucius in the sacrificial rites. These are Yen Hui (the favourite disciple), Tseng Tso, Meng Tzo (Min-cien), and their subordinates.

There are three rules of discipline which have to be observed by all persons who occupy permanent posts in connexion with the Confucian rites. Among the offences which entail dismissal from office two are of interest as bearing on our present subject; the first is the act of entering the temple (to perform duties connected therewith) without having undergone purification. The other is the offence of ni sang jin ma, entering the temple while in a state of mourning, and consequently the presence of a dead man's skull in the temple. For observations on the religious significance of the rite, and its use in other parts of the world, see art. Hand, vol. vi. p. 499.
Purification (Chinese)

who in mourning is expected to notify the fact without delay to his official superiors, in order that arrangements may be made to have his duties temporarily delegated to some one else. The following is an extract from ancient Chinese religious literature to a curious belief that, when the rites of strict purification had been scrupulously fulfilled, the purified worshipper would see the spirits to whom his sacrifice was to be offered and on whom his thoughts had been concentrated (see, e.g., SBE xxvii. 448, xxviii. 211). This rather startling statement should not be taken as the expression of a literal belief that the spirits would present themselves before the worshipper's bodily eyes. It is not impossible, indeed, that statements of this kind indicate the survival of pre-historic beliefs similar to those which existed down to our own time among the Eskimo or the American Indians, who believed that the fasting and other austerities which a youth underwent at puberty would enable him to see his guardian-spirit. 1 It is also possible that among the ancient Chinese, as among many sects known to Christendom, fasting and other ascetic practices were the cause of the 'heavenly eye' (zen 'heavenly eye') of the Confucian mystics. 2

An interesting parallel to our Chinese text is to be found in the 'oracle' of the Montanist prophetess Prisilla, which declared that 'purity unites (with the Spirit), and they (the pure) see visions, and bowing their faces downward, they hear distinct words spoken.' 3 The Chinese, however, under the sober influences of Confucianism, have shown little inclination to carry their religious austerities to morbid extremes; indeed, worshippers are told that they should not emaciate themselves till the bodies appear, nor should they let their seeing and hearing become affected by their austerities. 4 Confucian Chinese, therefore, prefer to interpret the classical references to the visibility of spirits in a sense similar to that in which the term 'ien yen ('heavenly eye') is understood by Buddhist mystics. This 'heavenly eye' is much the same thing as Plato's 'eye of the soul' when it is turned towards reality, or the 'mind's eye' and 'heart's eye' of Gregory of Nyssa and St. Augustine. When our Chou dynasty enthusiast expressed his belief that the spirits would become visible to their faithful and purified devotee, he probably meant exactly what was in the mind of the 15th century. Christian mystic who said:

'Let us eternally burn pure, tome omnia sine impedimento videre et bene capere purum penetram caelum e internum' (de Immac. Chriat., ii. 4).

Purification in ancestor-cult. — Strict purity has always been enjoined on those who officiate at the sacrifices to the dead.

'When a filial son is about to sacrifice, he is anxious that all preparations should be made beforehand. . . . The temple and its apartments having been repaired, the husband and wife, after vigil and fasting, bathe their heads and persons and array themselves in full dress.' 5

Purity is indicated by the very name of the great spring festival of Chi-ing-ming, at which the frieze was not permitted, regard it as necessary, and swept clean; for chi-ing ming means 'pure and bright.' This phrase contains an allusion to the belief that on this day all nature achieves a general purification and renewal. This was symbolized by the lighting of 'new fires' to take the place of the old fires which, in accordance with ancient custom, had been put out the day before and put away for three days. The term han shih ('cold eating') was applied to the day (or to the three days) preceding the Chi-ming festival because, as the old fires had been put out and the new ones were not yet lighted, it was customary to abstain from cooking. 6 The ceremony of lighting new fires is almost forgotten now, but there is ample evidence that it once took place and that it was regarded partly as a purificatory rite by which evil was extinguished and the old life transformed into something new and clean. 7 Both 'pure water' and 'pure fire' occupied a place in the ritual offerings of ancient China. 8 Frazer, referring to a certain fire-ceremony still celebrated in the province of Fukien, records the significant fact that 'the chief performers in the ceremony . . . refrain from women for seven days, and fast for three days before the festival.' 9 The well-known custom of letting off fire-crackers, which is intended to exorcise evil spirits and effect a general purification, is also well known in China. 10 Disembodied spirits,' as de Groot says, 'are afraid of fire.' 11 The original meaning of the Chi-ming festival has been obscured in China by the fact that the day came to be regarded as the appropriate occasion for the performance of the spring ceremonies in honour of deceased ancestors; and the importance of the ancestral cult naturally caused the other associations of the festival to recede into the background. But the idea of purity is associated with the performance of the ancestral rites no less than with the renewal of nature's activities, though, as we shall see below, pollution of a distinctive kind was believed to be inseparable from the mere fact of being in mourning or of having come in contact with death. The ancient customs forbade any approach to the tombs or the spirit-tablets by any member of the family who had sullied the honour of his house by committing a crime, or who had brought disgrace upon himself or his ancestors. 12 This is interesting as showing that something better than mere ritual purity 'was expected of those who paid religious honours to the dead.

4. Popular purificatory rites. — Apart from the State rituals and the national cults of Confucius and of ancestors, there are many occasions on which ceremonial purifications are employed in some form or other, formerly practised by the people, though in modern times most of these rites have tended to become obsolete. At an ancient triennial drinking festival described in the Li Chi there was a ceremonial washing of hands and rinsing of cups (SBE xxvii. 355, xxviii. 435 f. ). In the Confucian Analects there is an interesting passage which, according to the commentators, contains a reference to an old custom of 'washing the hands and clothes at some stream in the third day of the month to put away evil influences' (Legge, i. 240). Purification ceremonies, whereby

1 See R. F. Johnston, Lion and Dragon in Northern China, London, 1919, pp. 155-157. There is a well-known Chinese legend which professes to trace the Han shih festival to an episode attributed to the 7th cent. B.C., but it was probably invented to explain a ritual of which the original meaning had been lost. See C. H. W. 642. The Sacrifice of a Perfect Moral Being (feat. 4th cent. B.C.), trans. Hsu Ho-Kien-fu, 1913, p. 427 f.; and H. A. Giles, A Chinese Bio- logical and Theological Dictionary (1885), 124 f.

PURIFICATION (Chinesees) 473

Buddhist sects, or borrowed certain Buddhist usages and formulas for the purpose of throwing an air of religious mystery over their secret rites. Such was the White Lotus Society, which was the cause of so much unnecessary amount of bloodshed in the reign of Ch'ien-Lung.

6. Taoist view of purity.—In the Taoist system purity and purification are regarded from a point of view which differs very considerably from that of Confucianism. chin hsin, the "fasting (or purified) heart", is strongly recommended, and the chi ssi chih chai, the ceremonial purification, which may be merely external and fictitious. But, when Chang Ts'au and other Taoist writers speak of the "fasting heart", they do not mean exactly what the Confucian means when he insists, as we have seen, that true purification must be internal as well as external. For the Taoist the only thing worth fasting and purifications is the attainment of Tao, and for the single-minded seeker after Tao all ceremonial is superfluous and meaningless. The 'fasting heart' is a negative state in which the individual shuts himself off from sense-contact with the outer world, and, by discarding everything that is treasured by ordinary mankind, fits himself for the reception of a distinct portion of that which endures and is incorruptible—the transcendental Tao.1 'The height of self-discipline,' says the Taoist, 'is to ignore self.'2 But the orthodox Confucian cannot ignore self (so the Taoist would argue), and therefore his attention lays stress on outward observances and attributes importance to the correct fulfilment of 'rites.' Moreover, ceremonies imply activity—and activity of a kind which, from the Taoist point of view, is useless. Man's function is to be rather than to do. The true sage 'does nothing, and therefore there is nothing that he does not do.' He is one who has cleared away all the impurities that dimmed the lustre of his true self and who knows that he has transcended the limitations of his phenomenal Ego. His perfectly purified nature is in complete conformity with the ineffable Tao, which is never so fully possessed as when it eludes all observation and makes no outward manifestation of its presence. At the outset of his search for Tso the sage usually retreats to his hermit's hill, where he has a romantic hermitage among the rocks and woods and lives on wild herbs and the pure water of the mountain streams. The beauty and wonder of his surroundings gradually enter into his soul and teach him that all the most glorious manifestations of external nature are but signs and symbols of spiritual glories that lie far beyond the range of unpurified vision. As he grows in spiritual stature, he catches fugitive glimpses of that loveliness, and after a long upward struggle he learns at last 'to ride upon the glory of the sky, where his form can no longer be discerned.'4 He is now a hsien-fen—a Chinese term which etymologically means nothing more than 'a man of the mountains,' but which in Taoist lore means one who has attained the immortality and the spiritual graces and which Tso himself can confer. One of the highest grades of this transcendental state is that of the ch'en-fen, the 'true man,' one who 'fulfills his destiny. He acts in accordance with his nature. He is one with God and man.'

He is a being 'whose flesh is like ice or snow, whose demeanour is that of a virgin, who eats no fruit of the earth, but lives on the dew, and whose eyes are filled with dragons for his team, rams beyond the limits of mortality.'5

Such is the language in which the old Taoist mystics strove to express the inexpressible—language which "is always wild, and is always wilder."6

which led in later ages to pitiful misunderstandings, and which fostered the growth of a belief that modern Judaism which is a home of philosophic, magickal, ritualistic, priestly mummeries, and demonology. The priests of the cult are, for the most part, comparatively harmless members of society—if, indeed, it is possible for uselessness and harmlessness to go together. All co-religionists are ignorant, unenterprising, and superstitious; and, though they may know a good deal about the mysteries of talismans and exorcisms, it must be confessed that they show very little knowledge of, or interest in, the mystic ways of philosophers. Therefore, we may expect to find this sense-impression at its highest.

2. The sacraments.—The primary significance of baptism seems to have been that of cleansing and usually, though not always, it was understood in a more than material sense. The Pauline Epistles throughout regard baptism as a cleansing from sin. It has been said that the idea of purification attains its highest form in the Christian rite of baptism; certainly it is on the spiritual basis that the emphasis is now laid.

As baptism in Judaism came to mean purificatory consecration, with a twofold reference—from an old state and to a new—so was it in Christianity.6

The gift of the Holy Spirit does not seem to have been associated with the baptismal ceremony at first. The rite seems to have been regarded by the primitive Church simply as a cleansing from sin, bringing about the renewal of a former undefiled state. The convert must be purified in the laver of regeneration, as a preparation for the reception of the EUCHARIST. This is to follow. So effective is the purification here that it can be regarded as 'a death unto sin, and a new birth unto righteousness'—not a generation, but a regeneration. This conception is maintained in the Baptism of the Church of England, the prayer for the sanctification of the water to the mystical washing away of sin and in the vow of renunciation.

Since the middle of the second century the notions of baptism in the Church have usually not extended to the forgiveness of sins, and this pardon was supposed to effect an actual sinslessness which now required to be maintained.6

This maintenance was supplied by the second great sacrament, which, offering the means of union with God, through outward and visible signs, became the recognized channel for the conveyance of grace and strength to the soul, purified and already in a sense cleansed. The idea of sacrament is a reminiscence of that purification. Yet it was soon realized that the flesh still remained weak and continued to act as an instrument of defilement to the spirit. Thus, just as it was necessary that the purification of baptism should remain with us, so it was necessary to prepare for the gift of the Holy Spirit, so it became necessary that a formal purification should precede, cleanse, and prepare for the gift received in Holy Communion. Hence the further sacrament of penance (q. v.) and absolution, which was entirely a rite of purification in its conception and effect.7

The original position was that baptism alone was the cure for sin; it was in itself sufficient for the needs of the believer. Experience, however, showed the difficulty of this position; it became more and more clear that Christians were not immune from the attacks of sin, and sinslessness was really required from them, or the efficacy of salvation ascribed would be saved. Sin after baptism thus became a practiced problem; a

symbolic of that which is much higher, much holier than itself; it is indeed a vain thing.

Thus purification becomes entirely symbolic for Christians.1 St. Paul's treatment of the question of circumcision illustrates his attitude towards purification and shows that he had grasped the principle of cleansing in a new light. Henceforth it was plain that the idea of purification attains its highest form in the Christian rite of baptism; certainly it is on the spiritual basis that the emphasis is now laid.
second baptism, suggested by some, was regarded as impossible, but nevertheless analogous rites—in so far as they were looked upon as sacramental—were established. Penitence (or Penance, to use the more customary word) and the Mass came to be used as the sacramental means whereby, the soul once cleansed from the stains of post-baptismal sin, and the ministry of the Church developed into a great system for their administration, in order to bind the confraternity stricken with sin and calling for the care of a physician.1

The Roman Church to this day insists upon this formal purification for the individual before allowing him to take his second baptism. It would be impossible not to recognize in the provision for frequent and continual purification of a formal kind, even apart from any particular material ceremony, a dangerous resemblance to the older and pre-Christian usages.2 The Church of England has never insisted upon this pre-communion purification, yet has rightly recognized the essential idea in the collect at the opening of the Communion Office: ‘Cleanse the thoughts of our hearts...’, and in the confession and absolution which must precede the reception of the sacrament. It is on these lines that purification is treated in the other offices and prayers of this Church.3

3. Purification and the contemplative life.—The idea that man must purify himself most strongly appears to have already hinted, to the more earnest and sincere Christian. It has been the initial cause of many great movements, both within and without the orthodox body; the Novatian and the Montanism, e.g., made such attempts to realize this idea. But it is above all in mysticism (q.v.), with its passionate desire for communion with God, that we find the greatest stress laid upon purification. It is an essential part of the system. It is the earliest path—the purgative way—‘which alone can lead on to illumination.’ To those who follow it will come indeed many a ‘dark night of the soul,’ until the end is reached and the achievement of purification brings light. The process is a gradual advancement, step by step, at each of which something is left behind. As the runner strips himself of one garment after another in order to attain the goal that is set before him, so the mystic must disencumber himself of all material or spiritual hindrances, as he strives after purification.4

Now be assured that no one can be enlightened unless he be first cleansed or purified and stripped... Thus there are three stages of purification: the external, which purifies the soul, and makes it equal to communion; the internal, which is hidden from the sight of others; and the highest, which is the state of the saint;5 for even the greatest of the ancient Christian writers taught that a perfect man could only be attained by high contemplation, which is the goal of the mystic.6

This notion of purification as an absolutely essential element in the religious life was the immediate cause of monasticism (q.v.). It was in order to escape the defilement which it was thought, was almost necessarily incurred in living the ordinary life of men that the extraordinary life was adopted. There were fewer enemies to contend with in the seclusion of the cell or the monastery, and those among them the most severe measures were taken—fastings, self-mortifications, and constant prayer. Only a state of purity could bring about that condition of holiness which is the passport to eternity. The practice and exaltation of celibacy most probably find here their root motive. Thus the two greatest developments of the Church’s religious life—mysticism and monasticism—may fairly be said to be developments of the Christian idea of purification.7

4. Purification through suffering.—Not a few works on Christian purification would be complete without consideration of the purificatory influence inherent in suffering. Perhaps the best illustration of this to be found in literature is contained in the beautiful poem of Mrs. Hamilton King, ‘Ognon Dazo’s Sermon in the Hospital’. It is not given to many to attain purification in this way, though opportunity is rarely lacking.

‘It is only those who are already far in the path of spiritual growth who are purified by suffering, even as the Captain of our Salvation was, and indeed, as the whole Christ himself was...’

Those, however, who do through suffering win the peace of God which passeth all understanding reach a level of purification which is higher and more perfect than that which can be attained in any other manner.

The suffering which comes to us through the fault of another would seem to possess a very high capacity for purification. This kind of purification embraces the idea that lies at the root of atonement. It is exemplified in its most perfect form in the rite of confession.8 and it is in these lines only that it is possible for men to become pure even as He is pure and, in so scaling the rugged heights of true Christian purification, to win for themselves the beatific vision of the promised land which lies beyond—the glory that shall be revealed.9

5. Cleansing of the conscience.—When it has been once realized that it is no longer purification of the body but purification of the conscience and character that is the real substantial thing10 it will be seen that the need for purification really exist even when the act which would render the person obviously impure has not been committed. This is indeed definitely taught by Christ Himself in the Sermon on the Mount.11 Many other nations besides the Jews have required a ceremonial purification of the body after deeds of lust and bloodshed. Christianity, if it is to follow the conception of its Founder, requires the purification of the conscience after the ‘will’ to commit such deeds, even when the only gravity of actually doing them has been lacking. Again, non-Christian ceremonial purification can be had and sometimes has been refused, but Christian purification can never be refused to the true penitent who seeks for it.

6. Cleansing by baptism. —Purification is still observed in Christianity.—The Feast of the Purification of the Blessed Virgin Mary is still observed by the Church. But the ceremony which it commemorates was a purely Jewish rite, though it has been taken over by Christianity for the Churching of Women after childbirth. The notion of legal uncleanness, which prevented the Jewish mother from appearing in public until after the ceremonial purification had been performed, has been dropped.2 The many women who still insist upon going to this service before them going elsewhere do so from the notion of thanksgiving rather than from that of purification. They have no idea of being legally unclean. The offering of the lamb, pigeon, or turtledove which was connected with the purification idea has given place to a money-offering, which, though forming

an actual part of the service, again emphasizes the thanksgiving motive.

7. Purification of churches after suicide, sacrifice, etc.—Ceremonies of purification are still observed in many churches for reasons of this nature. The idea is that of restoration to the former state of holiness conveyed by baptism or the like. The idea, however, must have been one of the common acts of daily life in ancient no less than in modern Egypt.

The ground that the Nile cannot reach by irrigation, inundation, or percolation is to all appearances drier and more likely to support life and vegetation.

But, when once this ground is inundated or irrigated, it soon begins to show signs of life and grows green with vegetation in a remarkably short space of time.

The same Nile waters both cleansed and vivified—a phenomenon that seems to have profoundly influenced the ancient Egyptians' ideas about purification (see below, esp. V. i, 3).

II. MATERIALS AND VESSELS EMPLOYED FOR PURIFICATION. For the most part, the materials were those of the normal as well as the most natural purifying medium. Natron, i.e. native carbonate of soda, was often dissolved in the water to enhance its cleansing properties.

Natron was also used dry (see below, V. 2 (d), etc.)—a box of this substance is included among the requirements of the dead in certain Middle Kingdom funerary prayers. Incense was used for purification, but was most likely also employed like the dry natron (see below, V. 2 (c) (ii)).

Such liquid as was desired was constituted from below, VI. 4), and so, in a secondary sense, were food and drink (see below, V. 1 (d)).

2. Vessels. Two varieties of metal ever and a basin were used for washing the hands.

The usual thin wren was named ḥ-ḥ, the squat one, apparently, ḥʾḥ or ḫʾḥ. The basin was named ḫ-ḥ or ḫʾḥ.

The same kind of basin was used for feet-ablations, but the ever employed for this purpose was of a very curious shape.

All these vessels could be made of gold or silver, but were most often of copper.

For bathing or

III. SECULAR WASHING, SANITATION, AND SANITARY OBSERVATIONS.—In an Old Kingdom palace the toilet-rooms were designated 'House of the Morning' (pr-dw-t-t), in a noble's house the 'House of the Middle Kingdom' (gabinet of the Morning) and 'House of purification'. They would have comprised from quite early times a privy and a bathroom, of which excellent examples (XVIIIth dynasty) have been unearthed at El-Amarna. The House or

1 The compound pr-dw-t-t, 'House of the Morning,' was used by the Pharaoh's breakfast.

2 After the month had been cleansed with natron, it was said to be like the mouth of a sucking calf on the day it was born. A light repast, consisting of a loaf of bread and a jar of drink, was called 'breakfast.'

3 It is curious that the word 'breakfast,' mentioned above, is an abbreviation of 'pr-tnt.' If so, the official in charge of the ablutions, i.e. the steward who assisted at the royal toilet, but, as Sethe supposes, the person responsible for the proper abrading of the royal toilet.

3. Washing of the feet.—The feet would have been frequently washed, as in the modern East; there was a special ewer for feet-ablations (see above, II. 2).

20 Book of the Dead, cxxvi. 37, 41.
4. Cleaning of nails. — Care was taken to keep the nail-tips clean. 1

5. Shaving. — (a) The face. — From the time of the early Old Kingdom 2 and onwards the custom was to shave off all facial hair, a false beard being assumed on special occasions. 3 The moustache is very rare.

(b) The head. — From early Old Kingdom times the hair of the head was either closely cropped or shaved off entirely, wigs being worn by the upper and well-to-do classes.

For cooked personal servants with their heads close shaven for the sake of cleanliness see Blackman, Rock Tombs of Meir, ii. pl. xviii. 3, lli. 31, pls. lix. xxv. xxxvii. Newberry, Biblia, pl. xliii. 1, fig. 6. 4

6. Depilation. — There is evidence for thinking that depilation was practised by the upper classes and priests in the Old and Middle Kingdom, as it certainly was by the priests in later times (see below). 5

7. Purification before a meal. — The Egyptians, in ancient times, purified themselves before partaking of food; indeed, as Griffith points out, 6 'purify oneself' is equivalent to 'take a meal.' This purification would usually have consisted merely in washing the hands.

'The hands are washed; thy ka washes himself, thy ka sits down, he eats bread with thee.' 7 Even before drinking a cup of beer, a man would have his hands washed by his wife. 8

The washing of the hands was often followed by purification with incense.

In the list of requisites for a banquet 11 'water for washing the hands' is enumerated regularly followed by 'incense.' 12

8. Purification after sexual intercourse. — The modern Egyptian men of the peasant class are very scrupulous about purifying themselves after sexual intercourse or after a nocturnal emission, sometimes having a bath, and always washing the genital organs.

1 Pyr. 13803, 2015a; cf. below, V. a. (q); (e); for a pedicurist attending to a man's toes—see Newberry, Beni Hassan, London, 1929-1930, iii. pl. iv. fig. 6, left end.

(c) At coronation.—The coronation purification was a renewal of that undertaken in infancy. It was performed with three distinct ceremonies placed upon the Pharaoh’s head, by a priest impersonating the god Yahes (Jb. 4).

The god thus addresses the king: ‘I purify thee with the water of all life, all health, all happiness.’ The Pharaoh, therefore, was not only purified, but endowed with the qualities which fitted him for his new position, and anointing him, in common with the sun-god.3 Perhaps this ceremony and that of (a) above have some connexion with the primitive ideas about kingship and fertility. In both scenes the water issues from the vessels as strings of symbols of life.

(d) Before officiating in a temple.—Before he could enter a temple to participate in any ceremony, the Pharaoh had to be purified by two priests impersonating Horus and Thoth4 or Horus and Seth.5 Cf. ‘Horus and Thoth hold out their hands to receive thee when purifying thy body.’6 This purification, which took place in the House of the Morning,7 consisted, when the full procedure was carried out, in sprinkling the king with water, which sometimes contained natron,8 fumigating him with incense, and presenting him with natron to chew and thereby cleanse his mouth (see below, V. 2 (d) (c)); he was also offered food and drink.9

This purification of water of life and good fortune,10 and ‘that which reneweth life,’11 was brought from the sacred pool with which every temple seems to have been provided.12 The purification is therefore, besides cleansing the Pharaoh, imbued with divine qualities; it also reconstituted him, as is shown by other formulæ pronounced during the ceremony, which are like those accompanying the funerary purifications. Food and drink were also purificatory in this secondary sense, for they possessed in addition the quality of water and incense.13

Probably on ordinary occasions the king merely washed his hands,14 after, perhaps, being lightly sprinkled with water by the two priests. It is unlikely that the fumigation with incense was ever omitted.

The king is described as ‘pure of hands when performing the ceremonies.’15 For a realistic representation of the king washing his hands in the House of the Morning see Lepsius, iv. 461 ff. In the sun-temple of Nusreru some or all of the ablutions were probably performed in the two basins which are sunk in the pavement just outside the door of the vestry, one on either side of it.16

(e) At a Self-festival.—At this festival special importance seems to have been attached to the washing of the king’s feet and hands.17

In the mutilated scene from the sun-temple part of the ceremony is still recorded.

2. Purity and purification after death.—Many of the funerary texts found in general use during and after the feudal period treat of what was once considered the destiny of the royal dead only (see above, under 1).

16 Jb., p. 15 14; L. X. (1899) pl. 1.

As the Pharaoh during his lifetime had to be purified before entering a temple, so after death he was purified before he could enter the solar, or Osirian, kingdom, the inhabitants of which, and all things connected with them, were pure.

Examples are the abodes of the sun-god,18 those who sail in the boat of Osiris,2 the lotus-flower which the sun-god holds to his nose,3 and the deceased’s throne in heaven or his seat in the sun-god’s bark, either of which he can occupy only if he himself is pure.4

Purity was therefore the only passport to posthumous happiness.

Accordingly, the dead Pharaoh’s ascent to heaven did not take place until his purity was assured: ‘Thou art pure, thou ascendest unto Re.5 ‘Piopi is pure . . . this Piopi ascends to heaven.’6 The guardians of the gates of the under world7 allow the deceased to cross their thresholds because he is pure.8

This purity as originally conceived was to a large extent physical.

Before Thoth and the sun-god can draw the dead king up to heaven, it must be said of him: ‘The mouth of N. is pure, the Great Ennead have censèd N., and the tongue which is within his mouth is pure, and that N. abhors dung, N. puts urine far from him, N. abhors this. N. exeats not this abomination.’9

The purity demanded by the gods of the dead Pharaoh, according to the Pyramid Texts, was not incompatible with gross sensuality or flagrant impiety.10 Something more than the rejection of physical impurity was expected of him.11 From the time of the Vth dynasty onwards the claims made by the dead to moral integrity and purity become more and more prominent;12 the idea, perhaps, fullest expression in the Book of the Dead.

In ch. xxvi, the ‘Assertion of Sinlessness,’ among the many sins which the deceased claims to be innocent of are fornication, masturbation (‘Introduction,’ line 15), and adultery (‘Confession,’ line 20.

In their conceptions of moral purity and righteousness the Egyptians very rarely, at any stage of their religious development, lost sight of the sanitary observances in which they held their origin.

‘Let me pass,’ says the deceased to certain gods who block his way, ‘I have purified myself upon this great way, and I have put away my evil, I have banished wrong, I have driven to the earth the evil appetizing to my flesh.’13

There were several ways of attaining that purity upon which the welfare of the dead so entirely depended.

(a) Ceremonial acts performed by the deceased in his lifetime.—These acts, which had associated, or identified, him with certain divinities and so rendered him holy, were (i) the ceremonial purification by which the Lord cleansed the waters or pools (see V. 1 and 3 (b)); (ii) participation in the Osiris mysteries (see V. 8 (b)).

(b) Spells, asserting (i) that those acts had been performed;14 (ii) that all imputables were hereby avoided.15 By means of these potent formulae the things alleged, however untrue they might be, became actualities.16

(c) Abjuries performed after death by the deceased himself (i.) on earth: in the ‘water of

14 cf. Gardiner’s remarks on the commemorative voyage to Abydos (Deth., cf. ‘Introduction’ 14, 17-20, cxxvii. 15-19; cf. also Pyr. 92t, which describes the followers of Horus not only as washing the feet of Osiris, but also as reciting spells whereby he was rendered righteous and so might ascend to life and happiness (Breasted, Religion and Thought, p. 171 f.).
Kherenra, the two pools at Herakleopolis Magna; in the other world he might, like the sun-god, cleanse himself in the Field or Pool of Eaur, or squat on a stone (cf. below, V, 7 b) beside the Pool of the God and wash his feet.

8. The pure incense, which was washed, sprinkled, sprinklings, fumigations, etc., possessed, therefore, a secondary, what we might term sacramental, significance; they both helped to reconstitute the deceased and, together with the food- and drink-offerings, which were supplied to the deceased while he lived, enabled him to continue his existence and to maintain unimpaired all his reconstituted faculties and powers.

9. The water with which the corpse or statue was washed or sprinkled was not merely cleansed from its impurities but brought together the head and bones and made the body complete (tm) in every particular. Accordingly effluents of water that flowed about the corpse of the dead User terminates in a large symbol of life, \( \sigma \) (see above, V, 1). With the offering of libation-water to the deceased is associated the offering to Re, the sun-god (hry) and his power (aou), and at the same time he is bidden to stand upon his feet and to gather together his bones.

10. In this way the dead might cleanse the head from all the evil that appertains to him, and make him strong and powerful above all gods.

11. For the divinity's virtuous function of the food- and drink-offerings see Breathed, Religion and Thought, p. 60.

12. The libation-water and libations and the libation of the deceased was reconstituted in the purifications that he underwent in the other world. After ablutions in the Field of Eaur he received this libation-water and libations (w'b-t) and other sacrifices were sprinkled and sprinkled over the deceased. The limbs which are in the womb of the sky-goddess. By the washings of Horus and Thoth and other divinities the dead was cleansed from all impurities, moral and physical, his body came together again or was entirely refashioned, and he was fit to enter heaven as the 20. Tui, under world.

4. Purification of divinities in the temple ritual. Owing to the influence of the Osiris myth, and to the fact that the Pharaoh was Horus and every god was conceived of as his father, the ceremonies performed at the temple of Eaur and tomb-chapel were in many respects identical. Every divinity, for cult purposes, was treated as an Osiris, and his or her statue was purified like that of a dead person—and for the same reasons.

When his statue was sprinkled, Anun was acclaimed not merely as pure but as reconstituted: 'Unite unto thee thy head, unite unto thee thy bones, make fast for thee thy head unto thy bones, which appears unto thee, and he whom that pure, pure is Anun, Lord of Karnak.' The libation-water also is 'life, libation-water is incense. Incense purifies the god and imbues him with life and vigour.'

5. Purity and purification of offerings to gods and dead.—(a) Purity. All offerings made to the gods and dead and everything used in their service, had to be pure.

The door-posts of temples often bear the following, or a similar, inscription: 'The offerings and all that enters the temple of such-and-such a divinity is pure.' The living pray that the mortuary equipment of the dead may consist of 'everything good and pure thing.'

PURIFICATION (Egyptian)

Herodotus\(^1\) describes the measures taken to ensure the ceremonial purity of victims offered to the gods, and suggests that this concern formed a matter of supreme importance.\(^2\) The testing of at least funerary victims was customary as far back as the Old Kingdom.\(^3\)

\(\text{V} \text{I} 122\) A ritual introduction forbidding the officiating priest to offer a victim until he had received a written certificate of its purity.\(^4\) For an extant example of such a certificate, see \(U.\) Wilcken, Grundzüge und Christentum der Papyruskunde, Leipzig, 1912, ii. 'Chrestomathie,' p. 118, no. 89.

(b) Purification. — Offerings were purified by pouring libations over them and by funigilating them with incense.\(^5\) Virey (pl. xxv.) shows a lector pouring water over the carcases of a victiou, which a brother then begins to remember. Offerings presented to the dead could be washed or sprinkled with water containing natron, the purifying qualities of which were thus transmitted to the dead.\(^6\)

The purification of the offerings possessed the same significance as the other purificatory rites. As already seen (\(V\), p. the water used in lustrations and lustrations and liturgies,13 offerings were endowed with mysterious reconstructive powers. The soaking in the liquid, therefore, and the funigilation added to the alacrity of the body of the food, and without the formula of presentation was recited, the combined qualities were imparted simultaneously to the god's (or dead person's) soul.\(^14\) Purification, which was an essential step, was placed nobly first to be purified with water and incense.\(^5\)

The following formula shows that the water might contain natron: \(\text{V} \text{I} 81\) To purify the offering-stone (\(w\text{hdw}\)) with natron, with cool water (\(\text{k}t\text{w}t\)), with incense . . . for the ka of the Osiris \(\text{v}r\).\(^7\)

6. Purification of temples and of buildings used for religious ceremonies.—(a) Consecration of a new temple or shrine. — A new temple was solemnly purified before it was handed over to its divine owner. The two chapels or booths of Upper and Lower Egypt that figure in the funerary ceremonies appear to have been purified by having water sprinkled over them.\(^8\)

(b) Removal of purification. — It was sometimes thought advisable to purify a temple afresh. A certain Sekhechefkaf informs us that he was sent by Senosritu n. to purify the temples in the Theban temple 'for the sake of the pure purification of the month festival and the clean observance of the half-month festival.'\(^9\)

Purification would naturally be necessary after the proclamation of a temple or sacred city. The day after PiAnkh had taken Memphis by assault, he sent men into it to protect the temples of the god, hallowed (? the sanctuary and the statues of the gods, offered to the community of god (\(\text{d}t\text{d}r\)-\(\text{d}\)) of Heketpa, purified natron with water and incense.\(^10\) So also Mentemhet purified 'all the temples in the nome of all Pators, according as one should purify violated temples,'\(^11\) after the Assyrian invasion in 667 B.C.\(^12\)

7. Purity and purification of the priests.—The most characteristic mark of the priest, from the earliest days to the latest period, was his purity. This

lector, possibly depict the cutting and cleaning of priests' fingers and toenails, and not, as has been suggested, surgical operations.

(f) Depilation. — Herodotus states that the priests in his day shaved their heads and body every third day for ceremonial purity. Depilation seems to be an ancient practice (see above III. 6). The depilation of a priest is perhaps depicted in the mastaba of 'Enkh-me'-hor (the priest of the temple of Osiris) in Egypt. The head and body of the priest is quite clean, but the hair of their body has been removed.14

(g) Shaving.—The clean-shaven head does not appear to have become the distinguishing mark of the Herodian caste till towards the end of the XVIIIth dynasty. In the Greek-Roman period the regulations about the priests shaving their heads were very strict.7

(h) Dress.—From the time of the New Kingdom onwards, the priests seem to have been very particular in the matters of dress.8 As early as the IXth to Xth dynasties we learn that a priest during his period of service had to wear white sandals.9

(i) Circumcision. — See art. CIRCUMCISION (Egyptian), vol. iii. p. 670 ff.

8. Purity and purification of the laity. — (a) Purification before entering a temple or sacred place.—Until the Greek-Roman period we know practically nothing about the laws of purity of the lay people before entering a temple,10 but we may be certain that ablations of some sort were deemed necessary. There is possibly a reference to this practice in an inscription dating from the reign of King Tetti of the Vth dynasty.11 In the Old Kingdom it also appears to have been reckoned impious for those who had eaten an impure thing, beth,12 or who were still purifying themselves, m bau-sen,13 to approach the portrait-statue in a tomb-chapel, or indeed enter the building (cf. below, VI. 1). Ch. liv. of the 'Book of the Dead, line 46, speaks of a worshipper's hands as pure when praising the god. Herodotus says that a man had to discard his woolen cloak before entering a temple.14

Hero of Alexandria (i. c. 250 B.C.) says that 'spear-throwers' for the temple guards were kept by those who enter15 stood at the entrances to Egyptian temples.16 Perhaps we have examples of the paqepetria of Hero in some of the larger vessels of the Ptolemaic age, which, as the inscriptions show, came from temples, and which, apparently, were meant to hold water. Some of them are decorated on the inside with the symbols 𓊀𓊁𓊂, 'good fortune, life, stability', which are associated (see above, V. 9) with religious ablations.17

Hero also speaks of bronze wheels, which were apparently fixed to the doors of temples, and were turned by those entering, because it is thought that bronze cleanses.18 This is quite an un-Egyptian device, and was probably imported from the East.19 Von Bischoff describes what may be an actual bronze wheel as being given and drawn over by the worshipper.20

An inscription of the Ptolemaic period states that people who had become impure through sexual intercourse, birth, miscarriage, menstruation, etc., had to pay dues before being admitted into the temple.21 From this it is evident that Ptolemaic temples were apparently paid into a money-box (bygparps) at the entrance to the temple.22

A bronze wheel was sometimes, it seems, associated with the money-box. Amos Forten suggests that the worshipper drew the wheel when it was turned, and we also learn from Hero that bronze wheels were set up near the water-stoops. He therefore proposes to make a "coincidence of such a kind that when the wheel is turned the water runs out of it for the sprinkling."23 For further particulars as to these two contrivances, the former of which was a pen-in-the-slot machine worked by s-drachma pieces, the latter an ingenious swivel tap, see Rosch, Annales du Service des Antiquités, xi. (1911) 26.

(b) Purification in sacred waters and pools.—(i) Near Kherkeš (the Greek-Roman Babylon) there was a pool connected with the Heliopolitan sun-cult. In its waters the sun-god washed his face, and it was of advantage to mortal men to do the same.10

(ii) At Herakleopolis Magna there were two great pools in the precincts of the temple of Haršef, called the 'Pool of Natron' and the 'Pool of Ma'.24 The worshippers came and were washed in these pools and so were cleansed from their sins; their offerings were washed in them also.25

An official of the Satte period records that he built a wall 'round this pool.26

(iii) The water at the First Cataract, the traditional source of the Nile,27 was believed to be endowed with special cleansing properties, and therefore was used (or supposed to be used) for all the frictions and libations offered to the gods and the dead. The fact that the dead go there to be bathed by the goddess Satis28 suggests that the living also performed ablutions there.29

(c) The Osirian mysteries.—Participation in the Osirian mysteries30 was productive of religious purity, as suggested by certain statements in the Book of the Dead.

E.g., the deceased thus addresses the gods in the other world: 'I am pure of mouth, pure of hands, one to whom is said "Welcome," by these means do I give; for I have heard those words which the ass spake with the cat' (ccxxv. ['Conclusion'] 131). Again he says to his ka who stands in his way: 'I am pure; I am pure. I am pure. I am able to triumph against his foes' (cv. 8); see also i. 8, 10-11, cxxix. 10 ff.

9. Purification before going into battle.—Apparently the only reference to this custom in Egyptian writings is Pfr. 2190a-2191b, which says:

'Horus comes forth from Khnum. Butz Town arises for Horus, and he purifies himself there. Horus comes pure that he may avenge his father.'

Purification (Greek).

VI. PURIFICATION AND MAGIC IN MAGIC.

1. The reciter of a spell and a magician must be pure. In the recitation of the Book of the Dead must be pure (ω' θ') and clean (τυρα). He must be clothed in the finest linen and shod with white sandals (cf. above, V. 7 (b)), have his eyes painted with stibium, and be anointed with the finest unguent.

The purity demanded of the reciter could be obtained by washing with water containing natron 1 or by washing and bathing in the sunlight, eating pure food, such as venison and fish, and sexual intercourse to be avoided. 3 In the case of one spell the reciter, and his servants also, are directed to purify themselves by washing and bathing with water containing natron. 4

To be successful in ‘spirit-gathering’ the magician must be pure.

In divination by the moon the magician, if a medium is not used, must be ‘pure for three days’. 2 In divination by a lamp without a medium the magician, who must be ‘pure from a woman’, is directed to lie down on green, i.e., fresh, reeds.

2. Purity of the medium.—In ‘spirit-gathering’ the medium must be a boy, pure, before he has gone to a woman. 3

3. Purity and purification of the objects used.—The papyrus upon which a spell is written must be pure. 4 The table used in ‘spirit-gathering’ is to be of olive-wood, having four feet, upon which no man’s foot ever sat. 5

In lamp-divination the lamp must be a white one ‘in which no mineral or gum-water has been put, its wick being clean;’ it is to be newly made for this viewing, and in then be set upon a new brick. 11 The Book of the Dead, ch. xxv., rubric, directs that the representation of the hall of the Two Truths be drawn upon a pure tile of porcelain fashioned of earth upon which no pigs or small cattle have trodden. The canopic (i.e. placed over the model of a boat used in a magical ceremony to be purified with natron and incense. 12

In Griffith-Thompson, xxvii. 4, we learn that the bronze vessel used in the same divination is to be washed with water of natron.

4. Purity and purification of the place where the ceremony was performed.—The place where the magic rite was to be performed must be clean. 10 Sometimes it had to be both ‘clean’ and ‘dark without light’, 14 and in addition must be purified with natron water 15 or sprinkled with ‘clean sand’ brought from the great river. 17 Furthermore, it is laid down that there is to be no cellar underneath it. 16

VII. PURITY OF THOSE WHO WISHED TO HAVE AUDIENCE OF THE PHARAOH.—In the Priest-Khete-Ste, lines 147–153, we are informed that of the four princes who came to the Pharaoh to pay homage three, being fish-eaters, were not admitted to the royal presence. Perhaps this scrupulousness on the part of Pharaoh is due to the fact that he had just been affiliated to the sun-god (see above, V. I (6)), to whom fish was evidently supposed to be an abomination. 19

Literature.—This has been sufficiently indicated in the article.

Purification (Greek).—All the lower religions and most of the higher are concerned with the ritual of purification in its manifold forms; the higher are also deeply interested in purity as a spiritual ideal. The history of Greek religion falls into line with the general history of religions in that these respects—these purificatory, ritual agrees in essential respects with that of the other communities noted in the various sections of this article; it agrees also with the history of the higher religions in that a spiritual ideal, appealing to the more exalted or more sensitive part of the nature, emerged from this period. Nevertheless, the phenomena of Greek purification, the ideas and the value attaching to it, bear the impress of the unique temperament of the people, and especially illustrate the plan.cy with which the Greek communities could adapt the traditions of ritual to serve the purposes of legal and ethical development.

The student of this department of Greek religion is at once confronted by a chronological question that is also in a way an original one, for from what period and from what source did the cathartic system arise in Greece? It has been maintained that the whole of it was post-Homeric, and that in origin it was non-Hellenic, being derived from some Oriental or Anatolian source—e.g., from Lydia. 1

As early as the Homeric Hymn to Apollo there is a sound concernning it, and his silence is explained by his ignorance of any such ritual, which therefore could not have existed in the period when the poems were composed. But we have now learned that Homer's 'silence' has to be carefully and critically judged and interpreted before it can be accepted as certain evidence that what he is silent about did not exist in his time. Also the statement that the Homeric poems are wholly silent concerning the ritual of purification from some ignores the plain or the probable significance of certain texts. We read that Odysseus purifies his hall with fire and sulphur after the slaughter of the suitors; 2 we may suspect a religious sense of impurity as a motive, though we cannot prove it. But Hecker's words, 'It is not meet for a man stained with blood and grime to offer prayers to God', 3 cannot but be interpreted in relation to a contemporary simple rule of ceremonial purity—the same rule that two Greeks would wash his hands in lustral water before raising them in prayer to Zeus, 4 or to Telenchos to wash his hands in sea-water before praying to Athena. 5 Also, we find the νερός, or lustral water, the purificatory value of which cannot be doubted, a constant accompaniment of the Homeric sacrifice and libation. 6

Again, we should consider the purification of the Achaeans, the underlying reason why we cannot accept the view that the Achaeans were not a monotheistic nation and that the rituals of purification played no part in them. We cannot accept the view that the Achaeans were not a monotheistic nation and that the rituals of purification played no part in them. 7

modern anthropology, as in this important respect distinguishes the Greeks from the other peoples of the world. It is evident that the invaders from the north, whose blending with the southerners, the people of the Minoan culture, generated the Hellenes of history, brought with them their own cathartic ideas and practices; and the evidence of festivals recorded by the later Greek writers suggests that they found on the soil of Greece and in Crete a more elaborate system of the same significance and of immemorial antiquity.

But there is indeed a marked difference between Homer and the later Hellenic society, so far as that is mirrored in the Homeric poems, and the succeeding periods of Greek life; and this difference should be noted at the outset before we proceed to the details of the subject. If we call the people to whom those poems were originally addressed the Achaeans, we may venture to say that the Achaean consciousness took its cathartic duties, such as they were, very easily and lightly; on the other hand, the later Hellenic conscience became anxious and at times even sombre in regard to such matters. It was haunted by terrors of the ghostly world and by the feeling that certain acts, especially homicide, might arouse the wrath of unseen spirit-powers or ghosts, and that such dangers could be averted only by a cryptographic ritual of purification. There is a wide cleavage between the Achaean and the later Attic religious consciousness in this vital respect, as wide as that between the genius of Homer and the genius of Eschylus.

The later Greeks, just as and perhaps more than their predecessors, endowed the social-religious world, no shadow on the brightness of that early epoch. And nothing more vividly illustrates the moral light-heartedness of the Homeric world, so splendidly endowed in most respects, than its normal indifference concerning the consumption of human flesh. domicile, haunts of the ghostly world, and by the feeling that certain acts, especially homicide, might arouse the wrath of unseen spirit-powers or ghosts, and that such dangers could be averted only by a cryptographic ritual of purification. And nothing more vividly illustrates the moral light-heartedness of the Homeric world, so splendidly endowed in most respects, than its normal indifference concerning the consumption of human flesh. domicile, haunts of the ghostly world, and by the feeling that certain acts, especially homicide, might arous
of a change in feeling is the citation of an incident in the *Aithiopis*, an epic poem by Arktonos of Miletos, composed probably near the close of the 8th century B.C. Theseus, for some reason or other, caused his kinsman of Thersites, slew him and was thereupon obliged to quit the army for a time and to retire to Lesboe, where he was purified by Apollo and Artemis.2 It is very doubtful if the poet of the *Iliad or Odyssey* would have any part in the story; for this kinsman was a Milesian, and at most only a degraded member of the same Aecean stock. Yet the Milesian poet feels that his homicide, however justifiable, deeply concerns the whole army and is a blot on its honor. Ideas must be purged out of the religious ritual at some distant place before he can safely resume fellowship with his compatriots. The legend represents, no doubt, the contemporary State law of Miletos, and exhibits that State as having advanced soon after its foundation beyond the stage of culture wherein homicide is only a matter of the blood-feud and the *xorgid* to the higher religious thought that the slaying of any member of the community brought a stain on the whole community. A whole nation, which it must protect itself. We are still very far from the establishment of advanced secular law; the various stages of progress in later Greece and the ideas that inspired and assisted it are obscure and difficult to trace. On one point we may form a certain hypothesis. As ideas of purity and religious impurity are closely related to natural sensations of horror and aversion, and in Greece as elsewhere these feelings were most strongly excited by the shedding of kindred blood, it is probable that this type of homicide was the first occasion for the institution of an elaborate ritual of purification. Some of the few legends concerning its origin and vogue convey this impression. Ixion, who slew his father-in-law treacherously, figures in Greek mythology as the first murderer, and he is also the first suppliant who is pitied and purified by Zeus *Ikeus*, the god who hears the prayer of the suppliant and outcast. Bellerophon was purified by King Proitos for the accidental slaying of his own brother; Theseus, who slew the monstrous Minotaur, was most justifiably, had to be purified from the stain, as Sinis happened to be his cons; and the typical exemplar of the divine law of purification is the *matricide Orestes*.3 But, if the law in origin linguistic, did it originally mean *the lustration of the soul*. At least, the only evidence that can be quoted of some such feeling is isolated and peculiar; the priest who slew the sacred ox in the Attic Bouphonia had to go for a time into exile; but this ox was a mystic, 'thesanthropic' animal, charged with the divine spirit of the altar, and the priest had shed divine blood; there is no reason to believe that at any time the Attic people regarded the slaughter of an ordinary ox as a heinous impurity. We may note also the fact that a certain altar of Apollo in Delos was specially called *ayvds*, 'the pure,' because the offerings and ritual were bloodless, no animal-sacrifice being allowed; this is no proof of ordinary Greek feeling, but suggests rather some peculiar sacerdotal development of thought concerning blood.

Not bloodshed alone, but any contact with death and the ghost-world was a strong source of im
y any evolution of the early post-Homerian epoch; and we may seek a more probable explanation in the increasing terror of the ghost-world; for we may infer that those who have the share in the religious ritual, confirmed by many legends, to suggest that this was more potent in the post-Homerian than in the Homerici and Myceenian periods. Given an intensified danger in the ancient world, as a necessary consequence of bloodshed, was the only safeguard both to the individual and to the community against the wrathful spirit of the slain, we can well understand the wide extension of the law, until it covered the slaying of a slave and, by a parallelism of phrase, might be the same. The misgivings emanating from a ghost was supposed to attach also to inanimate objects that had caused the death of a man; the civilized Attic law required that the axe which had slain the sacrificial ox of Zeus Hekatos should be formally tried and cast into the sea—a means of purging and purifying the land; solemn purification ceremonies were performed over the head of the bronze ox at Olympia that fell upon a boy and killed him.

This sensitiveness to bloodshed and death may become extravagant and morbid, and has at times evoked such strange vagaries of the religious law of purity as may half-paralyze the life of a community; but the Greek was saved from this by his moderate character. Of a certain sensibility, which protected him from the extreme logic of the view that all bloodshed was impure. We are not sure that any purification was imposed by Greek State law or social custom upon a man who had slain an alien in foreign lands; that would depend on his own sensitiveness or on his desire to be initiated at any of the great mysteries, which would demand a *katharsis* from such a stain. Nor have we any record proving or suggesting any rule, such as prevailed with stringency among the Hebrews or still more and with detrimental results among the Indian tribes of N. America, requiring the purification of the army returning from battle; the Greek soldier was probably content with an ordinary lustral washing, sufficient for the purposes of refinement. Nor, again, was the ordinary Greek troubled by over-sensitiveness in regard to the blood of animals shed for sport, for food, or for sacrifices; there is no hint that the butcher or, as a matter of fact, the owner of the animal that was killed for food, should be purified. The law, which as at least, the only evidence that can be quoted of some such feeling is isolated and peculiar; the priest who slew the sacred ox in the Attic Bouphonia had to go for a time into exile; but this ox was a mystic, 'thesanthropic' animal, charged with the divine spirit of the altar, and the priest had shed divine blood; there is no reason to believe that at any time the Attic people regarded the slaughter of an ordinary ox as a heinous impurity. We may note also the fact that a certain altar of Apollo in Delos was specially called *ayvds*, 'the pure,' because the offerings and ritual were bloodless, no animal-sacrifice being allowed; this is no proof of ordinary Greek feeling, but suggests rather some peculiar sacerdotal development of thought concerning blood.

PURITY or μητεμα. The household to which the corpse belonged was impure; even the friends and others who attended the funeral were impure. In the tolerant Greek world this did not mean that they were guilty, merely boycotted, but only that they were unfit to approach the altar and to take part in divine service with others, also that it might be unlucky for them to carry on any serious business while in that state; Hesiod is our first witness to a period of mourning of far older date, for he mentions, in the following period, that it was unlucky for a man returning from a funeral to try to beget a child.1 The inscriptions and other evidence show that the period of impurity varied in the different states; at Lindos in Rhodes (in the time of Hadrion) it lasted for forty,2 at Eresos in Lesbos for twenty days.3 Those who merely attended the funeral were under the tabo for three days at Eresos, but at Pergamion they could recover purity on the same day as the beginning of purification.4 The fear of the ghost-world, implying a shrinking of vitality in the living and a general sense of bad luck abroad, explains much of the funeral ceremonies of the Greeks, which show indeed the desire to please the ghost and to assure it of the family affection, but at the same time the determination to keep it at a distance and especially to prevent it following the mourners back to the house; one day of the Attic Anthesthria was devoted to an All Souls' celebration, when the spirits of the dead kindred were formally invited to an entertainment within the houses, but great care was taken to purify the dwellings at the end and to effect a complete riddance of them;5 meantime the whole day was μακρόι, impure and unlucky. The same feeling explains the elaborate ritual to which θαύμα must submit, the person who had been reported to be dead and had had funeral ceremonies performed over him and was then found to be alive and desirous of returning; society was afraid of such a person, and yet at the same time due to beget a child.6 The presence of the matricide Orestes was supposed to pollute the Taurie image of Artemis, which therefore needed washing in the sea.7 Another momentous crisis was the foundation of a new city, and we have some indication that the ground was first carefully purified so that the settlement might start under good auspices purged from evil demoniac agencies.8

The gravest crisis of all was one that was only too frequent in the life of the Greek states—the outbreak of civic massacre, when kindred blood was shed, the sense of guilt weighed on the citizens, and it was feared that a man might be changed into one or more of wrathful ghosts. This was the condition of things at Athens in the 6th cent. B.C., when Kylon and his adherents had been sacrilegiously slain, and the people appealed to the aid of the Cretan prophet Epimenes, who came over and purified the whole city, the fields, and the homesteads; the reconstruction of this historic event lingered late in Attic tradition and gave rise to the erroneous belief that it was this prophet who first taught the Athenians the ritual of purification and its value.9 As will appear from a careful inspection of the sources, there is evidence that the Greeks, like other primitive and advanced peoples, regarded the act as an occasional source of impurity and held the belief that abstinence had a certain value and efficacy for some religious or magical ritual. A deeper and more interesting question arises when we consider purity in the abstract and the Greek view of chastity as a religious duty and ideal. The law of purification in this matter was very simple and easy; such an act was supposed to render the person unclean in the religious sense, but the uncleanness could be immediately removed by washing and anointing, and some temple codes might allow the person to approach the altar on the same day, others might impose a tabo of one day or even more; for the case of the mysteries and for certain lengthy ceremonial such as the Thesmophoria a longer abstinence might be required. In the later inscriptive records we are interested to mark the glimmer of an ethical idea; for the impurity is regarded as greater and the period of tabo imposed longer in the case of irregular and lawless indulgence;10 and by Attic law the adulterers was permanently excluded from temple worship.11 But, on the whole, the temple rules in regard to this act are confusing and at times inconsistent. The idea of a superstition arising from a primeval feeling that has evolved our modern social laws of decency; and the non-ethical standpoint is sufficiently revealed in some of the special rules and some of the phrases used in temple writings; in the inscription from Eresos a longer tabo is imposed in

of loss of virginity than in any other sex-indulgence, and in the rules of bygela, or 'purity,' handed down to the altar of Zeus Kybele and Artemis Kybele at Delos the prescription of temporary chastity was put on the same footing with abstinence from salt-fish and meat. The priest was concerned, not with society in general, but with the purification of the temple. Therefore the sexual act, by which a stain was incurred that must be washed off before the person could safely approach the altar, became insurmountably more heinous if committed within the precincts of the temple; in the Greek legends that relate such exceptional incidents the whole community suffers divine punishment until expiation is made.

The same feeling was attached to the law, which is practically universal, against the defilement of the temple or the temple-precincts with the evacuations of the human body; and some of the sacred codes carefully prescribed the entrance of cattle into the τέμενος for the same reason. It may also explain the rule prevailing in some of the Greek temples against the wearing of sandals in the holy place, the rule which is universal in Muslim communities; the source of it may be sought in the fact that the sandals are made of the skins of dead animals and that therefore they bring the impurity of death into the shrine.

From the same prompting of primeval feeling, child-birth has been generally regarded as a strong source of impurity to both the woman and the man of the house, not because it is the result of the sexual act, but because of its concomitant and the awe attaching to it; nor did the civilized Hellenic societies differ in this respect from the savage, though their tabus and rules of purification were much milder and easier. Such an event was not likely to happen within the temple itself: but we are familiar with the law that required the removal from Delos of any woman who was approaching her time, lest the island of the pure god should be polluted. The ordinary temple codes would be concerned only to prescribe the period during which the woman should be in tabu after travail; it is noteworthy that in one example we find the abnormally long period of forty days imposed in the case of miscarriage, the more unnatural event producing the greater stringency of stricture. As to the woman, the idea of religious uncleanness is so closely linked. In the ἱεροπόρος of the Greek temples we might have expected to find under this head some rule of tabu concerning menstruous women, about whom the code of Leviticus is anxiously severe; but no direct evidence touching this matter has yet been found, and probably none will be; for the Greek religious mind was more easy and tolerant than the Hebrew, and the vast number of Greek priestesses would have the application of any such rule very difficult.

As regards impure food, the Greek world was happily free from the severe scrupulosity of some other religious laws. For the distinction between clean and unclean animals natural to the Greek mind; the Greek inscriptions that preserve certain temple laws only indicate that it was desirable, in order to attain the bygela necessary for participation in religious service, to abstain for a short time beforehand from certain foods. In the case of the various codes probably did not agree in determining, and it would be hard to find a common principle explaining all. In some we seem to detect the natural feeling that foods which left an unpleasant taste or attacked to the person ought to be avoided before worship; hence would arise a tabus on pea-soup, salt-fish, cheese, and garlic; for evil smells have much to do with the sense of uncleanness and with the belief in the presence of evil spirits. Again, the rule sometimes enjoined abstinence from certain animals because they were specially dear to the divinity, and the question of the origin of such rules involves a discussion of totemism (q.v.).

As speech suggests action, it was natural that the same law should apply to foul speech as to impure act, and that evil words should be considered to mar the purity of the divine service; hence the universal Greek rule that before the sacrifice began the command for νομοποίησις should be proclaimed to the people; this word, at first meaning 'auspicious speech,' became indirectly a synonym for 'silence;' for, as it was difficult for each member in a vast concourse to be sure what word was auspicious and what not, it was best for general silence.

In accordance with the same idea, the purity of the ritual would be disturbed if any quarrelling or altercation arose, for quarrelling suggests bloodshed. Hence during festivals of exceptional solemnity, such as the Eleusinia, by Attic religious law no legal action was thought to be taken, no creditor could distrain, even a person aggrieved by the State might not lay a suppliant-bough on the altar; for all this implied strife.

2. The means of purification.—The means of purification are of two kinds, (a) mechanical, and (b) religious or quasi-religious; and the two may be used together. Among the former we find in Greece, as elsewhere, such natural purgative media as water, fire, sunlight. To the examples already mentioned we may now add the additional custom of purifying the bride with water from the sacred spring before the marriage ceremony. It is not clear that there was any ceremonial purification of the new-born infant with water equivalent to our baptism. The need was fulfilled some days after birth by an interesting ceremony called Μαινιδώρης, 'the running around,' in which the new-born infant was carried at a running pace round the fire of the domestic hearth; and with this we may compare the Eleusinian legend that the goddess Demeter is said to have purged away by fire the impure and mortal parts of her fostering Demophon. The use of fire in certain Greek rituals, such as that of the Menaids who sprang through the fields with torches, may be supposed to have had the cathartic effect of purging evil influences from evil persons.

Dittenberger, nos. 564 (inscr. from Delos, wine labeled), 567 (Lindos, pea-soup, goats' flesh, cheese), 663 (Sounion, Men. Tyrran- nus, garlic and pork, 'celestial influence'); Propert-Ziegen, ii. 1, no. 41 (Delos, shrines of Artemis, goat flesh); id., no. 51 (Delos, shrine of Artemis, goat flesh forbidden), no. 92 (Delos, shrine of Artemis, salt-fish). The rules of (a) bygela in the mysteries were much severer than in ordinary cults—cf. Adel. 4, 116, Aristoph., Orn. Corsich. iv, 556 (Relake).

2 Ch. xi. 35; J. ii. 12, 13; Arist. Thesm. 394; Eur. Hec. 530.

3 Or. Dict. v. 110; cf. Demost. x. 9, 10; id., 110, p. 517; cf. schol. Demosthenes, 22, 68 (L. R. Farnell, Greece and Baby- lon, 2, 527).

4 Schol. Pind. Ol. 5, 58.

6 Hom. Iliad, 239-331.
though other explanations are possible, and we are told that the torch was used in the purification of cities. The idea of the purity of fire is strikingly illustrated by the annual rite practised by some of the Greek states of renewing the purity of their hearth-fires, both public and private, by bringing new fire from some specially pure source, such as the altar of Apollo at Delos or of Hephaistos in the Academy at Athens.  

The most important form of the sacrificial, as a mode of purifying the air by fumigation, which Greece adopted from Assyria in the 8th cent. B.C., had in the East a strong cathartic power against demons, who are generally supposed to be attracted by evil smells and banished by good; and, though its pleasing odour would cause it to be maintained merely as an attractive concomitant of worship, we may believe that at least the earlier Greeks were aware of its original significance.  

Fumigation by sulphur had an obvious purificatory value; for, though its odour is not pleasant in itself, its pungency is such as to overpower other smells which might be dangerous; hence Homer calls it κακῶς ἄκος, 'a healing of evils.'  

The boughs of certain trees, probably on account of the picturesque value of possessing a cathartic value, such as the laurel at Delphi, which Apollo was supposed to have brought back from Tempe after his purification there from the blood of the Python,  

the withy-bough, or λαύς, which the Attic women used in purifying new oaths in the Thesmophoria,  

and especially the squill, or σκίάλα, which was used in the general purification of cities and for beating the scapegoat in the Thargelia,  

a ritual of purification or expulsion of evil; therefore the Arcadian rite in which the image of Pan was carried in procession by women who sang no doubt may be interpreted as cathartic.  

When the Athenians on one day in the Anthestria stuck branches of backthorn at the entrances of their houses, this was a mechanical means of purification, its object being to keep out ghosts;  

for its thorns would naturally harass the ghost, as would the sticky pitch with which the citizens at the same time smeared their doorposts.  

Thunder-stones in certain religious circles had a recognized cathartic value, which their mysterious origin or the mysterious powers which their colour, their force, or their shape would naturally attach to them. Perhaps it was a stone of this kind that, according to a Boeotian legend, Athene dashed at Herakles to cleanse him of his madness after he had slain his children.  

The formula of an Arcadian story about the sacred stone called Ζeus Κακωστός, evidently from its name meteoric, by sitting on which Orestes was healed from his madness.  

There is some evidence that gold, the pure and bright metal, was regarded as purificatory;  

also among the mechanical cathartic media we must include amulets, which were as much in vogue in the later periods of classical antiquity for keeping ghosts and evil spirits at a distance as they were in Christendom; some of the Greek types, such as the φαλάκρα and the pointed finger have the connexion with religion; others might be carried in the form of divinities, but their working was mechanical magic.  

The other type of purificatory methods consists of those that may with more right be called religious, as connected directly and indirectly with the worship of the divinities or with their influence. The use of certain animals—their blood or skin or both—was perhaps the most constant method of purification from bloodshed and other taints. The fleece of the ram offered to Zeus Μυκήων, the god who had specially to be appeased when kindred blood had been shed, was used for the purification of the catechumens at Eleusis, upon whom the stain of blood rested and who knelt on the fleece of God,' the Δοξ κάθωσ— as it was called—while the purification ceremony was performed over them. In the mysteries of Andania we hear of the 'ram of goodly colour' used for the purification of the initiates.  

Plague might be averted from a city by a priest carrying round its walls the ram of Hermes. But the most usual animal employed for purification was the pig, of special potency in the Eleusinian mysteries. The Athenians in assembly was purified before its meeting by a ceremonial procession of little pigs; and no other purification was of such avail for the homicide as pig's blood. Hence on one vase representation we see Apollo himself purifying Orestes by holding over his head the sacrificed bleeding ram.  

Now, we have strong evidence that in the magic rites of purification practised by many modern savage societies the blood of animals—the goat, the bullock, or swine—has an intrinsic mysterious potency itself, wholly unconnected with sacrificial or divine worship; and this primitive feeling may have survived here and there in historic Greece. But that this is in general a sufficient explanation of the Greek ceremonies is not credible. A new-born pig's blood in Hellenic purifications were suggested by their intimate sacrificial association with the high god and the great goddesses and powers of the lower world; just as the αἴγις, or goat-skin, of Athens, wherewith her priestess at Athens visited the newly-married couples for cathartic or fertilizing purposes, derived its efficacy from its contact with Athene. In Hellas the pig was the sacred animal of Demeter and Kore, the powers of the world of spirits; the pig's blood was charged with a portion of their divinity, and therefore the homicide who had offended those powers could recover grace by its contact, in fact by a sort of communion with them.  

A different type of communion, serving a cathartic purpose, is suggested by a record of Phintarch that at Argos the period of mourning for a death in the family lasted thirty days, and that at the end of that time the mourners regained their original status by a sacrifice to Apollo; we may interpret this to mean that by communion with the pure god they finally wiped off their impurity.  

It has been observed that cathartic features, often overlaid and obscured by other accretions, attached to some of the complex Greek festivals; the Thargelia at Athens and elsewhere is an example. The goat, which was its central act, effected a καθάρσις of the whole community from sin and other evil. Another curious but not unique accomplishment of certain Hellenic ritual and festivals was the employment of curses, ribaldry, satire, and abuse.

in the solemn procession along the sacred way to
Eleusis the aspirants to the mysteries were ceremo-
nially abused and ridiculed by the crowd at one
point; in the Thesmophoria the men abused the
women and the women the men; and that such
leading had a cathartic purificative influence; the
smelling of ρυγια or of evil spirits—is a reasonable
theory confirmed by a text in Suidas that the
people of Alexandria in old days purged the city
of ghosts by going round in wagons to the doors of
the houses and purifying them with the spitting of
the individuals within. This humorous pro-
cEDURE may be regarded as a kind of vicarious
confection; the cathartic character of confession
has been long recognized, but confession in our
sense, a private and personal revelation of one's sins to
a priest, was alien to the old religious system of
Greece. The purgative value of personal satire
may have been one motive for its dramatic de-
velopment in the Dionysiac festivals.

The religious aspect of the Greek system of puri-
fication was further emphasized by its close associa-
tion with certain high divinities, especially Zeus
Nicandros and Apollo of Delphi. The former deity
belongs to the older stratum of Greek religion, but
retained his function of granting or withholding
purification and purificative grace throughout the
whole of antiquity. The Delphic-Apolline καθάρσις
has been a subject of much dis-
sertation and cannot be even summarized here.
But it may be noted that it was the claim of the
Apollo was purged to deal with the question of
purification from bloodshed that led to the estab-
lishment of one of the most important law-courts
in Athens to deal with the plea of justifiable holi-
micide, whereby the civilized Athenian State ap-
proached the legislative form. Though power was thus
taken out of the hands of the priesthood, the secular court at Athens
that dealt with homicide remained strikingly religious
in their procedure; and it is mainly their strong
infusion of cathartic ideas concerning the massas
of blood that differentiates them from the modern
tribunal.

A side question that may be glanced at under
this section is whether Greek feeling about in-
purity was always associated with a belief in
gnostic purificative restraint. The question is
important because an overstrong susceptibility
to the terrors of the demon world can vitally affect
the religious and scientific development of a race.
We have seen that the sense of the impurity of
bloodshed in Greece was connected with the fear
of the ghost and that ghosts made a household
impure; but we have no reason to believe that
this fear or any clear belief in evil demons ac-
counted to the Greek of the 'classical' period for
the other sources of impurity. It is true that
Porphyry declares that the chief motive for the
various ἔγρευς, or methods for obtaining purity,
was to drive away the evil spirits which clung
to certain kinds of food. But Porphyry is no true
witness for the earlier Greek thought, as he repre-
sents the later demonology that swept over the
Mediterranean world from the East and found
expression in Neo-Platonism and the Hermetic
literature. But in the earlier Hellenic spiritual
world there was no true dualism of good and evil
spirits; there was the Orphic θεραπευτής, who cleared
centuries ghost-ridden or demon-ridden or much
dependent on the exorcist for his peace of mind;
and this is one of the most salient differences
between Greece and Babylon.

3. The idea of purity.—It remains to consider
briefly certain religious and moral aspects of the
idea of purity. This was expressed by the Greek
ἐγρευτική, meant originally a state of the body
and the person that fitted an individual for commu-
nication with the deity, and this state could be
obtained by certain ceremonies and abstinences.
It was required with peculiar insistence in the Greek
priesthood, as a condition of participation in
the greater mysteries, which offered to the
initiated the promise of posthumous happiness.
Hence the idea could gain ground that a state of
purity, as it qualified a person in this world for
divine fellowship, might also be a sufficient
means of grace and salvation in the next. It was
the Orphic sects that developed this view with
the greatest zeal in Greece. They preached and prac-
ticed a specially stringent code of abstinences,
and based on this their claim to happiness in the
next world. The θυρυγια ἐκ καθάρσιος was the Orphic
password in the portals of Hades—'I come from
the pure.' But most of our ancient evidence
concerning Orphism suggests a ceremonial and
'Pharisaic' purity, rather than an ethical, and an
implied ascetic prejudice which demanded personal
separation for the separate burying-ground for the
avatars. And we cannot allege that it was wholly or mainly from
their influence that the ideal of purity of soul per-
meated at last the higher mind of Greece. Its
earliest testimony is in the 6th cent. B.C., a phrase of Epicarvmos,
'If thy mind is pure, thou art
pure in all thy body'; and the elevated ethical
thought that purity of soul was of more avail than
all lustration and mere washing of hands was pro-
duced in the Delphic-Apolline καθάρσις of ancient
Greek literature near the beginning of our era; and
even some of the later codes of temple ritual
adopted it in their formulæ. This 'purity of heart'
commenced to the Greek the absence of any
stain on the conscience and of evil purpose or thought; it is important to note that the idea of
sexual purity, which is often the sole significance of our English word, was not the dominant idea
in the Greek ἔγρευς. The Greek philosophers and
ethical teachers, who preached σωφρωσύνη, or self-
restraint, did not attach so great importance to
such occasional chastity under special circumstances, as never preached chastity in general as an ideal of
life. The Greek priest and priestess were usually
married; chastity was enforced very rarely upon the
priest, and not upon the priestess, who required
occasional chastity upon special occasions, and
whose position was only temporary. The Greek priest
had to be of unblemished body, and led the normal
life of a citizen; the eunuch played no part in
Greek religion, which was saved by its sanity from
the morbid anti-sexual excesses of the Phrygian.
Even the worship of Artemis, apart from its myth-
ology, could not and did not attempt to establish
among the Hellenic people any conception of the
chastity life as spiritually more perfect and
dearer to God.

PURIFICATION (Hebrew).—The term 'purification' is applied to those ritual observances by means of which Israelite was, absolved from the taint of uncleanness. This article deals exclusively with the Jewish laws and customs relating to purification; to estimate the methods by which the Israelite probably reached his conception of it, it will be necessary to refer to the other articles in this series.

W. Robertson Smith ('The Religion of the Semite,' London, 1894, p. 425 f.) points out that, 'primarily, purification means the application to the person of some medium which removes a taint or impurity or defilement or infection peculiar to the individual or to the ordinary life of his fellows'; he shows that the normal life of the holy people was a holy life. When a person used purificatory rites it was not to tone down, to the level of ordinary life, the excessive holiness conveyed by contact with sacramental things, but rather to impart to one who has lost it the measure of sanctity that puts him on the level of ordinary social life. 'Speaking of blood as being one of the media of purification, he says (p. 427): 'In the most primitive form of the sacrificial idea the blood of the sacrifice is not employed to wash away an impurity, but to convey to the worshipper a particle of holy life. The conception of purificatory media as purificatory, however, involves the notion that the holy medium not only adds something to the worshipper's life, and refreshes its sanctity, but expels from him something that is impure.'

We must first consider in what ways the uncleanness was produced or contracted, and then the observances by which purification was effected. And we shall see that there were ritual ordinances in connection both to persons and things and to a land defiled.

I. Uncleanness and its penalties.—Uncleanness was contracted in various ways.

(a) Sexual uncleanness, in the functions of reproduction (Lv 15:1-51), by issues in both sexes (Lv 15:15), in menstruation.

The functions of reproduction 'early excited the superstitious awe of mankind, who invested the organs and their activities with mysterious powers. Sexual intercourse was widely regarded as producing uncleanness' (A. S. Peake, in HDB, iv. 827). The period of separation lasted seven days, and the uncleanness was communicated to the bed or seat, contact with either produced uncleanness. Whenever the evening washing, the washing of the body and clothes (Lv 15:18, 22 S 11:19).

It is worth observing that 'holiness' and 'uncleanness' were regarded as infections and demanded similar ritual purification, and instances occur in which a condition of uncleanness necessitated absences which resembled in all respects the uncleanness to the approach of Jehovah at the giving of the Law (Ex 19:10); the holy bread of the sanctuary could be eaten by David's men in 1 S 21 only if they had strictly observed this abstinence; and the same regulation applied to men on active military service, for war was regarded as a sacred act (cf. the expression נַעֲלֵי בָּדָן [Jer 6:4 22 5127]), from the custom of opening a campaign by sacrifice). The same idea obtains probably in the case of the first year of marriage, when a man was absolved from military service (cf. Lk 14:2), and in Uriah's refusal in 2 S 11:8 to obey the king's order. In ordinary cases the uncleanness lasted till the evening (Lv 11:152), but in menstruation, at the end of seven days from the cessation of the symptom, in the evening, the candidate for purification performed an ablation both of the person and of the garments, and on the eighth offered two turtle doves or two young pigeons, one for a sin-offering, the other for a burnt-offering. Two methods of purification applied to males with abnormal issues. And so infectious was the condition in such cases that contact with such persons or contact with their clothing or furniture involved uncleanness as a sanctified ablation on the day of the infection.

In lesser cases of illness, such as gonorrhea dormientium in males, a condition of uncleanness was involved until the evening, and

the ablation of the person and of the defiled garments was necessary.

(b) in childbirth, J. G. Frazer (GB, London, 1900, iii. 463) inform us that 'women after childbirth and their offspring are more or less tabooed all the world over.' With regard to purification after childbirth, a difference was made between the birth of a boy and that of a girl; in the case of the latter the period of uncleanness was doubled, as it was commonly held that in this case the symptoms of infection continued much longer. In the case of the birth of a boy the mother is unclean for a week, during which time she would be suffering from menstruation. In the case of the birth of a girl, 'in the blood of her purifying' for thirty-three days (during the latter period she would not presumably be infectious). During the whole forty days 'she shall touch no hallowed thing, nor come into the sanctuary.' At the expiration of the forty days she was required to offer a yearling lamb for a burnt-offering, and a young pigeon or turtle-dove for a sin-offering. In the case of poverty she was permitted to substitute a second pigeon or turtle-dove (e.g., Lk 2:24, Lk 12:1).

(c) Contact with uncleanness.—In contact with uncleanness was not to touch with the hand, or to carry a carcass involved, besides uncleanness till the evening, the necessity of washing the clothes, and in some cases (Lv 17:2), the washing of the person. In the case of a Nazirite coming in contact with uncleanness, it was necessary to shave the head, and to offer two turtle-doves, for a sin-offering and for a burnt-offering, and a lamb for a trespass-offering.

(2) Caused by contact with one unclean by the dead (Nu 19:11, Hag 2:13), or by contact with one unclean from whatever cause (Lv 5:22), or with some thing unclean (222). The purificatory observances in these cases involved the ordinary condition of uncleanness until the evening, the confession of guilt, and the offering of a trespass-sin offering.

(3) Caused by contact with creeping things (222) or by eating creeping things, or with certain animals which were always unclean (1160: 'every beast which divideth the hoof, and is not cloven footed, and which taketh not its vomit backward, the same is unclean to you'). The purification in these cases was principally that of remaining unclean until the evening.

(4) Caused by leprosy. The full regulations are dealt with in Lv 13 and 14, in regard to the disease in the person, the garments, and the house.

The ceremonial of purification consisted of various elements.

(a) After the examination by the priest, two living birds were to be brought, together with a rod of cedar (juniper)-wood, scarlet wool, and hyssop; one bird was to be killed over water from a running stream, and the leper was to be sprinkled seven times with the blood of the bird, signifying the new life imparted to one who was regarded as 'dead,' and the living bird was to be released, a symbol of the removal of the evil.

(b) The washing of the clothes, shaving off all the hair, and bathing. It was also necessary to remain outside the house for seven days, and the shaving and ablutions were also repeated.

(c) On the 5th day the final offering was made at the 'tent of meeting,' consisting of (i) a guilt-offering, (ii) a sin-offering, (iii) a burnt-offering, (iv) the purified leper by the priest placing oil on parts of the body and pouring on his head. 'This offering was a reparation to God for the defilement of the leper, and was offered during the seventh day, when the leper was held ceremonially pure. Into the blood of the victim (a lamb) and the oil being symbols of the sanctuary and consecration (Lv 8:12, 13). Reasoning from Le 14:8; iii. 18); (ii) a ewe-lamb as a sin-offering before readmission into the congregation; (iii) a ewe-lamb as a burnt-offering, and (iv) an bearing provision was made for the poor by the substitution of doves for the lambs, and a reduction in the quantity of the flour for the meal-offering.

(d) Uncleanness in religious matters.—Uncleanness might be caused by idols (Ezk 22:26), conceived
as whoredom (Hos 5:3, Ezek 39:22), by necromancers (Lv 19:1), or by sacrificing children to idols (Ps 106:37-39). The prohibition rings out clearly in such cases, but it is often disregarded. But what is the purification? Jahweh takes the matter into his own hands; the only purification possible is punitive; such sins need the smelting in the furnace of Jahweh's wrath; 'And ye shall know that I the Lord have poured out my fury upon you' (Ezk 22:2). Sacred places were also defiled by sin (2 Kgs 23:8, 25:4), and Jahweh 'defiled' him thereby, and made him desolate to the end that Israel might 'know' Jahweh. Josiah 'defiled' the idolatrous places of worship by destroying them and making them unfit for use (2 Kgs 21:20).

Death, stoning, excommunication, the opposition of the face of Jahweh, could be the only purification.

c) Uncleanliness of land or country.—Again, a land or country is defiled by the sexual impurities of the people, by spiritual whoredom (Ezk 22:4). Israel is warned repeatedly against this contamination: it was the sin of the nations driven out by Jahweh; Israel had been and will be visited for such, and the very land itself 'vomited out her inhabitants.' The assiduous practice of idolatry was an abomination in the remembrance that Jahweh is their God, and the purifying punishment is the cutting off of the souls from among the elect people, and the raising up of the divine instruments of judgment, the Babylonians, etc. It was accompanied by the shedding of innocent blood (Nu 35:34).

The purifying punishment of the land is the shedding of the blood of the murderer; the land is sacred because Jahweh dwells among His people; there can be no expiation, except by the shedding of the murderer's blood. A land may not be defiled by allowing a murderer to hang upon the tree all night; the body should be buried on the day of execution; the land is sacred because it is the inheritance of the people sacred to Jahweh (Dt 21:21 ff.). A land was defiled by idolatrous practices (Jer 2:7, Ezek 36:39); it was a goodly land that Israel had inherited, and the people, priests, and rulers had made it an abomination by idolatry; their way was before men; they had forsaken the word of the Lord's servant, and the land was cursed by its rejection of Yahweh.

2. Purificatory media.—We have seen that there are various media of purification, and various acts of ritual to be observed. Speaking of cathartic sacrificial washings, Robertson Smith says:

'Purifications are performed by the use of any of the physical means that re-establish normal relations with the deity and the congregation of his worshippers—in short, by contact with something that contains and can impart a divine virtue. For ordinary purposes the use of living water may suffice, for, as we know, there is a sacred principle in such water. But the most powerful cleansing media are necessarily derived from the blood and blood of sacrificial victims, and the forms of purificatory embrace such rites as the sprinkling of sacrificial blood or ashes on the person, anointing with holy unguents, or incense, or sometimes anointing with holy-lived-in oil, that is, the ashes of the burnt-offering, or of the heathen, were the purifying, purifying remedies.

Purifications are performed by the use of any of the physical means that re-establish normal relations with the deity and the congregation of his worshippers—perhaps, in short, by contact with something that contains and can impart a divine virtue. For ordinary purposes the use of living water may suffice, for, as we know, there is a sacred principle in such water. But the most powerful cleansing media are necessarily derived from the blood and blood of sacrificial victims, and the forms of purificatory embrace such rites as the sprinkling of sacrificial blood or ashes on the person, anointing with holy unguents, or incense, or sometimes anointing with holy-lived-in oil, that is, the ashes of the burnt-offering, or of the heathen, were the purifying, purifying remedies.

But the most powerful cleansing media are necessarily derived from the blood and blood of sacrificial victims, and the forms of purificatory embrace such rites as the sprinkling of sacrificial blood or ashes on the person, anointing with holy unguents, or incense, or sometimes anointing with holy-lived-in oil, that is, the ashes of the burnt-offering, or of the heathen, were the purifying, purifying remedies.'

With these physical media of purification, and with the use of living water, blood, ashes, herbs, incense, oil, shaving the hair, seclusion, confession, and punitive destruction.

(a) Water.—In regard to water it should be observed that rivers, wells, and streams are often found near sanctuaries in Arabia, Phoenicia, and Syria.

Robertson Smith points out (p. 173) that 'the one general principle which runs through all the varieties of the legends [about sacred waters], and which also lies at the basis of the ritual, is that the sacred waters are instinct with divine life and its purifying and sanctifying power. In its highest sense, the stream comes to be impregnated, so to speak, with the vital energy of the deity; the object in its drinking is to be cleansed of the defilements of sin. The stream is thus a life-giving power, to the primary conception of uncleanness is that of a dangerous infection. Washings and purifications play a great part in Semitic ritual, and were performed with living water, which was as such sacred in some degree.'

(b) Blood.—For the cathartic nature of blood reference should be made to art. SACRIFICE. Here we need only quote the words of the Epistle to the Hebrews (9:24): 'Without shedding of blood is no remission.'

c) Incense.—For incense used in purification see above, and Robertson Smith, p. 428 ff. Cf. Nu 19:17 (RV, 1894) for its atoning efficacy.

d) Confession.—For instances of confession cf. 1 Kgs 8:50, Ps 32:7, Pr 25:11, Ezr 10:12, Neh 9:5, Dan 9, Lv 16:9 (P) 20:7 (8), Nu 5:4 (P), Lv 5:1 (P), Neh 10:5, Hos 7:19, and especially the ceremony of the scapegoat (Lev 16:22; Nu 28:15; Is 58:5, etc.). In Nu 19:8 (P) it denotes the mixture composed of the ashes of the red heifer and those of 'cedar wood, hyssop and scarlet,' and used for the preparation of the 'water of separation' (cf. G. B. Gray, Numbers [ICC, Edinburgh, 1900], p. 241-247; for ashes of the red heifer of HDB iv, 207 f.).

e) Ashes.—The term ἐξοσμός is frequently used as a token of humiliation and atonement (Job 22:17, Is 58:5, etc.). In Nu 19:8 (P) it denotes the mixture composed of the ashes of the red heifer and those of 'cedar wood, hyssop and scarlet,' and used for the preparation of the 'water of separation' (cf. G. B. Gray, Numbers [ICC, Edinburgh, 1900], p. 241-247; for ashes of the red heifer of HDB iv, 207 f.).

(f) Herbs.—For the use of herbs, especially the hyssop, for the act of sprinkling blood in ceremonies of purification cf. Ex 12:8, Lv 14, Nu 19, Ps 51:18; it is spoken of literally in 1 Kgs 19:21. G. E. Post (HDB ii 442) identifies it with Origanum Marit., which is eminently adapted for the purpose of sprinkling. He points out that in certain of the ceremonial sprinklings, as in the case of leprosy, the sprayer was made to put on the robe of the laity, and sprinkled with scarlet wool, and a living bird. Gray (p. 251) contends that it was used 'on account of its cleansing properties,' and he adds:

'The scarlet thread was presumably selected for its colour, for the same obscure reason that required the cow to be red; the cedar, perhaps, on account of its soundness and endurance, and its supposed property of imparting these qualities.' He reminds us that Pliny mentions 'numerous medicinal qualities with which cedar and hyssop were credited in the ancient world' (HN xvi, 70).

PURIFICATION (Hindu).—There is nothing that an orthodox Brahman, or Brahmanized caste generally, will shun so much as external defilement. 'The predominating idea in their general conduct, and in their every action in life, is what they call cleanness,' says J. A. Dubois. The rules regarding impurities (Purification) (cf. Purification 1) and purifications, therefore, a conspicuous place in the Sanskrit law-books, and there are many special treatises in Sanskrit on this subject—the Astauchanirnaya, Sudhottaretta, Sudhamanvaksah, etc., which are the idea of a separate code inspired by the sight of a corpse becomes particularly manifest in these rules. The impurity of a Brahman caused by the death of a relative is declared to last in general ten days. Those who have carried out a dead relative and burnt his

Purification (Iranian) has its own unique religious requirements which are not found in other religions. In the Islamic religion, purification is a significant practice, and it is mandatory for every Muslim to perform ablution (wudu) before prayer. Similarly, in Hinduism, purification is essential for religious practices, and it is performed through various rituals such as the Ganga Aarti and the Ganga Darsan. The tasks involved in purification vary from one religion to another, but they all emphasize the importance of cleanliness and respect for the sacred. Hinduism, in particular, places a strong emphasis on purity and cleanliness, and this is reflected in the rituals and practices associated with purification. In Hinduism, the Ganges River is considered sacred, and bathing in it is believed to purify and cleanse the body and soul. The Hindus believe that the impurities of the body can be washed away by bathing in the river, and this is why the Ganges is considered the most sacred river in Hinduism. In contrast, the Muslims believe that purification is achieved through the ritual of ablution, which involves washing the body with water and sprinkling it with water. The rituals and practices associated with purification vary from one religion to another, but they all emphasize the importance of cleanliness and respect for the sacred.

Wilson, 2 vols., London, 1888; BG, passim. 

Purification (Iranian).—In the less developed religions of the world purification means

1 Loc. cit.

2 Ib. p. 182i.

3 Ib. p. 181.
the expulsion of the contagion of a ritual pollution. In higher religions it is above all the liberation from an ethical depredation. Mazdeanism combines both conceptions. The annulment of sin is primarily to be obtained by outweighing the evil deeds, evil thoughts, evil good words, good thoughts (hususyouthmana, hýchta, húnata). A penitential formula (pastita) was also recited before the dastār.1 The term pastita expresses the balance of merits and sins, and in later times the applied saying of the penitent renouncing the sin, and saying, 'Henceforth I will no more permit the sin.' But there is no remission—or, more exactly, neutralizing—of the sin unless by good actions in compensation for the evil inflicted on good creation by the evil act. In the Vendidad these works are enumerated; they consist in building bridges, gifts to the priests, purification of defiled good beings, etc. More often regular penances are provided, in the form of strokes by means of a whip. (ashtā, svaashtā-hūrana.) The rate of strokes is given in several passages of the Vendidad. In later times, as a substitute for the strokes, silver coins were paid by the penitent, and a scale of fines was fixed.2

Often, also, spells had to be recited, expiatory offerings to be presented, or purifications performed;3 and here we have prescriptions connected with the more materialistic conception of purity and purification, as we find it in the Zend-Gathas, where sin is but one of the many pollutions that may be inflicted upon man and have to be wiped off by means of some ritual process.4 Mazdeism gives to purity and purification as much importance as any lower religion, because those conceptions have been made to fit into the double system. Pollutions come from contact with impure beings or are ascribed to demons, exactly as in the beliefs of primitive people, but they are considered at the same time as an achievement of Ahura, the spirit creator of the evil creation, source of every evil, material or moral. When those defilements are suppressed by means of water, gómê, and other substances, or by rituals completely similar to those used for that purpose, it becomes the aim of Mazdeism, as these elements are endowed with the purifying power emanating from Ormazd, the producer of good creation. In all this we have to do with aspects of the great struggle between the two principles. The material and the moral aspects of purification are wholly intermingled in Mazdean conceptions.

The verb yazsdhā, 'to purify,' is akin to Lat. jus and Skr. yosh. It refers to all that is fine, good, or right—all that is as it should be. In the Gathas the word is found only once and means 'to accomplish,' 'to make perfect,' 'to put in good shape.' It is used of the daēna, the conscience, the soul of the faithful, while in the Vendidad it is used by the body and all of kinds of material beings and substances.

Darmesteter5 compares this double meaning to that of 'cleanliness' in English, which is a moral as well as a material virtue—'cleanliness is next to godliness'; and he adds with much reason that, for the Zend-Gathas are a complete philosophy of discipline and morality, since it is the state of a being belonging to Ahura Mazdā. In most cases one has to do with pollutions that are real infections or defilements. But they not only soil; they also put one in the presence of God and in a purity most nearly resembles by contact and dooms the visitor to perdition unless it be redeemed by a purification that gives it back to the realm of Ormazd. The conception of a soul, its purity or impurity, its moral health, that is unhealthy or abnormal in the body is impure: disease, menstruation, childbirth, death of the whole body or of parts of it; and, after all, sin is a kind of disease also—a folly in contrast with wise conduct (armesht-gāh) or the right kind of mind (Vohu Manah).

It is therefore not surprising that Mazdeism professes that wise conduct and good teaching purify man's life (Yazdshāo nanṣayān aipti sanheth [Ya. xlviii. 6]).

The worst impurity is that which arises from contact with a corpse. For a Mazdean, to die was to pass into the power of the dāvīr Nāus (vēkšt). Hence it is necessary to minimize the evil produced by this demon by protecting all good beings of its sphere (including for example the enemy of man) from contact with it. When it has taken place, it is urgent that the defiled substance should be freed as soon as possible from the grasp of the dāvīr. The first process of purification applied in that case is the sūy-dīd, or the look of a dog; probably of a white dog. The second is application of an emetic (i.e. with spots near the eyes). This, however, is not sufficient to destroy the impurity inherent in the corpse, and every person and thing that has come in direct or even indirect contact with it must be purified. The contact is greater on soft and wet ground and where decomposition has set in. The corpse is therefore deposited on a flat stone around which the nast-sālār traces with a knife three deep circles to prevent the Nāus from infecting the surroundings. The corpse has to be stripped of its soft and liquid parts by the action of vultures or other animals of the evil creation. It is therefore deposited in some remote and dry place far from the cultivated fields or on a dakhima till it is completely dried up. Then it is presumed to be no longer infectious. All kinds of purification are prescribed for the people who perform the duties connected with the dressing of the corpse and its transportation. See, further, art. Death, etc. (Parsi).

Next to death, the worst impurity is menstrual blood. This is the only pollution that must be kept indoors for a distance of a stick. The woman after childbirth is treated in the same way, and must be confined during forty days in the armesht-gāh, which greatly increases the mortality among Parsi women.

All that is detached from the body, being dead, is impure. Hence the ceremonies prescribed for cutting the hair or the nails (Vend. xvii. 1-9). This is also the reason why the priest wears the pastidadā, or piece of gauze, before his mouth when he comes near the sacred fire lest he should spoil it by his breath. All that has been touched by one of the defiling substances has to be purified, and the greater part of the Vendidad is devoted to the description of the ritual processes securing the purification of all kinds of elements or materials, such as wood (Vend. vii. 28.), corn (ib. 32), water (vi. 26), fire (ib. 34), iron (ib. 75 ff.), sheep (ib. 184), the dead man (viii. 3) or the road followed by the carriers of the corpse (ib. 14, 22), household utensils (vii. 74), clothes (ib. 10 ff.), and animals—e.g., the cow that has eaten from a corpse (ib. 76 ff.).

Soft and porous substances need more careful cleansing than hard and dry ones, and purifications are more elaborate in winter than in summer.

The cleansing substances are the same as are used in all rituals of the same kind, viz. above all, water, and next to it gracias (Pahl. gómê, 1
3 G. Bartholomae, Altirn. Worterbuch, Strassburg, 1904, s.v.

PURIFICATION (Jain)

or urine of cattle. A rivôet quoted in Darmesteter [Zend-Avesta, ii. 266] explains that, when Jamnial (V. X. 20) extirpated Tahmudi, from the body of Ahriman, he soiled his hands; but, a drop of gomêz having by chance fallen on them, they immediately recovered their fine aspect. Earth is also mentioned at times as a purifying element (Vend. viii. 15, 74).

As for fire, it is generally considered to be the purifying element par excellence; it has been exalted so high in Zoroastrianism, as the purest offspring of the good spirit, that it cannot be used as fuel and fire must never come in contact with anything impure.

For some specially serious cases of contamination there was provided an extensive ceremony—the barâshnâm, or purification of the nine nights, described in Vend. viii. 35-72 and lx. 1-67. The ground had to be prepared by cutting down trees in a dry place. Then holes had to be dug, and furrows drawn. The unclean person had to walk to the holes, recite a prayer, and be sprinkled with water and gomêz on all parts of his body in succession.

ALBERT J. CARNOW.

PURIFICATION (Jain).—Introduction and remarks.—The Jains of to-day are as rigidly proud of the old saying that a Jain might be trusted in the zenâna of a king; so great, indeed, was their character for purity that it won for them the epithet of paraghurâ pavete, "worthy to enter another's house." There can be little doubt that this splendid reputation was due to the ethical character of their religion, though even to-day the ethical nature of Jainism is insufficiently realized by European scholars, and too little appreciated even by the Jains themselves. It is in accord with this ethical tradition that sins against purity of any kind are never glossed over, but always treated with the greatest severity. Adultery is accounted one of the most heinous sins, equivalent to the taking of life (ahimsa sin). The Jain monk who breaks the vow of chastity is held to have broken all his vows. Every sin of impurity, whether it lie in thought, word, or deed, or in causing others to offend against the law of chastity in thought, word, or deed, must be confessed to one's director (guru) as soon as possible, and the penance imposed by him performed. The usual penalty for unchastity is for a monk nothing short of expulsion from the order, and he must undergo long fasting before he can hope to obtain readmission. A layman guilty of impurity is held to have slipped back on the ladder of rebirths and fallen below the stage not only of being a Jain but even of being human, and he must observe the strictest fasts with the idea of torturing the body which led him to commit such crimes before he can win back again the birthright which he has forfeited. If the sin be not repented of and confessed, the most hideous torments await the offender in a future rebirth as a hell-being. With regard to women who transgress this law of chaste life, a husband can never divorce his wife, but, if she prove unfaithful, he would very probably separate from her, and though, as a rule, the practice of taking a second wife is much looked down on, it would be considered pardonable in such a case, and the woman would look forward with dread to being widowed in her next existence. The idea of purity differs of course for a monk and a layman. The monk must observe the most rigorous celibacy, never looking at, thinking of, speaking of, or sitting where a woman has sat or stroking a female animal. It is interesting to notice that these laws are enforced in their sacred books not only by every religious sanction present and future, but also by appealing to the natural laziness of the monk, warning him of the burdens and cares of married life.

A layman vows to maintain his wife in all honour and loyalty and to renounce the society of other women. It is customary for a devotee to observe celibacy before any of the great Jain festivals or fasts, before going on pilgrimage, and for twenty days in every month, and, as he advances in holiness, he at last renounces entirely the society of both sexes (brahmacharya pratimâ).

All unnatural sins against purity are punished in this life by heavy penances, or after rebirth by the most hideous tortures.

The Jains are also proud of the purity of their worship, fasts, and ceremonies are not to be found connected with their temples, nor does their religion permit any sakti or vina mirga orgies, and their entire sacred literature contains nothing approaching to the Tantras of the Hindus.

With regard to the purity of inheritance and purifications, the Jains themselves say that they have borrowed their rites from the Hindus and especially from the Brâhmans; so it will be interesting to compare the two systems on this point. A Jain is always most anxious to maintain ceremonial purity, for only when in a state of ritual holiness can he go to temple or monastery, or perform any of his religious duties, such as meditation, adoration, or reading the sacred books; but ceremonial pollution is very difficult to avoid, accruing, as it does, in so many minor ways, and especially on the occurrence of any birth or death in a family.

2. Birth impurity (upadhi sítaka).—Before the birth of the first child the young mother goes to her own old home, where she must stay for at least a month, and only after the child's birth; during all this time she is considered ceremonially impure and 'untouchable,' and her husband is not allowed to see her or to enter the house where she is living. The child, when born, is considered ceremonially impure for nine days, and it is not allowed to go to temple or monastery, or to perform any of its religious duties, such as meditation, adoration, or reading the sacred books; but ceremonial pollution is very difficult to avoid, accruing, as it does, in so many minor ways, and especially on the occurrence of any birth or death in a family.

There are four distinct stages in the progress of the mother back to ceremonial purity:

(a) On the tenth day after the child's birth she bathes in the house and on the very bed on which she gave birth to the child; her forehead is marked with an auspicious mark (chandita) in the name of the presiding god and change is made in her diet. She is to be allowed to touch milk during the whole forty days of her impurity, and the first day after the child's birth she has to observe very strict Purificationfasts. She must not eat rice, meat, or fish, but is allowed to eat only a favourite dish of pepper and garlic (the same ingredients as in the Hindu râita, but less liquid), but after the tenth day she may take bread and the curried vegetables which she so keenly relishes, and several different kinds of gruel.

(b) On the twentieth day the mother again bades in the house, her hands and forehead washed which is to face the sun; and the earthen floor and sometimes the walls of the room are freshly plastered with the usual mixture of clay, cow-dung, and water; but the auspicious mark is again put on her forehead (she had not been allowed to do this during the intervening days), and an Aryan dish called dîna (the same ingredients as the râita). At the same time she must not eat and after she may now be allowed to sweep the house, but

1 See M. Stevenson, Heart of Jainism, p. 223.
2 Ibid., p. 258.

If, however, he is very anxious to see his first-born, he may be brought outside the house for him to look at after it is twelve days old.
must not go outside (unless the family is so poor that she must help with the work). On this particular day she may again eat dāru, or dūru, if the Jains, she may not wear her ornaments or her beads.

(c) On the thirteenth day, or on the Thursday nearest to the thirteenth day after the child's birth, the mother bathes in the ordinary bathing-place of the household, whether it be in a room, a well, or a tank. She will wear a new and auspicious mark and given dāru to eat; she is now considered less unclean and allowed to go outside the house, though she still must not touch any one or go to the mansion or temple.

(d) On the fortieth day, or on some convenient Sunday, Tuesday, or Thursday, the fortieth day after the child's birth, the mother bathes again in the household-bathing-place, and is at last considered ceremonially pure; she is now allowed to touch the household water-pots, though she still must not bathe, and the last of all, she is allowed to be present for her friends. If during these forty days she has used earthen pots, they will be thrown away, but the brass vessel returned to her own mother's house for a varying period lasting probably six months—the seems the correct thing to do, as it is the Brāhmans' custom to perform the purificatory ceremonies before the child is bathed. Amongst most of the Jains the child's father is considered impure for ten days, and for that length of time he is not allowed to go to the temples or perform any religious duties; all the relatives, however, that bear his surname are in the same state of ceremonial impurity (though, unlike the Brāhmans, they are allowed to celebrate weddings during that period). The impurity is removed at the end of ten days by simply bathing in the ordinary way. In cases of poverty, however, the father and his relatives may purify themselves by ordinary bathing the day after the child's birth.  

Thus the Jains are anxious that the mother should not die before the purification is completed. The Indian friends have assured her that, if their wives were to die in childbirth, they would now break through every custom and insist on being with them at the last.

3. Death ceremony. —The dejection which death brings on a household (maṅgyu sītaka) is far heavier than that of a birth. During the time the pollution lasts the Jains, like the Brāhmans, can celebrate no marriage, hear no music, eat no sūryā-kīrtana, or saturnalia, and they must wear only white turbans, but, unlike the Brāhmans, they need not shave off their moustachest.

When a Jain is dying, he is placed on the floor, which has been previously washed with clean and strong water. If Hindu influence is strong, the corpse will probably have been mixed with water from the river Ganges), and the patient is so arranged that his head is towards the north and his feet towards the south. Great attention is paid to the purification of the last day. The body is bathed, and, with this in view, he is urged, even before he has been placed on the floor, to take certain vows, especially that of religious suicide (sanyāsa pātham), in which he promises never to eat or drink again, to renounce all the world, and, without food or drink, to put off the skin, and the moment he dies, his heirs offer further alms in his name. Still with the object of purification, a lamp is lit with melted butter, lit close to the man when he is on the point of death, and is kept constantly burning till the dead body is carried out of the house. The corpse is not usually bathed, but, in the case of a woman dying while her husband is still living, the big toe of her right foot is bathed, and her forehead is smeared with red powder.

Every one in the house is considered unclean; the men of the family go with the corpse to the burning-ground (pūrṇa); the women leave the house to go and bathe in a river or tank after the corpse has been carried out, but they must be careful to return before the men. The period of ceremonial impurity lasts for seven or nine days, and is broken on a Monday, Thursday, or Friday, nearest the seventh day when the men all go to the river and bathe, and then shave for the first time since the death occurred. The women bathe in the house, wash their hair, and change their clothes. The house has also been impure during the week, and no outsider would drink water in it; but now it is all cleansed and re-plastered with cow-dung. The room in which the person died is re-plastered with special care, and, if Hindu influence is strong, it will be further purified by the presence ofCLEANING-HEARDI] and cow-dung. All the clothes worn during the seven days have to be washed, the vessels used purified with ashes and water, and the cooking-hearth cleansed with ash and cow-dung. The funeral ceremonies are led with all the customary Vaisnava, Jain, or Śvētāmbara by religion.

4. Special impurity of women. —The birth and death sītaka are the two great periods of impurity for a man, but a woman contracts a much milder pollution more frequently, and is regarded as un-touchable for four days in every month. During this time she must sit apart either on a thick cloth or on a hessian made of sacking, and, though she may sleep on a bed, it must not have the mattress spread over it, but only sacking or thick cloth. She must eat apart, and may not touch copper or bronze vessels, though she is allowed to use brass or crockery, but she may be used to wash her hands and face, and only by the women of the house. The fourth day she bathes, changes her clothes, and washes her hair. On the occasion of first attaining puberty, however, the purificatory ceremonies are more elaborate. The girl, who, though married, is probably still living in her mother's house, bathes after the fourth day and puts on a simple green bodice and red sāri (two auspicious colours) that her mother has prepared for her, and then starts out for her mother-in-law's house; but, just before she leaves, her mother puts some molasses in her mouth. Arrived at her destination, she makes her reverence at her mother-in-law's feet and offers her two rupees; and the old lady, if gracious and kindly, presents her daughter-in-law with a more elaborate green bodice fashioned of silk. Then the daughter-in-law invites her to a feast of specially nice food, which will include a dish of wheat, treacle, and ghee (dāpasī). The girl can be summoned any time after this to go and live with her husband in her new house, and the seventh day must be fasted on, for she must not go till this is completed. Prob-

1 It is interesting to notice that, though the body may be carried out through the ordinary house-floor, there are usually one or two special city-accessed ceremonial roads for the purpose.

2 Near relatives, even if living in a distant village, are obliged to go and bathe in a stream immediately after hearing of the death.
ably, despite all the bowing that she has done and will do at her mother-in-law’s feet, the last thing that he will brook will be a word or more. He will say, ‘I will not go to another bowl for water; and if you will be spattered [with water] you shall be spattered, and you will be eaten up [with the work they will put on you].’

5. Accession of pollution.—A Jain, however, may acquire pollution in his ordinary life, and especially through what he eats and drinks. The worst fault that a man can commit is to eat meat, and, if this were done openly and persistently, he would be placed absolutely out of doors. He is not allowed to eat with others, nor is he allowed to speak to them. If, however, it were done accidentally and repented of, the offender would confess it to his director and have to observe very strict fasts before he would be regarded as purified. The rule is the same for drunkenness; even moderate wine-drinking is absolutely prohibited on account of the entry of life by fermentation, though eating opium and smoking tobacco (while not approved of) do not render a man impure.

Pollution is also acquired by touching an outcaste (an untouchable), and, after sitting beside one in a train or brushing against one, Jains purify themselves either by bathing and changing their garments, or, if less particular, by just sprinkling water over themselves. If, however, they are content with simply touching a Muhammadan by way of purification. If an out-caste passed very near their house or accidentally entered a room, Jains would purify it by sprinkling water, and, if the owner would wash his hands or touch the water on the faggots; in the same way, after walking through an out-caste quarter of the town, they would purify themselves by bathing or by sprinkling. The rule seems to be that a very particular Jain purifies himself by immersion or, rather, affusion, and a less strict one does it just as effectually by aspersion—an interesting parallel to the varying methods of Christian baptism.

Bronze and copper vessels are treated with great respect; if they should, despite every precaution, be dropped, the vessels are put into the fire to be cleansed. Brass vessels can be purified with fire or more simply with ashes, crockery by being washed in warm water; but the writer was shown in one house the glass that a Muhammadan visitor frequently cleansed in a temple, and the whole garden wall. In schools, in the same way, the vessels used by Muhammadans are kept separate from those belonging to Hindu or Jain children.

If the whole of a house be defiled—by a dog bringing a bone into it or a crow dropping some meat in the courtyard—the householder summons a Muhammadan or some meat-eating Hindu, such as a Koli, to take it away and himself purifies the house by sprinkling water and cow-urine where the meat had lain.

Unlike the Hindus, the Jains do not become impure during an eclipse, but, where Vaishnava influence prevails, they throw away their earthen cooking-pots when the eclipse is over and bathe in a river.

Like the Hindus, the Jains perform ceremonial bathing and teeth-cleansing every morning, and until their teeth have been rubbed with the tooth-stick they will not swallow a drop of water. Moreover, unless they have taken a bath, they may never bathe, lest they should injure the water-resources. Naturally clean ascetics, however, evade this by rubbing themselves over with a cloth which has been moistened in warm water. But they must not allow their clothes to dry. When they are professed, they bathe in the ordinary way, and when their heads are shaved except one lock of hair which they must themselves pull out. Every year after

The idols in the temples are also bathed every morning, but the most elaborate idol-bathing is that which takes place on the great annual confession—a custom which is believed to be peculiar to the Jains.

The village life is even more simple. In the morning, the men go to the temple and the women to the fields. The special purities that are practised in the temple are also communally kept in a particular room attached to the temple. In Kāṭhiāwār the Jains seem to be able to go to England without going through any special purification on their return, but in other places where Vaishnava influence is strong a Jain goes and bathes in a sacred river, such as the Ganges, the Godāvari, or the Narbādā, and, under the pressure of Hindu opinion, he might even sip the livefold nectar which consists of butter, curds, milk, sugar, and honey. He would also probably have to make a special journey to Bombay, Gājā, or some other sacred place. All this trouble, however, is sometimes avoided by a well-understood and useful fiction—the man simply giving out that he is going on pilgrimage, and then quietly proceeding to his destination. Thus, when a Jain gentleman was travelling in Germany at the outbreak of the war and suffered all sorts of difficulties before he was able to leave for India, he was careful, however, to return to his native place by way of a sacred hill; and it was apparently assumed that he had spent the whole time there, when he had found it difficult to reconcile the stirring adventures, alarms, and excursions under the Kaiser’s banners, which he openly recounted to every one he met with, to the peaceful happenings incident to a pilgrimage, which ought to have composed his story. Anyway, no purification was demanded.

LITERATURE.—The information contained in the above article has been derived directly from Jain informants. See also the present writer’s Notes on Modern Jainism, Oxford, 1910, The Heart of Jainism, do. 1915; and SBE xxii. (1884) and xiv. (1895).

MARGARET STEVENSON.

PURIFICATION (Japanese).—As cleanliness or purity is the dominating ideal of Shintō, rites and ceremonies of purification make up a considerable portion of the ‘way of the gods.’ The most important ones are the two ceremonies known as harai and misogi.

Their origin is said to date from pre-historic times as far back as Izanagi and Izannami, the male and female creators of the land of Toyo-ashi-hara, as Japan was anciently called, the experience of this anciently called 1 after it had departed to the land of yomi, or darkness; her husband followed her and, beholding her body was already putrid, maggots scoured over it...and Izannami, greatly shocked, exclaimed, ‘What a hideous and polluted body! I have come to unawares!’ So he speedily ran away. He threw aside the stick with which he had touched the dead, and his belt, garments, waist-cloth, hat, and bracelet, thus sweeping off everything that had clothed his body. The action was called harai, literally ‘to sweep away.’ Thereafter he jumped into the sea and cleansed his body with its water. This was termed midare, ‘watering’ the body, in token of the removal of all impurities. Thus harai and midare became integral parts of court ceremony and consequently of Shintō ritual.

There are various kinds of harai, named according to their purpose and importance: yoshino-harai, o-harai, akuno-harai, kamono-harai, nakuna-harai, shinama-harai, etc. Yobi means ‘good,’ and yoshino-harai is to secure the good; aku means ‘evil,’ and akuno-harai is to avoid evil; ō means ‘great,’ and o-harai is the most important of all; and shinama and shinama-harai are roughly ‘upper,’ ‘middle,’ and ‘lower,’ thus indicating their grade of importance.

The o-harai, or great purification, is a ceremony intended to cleanse from all impurities the last court celebration. It is observed twice a year (at the end of June and the

PURIFICATION

end of December), when the official in charge, after the proper purification of his own body, offers flax and a sword. The most important part of the ceremony is the reading of the formula known as the Shintō no Norito, a ritual prayer that in the beginning the family of Nakatomi had charge of the reading. The formula first announces to all whom it may concern the celebration of the ceremony, then enumerates the evils and impurities which have been incurred, and concludes with the statement that all shall be purged away by the virtue of the rite.

The ō-harai was usually performed at the southern gate of the royal palace in Kyoto. Special messengers were sent by the court to all parts of the empire, and the same ceremony was performed in various Shintō temples. Regulations governing the details of the ceremony were formulated from time to time, but these tended not to perpetuate the ceremony but to hasten its decline. For several hundred years preceding the restruc-
tion of 1868 the observance of these ceremonies was much neglected by the court; but with the restoration, together with many old forms, they were again brought into more or less prominence.

Special occasions of public calamity, such as the outbreak of pestilence, famine, or destructive fires, also call for the observance of ō-harai. Local and individual harai are at times observed for various reasons upon a much smaller scale. Individual harai can be based upon a penalty for certain offences, and in A.D. 801 was carried to such an extent that the court issued an ordinance regulating its use.

Saikitō, or monomi, is a form of self-purification in Shintō worship, which has been fully performed, the worshipper discontinues the saikiti by a ceremony of koi-sai, dismissing the sait. While under sai kitō, certain things are forbidden, such as attending funerals, visiting the sick, sentencing a criminal or putting him to death, playing upon a musical instrument, or taking part in any impure or desecrating act.

The length of the observance may vary from one month to a month, according to the importance and nature of the occasion.

The ‘Book of Ceremony,’ published during the Yenta era (901–923), has the following regulations concerning those who are to be regarded as polluted by various acts of impurity and who are therefore to be prohibited from taking part in Shintō worship. Pollution from thehuman dead shall debar for thirty days from the day of the funeral; pollution from human birth for seven days; pollution from animal dead for five days; and from animal birth, not including chickens, for three days. Those who ate the flesh of beasts were impure for three days. Participation in the re-
burial of the dead rendered one impure for four months or longer. Those who had attended a funeral, visited the sick, or been present at a memorial service were forbidden to enter the royal gate on the same day. Buddhist prayers performed and those in mourning were forbidden to enter the palace during the sai kitō, and both before and after the chief festivals such as kaien, konname, and wakayama.

Court ladies in pregnancy were obliged to withdraw from the court during the time of sai kitō, as also were those temporarily incapacitated at the time of the ceremony itself. A confutation rendered those within the house impure for a period of thirty days. Such ordinances, as it has been said, were formulated governing all possible cases; but in practice the observance has gradually decreased, so that at present slight attention is paid in general to ceremonies of purification.

Various symbols of purification are still more or less common. People returning from a funeral are not infrequently greeted with salt, that they may be freed from all impurity before entering the house. Splitting or breathing on them is thought to remove contamination from sights and objects near at hand. Shaking the gokei, strips of white paper attached to a rod, is an act of purification, and the shimenawa, or straw rope above the entrance gate, is likewise thought to protect the dwelling from impure influences.

TASUKU HARADA.

PURIFICATION (Muslim).—I. The ritual of purification.—The Muhammadan view of ritual pur-
ification is based primarily on the late Qur'anic passage, v. 9, repeated with slight variations from iv. 46:

(a) ‘O believers, when ye come to fulfil the prayer, wash your faces, and your hands as far as the elbows, and rub your heads, and your feet until the ankles’; (b) ‘and if ye be polluted by any evil, from your private parts or sweat, or from the outlet of your noses, take a good purifying wash, wash yourselves, tapal-talilis;’ (c) ‘but if ye be sick, or upon a journey, or one of you from the privy or have touched a dead body, and have no water to purify you, then take pure earth and rub your faces and hands therewith.’

With the help of traditions, the variations in the two versions of this law have been harmonized.

Many verbal and logical obscurities removed, and the details elaborated into a ritual of practice as follows.

The wu'dū’, or wudū’, the minor ablution, of the appendages (not the trunk) of the body.—It is per-
formed regularly before each of the five daily prayers, at home or in the mosque; but it may be omitted if the worshipper is sure he has in no way become polluted since the last wu’dū’, as, e.g., when he continues praying from one period without interruption into the next. It is usual also before touching the Qur’ān and the approach of death, and it forms an integral part of the major ablution.

The wudū’ is performed at a tank (miyājah) or reservoir (banafsqah) provided with spouts; after a declaration (niyyah) that the intention is for purification, the Muslim, with sleeves tucked above the elbow, performs each of the following: washing of the face; washing of the mouth (here the tooth-pick also is used); compressing each nostril with the left fingers and snuffing up water from the right hand, or up from the declination of the arm without wetting the face; washing the right arm and permitting the water to run from the palm to the elbow; washing the left arm similarly. Then following the same path, wetting the upper part of the head, the turban being pushed back with the left; combing the beard with the wetted fingers; inserting the tips of the forefingers into the ears and passing the thumbs around the back of the ears; wiping the neck with the back of the fingers of both hands; washing each foot as high as the ankle and passing the fingers between the toes (Shī‘ites, however, conform more literally to the Qur’ānic passage by rubbing [maṣḥ] the feet with the wetted hand instead of washing them; see also maṣḥ, under tahār, p. 497a).

(b) Ghaust, the major, total ablution of the body.—As based upon the Qur’an, it is demanded in the case of certain physical pollutions, specified by tradition to be those of collision, nocturnal pollution, menses, and childbirth, the period of uncleanness in the last (nifās) continuing for forty days according to Sunnite law, for ten according to Shī‘ite. As based upon tradition only, and hence called nifās muṣāla, it is the standard form of purification for conversion to Muhammadanism; before the prayers of Friday and the festivals; after washing a corpse; after blood-letting; after death (performed by the unghassil, or washer of the dead). It must be performed in more than a certain minimum of water, which must touch every part, every hair, of the body, and hence takes place usually in the hammāmah, with its plunge bath. Ghaust includes also the wu’dū’, though the washing of the feet should be deferred by a niyyah to the end of the
entire ablation; in the case of the wudu' as part of the ghut of a corpse the mouth and nose are stopped with cotton instead of being washed.

(c) Tawmam, the minor purification with dust in place of water.—It may be performed when water cannot be secured within two miles or without incurring danger; in case of sickness, open wounds, or fractured bones; because of lack of time for the proper wudu' before the prayer on festive days and at funerals. The conditions of the declaration of intention, and of clapping dry sand or dust upon the face and hands.

(d) Various practices of personal cleanliness.—Some of them, together with wudu' and ghut, are classed under the general term tabarrā', 'purification,' some of them form part of the regular wudu' also, others are practised as occasion demands; in so far as they are not mentioned in the Qur'an, they are declared to have been sanctioned by the Prophet as fīrāq, i.e., as a separate religious practice by which each man acts in accord with his own religious feeling. These are of use to the tooth-pick (miswak)—an insistent practice of Muhammad; cleansing the nose and mouth with water and clapping them into the dust to prevent them from entering the mouth; clipping the finger-nails; cleaning the finger-joints; depilation of the armpits; shaving of the pubes; abstention (isti'nin') with water or dry earth or a piece of cotton after evacuation and urination. Washing the hands before and after meals is also declared sometime to have been demanded by a ḥadīth; and it is quite generally practised. Another enumeration of five usages of fīrāq includes circumcision, which in usage is also regarded as an act of purification, and hence the term tāḥrīr (see below) applied to it; it is nowhere mentioned in the Qur'an, however, nor is it absolutely necessary in the case of an adult converted to Muhammadanism.

(e) Tāḥrīr, the purification of objects which have become ritually unclean.—This is based on ḥadīth only; like personal purification, it may be performed with dry earth instead of water. One of the most important rules of tāḥrīr is that it is not purifying with dry earth the internal part of the boots; according to Sunnite law, if they cannot be cleansed of filth by rubbing dry earth upon them, they may still be made ceremonially clean (and worn during prayers) by stroking (mush) them with the wetted fingers three times; Shi'ite, however, deny that the boots may be worn at all during prayers. Some of the other numerous details of tāḥrīr are the following:

Any spot can be made ritually fitted for prayer by spreading a clean rag or garment upon it; but the ground itself is clean when dry. Handling forbidden animals, such as dogs, pigs, and rats, requires purification of the person and garments. Dishes which have contained wine or the flesh of 'awāli (conditions which may exist when such dishes have belonged to Jews or Christians) must be purified before a Muhammadan may eat from them. A vessel from which a dog has drunk must be washed seven times; a moist dog in a field can be purify according to the legal status of the owner of the dogs from the Qur'an; it should be noted, however, that the presence of the animal, if dry, does not render unclean, while, on the other hand, the slightest contact of its body with the clothes requires (so the Shī'īs hold) that the clothes be washed seven times; a fresh rag, a fresh water, and a fresh earth; even Muhammadans less strict hold that body and clothes are defiled by a dog's saliva, and naturally by its meat and milk. Another rule is that one must never use a knife not washed after contact with dogs' flesh. Another tradition declares that any considerable amount of flesh' blood defiles a garment. To a certain extent the ordinary washing of clothes is considered an act of purification, since the operation is concluded by pouring clean water upon them and alluding the shafā of, or testification of faith.

Thus it will be seen that for purifying by purposes must itself be pure, i.e., clean. Therefore rain-water is preferred and regarded as specifically recommended in Qur'an, viii. 11:

{Remarked: He sent down upon you from heaven to purify you therewith and remove from you Satan's pollution' (v; perhaps intended rather in the sense of keeping除 away from the mild indulgences of man.)

On the basis of ḥadīth, water from other sources may be used; that of the sea, springs, wells, rivers, hail, snow, and ice (but not sea itself), providing colour, smell, and taste give no evidence of pollution; with those restrictions, running water may also be used even by dead body or other unclean thing has fallen into it. The same permission is given in the case of standing water of more than a certain volume; but, if an animal falls into a well, at least 300 bucketfuls of water must be drawn, and this water must not be used for a day, or until so purificatory as to be fit for use.

2. Origin and motive.—The details of these purificatory practices were derived by Muhammad and the elaborators of his laws from pagan Arab, from Jewish, and from Christian sources. Occasionally a tradition seems to show that the Prophet (or those speaking in his name) was still under the influence of the primitive superstitions which have not been dispelled by the particular practices in question; some traditions show an appreciation of the religious and ethical transmutations of Judaism and Christianity; others a mere toleration of existing customs in so far as they were free or could be freed from idolatrous implications.

But to the extent that there was any logical purpose in his eclecticism as a whole, that purpose seems to have been partly rationalizing and disciplinary, mainly aesthetic. For it would seem that filth in any form was indissolubly connected with uncleanliness, simply as a matter of custom, its origin probably going back to the natural impregnation of all things by the evil spirit. This abhorrence of filth and keenness of smell may well have been due in part at least to his early Bedawin apprenticeship, for both are very pronounced in the true Bedawin. At any rate tradition is insistent in ascribing them to Muhammad.

Thus one hadīth declares that he demanded that any one who had eaten garlic or onions should avoid his presence (a variant reading reads 'his speech') for the period of the prayer; another, which is observed by some tradition, accounting for the institution of the ghut as a regular Friday practice, declares that he ordered it on an occasion when the people had performed their daily prayers while wearing blankets and had perspired to such a degree that their breath was offensive. Again, he is reported to have said that in paradise all bodily excretions will be carried off as a perspiration with the odour of musk, and that every dressing of any pungency or a sound must be considered an interruption of the required absorption in prayer; and, still more significant, that, when a man tells of the foulness of his odour his guardian angels a mile away.

It is possible, of course, that under the self-sufficing aesthetic motive there was a trace of that sublimated anthropomorphic conception which leaves to the devil a gratification in the offence of sacrificial smoke or of incense, and hence might ascribe to God man's own aversion to foul odours. Indeed, there is even a tradition which declares that the sacrificial blood itself reaches Allah's acceptance, and, if not, is intended for Satan. As far as Muhammad himself is concerned, this evidence is nullified by the Qur'an (xxii. 37):

'Their flesh will never reach to Allah, nor yet their blood, but your pieté will reach them.'

The tradition cited probably represents merely a popular exaltation of the surviving primitive superstitions conception; still more primitive in conception is the declaration that the nasal purification was instituted for the purpose of driving out the evil spirit which lodges in the nostrils during sleep. From the same tradition the impression is derived that Muhammad's purificatory ordinance was perhaps merely an expression of the feeling which, superstitions origins forgotten, still demands a certain decency and comeliness on the part of the worshipper; for the ordinance in
question follows immediately the rational injunc-
tion of the Koran to wash away while ye are drunk,
until ye understand.' The rationalizing tendency of
Muhammadanism in the purificatory ordinances is
seen also in the limitation of conventional ritual
to cases of actual physical trans-
ference of perceptible filth. It is evident that the strictness of Hebrew legislation in regard to
the menstrual woman was shared at least in part
by the pagan Arabs (in the earlier Arabic usage the only clear equivalent to the Hebrew
tamím and tahír, 'unclean' and 'clean', seems to be
'támír and tálír as applied to the 'dirty' and the
'clean' woman); but several traditions show
that Muhammad, in accepting the general principle
and some particular details from both sources, modi-
ified the severity and declared that mere contact
with a woman in this condition need not be avoided.
Nor does touching a corpse render unclean any one
even the person who washes it for burial; still
less does mortifying in general, or contact with
sacred objects. The same tendency to identify
ritual uncleanness exactly with physical male-
dorous uncleanness, with excretions, dampness, and
putrefaction, is evidenced in some of the defini-
tions cited above; e.g., a dog's contact defiles only
if the animal is wet; earth is clean (and cleanliness
if unsoiled) only if it is not discharged from the
micturition of a 'clean' animal does not defile is,
of course, not of this rationalizing tendency.

3. Connexion with expiration.—There are a few
isolated indications that purification might by
some be regarded as having an atoning or
atonizing force—that it washed away guilt.
Whether any such idea attaches to a tradition
that in paradise the faithful will be distinguished
by the marks of purification on hands and fore-
head is doubtful; the hadith that he who performs the
wudu' thoroughly will extract all sin from his
body, even though it may lurk under his finger-
ails, is clear. And such an idea may have been
present in the mind of the governor of Kufah who
ordered the pulpit of its mosque to be washed
because his predecessor, who had been guilty of
immorality and injustice, had occupied it. But
such a conception of purification from sin is not
found in the Qur'an, nor has Muslim theology
developed it. Even prayer, for which ablation is
obligatory, has no connection with any part of
sins (those inherent in human nature and hence
more or less unconsciously performed) and not
from the major sins (including all crimes, usury,
lying, disobedience to parents, and the frequent
commission of minor sins); one looks in vain for evidence that the ablution of a convert represented
a baptism into new birth, or that circumcision was
really regarded as an act of purification. Neither
blood nor fire appears as a purificatory medium.
Nor does the use of earth as a substitute for water
indicate that purification was a symbolic act; for
earth or sand was regarded as an actual sanitary
hygienic medium; in the case of sickness the
avoidance of water was due apparently to an old
and still persisting belief that water poisons
wounds and, when cold, causes fever; though here
again there is a contrary tradition that Muhammad
thought his own fever was due to a spark from
hell-fire and might be cured with cold water.

4. Application to food.—Muhammad's treatment of
the subject has been spoken of as having dispensed
with the support that he did not place much emphasis on the ritualistic, technical distinction
between clean and unclean, for he did not use the
terms at all in this connexion. To him permitted
food was 'lawful'; and the purificatory ritual had a decided value; if it was
then 'sound', 'healthful': [ii. 269, v. 6, xxiii. 53].
Forbidden animals are not specifically mentioned
in the Qur'an (except the swine): later law, how-
ever, characterizes various animals with the legal
terms: sulúh ('lawful'); mubáh ('permitted';
legally indifferent); makráh ('disliked' or
'abominable'; disapproved, but without penalty
for use); harád ('forbidden'); the various local
schools differing in the assignment of certain
classes. If one included their prey with their teeth are absolutely
prohibited; included in this class are the elephant,
the weasel, the ass, the mule; according to Ḥanî-
lite law, also the hyena, the fox (but these are
considered permissible by the Sháfi'ites), and the horse
(held to be indifferent by the Sháfi'ites, while Mālikite law agrees with Ḥanîfite).
Birds which seize their prey with their talons, such as ravens
and some crows, are also forbidden. According to
some interpretations, all aquatic animals except
fish are unlawful (though the Mālikites permit
them). Included in makráh are pelicans, kites,
crocodiles, otters, and insects (except locusts, which
are permitted); in mubáh are hares, crows
that feed on grain, magpies. But all animals used
for food (except dogs) and birds (except crows)
by drawing the knife across the throat in such a
manner as to sever windpipe, carotid arteries, and
gall; and at the moment of slaughter (in the
case of prey at the moment when the weapon is
applied), would be regarded as 'disgusting'.

5. Value of the ritual.—The prescription of
ritual practices and distinctions belongs to the later
period of Muhammad's life; and it may be con-
cluded that his priestly or legal, as distinct from
his prophetic, activity was of secondary im-
portance to him, adopted, at least in part, because
of the demands for definition in creed, code, and
practice which the mass of believers demands.
Moreover, the ritualistic prescriptions provided a
certain discipline of unifying value; and they were
the more demanded in that his religious system
did not dispense with fixed personal responsi-
bility upon each individual.

As a sanitary code which made cleanliness not
next to godliness but a part of it (in a tradition:
'Cleanliness ... is one half of the faith'), the
purificatory ritual had raised the standard of clean and healthy living
among all classes of observant Muhammadans.
Some Bedawin, it is true, are little observant of
cereories; Burton 1 quotes the Bedawin saying: 1 'We pray not, because we must drink the water of ablation'; nevertheless they show an innate eagerness to bathe at every opportunity. A more serious neglect is frequently noticed in the case of children, who are purposely left uncared for out of fear of the evil eye. But in general those who have lived in the Muhammadan East support the emphatic verdict of Burton and Lane that there is a marked contrast between Muhammadans and non-Muhammadans in this matter of personal cleanliness.

On the other hand, Muhammadanism by its emphasis on ritual has subjected itself to the danger of making cleanliness not a part but the whole of godliness. In the effort to prevent this the ritual provides that each act of the _siyād_ should be followed by a short prayer making the act at the same time the symbol of some ethical or religious idea.

Thus, after the rinsing of the mouth the prayer is: 'Oh Allah, assist me in the reading of Thy book, in thanking Thee through worshipping Thee well'; on washing the ears: 'Oh Allah, make me to be of those who hear what is said and obey what is best.' As a matter of fact, however, many Muhammadans neglect these intermediate prayers, and consequently fail to discharge the obligation (despite the exactness of regulation, there is a decided difference in the manner of performance by an educated and that by an uneducated Muhammadan); and, when the prayers are recited by non-Arab speaking peoples, they may be little better than meaningless.

7. Outward and inward purity. — But these defects are not necessarily to be regarded as of the essence of Islam; they are rather inherent in any system which gives to unthinking mankind fixed forms and ceremonies. It might even happen in more advanced circles of thought that the Qur'an, by making clearer the distinction between forms and faith — e.g., by making of the purification ritual merely a divinely-ordained sanitary ordinance and the clause of superstitious connotations — might lead to a lofty spiritual conception. But it is the misfortune of any theocratic code which must provide for all the life of man that the distinction between police and religion is not generally easily clarified — that, perhaps contrary to intention, emphasis is misplaced upon the easily comprehended ritual to the neglect of less specific exhortations to moral righteousness. In the Qur'an, as a matter of fact, the ritual of physical purity is a sublimation of the moral purity mentioned at all in the definition and summary of true piety found in ii. 172. References to religious, ethical, and moral purity, however, are many, though the exact meaning of the term 'purity' is sometimes difficult to determine. On the whole, 'purity' is a negative term, denoting the absence of what is foreign and obnoxious to the normal, natural, or simple state.

Man was created in purity; though of clay, even the angels how to free it (xx. 19), and a purity of faith, to Muhammad who were merely freed from idolatrous corruptions and superstitions which had crept into the natural, original faith of Adam. Purity of the heart is demanded under varying forms of expression. As ideality is unceasing (naja), firm belief in Allah is purity; thus, in x. 6, 'those whose hearts Allah does not please to purify (nja'ahin)' are those who do not believe sincerely and without hypocrisy'; in xvii. 2, the Qur'an itself is 'pure' (mushtari), 'a house of purification beyond all superstitions'. Tradition (vi. 78, 'none shall touch it [the Qur'an] except the pure'); in the language of other small unenlightened societies the hearts of those who are pure of heart. Another word for 'purity,' 'one normally not used in the ritual sense, appears in i. 140: 'And we sent you [the Prophet] as a Mercy to all mankind, saying: you have signs and purify you (puzkka'llam) and teach you the Book and wisdom, in which the purification excellently refers to faith; so also the Qur'an says: 'ye shall not take it [the Qur'an] in your hearts; this is to be pure of heart' (9. 57, xxvii. 83); 'he is pure of heart' (xxvii. 82, 89), while hypocrisy is found in those 'in whose hearts is sickness (f. qubbatun mawraf); the sincere in heart are those who 'clarify their faith' (mukallatun al-din: i. 143); and in the 'Sura of Sincerity' (Sūrat al-Imārāt). Vaguely the same idea is expressed in bār, 'pious' (li. 41, 173), which in Hebrew is 'pure.'

Purity of purpose is demanded in many passages where no specific term is used; thus lx. 26 is directed against those who out of fear of loss of trade were willing to make concessions to idolaters; lxxiv. 6 inveighs against those who, when they do a kindness, have in their hearts the hope of receiving in return the same, etc. On the negative side purity of intention is emphasized in the teaching that no sin attaches to one who under compulsion eats forbidden food, provided that he is 'without lust or wilfulness' (li. 108). And this Qur'anic insistence upon purity of intention is embodied in the purification ritual itself, which, like every act of devotion, must begin with the _niyāt_ ('intention'), the thought or the words, 'I purpose to offer up to God only with a sincere heart'; and it is expressed doctrinally in the statement that 'the fundamental and essential attributes of Muhammadanism are sincerity of belief (sīhab al-aqíd), truth of intent (ṣidq al-adq), observance of the lawful limit, and keeping of the covenant' (so stated in the Shāhīinnie Exposition of Muhammadanism put in written form and widely accepted in the 443rd night of the Thousand and One Nights). The Sāyid Amir 'Ali quotes, against those who find in the Qur'an only physical purity as a prerequisite for prayer, vii. 29, 30:

'And think within thine own self on Allah, with lowliness and with fear, and without loud spoken words, at even and at morn.'

8. Moral purity. — In the moral (sexual) sense it is difficult to fix a definite idea of the term 'purity,' even of the term, as denoting sexual self-restraint within varying limits of indulgence, is expressed in the Thousand and One Nights (night 918) in these words:

'As for the lust of reproduction, that which pleases Allah thereof is, that it be of that which is permitted, and that which he disdains is that which is forbidden.'

As compared with previous conditions, the Qur'ān (see CHASTITY [Muslim], LAW [Muhammadan]) narrowed the legal limits of indulgence; but it is difficult to set a wider, or the ideal limits set by Christianity, e.g., in that it specifically permitted monogamy and concubinage, and made divorce easy, especially for the male. In so far as this freedom was based only on the Semitic desire for numerous offspring, it does not involve the question of moral purity, though it might perhaps be suggested that Muhammad should by analogy have deduced the doctrine of purity in morality through monogamy from that of the purity of religion through monothelism. But Muhammad in his legislation was mainly an opportunist, a compromiser, satisfied to ameliorate the most evidently vicious social evils to the extent that he could without jeopardizing the success of his main purpose. It is doubtful, indeed, whether monogamy, if defined with wider or more lenient limits of achievement, would have been possible to the extent of social good than he otherwise would have achieved. At any rate, he raised the standards of moral purity among many primitive peoples which other systems had not before, and have not since, been able to raise; and to an extent correspondingly or possibly unusually, that has been his success in trying to estimate how far Islam lends itself to the more enlightened social systems in this matter, it is again necessary to consider not only standards of monogamy but also what extent these standards are reached. In the first place, not even

1. Pilgrimage, ii. 110.
a strictly observed monogamous relationship, of necessity denotes ‘purity’ defined as self-restraint in sexual indulgence. Moreover, there are some who doubt whether the amount of indulgence through the lax interpretation of laws of divorce (but more especially through the legal and social traditions) is any smaller among non-Muslim Europeans than among Muslims. For polygamy and concubinage, owing to imposed conditions and natural difficulties, are by no means practised even by a majority of Muslims, and the serious defect in the legal code is a double standard. The double standard implies a lowering of the general ideal of womanhood, it has meant the saving from absolute moral degradation of a considerable portion of womanhood. For the punishment for transgressing legal bounds is strict; and the seduction of Muslim women is exceedingly rare. Legal restrictions, however, are of no avail in checking those outbursts of sexual violence which accompany the riots of mobs inflamed by racial or religious fanaticism or jealousy, whether in Moslem or non-Moslem lands, and which are directed against the women of the persecuted race.

It is in such crises, perhaps, that the moral shortcomings of Islam stand out prominently, because the Qur’anic permission for cohabitation with former unbelievers, for example, is neither immoral nor anti-Christian, furnishes a ready excuse for reactionary and fanatical Muslim leaders who are willing to make lust serve the purposes of religious hate.

In so far as ‘purity’ is used not only of actions but also of thought and word, it is again a relative term. In Islam, since matters of sex-relations in themselves are not considered to be impure, the thought or mention of them in literature or conversation is not, in itself, regarded as evidence of moral depravity. Here also the law of purity be made the amount of sexual stimulation produced, it is doubtful if the natural frankness of Muhammadans is worse in its results than the veiled suggestiveness permitted elsewhere; it is extremely difficult, e.g., to judge what the actual effect of Muhammad’s picture of the pleasures of paradise is upon the mind of the Muhammadan.

At all events a high ideal and voluntary practice of moral purity are not impossible even when the law in such matters is a question of personal indulgence. The interpretation of Qur’ân (and Scripture) is often more important than the letter; and, while there are not many Muhammadans who have attempted to allegorize away the sensualism of the Prophet’s paradise, there are many of high moral standards who have found and emphasized other texts in the Qur’ân (see, e.g., the passages quoted in art. CHASTITY [Muslim]; it may be added that in the popular version of the Shi‘îte teaching presented in the Tha‘âlib ‘Ali, the Thousand and One Nights) of the super-structure of Islam is said to include ‘striving against the lusts of the soul and warring them down,’ while prayer ‘restraineth from lewdness and frowardness’). It is, of course, of more significance that certain Muhammadan teachers (e.g., in such passages as Q. 24:30) have demanded rather than that detractors of Muhammadanism deny the possibility of such ideals within the faith; it is hopeful that such a passage, e.g., as xlii. 17, ‘No soul knoweth what joy or satisfaction rilleth within the heart of the well-favored, nor for the good’ as a reward for their works,’ together with the frequent promise of the ‘grace of Allah’ (lit. ‘additional recompense’), is explained by some to refer to a higher reward reserved for those who are morally worthy, merely like the idea that God’s face and in this spiritual pleasure forgetting the lower, sensual pleasures of paradise. In a similar way Ghazâlî taught that there are degrees of purification: that of the body from pollution and filth, that from wickedness and vicious promptings, of the mind from irreligious ideas and worldly distractions. Graded lessons are taught also in the matter of polygamy; there is no direct prohibitive in the Qur’ân (as there is nothing in the OT) to inhibit those Muslims who desire to insist upon higher moral standards of purity through the voluntary relinquishment of polygamy and slavery.

PURIFICATION (Roman) — 1. Early history of the idea. — In the earlier ages of Rome the feeling for purity and the need for purification depended mainly on a yearning on after ceremonial exactitude, in order to avert resentment of supernatural beings because of flaws in the forms of service which they prescribed. Hence all those beings whose discontent would be dangerous were very dimly apprehended, sometimes as ghosts, sometimes as nuniina, divine forms hardly recognized with clearness as persons. Anthropomorphic ideas of the supernatural slowly made their way into Roman religion from without, through foreign channels. Consciousness that duty towards existence not of this world had been imperfectly performed did produce a sense of defection, which weighed upon the soul, even when the wrong done was involuntary. At first the penalties arising from conduct, except in extreme cases, was hardly regarded as belonging to the spirit. But the use of the words purus, puritas, like that of terms cognate in meaning, such as curatus, scutum, suggest a progress in thought in the spiritual direction. The notion of impurity accidentally incurred, and independently of the will, tended to pass away from the realm of the educated class, and to retain its force mainly among the rude and the rustic.

Although the apprehension of divinities in the earlier days was but dim, their power to protect the household and the state was real. The strong sense of law which was characteristic of the Roman in all ages led him to consider the relation between himself and the god or the ghosts in terms of a bilateral contract. If he did his duty by them, they were bound to do their duty by him, and to hold him free from harm. There was in time elaborated a complicated code of divine law (ius gentium) which the historian of religion has named Natural Law. Originally, those who knew and expounded both forms of this law were the same, the college of pontifices. It is too much, however, to say, as has often been stated, that the primitive idea of obligation towards the gods, or the divinity in general, was ethical. The horror inspired by murder, especially of the atrocious kind called paricide, and even by lesser offences, such as wrongful treatment of a client by his patrician patron, placed the country above the body, and rendered him accursed (saeer) and deprived him of civil rights.

2. Common acts of purification. — The necessity of purification ran through the life of the indi-
vital. In a sense the new-born babe was in pure and was the subject of various ceremonies. The day on which a child received its name was its dies lustricus, 'day of purification' (Macrobius, i. 16: 'dies lustricus quo infantes lastratur'). The cleansing operation was probably at first conceived as a purifying act, spiritual protection. It was only in a later

case, when a death had occurred in a house, a cloud hung over it, which could be dispersed only by elaborate purification. Without it the family would continue to be funesta, i.e. at variance with the world of spirits. The pontifices evolved elaborate rules to bring this condition to an end (Cicero, de Leg. ii. 55: 'Omni funestae faulae'). Until this was accomplished, a branch of Cypress

was hung at the door, or in poorer houses a bundle of fir twigs, to warn from entering those who were specially bound to purity—in particular, priests and vestals. A sacrifice was offered to Egeria, of which a myth is preserved to this day. In a certain ceremony called oasisigeum, which affords a remarkable example of the Roman unwillingness to break entirely with the past. What was called 'the gathering of the bones' was, after the introduction of Christianity, practically the collection of the ashes, but one finger-joint remained unburned, in order to do homage to the more ancient custom. All unpurged contact with the dead would bring with it fouling and a liability to misfortune. A Roman poet makes the spirit of a wife who died early, to the torch which glorified her marriage must have been lit at a funeral pyre (Propertius, v. i. 13; cf. Ovid, Fasti, ii. 577). The prohibition (general in the Roman empire) against burying within the walls of a city probably had its origin more in the dread of ghosts than in sanitary considerations.

Parallel to the lustratio of the house is the periodical purificatory ritual applied to a country district (pugna). The lustratio pugna consisted in a religious procession through the towns, with sacrifices and with sacrifice. There seems to have been in ancient times a similar procession round the walls of a city, called amburbium. In historical times special purification of the city (lustratio urbis) was carried out when calamity called for it—e.g., after the early disasters in the Second Punic War (Livy, xxii. 20). The object of all such expiations was 'to seek reconciliation with the gods' ('paenem deum exposeere,' of frequent occurrence in Livy). A lustral ceremony accompanied the foundation of a colony (Cicero, de Divin. i. 102). The Terminales, protective of boundaries, and the Comitia, of streets in the city, were also probably lustral in their origin. Down to a late period the priests called Luperci purified the boundaries of the city, and the vicus Servus was lustral with the luperci (Tac. Ann. xii. 24). That archaic priesthood, the Arval brotherhood (see ARVAL BROTHERS), was concerned with an annual solemn progress round the limits of the most ancient Romanus urger, the territory of the primitive city. The ceremony was called Amburvalia, and it was distinctly piacular. When Roman territory was expanded, no corresponding extension of the lustral rite seems ever to have been made. These roundabout piacular ceremonies were common also outside of Italy, and particularly in Greece. The solemn words and prayers of the traditional chant, duly gone through without slip of tongue, seem to have had a sort of magical effect. Any error in the pronunciation of these forms would involve a need of reparation, just as in the earliest Roman legal system the mispronunciation of the established verbal forms would bring loss of the law-suit. At Iguvium in Umbria there was a solemn day on which the priests, who were almost certainly contained in the great and very ancient record in the Umbrian dialect, preserved in the Iguvine Tables. It may be noted that, from the commonness of these lustral perambulations, the verb lustrare developed its secondary sense of surveying a scene with the eyes.

Other forms of quaint ancient ritual were connected with the piacular conception. The Salli, ancient priests of Mars, made a journey at certain times round a number of stations in the city; they also had a "cleansing of the trumpets" (arminuslustrum) and a 'cleansing of the trumpets' (tubilustrum), which testify to a primitive notion that the efficiency of the army's weapons required the use of religious as well as secular means. The 'washing of the walls' (lapsus muros) which the census ended was in essence military; for it was connected with the comitia centuriaria, which is merely the army in civil garb (exercitus urbano (Varro, de Ling. Lat. vi. 88)). A lustratio exercitus was often performed for the former, which may have been a superstition which sometimes attacked it; at other times it was merely prophylactic. There was also a lustration of the fleet (Livy, xxxvi. 42; Appian, Bell. Civ. v. 96). We very seldom find the lustratio terrestre and piacular divinities. In Virgil the host of Aeneas as offering a piacular ceremony to Jupiter on landing in Italy (Aen. iii. 279).

3. Irregular occasions.—In almost all the instances given above the purificatory operation is frequent and ordinary. But often it would occur and irregular. Religious officers, particularly the flamen of Jupiter (flamen Dialis), were beset by many tabus, the breach of which would involve expiation. So, when the Arval Brothers took an iron implement into their sacred grove to plant or trim the trees, atonement had to be made. The erring Vestal, if unpunished, brought calamity on the whole people. Individuals who made unauthorized compacts with the enemy, as the compacts rested on the sacra of the trandurum, unless the nation, on repudiating the agreements, handed over the authors to the foe—a cheap form of expiation, adopted, e.g., in the case of the officers responsible for the agreement made after the disaster at the Cannae, 216 B.C., and in that of Hostilius Mancinus in Spain. On one notable occasion the irregular shedding of blood in political strife at Rome spread a sense of impurity among the people, which the senate thought it well to remove. The murderers of Tiburtius Gracchi (a tribune of the people) were sent to the temple of Ceres at Henna in Sicily, and a choir of twenty-seven young maidens was appointed to minister to them with sacrifice and with secular justification for their crime, but, on the advice of the keepers of the Sibylline books, a sacred embassy was sent to the temple of Ceres at Henna in Sicily, and a choir of twenty-seven maidens was appointed to minister to them with sacrifice and with secular justification for their crime, and, on the advice of the keepers of the Sibylline books, a sacred embassy was sent. Theneed for purificatory ceremonial was especially felt in times of national disaster, particularly those entailed by war or pestilence. The people's souls were narrowed by extra-sensory activity, and the ceremonies which had shown to be signs of divine wrath. Elaborate regulations were evolved for averting the consequences. The experts of Roman origin were the pontifices; but from Etruria came the haruspices, and of Greek influence established firmly the college of the decemviri (later quindecemviri), who had charge of the Sibylline oracles. Prodigies or portents of the less serious kind were expiated after consultation
with the pontifices or haruspices; extraordinary signs led to an examination of the Sibylline books (Livy, xxii. 9: ‘tetra prodigia’). But the priests in all these circumstances had no initiative; they had to wait until they were asked by the senate to give an opinion. There was a fixed ritual for making appeasement when a thunderbolt struck the ground or killed a man. The spot became harboured, and the neighbourhood was held sacred until the weddings were concluded; hence the special meetings for public business in Rome, as in Athens, and in other ancient states. If affairs were carried on in defiance of the sign, guilt would be incurred and a publican offering would be due. Some ceremonies which have been deemed to have taken up the name might have had to do with an external signification, which only doubtfully be so regarded. Whether the curious ceremony of driving in the nail in the temple of Minerva every hundred years was purificatory in character is uncertain. But the ludi sacrificiales commonly were, as abundantly shown in the records of the elaborate celebration by Augustus in 17 B.C. The ceremony was a sort of larger lustrum, a great amplification of the censor’s performance, which came every five years.

5. Dies atri et religiosi.—In Rome certain days in the year were called atri, such as the anniversary of the battle of the Allia, and others religiosi, on which public business was prohibited and many private affairs would be suspended. Even more solemn occasions were those when the law courts were closed, a prætor who opened court incurred a publican offering (Varro, de Ling. Lat. vi. 30). One form of taint from which both private families and the state itself had to keep free by forms of purification and appeasement, was derived from contact with unsatisfied spirits of the dead, who were conceived as in a sense divine and described as di parentum. The month of February was in part devoted to observances of the kind, and derived its name (Ovid, Fasti, ii. 19) from februa, which in the ancient tongue meant ‘expiations’ (piauminia). Another application of februa was to the leathern thongs wielded by the Luperci, when in February they ran their rounds and freed from sterility the women whose throats would be smitten by their blows. From the 13th to the 21st day of February was a time of ceremonial gloom. These were the dies parentales, and the ritual of offerings to the dead was parentalia. All temples were not open to the public on this occasion, as the magistrates divested themselves of the purple-bordered robe (prætecta) and other marks of office. Family ceremonies called parentalia also took place on anniversaries of the birthdays or death-days of deceased members. In the imperial period there were in May or June two days of flower-offerings for the spirits—a day of the rose (dies rosa) and a day of the violet (dies viola). Of these there is frequent mention in inscriptions. The 21st of February was called Feria, when appointed from sterility the women whose throats would be smitten by their blows. The 23rd day was one of joyful family feasts, and bore the name of Caristia or Cara Cognatio. The characteristics of the three days in May when the ritual called Lucrinæ was performed resembled those of the februa. A popular belief was quite natural that the wild festival of the Saturnalia, held in December, was originally directed to keeping the ghosts aloof. The theory is very doubtful; even if it is sound, the Romans early lost all popular sanctity in the intercalary. Other ancient practices have been held by eminent scholars to have a purificatory character. Specially may be mentioned the custom of passing prisoners of war under the yoke, which is best known from the story of the disaster to the Roman arms at the Caudine Forks. So, too, with the passage of the triumphing general under the porta triumphalis, and with the sororium tigillum which figures in the tale of the Horatii. All these ceremonies have been believed to be modes of purifying away the stain of bloodshed. The present writer is not convinced of the correctness of this explanation.

6. Means for ensuring purity.—The signs of purity and the means of purification were very various. The purity of the Ludi and the festivals required abstinence, especially from sexual indulgence. Priests were of course under stricter rules than ordinary worshippers. The innocence of young boys and maidens was welcome to divine beings who desired to meet them as spirits in worship as singers or in other ways were called camilli or camille; from this usage Virgil’s Camilla takes her name. Only such children as had living parents were permitted to serve, and these were designated as lumi et materini. The Vestals were in touch with purificatory rites. The sacrificial offerings on such occasions were of many different kinds. In great public expiations the sacrifice of a pig, a sheep, and a bull (sacred alaria) was common. The pig was offered in private as well as public expiation. When (suffinitia) had lustral power. Bodily impurity, and also the defilement of a bad dream, could be removed by running water (Ovid, Fasti, iii. 35 ff., 622 ff.; Persius, Sat. ii. 15). Many herbs were believed to have a purifying power, and the laurel originally worn by the triumphing general, and later by the emperors, has often been believed to have been a means of cleansing the stain of blood shed in war; and the verbena, which the fetiales carried before them, has been supposed to be of lustral efficacy. These beliefs are very questionable (see the present writer, in JRS ii. (1912) 46 ff.). Myrtle was in customary use in connexion with the dead and also in the marriage ceremony, and it is possible that lustro loci was the cause. The willow (agnus castus) was supposed to have purifying power, because its name was in popular etymology connected with ãyov. 6. Ethical aspects of purification.—In the belief of the rustic Italian personal purity was needed to give full effect to many operations. The birth of a boy was supposed to be non-sexual; therefore the bee-keeper, when dealing with his bees, must be ‘pride castus ab rebus veneration’ (Columella, i. 14.3). Especially did the efficacy of medicinal herbs depend on their purity. The purity of the name or title that they bore was more important than that the herb was grown in a garden or cultivated by a patient. To assure this, a boy or maiden might be employed (Pliny, HN xxii. 27, xxiii. 130, xxvi. 93, and many passages in medical writers).

Purification was not merely ceremonial or mechanical. That an ethical element entered into it, even in very early days, is indisputably shown by the fact that some taints were inapplicable. All those to whom the vague penalty ‘Sacer esto’ was attached were of this kind (Ovid, Fasti, ii. 35, is in error). There were some offenders with whom the gods would not meet to have been assured as such by the laws (Cic. i. 40, ii. 22). In literature from the late Republic onward a strong distinction is constantly drawn between material and spiritual purity. It is true, however, that the yearning after a clean heart which the ancients felt afforded an opportunity to quack purveyors of kalhpmv was not natural to the ancient Italic peoples. Faith in the old forms was gradually lost. The calamities of the Second Punic War spread among the people a conviction that a stain lay on the nation and could be removed away only by extraordinary expiations; but the much greater horrors of the Social War, followed by the long series of civil wars which ended with the triumph of Augustus, produced no such consequences. Although there was a feeling that the Romans were steeped in guilt, a feeling to which
PUFRIFICATION (Teutonic).

—The religion of the Teutonic peoples, as it is presented to us by our sources, was not a religion of fear. To a very considerable extent those peoples appear to have ignored the possibility that supernatural powers might exist who were hostile to mankind, and accordingly they aimed at securing the assistance of their friendly anthropomorphic gods by the positive methods of sacrifice rather than by the negative processes of avoiding ceremonial impurity and of forestalling devils by superstitious and natural dangers. We must remember, however, that our sources paint the picture of Teutonic religion either from the point of view of the missionary, whose attention is focused on the more active forms of heathenism, or, in the case of the Icelandic sagas, from the angle of vision of the upper classes. The practices of the modern rural populations of Teutonic countries must suggest to us that the conceptions of tabu and of ceremonial purity were by no means so foreign to Teutonic religion as we are inclined to believe. An examination of the older evidence in the light of modern customs will not yield very much, but the results will not be entirely negligible.

2. Birth.—In the life of the primitive individual purificatory ceremonies cluster round birth, puberty, marriage, and death. The sprinkling of water on a newly-born infant, which the sagas state to have been customary in Iceland in pre-Christian times, may be a purificatory ceremony, and there is no reason to suppose that it is a late imitation of the Christian rite of baptism. The ceremony was performed by the father; and, until it was done, the infant enjoyed no rights as an individual being, for the father could refuse to have it done.1

2 Puberty.—Of the ceremonies performed at the period of puberty we know nothing, and we must assume that they played a negligible part in the life of the individual. They seem, however, to have existed, for we are told that an Icelandic chieftain, Thord gellir, was taken to the cross-knots to be initiated when he was 'introduced into manhood.' 2 It appears that the ceremony was connected with ancestor-worship, for it was the belief of this family that they 'died into the knolls.'

3. Marriage.—For marriage ceremonies we are restored almost entirely to more modern accounts, beginning with that of the Swedish archbishop Olaus Magnus, of the 16th cent., who describes the bridal hot-air bath, taken in the communal bath-house, to which the bride and her female friends walk in procession, preceded by men carrying jugs of ale or wine, bread, sugar, and spices. On their return the party wear wreaths.3 A number of other Scandinavian customs, but recently extinct, show that the people have clung to the Teutonic belief in the necessity of purifying the new bride by a period of moral seclusion, and that they incur a kind of ceremonial impurity which lays them open to supernatural dangers. A device clearly intended to avert those dangers is that of introducing another make-believe couple to act as, if it were, the bride's husband. This is sometimes called the 'double.' One of them a man got up as a woman, make their appearance in various parts of Sweden during the wedding festivities, are received with much honour, have a collection made for them, and finally are driven from the house. Sometimes it is only the bridegroom who has a 'double.' In some parts of Sweden the bridegroom is driven by a grotesquely disguised 'coachman,' who sits in front of him on the sledge; and in Vastmanland a kind of mock bridegroom, who was expected to dance and make music, is said to have been used to be thrown into the nearest stream on the third day of the feast. In Wurttemberg there was no substitute for the bridegroom in this part of the ceremony, and he was obliged to choose between 'wine and water.' If he chose wine, he had to treat the company; if water, he was ducked.4

In other parts of Sweden the youngest bridesmaid walked round the table at which the guests were seated, 5 in order to remove all evil. 6 In Norway and Sweden magical devices were employed to the attacks of chthonic deities, who had to be frightened off by the hallowing and pistol-shooting of the wedding-party. 7 Possibly the custom mentioned by Olaus Magnus, 8 of celebrating weddings on small islands, has its roots in a similar fear. Both in Norway and in Sweden weddings were usually celebrated at midsummer, when the powers of darkness were weakest.

In both ancient and modern wedding customs the wedding ale seems to have had a prophylactic or purificatory value. A Norwegian bishop of the 12th cent. has assured his flock that a wedding is legal even though celebrated with wine; and the belief in the special virtues of wedding ale seems to survive in a superstition current in some parts of Sweden. This pail, fantastically dressed, is made an empty cask; 9 i.e. before the wedding ale is brewed. In Sweden it was customary for the bride and bridegroom to drain a beaker before entering their house on their return from church.

PURIFICATION (Teutonic)

The bowls used for the purpose were often apparently the property of the commune. In Dalecarlia a large tree was brought into the house and 'slaughtered' by having branches lopped off it, and the company drank the 'ox-blood—coffee and brandy.' In some parts of Sweden the 'wedding trees' was flung into a stream or pond at the end of the festivities.

4. Death.—In the more primitive communities purificatory ceremonies are regarded as especially necessary in the case of a dead man's personal property, of sending the corpse out to sea in a ship, etc., or in burning the dead man's bed. This idea is not actually expressed in our sources, but the customs of destroying, burning, or burying a dead man's personal property, of sending the corpse out to sea in a ship, etc., may have their raison d'être in such a conception. The custom of soti, which appears to have been at least occasionally practised, is probably connected with the fear of pollution from a dead man's personal belongings. Some traces of this fear can be found in the Norwegian custom of solemnly dragging the straw of a dead man's bed. The old town-law of Bergen, while prohibiting all other bonfires, specially exempts such fires, kindled in the streets. In a recent Norwegian account on which a Norwegian legend was left to rot or used as firewood by the poor.

Ancient Teutonic religion offers but few traces of this feeling of pollution on contact with death in general. But from ecclesiastical prohibitions of unseemly laughter, songs, dances, story-telling, and mask-wearing at the memorial feasts for the dead we can guess that in the Germany of Charlemagne such observances aimed at averting the dangers of association with the dead. In Scandinavia this feast seems to have been more orderly and of original significance made more of. But the necessity for purification was still keenly felt in regard to persons who had been of an evil disposition during life. An Icelandic saga tells us that, when the wicked Thorolf begirt died in his chair, his son breaks a gap in the house wall and has him carried through it, so that the ghost may not find the way back. In spite of this precaution, the ghost 'walked' until the corpse was burned and the ashes were blown out to sea. We may suppose that the rituals performed in houses subject to ghosts, for the account in Eyrbyggja Saga of the legal proceedings resorted to was probably intended by its author as farce rather than history. Here the ghosts are summoned in turn, and an abortive verdict is given against each. This saga, however, gives an example of the belief that the properties of the dead are dangerous: as long as the bedhangings of Thorogunn were unburned, the household was a prey to every kind of misfortune. We may assume that here, as elsewhere, dead persons who had not received the proper rites were regarded as a danger to the community; for, according to Icelandic law, a man who killed another became an outlaw if he failed to cover up the body with a shroud and wash it. In this connection we may mention the wide-spread belief which makes it obligatory on every passer-by to add a stone to the cairn raised over some person who had died a violent death. This custom was observed until lately in the inner district of Eyrbyggja.

5. Harvest.—The various purificatory observances connected with harvest or other seasons of the year can be traced only in modern custom and can be best studied in Frenzer's Golden Bough. An exception is the need-fire (m.a.), which first mentioned as early as 742.6 It seems to have been

freedom from formalism, shown also in the contempt of the upper classes for magical practices. On the other hand, it may be pointed out that regard for ceremonial purity may develop, into the conception of ethical righteousness, a conception to which the heathen Teutonic mind can hardly be said to have attained.  

LITERATURE.—See the works cited throughout.

B. E. PHELLOTT.

PURIM.—'Purim' is the name given to a festival in the Jewish Church, celebrated for two days, on the 14th and 15th of the month of Adar, the last month of the Jewish lunar calendar. The supposed origin of the festival, which is of a distinctly popular character, is traced, feasting, masquerading, and exchange of gifts, is given in the book of Esther, forming part of the OT canon. According to this book, the festival marks the miraculous deliverance of the Jews resident in Persia from the destructive designs of Haman, the grand vizier of King Ahasuerus, i.e. Xerxes (485-465 B.C.), who had planned a general massacre of the Jews for the 13th of Adar in the 12th year of the king's reign, corresponding to the year 475 B.C. Thrown into confusion and distraction by the Italian expedition of Xerxes, a Jewess whose beauty led her to the king's harem, where she rose to the rank of queen, the plan was frustrated. Haman and his sons were condemned to the gallows, while Mordecai, the uncle of Esther, was made ruler, as the invincible station to become the second in the extensive kingdom of the Persian king. Instead of being slaughtered, the Jews were permitted to slay those who attacked them on the day set aside for the massacre, which they did with great vigour; and in commemoration of the deliverance a two days' festival was instituted. The only religious feature of the festival, however, is the reading of the book of Esther in the synagogues at the evening service for the two days in question. The otherwise purely secular observance itself points to a non-Jewish origin for the festival. It is now universally recognized by scholars that the book of Esther is a pure romance to which a quasi-historical setting is given. From the silence of Ben Sira, the author of Ecclesiasticus (c. 180 B.C.), who does not mention Esther in his enumeration of the sacred writings known to him, the conclusion is justified that its composition cannot be placed before the middle of the 2nd cent. B.C., and was perhaps as late as 100 B.C. Apart from the fact that it is not necessary to warrant the belief that in the days of Xerxes there was any persecution of the Jews in Persia, or, in fact, that there was even an extensive Jewish settlement in that country, and apart from the inherent improbability of the story itself, the chronological discrepancy in making Mordecai one of those carried into captivity by Nebuchadrezzar in 597 B.C. and yet still living 125 years later suffices to show that we are dealing with pure fiction. It so happens also that we know from Herodotus (ix. 108, 112) that the queen of Xerxes was married only twice and that on the second occasion to occupy this distinction was Amestris, the daughter of a Persian general.

If, then, the book of Esther is pure romance in a quasi-historical setting but without any historical basis, then the origin of the festival into which the given in this book is equally fictitious, and we are thrown back upon investigations independent of the festal legend to solve the problem involved. The author of the book of Esther, by his evident desire to give a title to the book, with a Hebrew word pdr, supposed to mean 'lot' (3 K. 2:30), recognizes the name as foreign. In view of the Persian setting of the festal legend, suggesting that the author of the book of Esther was a Persian Jew, one naturally thinks of a Persian origin for the festival, and, if there were a Persian word pdr meaning 'lot,' the necessary proof would have been furnished that the author of the festal legend at least in mind the Persian festival to the Jewish festival cycles. Now the Persian word as pdr exists, however, and all attempts to find in it some adaptation of a Persian term (see L. B. Puton, Commentary on the Book of Esther, pp. 60-62, for various conjectures and suggestions), all, however, rejected (or properly so) have failed. On the other hand, the possibility that the author of the book of Esther, in connecting the name 'Purim' with pdr, had in mind a Babylonian term must be admitted, especially as a word so easily exists in both meanings, among which those of 'lot' and 'term of office' are possible, though not certain (see H. Zimmern's discussion in Kat. p. 518; P. Haupt, 'Purim', in B.A.S.S. vii. ii. [1906] 20; and art. CALENDAR [Babylonian], vol. iii. p. 77). The names of the two chief personages in the festal legend, Mordecai and Esther, carry us distinctly to Babylonian soil; for Mordecai is clearly identical with the Babylonian deity Marduk, the head of the pantheon after the Babylonian conquest. His connection with the name of the united districts of the Euphrates valley, where Esther is quite as unmistakably the Babylonian goddess, Ishtar, the chief female deity and as such directly associated with Marduk. Even though the Babylonian festival name Purim is a shorter form of the name Persia, Istahr (or Talm Bab. Mogillah, 13a), with which Ishtar was identified by the Babylonians. According to P. Jensen, who first called attention to this double identification, Mordecai=Marduk, and Esther=Ishtar, the two Babylonian names, Haman and Vashit (the queen whose Vashit displaces) are Elamite deities, Humman (or Humbar) and Mashi, skilfully disguised or connoted ('Elamitische Eigennamen,' in WZKM vi. [1892] 47 ff., 209 ff.). These two identifications, however, are less certain; and to go a step farther and assume that the story of the book of Esther rests upon a Babylonian myth, relating a conflict between Marduk and Ishtar, the gods of spring and light, against hostile powers symbolizing winter and darkness, and therefore identified with 'foreign' deities or as modifications of Kingu and Tiamat, who in the main Semitic-Babylonian version of creation are the personifications of primal chaos and discord, who must be overcome by Marduk to establish order—is to do this is to enter the province of pure conjecture. Until some fortunate chance reveals to us the story of such a conflict with all four names unmistakably introduced, we must content ourselves with the definite proof that at the foundation of the book of Esther, or at all events as an element in it, we have some Babylonian tale of the gods in which Marduk and Ishtar play the chief roles, and that this tale was transformed in such a manner by the Jewish author of the book of Esther winter and darkness, and therein identified with 'foreign' festival into the Jewish calendar. The character of this festival is unmistakable. Its occurrence in the middle of the last month of the winter season is at hand in mind the natural beginning of the year, points to its being the beginning of the celebration of the conquest of the winter by the youthful sun-god of the spring—as Marduk is regarded in various Babylonian myths. The Persian festival Purim fit in with such a spring festival, while the fast added at a much later date for the 12th of Adar—it cannot be traced farther back than the 9th century—is the prerogative to the festival which afterwards takes on a sombre hue as a preparation for the fasting to follow. As Haupt aptly puts
it (p. 1), 'shoving was preceded by shoving.' That the Babylonians began the year in the spring follows from their insistence on the order of the months adopted by the Jews, which begin with Nisan, the time of the spring equinox; and we know that the Babylonian New Year festival known as Zagmuk, and celebrated during the whole month of March—this being primarily the festival of Marduk and his consort in the days of the united Babylonian Empire (see Calendar [Babylonian]). The circumstance that in the 2nd book of Maccabees (159) the Purim festival is the installation of Maccabeus, and the festival of 'Marduk (or Mordecai) day,' is a significant testimony to the association of Purim with the Babylonian New Year period, bound up with the Marduk cult. The middle of the month preceding the 1st of Nisan would thus mark the preparation for the period of rejoicing at the approaching triumph of the god of spring, Marduk, over the hostile and destructive forces of the winter and rainy season. The Jews in Babylonia and Persia, subject to the influences of their environment, would naturally be led to take part in a merry-making season, just as at the present time Jews in Europe and America participate in Christmas festivities and in New Year's exchanges of felicitations, despite the fact that the Christian winter festival has been given a Christian interpretation. Moreover, the Jews still observe a religious 'New Year' in autumn (Rosh Hashanah, 'beginning of the year') on the first of Tishri, the seventh month, pointing to an older calendar, in which the year began in autumn.

Corresponding to the festal legend set forth in the 1st book of Maccabees for the celebration of the Roman Saturnalia or mid-winter festival at the time of the winter solstice (adopted by the Jews under Graeco-Roman influence and converted into a Jewish festival by association with the victory of Judas Maccabees and his army over the Greek forces), the romantic tale in the book of Esther was composed to provide a justification for the participation of the Jews in the general rejoicing indulged in by Babylonia and in lands where Babylonian influences prevailed, at or near the beginning of the vernal equinox. The one link missing in the chain of evidence connecting Purim with the period of merry-making in honour of Marduk and Ishtar, but also with the Babylonian New Year, is the influence of Persia in the middle of Adar—just before the New Year's season proper two weeks later. Until such evidence is forthcoming, the view here set forth lacks definite confirmation. It may well be, however, that with the coming of the Persians into Babylonia in the second half of the 6th cent. B.C., a Persian New Year's festival, celebrated at the period of the vernal equinox, and fixed for a time somewhat preceding the date selected in the Babylonian calendar for the Zagmuk, became the current New Year's season of rejoicing. The natural tendency would be to bring this Persian New Year into close affiliation with the Babylonian festival. Purim would thus represent the result of such a combination of Persian and Babylonian customs. The festival of Naour, celebrated in Persia in the middle of Adar—just before the New Year's season is a time of rejoicing and festivity in Persia. The New Year's day, known as Naour, is fixed for the first day after the sun has crossed the vernal equinox, and is therefore a movable feast. The festival of Naour, celebrated in Babylonia, is the first day of the Babylonian New Year's festival. The festivities incident to the Naour last a week. It is to be noted, also, that in the Jewish calendar the tendency is to fix festivals connected with the transition of one season to another in the middle or the end of each month (e.g., the spring festival Pesah and the harvest festival Sukkoth on the 15th day of Nisan and Tishri respectively) or at the beginning of the month, as, e.g., the Rosh Hashanah. The 15th of Adar would thus be fixed as corresponding to an analogous period, that is, the time of the festival, and we find evidence that in the 2nd cent. B.C. the Jews of Palestine also celebrated the 13th of Adar as a festival and that, under the same tendency to give to popular rejoicings, when adopted from foreign sources, a Jewish characteristic, the Purim celebration was associated with the victory of Judas Maccabees over the Syrian general Nicanor of Adasa in the year 161 B.C., and in consequence became known as 'Nicanor's Day' (1 Mac 7:18; Jos. Ant. xii. 5 (408). Finally, it was adopted into the civil calendar (see Macc. vol. v. p. 886). The book of Maccabees thus furnishes the festal legend for two holy days adopted by the Jews: (1) the Saturnalia, or mid-winter festival, at the time of the winter solstice, celebrated for a week, which became the Jewish Hanukkah, in commemoration of the supposed restoration of the Temple at Jerusalem to Jewish worship after the victories of Judas Maccabees; and (2) the spring festival in the middle of Adar, adopted under Babylonian-Persian influences and associated with the festal banquet with a special occurrence in the so-called wars of the Maccabees.

Nicanor's Day and Purim thus represent the same festival. To the one a Jewish aspect was given by making it a commemoration of a victory gained over the Syrian at a critical moment in Jewish history, while for the same festival adopted under Babylonian-Persian influences a festal legend was composed which transformed a Babylonian myth, celebrating the deeds of Marduk and Ishtar, into a Jewish romance. It may be also that the Jews of Persia suffered some annoyance from hostile officials, and that a liberation through the dismissal of an offensive vizier suggested some of the incidents in the festal legend, which, in accord with the tendency of legendary compositions, would give to a comparatively insignificant episode an exaggerated importance. All this, however, is purely conjectural, and it must be frankly admitted that there is no evidence for any persecution of the Jews under any of the Persian rulers, who, on the contrary, appear to have been at all times favourably disposed towards them. The main thesis in connexion with Purim, that it is a foreign festival, a precursor of the Babylonian New Year's festival of the Persians, is adopted by the Jews, is not affected even if we assume the historical occurrence to be a factor in the composition of the romance, which was written to give a Jewish setting to a celebration that had become popular among the Jews of Rome and Babylonia and had spread to other countries where Jews had settled. The sad experiences of the Jews, encountering hostility and frequent persecutions in the Diaspora, tended to increase the popularity of Purim. The story in the book of Esther became typical of the sufferings of the Jews in many lands. There were Hamans everywhere who tried to work injury to the Jews, and the celebration of Purim helped to maintain their trust during the dark days in the ultimate deliverance from the dangers of foreign enemies. Thus merry-making at Purim also afforded an outlet for pent-up feelings, and furnished a much-needed relief from the serious life led during the greater part of the year.

All the festivals of the Jews except Purim take on a sombre hue, even those which, like the Passover and the Festival of Booths, were in their origin distinctly joyous occasions. The somewhat cruel and vicious spirit of the book of Esther, reeking with evil and cruelty, with the Jews themselves on their enemies by slaughtering thousands of them (9:14), was overlooked in the abandonment to joy that marked the two days of Purim.
Masquerading and games became one of the features of the popular rejoicing. Presents were exchanged and gambling was indulged in as an obligation. Sober and serious-minded persons gave themselves over to the joy of Purim, and it was regarded as quite proper to put oneself in such a condition at Purim time that one could not distinguish oneself. "Cecil's Morals," The "Blessed be Mordecai" (Talmud Bab. Megillah, 76), though naturally a playful allusion of this kind must not be forced beyond the point of showing that, as far back as Talmudic days, Purim was regarded as a time of relaxation, departure from the regularity of any genuinely religious character. The exceptionally secular nature of the festival is also shown by the express permission of the rabbis (Megillah, 18a) that the roll of the book of Esther may be read in any language in the synagogue, while otherwise, as a matter of course, only Hebrew was to be used in the service. Even the synagogue service in connexion with Purim acquired some of the boisterous character of the festival; for at the mention of Haman and his sons the congregation stamped with their feet or made a noise with rattles or by knocking two sticks on which the name of Haman was written against one another until the name was erased. Such customs are to be regarded as popular survivals of endeavours to drive away evil demons by use of sympathetic magic. They are closely bound up with the popular view that at transition periods—and such the New Year's festival is—the evil spirits were particularly malevolent, lying in wait for victims. Masquerading is also to be viewed under this aspect as a means of disguising oneself from the evil spirits or of deceiving them. Another interesting trace of the original character of Purim as a New Year's festival is to be seen in the persistent use with which the idea of their being connected with 'drawing of lots' clings to it, for whatever the etymological origin of the word par, there is no reason to question the correctness of the tradition set forth in the book of Esther which connects it with 'casting lots.' At the New Year's period, according to the Babylonian view, the gods sit in the council chamber of fate and decide the lot or portion of individuals in the year to come; and from the Babylonians this view passed to the Jews, for whom the ten days of the New Year's month are the days of portions. In the Boanerges, in the ten or eleven days of the Babylonian Zangmuk period. On the 10th day, the Day of Atonement, the fate of the individual is definitely inscribed in the book of fate and sealed. The exchange of presents on Purim also rests ultimately on an association of ideas between 'lot' and 'portion' as something set aside for some one. The term used for 'presents' (monēdēth) in the book of Esther (9:2) in connexion with the description of the custom is the precise word which means 'portions,' while par is specifically explained in a gloss (10:9) as ha-gōral, i.e. the common term for 'lot.'

MORRIS JASTROW, JR.

PURITANISM. — 1. Definition and application of the term. — The widely divergent estimates of Puritanism as a movement, as a religious, philosophical, and social tendency, unite in the designation of its significance as a formative factor in the life and character of the English people. Probably no other religious movement has left so deep an impression on the history of England. Some of the principles and ideas of the Puritans have been fundamental for all in the constitutional development and Church life of the country; others of their contentions may yet be realized. In a modified form, the Puritan ideal of a Church at once national and self-governing may be the subject of a modern revival. But the questions relative to the character of the Church of England to which the Puritans gave so much thought have been almost wholly set aside by the change in our religious life. Puritanism has a future, reverence for the very letter of the Puritan tradition lingers in many minds, while its inner force is by no means spent. It would conduce to clearness in historical studies if there were an agreed term which could be used to refer to that movement for further reform of the Church of England whose history falls within the century from the Act of Uniformity of 1559 to the Act of Uniformity of 1662. The Puritan party consisted of all those who believed in the maintenance of one National Church in England, and who desired that Church to be reformed after the model of Geneva. According to Thomas Fuller (Ch. Hist. of Britain, London, 1835, bk. ix. § 601), 'the odious name of puritans' was first applied in 1664 to those who resisted the attempt of the bishops in that year to enforce uniformity in ritual and in the use of vestments. A passage in John Bunyan's Life and Death of Mr. Badman (written in 1680) says: 'The man was a godly old Puritan, for so the godly were called in those days by many people. The word Puritan was used long before to include early reformers of the time of Henry VIII., Edward VI., and Mary, or, forwards, to cover later dissent. The kinship of Puritanism with earlier elements in the English Reformation is as obvious as the identity of the Puritan movement is with the English Church of later times. But Puritanism stood primarily for an ecclesiastical ideal which was not definitely adopted by any distinct body of Englishmen before the time of the Elizabethan settlement, and which was not fixed in the Church of England but in the dissenting Churches. Puritanism is most simply defined as the movement for Church reform whose first great leader was Thomas Cartwright and whose last was Richard Baxter.

A wider application of the term 'Puritan' to all who attempted a greater sobriety of life than was customary in Elizabethan England became familiar in the 17th. cent., if not earlier. Richard Baxter says that his father was dubbed a Puritan by his neighbours because he disliked the village custom of carrying about a glass of water at public dinners. Another preferred to pass his time at home, reading the Bible and the Prayer-Book:

'For my father never scurped Common-Prayer or Ceremonies, nor spoke against Bishops, nor ever so much as prayed but by a Book or Form, being not ever acquainted with any that did otherwise; but only for reading Scripture when the rest were Dancing on the Lord's Day, and for praying (by a Form out of the end of the Common-Prayer Book) in his House, and for reviving Drunks and Swearers, and for taking sometimes a few words of Scripture and the Life to come, he was reviled commonly by the Name of Puritan, Precisian, and Hypocrite.'

The wider aspect of Puritanism revealed in this application of the term cannot be ignored in any account of the subject, because the effort after a sober godly life which drew it and directed it was part of the whole religious movement of which Puritanism in the strict sense was the narrower ecclesiastical expression. It is worth noting incidentally that the name 'Puritan,' like the words 'Church Smacker,' is a term of insult which became a title of honour.

2. Puritans as a party in Church and State. — (a) The Prayer-Book controversy. — When Elizabeth came to the throne in 1558, the hopes of reformers as to Church and State were not altogether dashed. They were certain that the House of Lords would resist the religious policy of her predecessor. The burn of May-pole, being not ever acquainted with any that did otherwise; but only for reading Scripture when the rest were Dancing on the Lord's Day, and for praying (by a Form out of the end of the Common-Prayer Book) in his House, and for reviving Drunks and Swearers, and for taking sometimes a few words of Scripture and the Life to come, he was reviled commonly by the Name of Puritan, Precisian, and Hypocrite.'
ing of heretics would cease, and subserviency to the pope would be ended. Though the number of convinced Protestants was not large, the country as a whole was prepared for a considerable change. In some sense England would become a Protestant power. But how far was the queen prepared to go? It seemed to be the wish of some of the authors of the Prayer-Book had consecrated it in the eyes of its users, others who had been in exile on the Continent had come under the spell of Geneva, and desired a more thorough reform along the lines laid down by Calvin. The Protestant world had not stood still since the days of Edward VI., and it seemed absurd to be content with something obviously limited and faulty like the work of Cranmer. The position of many of the leaders like John Jewel, Edwin Sandys, and Edmund Grindal, who were among the first of the Elizabethan bishops, was that they would gladly go back to the system set up in the time of Edward VI. as a starting-point, but that they hoped to be allowed to make it the basis of a further and more radical movement.
The first appearance of the English Prayer-Book of 1552 was manifest. It obviated the necessity of thinking out at short notice forms of service and of government for the Elizabethan Church, and it gave a sense of continuity in the work of the Reformation in England. There was therefore no surprise or regret when the Act of Uniformity re-imposed the use of the second Prayer-Book of Edward VI.
The Act of Uniformity was preceded by the Act of Supremacy, which made Elizabeth chief governor of the Church of Christ in England. Her authority she was to exercise in the first instance through an ecclesiastical commission until a regular administration by duly appointed bishops should be possible. These two Acts ensured lay control of the Church, abolished papal authority and the Mass, and restored the English liturgy. So far, so good; but what was to be the next step?
When the revised Prayer-Book was issued, it caused a good deal of disquiet among the more radical reformers. The clause in the Litany praying for deliverance from 'the tyranny of the Bishop of Rome and all his detestable enormities' had vanished. The sentences appointed for the use of the priest in delivering the elements at communion included those from the Prayer-Book of 1549 which were capable of being interpreted to imply the doctrine of transubstantiation. Moreover, into the Prayer-Book was inserted, apparently at the last moment and without the knowledge of Parliament, an additional rubric directing that 1 'the minister at the time of communion and at all other times in his ministrations, shall use such ornamens in the church as were in use by authority of Parliament in the service and prayers of Edward VI.' In accordance with this rubric, ministers in the communion service were to put on 'a white Albe plain, with a vestment or Cope'—the garments used in the celebration of the Mass.

Referring to a point of a renewed vestiarian controversy. To the dismay of the reformers, the queen was determined that her clergy should wear a distinctive dress in ordinary life, and should continue to use the vestments of the un改革ist period. Protestant under pressure from the queen, determined in 1566

PURITANISM

The chief Puritan criticisms of detail may be summarized as follows:

(1) The Prayer-Book stands for a reading ministry as con-trasted with the preaching ministry. The reading of the services is not done by those who have not yet appeared, and which consequently cannot be approved. These homoines, too, are to discourage private prayer. The Bible is not required of the parson, but of the keeping of saints' days—contrast to the Fourth Commandment. (4) The order of the communion consists on the communion being a part of sitting and talking. The communicant may receive the elements. The book, moreover, retains the term 'priest' in this connexion. (5) The parsonate is a contract with the church, but the assent of the congregation is necessary. It is essential that the men elected be fitted for the office for which they are called. (6) The ordination backed by prayers is wanting; those who are to be ordained are not in the presence of God. (7) The ordination consists of public prayer together with the laying on of hands. The latter feature of the ceremony belongs of right to the word of God.

Turning to the particular offices, we find two kinds of ordinary official, viz. bishops and deacons. The bishops and presbyters, or elders for they are one and the same in the NT, are appointed to look after particular churches. They are of two kinds, doctors and pastors. Ability to teach and to pray in the chief qualification of the former; the latter's duty is to speak the word of exhortation needed on particular occasions and to administer the sacraments. The deacons, according to Travers, are also of two kinds, the first being treasurers and almoners, and the second overseers or elders responsible for the discipline of the individual members of the church. (8) The deacon of the NT has nothing in common with deacon's orders in the Church of England. For the latter is but a step towards the priesthood, while the former is a distinct and permanent office. These are the only offices required or ordained in the NT. (9) The ordination services in the Prayer-Book mention other offices, such as apostles, prophets, and evangelists; but these were extraordinary functions and not permanent offices.

(d) The break with Anglicanism.—The first Admonition to Parliament and the tract by Travers afford an excellent survey of the Puritan case against the theory and practice of Church government in the Church of England. The whole field was covered in the long and embittered controversy that followed between Cartwright and Whitgift, in which both writers displayed great learning, much animosity, and an inadequate sense of proportion. But their works were overshadowed by Hooker's Ecclesiastical Polity, perhaps the noblest piece of controversial literature in the English language. It is not possible to trace the development of the controversy in detail. The Puritans failed to secure any part of their programme in the time of Elizabeth. Indeed, the administration of the bishops, especially under the leadership of Whitgift, rendered their position more and more difficult. No relief was given to their grievances until the Revolution, and to which the separation of Church and State is due. The Puritans drew to the point that the monarchical episcopate is contrary to the spirit of early Christianity and to the letter of such passages as Mk 10:25 and Mt 19:12.

Travers proceeds to develop another point to which the Puritans laid great stress, viz. the anomalous position of the Church belongs, not to particular officials, but to a compound office, i.e. to individuals set over and above the ordinary members of the church. The bishops are denied the right of ordination, which authority belongs to the elders. The ordination or assembly gathered from the three chief orders of the church, viz. pastors, doctors, and overseers, or elders—exercized the highest authority. These symbols are requisite for elections and depictions of Church officers. They are also responsible to no one but God. There is no presbyterate, no orders from communion or in pronouncing complete excommunication. The essential point is the corporate character of the church, and the authority of the assembly, which is enjoyed by Puritans drew to the point that the monarchical episcopate is contrary to the spirit of early Christianity and to the letter of such passages as Mk 10:25 and Mt 19:12.

Puritanism

ment is abandoned. On the whole side of the Puritan case embodied in Travers the petition is silent. Instead, the desires of the petitioners are grouped under four heads:

The first reproduces the following details from among the charges used in the First Administration. A church service, that the cross in baptism, interrogatories ministered to by a priest, and some superfluous, may be taken away. Baptism not to be ministered to by an unevangelized man, and so explained. The cap and surplice not urged. That examination of a communicant, demanded by a sermon. That divers terms of priests and absolution and some other used, with the ring in marriage, and other such like, be burned in the next Assembly of the clergy. Church service abridged. Church songs and music moderated to be done with more solemnity. It is no reason the Lord's Supper profaned: the rest upon holidays not so strictly urged. Traditions be uniformity of doctrine prescribed. No popish opinion to be any more taught or denied: no ministers charged to teach their people to bow at the name of Jesus. That the canonical scriptures only be read in the church. In the second place, the petition urges the importance of a preaching and resident ministry. Thirdly, they protest against the abuses of pluralities and impropriations of tithes. Under the fourth head they ask that the nominees of discipline and excommunication may be restrained. They particularly desire that excommunication may not be imposed contrary to the laws and customs of the land. They criticize the fines and the fees, and the delays in ecclesiastical courts. The oath ex officio, whereby men are forced to accept a judgment from a body of which they would be more strongly dissatisfied.

In the Hampton Court Parliament the Puritan representatives went somewhat farther. The uniformity of doctrine which they desired was to be found in the famous Lambeth Articles of 1589, which the bishops, in their strictest, would call the truest handiwork of Puritanism. They desired corresponding changes in the other articles. Their plea for the association of ordinary ministers with the bishops in discipline drew from the king the famous and fatal aphorism, 'No bishop nor preacher either.' Under the title of feeling against episcopal rule, clergy rose. That, against presbytery commanded an ever more respectful hearing. In the Long Parliament the movement for ecclesiastical reform was no longer directed towards modifying episcopal control or securing detailed changes in the Prayer-Book; the fast-breaking was to be restored root and branch, the Prayer-Book displaced by the Directory for Public Worship. That, however, is not the final phase of the Puritan ecclesiastical ideal. At the Savoy Conference in 1661 they put forward somewhat sweeping pleas for a reformed liturgy, and expressed their willingness to accept Archbishop Usher's scheme of a constitutional episcopate—a scheme under which the bishops governed with the assistance of representatives of their own hands. The Puritans were out manoeuvred at this contest. The Commons were asked to state their full demands, and they did so, in good faith; and then the boldness of their demands was used as a justification for refusing all concessions. They would have been content with less than they asked; as it was, they got nothing but expunction, and thus regretfully they turned their backs on the National Church and on their ideal of such a Church and set themselves to create their own religious organization. Puritanism as a definite movement for the reform of the Church of England was ended.

3. The influence of Puritanism as a tendency on religion in England is far from clear. How far were the Puritans right in their ecclesiastical scheme? Did they form a correct estimate of the needs and possibilities of the English Reformation? Were their criticisms of the Elizabethan settlement justified, or resulted in principle? Any answer to these questions involves the introduction of the personal equation but some answer must be attempted nevertheless.

(a) Elizabeth's ecclesiastical policy.—The assumption that the queen gauged the temper and wishes of the country with singular sagacity is part of the persistent legend of Good Queen Bess. Elizabeth is supposed to have given the National Church exactly the form that the mass of the people desired. In suppressing the Puritans she was really acting for short-sighted reasons, who would have broken the national unity, and given the Church of England a rigid constitution which would have offended the Englishman's love of compromise. This view is frequently taken for granted, and it is only open to question. It would be truer to say than the country was prepared to accept almost any Church that Elizabeth liked to set up, provided it was more or less definitely Protestant, than to say that Elizabeth gave the Church precisely the Church that it instinctively desired. No doubt the people generally would have revolted against any attempt to establish the Genevan model in England, but there is equally no doubt that, if Elizabeth had cared to go farther than she did in the Puritan direction, she would have won the approval and support of the majority of her first group of bishops and of many of her leading statesmen and favourites, including Burleigh and Leicester. Very little encouragement would have sufficed to make the clergy predominate in the council. As it was, a considerable and influential section of the clergy sympathized with the Puritan position. A majority in Parliament could have been found at almost any time to advocate and sanction further reforms. There is no doubt that in the matter of religion Elizabeth possessed enough acuteness for interpreting the mind of her subjects. The rank and file, like their leaders, would put up with almost anything from the queen, because the maintenance of her throne was essential to the national safety and independence. But, had she insisted on a more Calvinistic reform, the change would certainly have been accepted as readily as the actual settlement, and in all probability a more fully reformed Church would have evoked greater enthusiasm.

The limits which Elizabeth set to reform in England cannot be regarded as an inspired expression of the national mind in religion either then or since. It is possible to claim for Elizabeth's ecclesiastical policy that it showed the diplomatic skill to which Puritans were strangers. The retention of the ornaments may have been intended, as Lindsay suggests, to give a Lutheran character to the Church of England and to secure for it from the emperor and the pope. But the quality extended to Lutheranism by the Peace of Augsburg. The ornaments rubric and the other little changes in the second Prayer-Book of Edward VI. also conveyed to the pope and to Philip II. of Spain the impression that England had been shifted a little to the Catholic fold at any moment and at short notice. No doubt such an impression was intended, and
one cannot but admire the skill with which Elizabeth used her ecclesiastical settlement to minimize the dangers which she had to face in her foreign policy. But if the elements of Puritanism counted for less than the element of personal caprice. Diplomatic reasons justified a cautious beginning—they did not suggest an absolute halt—in the work of reform. After the pope had excommunicated her, and still more after the failure of the Armada, reasons of State counselled a stiffening of England's Protestantism rather than the reverse. If statesmanship had been the determining factor, Elizabeth might have held back the Puritans at first; she would almost certainly have encouraged them later. She did not do so, because she was a Tudor and liked her own way. She meant to have the Church reformed according to her taste, and the Puritans were not to her liking.

One reason for the queen's personal animosity to the Puritans was her indifference to religious truth. She was consequently at variance with the Puritans on the question of a preaching ministry. The queen did not greatly care whether the people were instructed in the faith or not. To the Puritans the essential and important statement of the Protestant position should be popularized. If it was desirable that the country should become Protestant at all, then undoubtedly the Puritans were right in desiring an intelligent congregation in the reformed preaching ministry. On this issue Elizabeth was obscurantist; the Puritans were standing for enlightenment and education, however narrow the views may have been which they would have propounded ostensibly for popular acceptance, and in effect for popular guidance. Elizabeth, in attempting to starve thought and stifle discussion, was a sheer reactionary, and one of the most short-sighted measures on which she insisted was the suppression of the prophesymings—a measure against which Archbishop Grindal vigorously protested, to his eternal honour. There is no reason to doubt that the Puritan demand for a preaching ministry could have been very largely realized, had the queen wished it. There can be no question that the maintenance of an educated ministry would have been in the best interests alike of Church and of State. Even the instruments and defenders of the queen's policy admitted that. The main obstacles to the creation of such a ministry were the avarice and prejudice of the queen.

In some particulars the Puritan leaders certainly showed a truer appreciation of the religious needs of England than did the queen. Events soon proved that they saw farther than their fellow-reformers, when they urged that reformed doctrine would not co-exist for long with unreformed discipline and worship. The apologists of the Elizabethan settlement pointed to the pure standard of reformed theology enshrined in the articles. Further reform of the liturgy or of Church government would have been in the best interests alike of Church and of State. Even the instruments and defenders of the queen's policy admitted that. The main obstacles to the creation of such a ministry were the avarice and prejudice of the queen.

The main obstacles to the creation of such a ministry were the avarice and prejudice of the queen.

(b) The Puritan polity. — The details of the Puritan criticism of the Prayer-Book need not detain us. The weight and importance of the objections raised in the First Admonition apply not so much to the book itself as to its misuse of it and to the association of superstitions customs with its rites and ceremonies. Some of the Puritan criticisms seem now unimagineable if not captious (e.g., their objection to the ring in marriage or to the use of the Magnificat in public worship). Others seem obvious, and have been more or less accepted. They might have been pressed and pressed, and their demand for a revised lectionary was valid for other reasons besides the reverence for Scripture which dictated it. The protests against the strict observance of saints' days and the lax observance of the Sabbath were more ineffective. The matins may have been pushed too far. The 'lengthiness of matins' is likely to be taken into account in any future liturgical reform. But, in general, such reform, when it comes, will probably not owe much to Puritan criticism.

It is more important to notice that Puritan ministers might have been accorded the liberty to omit or vary unessential details, not only with great relief to their consciences, but also with advantage to their congregations. The denial of liberty of conscience to the Puritan clergy in things indifferent is not excused either by the probability that such concessions would not have contented them or by the fact that, as a party, they were as much possessed by the craving for observance of the canon of perfect regression as the Puritans.

With respect to the ministry and government of the Church of England, the Puritans were clearly right in pleading for a better educated, a better paid, and a more carefully appointed ministry. It would be a gross injustice to the Puritans to overlook the fact that they were undoubtly right in the protest they made against the abuses of pluralism and patronage. The system and methods of ecclesiastical discipline lay open to the charges which the Puritans made against them. By 1602 all England agreed with them as to the need to make the ecclesiastical offices, and Land had no successor in the position that he secured in the councils of State. The impression that Hooker completely disposed of the Puritan case owes not a little to the neglect of the incomplete posthumous books of the Ecclesiastical Polity—vi., vii., and viii. When he came to grips with the Puritan criticisms of the actual working of episcopacy, Hooker was obliged to make large concessions to his opponents, and, while he would not make concessions, he did not find it easy to maintain his defence. As a matter of fact, indeed, no answer to some of the main criticisms which the Puritans passed on the state of the ministry, and the only kind of reply possible was to depreciate haste in reform and to urge that the bishop should remember his best friends, and that, being the intrinsie of the queen and the vested interests of some highly placed laymen.

The platform of Church government which the Puritans drew from the Scriptures, and the appeal to the Scriptures on which it was based, raised further points of interest. As interpreters of the NT, Puritan scholars were not at fault in contrasting the diocesan episcopate with the NT bishops who were in charge of particular churches and were the same as presbyters. It was fair to insist, in view of the importance of the primitive diaconate—a distinct office alongside of the eldership—and the later use of the diaconate as a mere stage in the evolution of the presbyter or priest. The element of corporate action and responsibility, and the exercise of justice, and of the exercise of discipline, undoubtedly existed in NT times, and was rightly emphasized by the Puritans. In restricting membership to communicants, and in making strict examination of candidates for communion, the Puritans were also keeping close to the early Church. It is disputed whether they were correct, as a matter of scholarship, in claiming presbyteral ordination as the normal primitive practice, and it is doubtful whether their division of NT Church offices into extraordinary and ordinary can be legitimately
maintained. But the point on which their position has been most effectively challenged is the assumption that there must be laid down in the NT a final form of Church government, to be rigidly enforced at all times and in all places. The Puritans took great pains to prove that 'God must have delivered in Scripture a complete particular immutable form of church polity.' Otherwise, they said, the Christians would be worse off than the Jews, and God would be negligent if He did not provide for the legal order, and order is never happier than when undermining this a priori dogmatism, in which the Puritans so frequently indulged:

'In matters which concern the actions of God, the most dutiful way on our part is to search what God hath done, and with meekness to admire that, rather than to dispute what he in conformity of reason ought to do. The ways which he hath walked in are not for us to argue. He is far more in number than we can search, other in nature than that we should presume to determine which of many should be the fittest for him to choose, till such time as we see he hath chosen of many some one; which one we then may boldly conclude to be the fittest, because he hath taken it before the rest. What we do otherwise, surely we exceed our bounds; who and where we are we forget; and therefore needful it is that our pride in such cases be controlled, and our disputing be turned back again to those demands of the blessed Apostle.'

"How unsearchable are his ways, and his counsels past finding out. Who hath known the mind of the Lord, or who was his counselor?"

It would now be generally conceded that the government of the Church to-day cannot helpfully be made to reproduce exactly the features of the NT. We know now better than we did then how much more than we do the character of that polity. It is probable that no uniform system existed in the early Church, and Church institutions have necessarily been developed and adapted to changing conditions. The Puritan hypothesis of a divinely ordained and unchangeable form of Church government is untenable. Yet their appeal to the primitive Church was not fruitless, and is still a necessary safeguard against the easy assumption that, in the development of Church order, whatever is is right. Growth in Church organization is inevitable and desirable, but not every development is suited to the genius of Christianity, and none can escape criticism in virtue of its mere existence. When we refuse to follow the Puritans in denying the legitimacy of development in the realm of Church life, we have still to consider whether they were not justified in condemning particular developments as alien from the temper revealed in the arrangements adopted by the primitive Church. We are not entitled to criticize episcopacy, as involving a social distinction and a secular greatness incongruous with the Christian ministry, and as exercising an arbitrary authority unsuited to the Christian brotherhood, they were exemplifying a ground from which it was very difficult to dislodge them. The difficulty is at once apparent in Hooker's ineffective discussion of the phrase, 'it shall not be so among you' (Mt 20:25).

In origin and in character the institution of episcopacy was not specifically Christian. Moreover, the representative and denominative element in early Church order cannot be dismissed as accidental. There was and there is something vital to the expression of Christianity in the presence of that element. And, above all, the Puritans sought a servitude which led to Chr

1 Eud. Pol. bk. iii. ch. xi. § 53.
2 Bk. vii. ch. xvi.
penalty for witches were strengthened by this appeal to the OT; the wide acceptance in Puritan circles of the theory that all the virtues are splendid vices may also be traced to the same root. If the English are essentially an OT people, the Puritans are largely responsible for it.

(e) Influence on education and industry. In the matter of education the Puritans had to provide for themselves after 1602, and they made no small contribution to educational progress. As a reformer they did not sit loose to the methods and classical traditions to which the universities and grammar schools were still wedded. They were ready for changes both in method and curriculum. It was in Puritan circles that Comenius's works, an attempt to reform education, were studied with interest. The Long Parliament seems seriously to have considered enfranchising him to the task of reforming national education. The dissenting academies of the 17th century, like Oxford and Cambridge, were obvious illustrations of the recognition of the need for an educational system more suitable to the religious views and the intellectual needs of the age.

1 Dowden, p. 31.
the 18th cent. compared favourably with the older universities alike in expense, morals, and intellectual keenness. It was in these academies that the teaching of modern subjects was begun. The Puritans are being blamed nowadays for having been too exclusively intellectual, and it is true that the Puritanism may be regarded as the children of Puritanism. But this strong intellectual tendency was really a virtue, in spite of its limitations. In the States it was the Puritan colonists who cared for education. The colonists of Virginia took no such interest in the subject, as witness the sentence of W. Berkeley, governor of Virginia in 1671:

\[1\] Thank God there are no free schools or printing, and I hope we shall not have these hundred years.\[2\]

After all, the sermon itself, on which the Puritans set such a high value, is an appeal to the reason of the common man, and is an instrument of education. It assumes that religion must capture the head as well as stir the feelings. And so far the Puritan appeal to reason made for a higher intellectual life and activity. The independence of character which Puritanism fostered also helped to produce pioneers in educational reform.

The moral discipline enforced by Puritanism had a dramatic effect upon industry. The Christian life was regarded as essentially an ordered life. The passions were to be under rational control. Puritanism cut men off from wasteful expenditure and forlorn indulgences which dissipated both wealth and energy were sternly denounced and repressed. Time and talents were not to be wasted. On the contrary, the Christian's first duty was to make the most of his powers and possessions in whatever vocation his lot might have placed him. If his vocation was not a useful one, he was urged to seek a more useful one. If he had no vocation, he was urged to try and find one. The Puritans believed that one standing in grace was dreadful. No one should be unemployed; even the men of leisure should find some occupation which would be of service to the community. Puritan pressure in these directions was largely tended to develop the spirit of enterprise and industry characteristic of modern capitalism. Both by inculcating frugality and by strengthening home ties, Puritanism encouraged thrift and the accumulation of capital. Moreover, the emphasis on self-discipline and on self-control, it helped to form those regular habits on which the conduct of modern industry depends. The business virtues, viz. honesty, punctuality, and steady application to work, were stressed and approved. Puritanism, again, the emphasis on personal responsibility which was characteristic of the movement served to make men bring an independent judgment to bear on their business problems, and so increased the power of individual initiative. Hence, the influence of Puritanism was far more clearly on the side of economic freedom. For the Puritans, having lost power, naturally distrusted State control, while those who were in any case convinced of the superiority of State institutions, their first concern was toleration, and they became the champions of the movement for limiting State interference in every direction.}

1 Puritanism and art. The relations of Puritanism to art and literature are not easy to define. The movement has been wrongly held responsible for the general degradation, especially in architecture, which took place in the 18th century. Much vandalism has been attributed to Puritans in which they only shared or did not share at all. It is of course clear that Puritanism tended to dissociate itself from certain forms of art, particularly the dramatic art and the stage, which it treated as hopelessly corrupt, and whose moral recovery it consequently tended to retard. Moreover, Puritanism taught that it depreciated the outward. Calvinism has been called "the ugliest of all religions." Its symbolism is of the plainest. Dependence on the outward is discouraged. The central emphasis on God's righteousness still further contributed to a neglect and a distrust of the merely beautiful. The Puritan was intensely preoccupied with moral issues, and, as a result of the Puritan tradition, many have neglected and shunted the artistic sides of their nature. And yet this very concentration on the moral life and on the supremacy of God's righteousness has not been without its vivifying influence on art and literature. The deepening of the inner life due to Puritanism was bound to find expression.

1 Puritanism in itself is ill-fitted to produce a great art. Yet the inward life of the soul may be intense and the more intense the better. It is only the soul itself through appointed forms; and absorbing thoughts and passions cannot fail in some way to discover or to create that outward vehicle through which alone they can secure a complete self-realisation.\[3\]

Nor is the self-discipline of the Puritan unfavourable to art.

1 For the maintenance of high passion the habit of moral restraint is in the long run more favourable than the habit of moral relaxation.\[4\]

And it may be urged that, in the last resort, art reaches its highest achievements precisely through the practice of moral renunciation, i.e. through the Puritan acknowledgment of the supremacy of God's righteousness.

\[3\] So man does real justice to beauty till he feel the moral beauty of resting beauty—upon due occasion. There is something incomplete in artistic taste till it see, with so great an artist as Pino, the beauty of Puritanism.

4. Summary.—To sum up, the Puritans stood for an ecclesiastical ideal, the chief importance of which lay in asserting that the Church must not be made the tool of the State. In thus maintaining the independence of the Church, a necessity for the existence of any true government, the Puritans promoted liberty and very powerfully influenced the ideas of government. These ideas led with them into the colonies which they founded in America and into our own constitution and of state found freer expression. The United States Puritanism has exerted an even greater influence on Saxon thought than it has through British character. By means of a narrow theology Puritanism has shaped generations of Englishmen on the themes of religion. By its resistance or discipline it has influenced a steady growth of intolerance. It has exerted itself largely in industry and in industrial practice which is apparent in all professions and all the men and women who have come under the influence of the Puritan tradition. If it has favoured the growth of democracy, it has developed those qualities of self-control and devotion to duty without which no democracy can be preserved from corruption. In speaker and outlook Puritanism has shown some of its defects in the 19th and 20th centuries. The movement known as Puritanism has been too much to the OT. Belief in

4 Ibid., p. 9.
original sin led to a too sweeping depreciation of human nature and to harsh, unsympathetic judgments on opponents. Their religion tended to lack gladness, and their 'cardinal error lay in a narrow conception of the pureness and sacredness of all as not also as the God of joy and beauty and intellectual light.' But no movement of religious thought could fail to enable human life and to possess permanent worth which, like Puritanism, was inspired with the conception of the world as being to glorify God and enjoy Him for ever.

LITERATURE.—Besides the works mentioned in the article, the following should be consulted: 1. GENERAL HISTORIES:—

ii. PUNISHMENT IN STUART PERIOD AND COMMONWEALTH.—

H. G. Wood

PURITY.—A fine passage from the works of the Cambridge Platonist Henry More (1614-87) will give a good idea of the wide meaning which the gospel attaches to the word 'purity':

'By purity I understand a due moderation and rule over all the powers of the soul, not only of the angels, both of a holy spirit and having so watchful an eye over their subtle enticements and allurements and so firm and loyal affection to that idea of celestial beauty set up in our minds, that neither the pains of the body nor the pleasures of the animal life shall ever work us below our spiritual happiness and all the compatible enjoyments of that life that is truly Divine; and in this consubstantiality is contained whatever either mortal temperament or fortitude can make us.

To this large conception of the meaning of purity corresponds the view of Augustine that the purity of heart mentioned in Mt 5 means single-heartedness or simplicity:

'sicut aedificium est simplex cor.' *

It thus appears that 'purity', like 'temperance' and 'sobriety', has, properly speaking, a wider sense than is usually connected with the word. It connotes the singleness or simplicity of a thing which finds the perfect satisfaction of its desires in God. The opposite of purity is uncontrolled or misdirected desire; and the characteristic reward of purity is the vision which is man's true life:

'a visio Beatissimae Dei.' *

The origin and usage of the word are sufficiently dealt with in HDB, s.v. It will suffice to recall the obvious fact that the idea of purity, like that of holiness, gradually passed over from the material and moral to the spiritual conception, and into a large range of ethical ideas; the notion of outward conformity to any deontology of the service of the Deity gave way in process of time to that of inward sanctity. In this process the teaching of the Hebrew prophets played a conspicuous part. The culminating point is perhaps marked in our Lord's teaching recorded at the conclusion of Mt 5. Christ's argument was really about the thing that 'defileth a man' in fact distinguishes between two spheres, the physical and the spiritual, which men had hitherto tended to confuse. Henceforth, as Christians were led to perceive, 'the Kingdom of God' (Mt 5:36, 26) was to be contemplated by the Scribes can be prejudiced only of that which affects man's moral nature. It is interesting to trace anticipations of this principle in ancient writers—e.g., Cicero:

'Cuius est lorum genus unde ad hominum animam invasa solitudo?'

As in the case of other virtues which re-appear in Christian ethics, the idea of purity directly depends upon the Christian conception of God as a Being to whom 'all hearts are open and all desires known.'

1. Purity in the narrow sense of freedom from sensual pollution was a virtue which, before the coming of Christ into the world, held at best a precarious position. Israel cannot be said to have been very far above the general level of the animal world in this respect. Where polygamy is not condemned, no very high standard of purity can be expected, and grave lapses from chastity in OT times were of frequent occurrence. These were often closely connected with Israel's ineradicable tendency to idolatry, and in fact the prophets usually describe the apostasy of the nation as 'adultery' (Hos 2, Jer 3, Ezek 16, etc.). As regards the Gentile world, heathen moralists could hardly be expected to display any strong feeling to self-regarding and prudential motives. They had no resources for tampering or restraining the force of human passion. Purity was a virtue of which, in the picture of heathen degradation regards the Gentiles as actually given over to an abandoned mind (Ro 1:24, Eph 4:18). Religion itself was corrupted at the source; the current mythology was a chief factor in the general moralization. The better element in the ancient religion passed over into the mysticism of the Cabala, which at least approached to the sense of moral defilement, though they could not appraise it. These bore their own imperfect witness to the truth that purity of life was needed for acceptable approach to God.

Now, Christianity dealt with the evil which was too strong for the heathen world by re-emphasizing, with sanctions peculiar to itself, the Stoic doctrine of the sanctity of the body. Seneca had spoken of God as 'near us, with us, within us,' lodging in the human body.' Euphonet ix. 18.58:

'Thou bearest God about with thee, within thee; and thou dost not realize that thou art outraging Him with thy impure thoughts, thy impure deeds.' God Himself bore within thee and over looking and overlooking all, etc. St Paul points to the body as the actual temple of the Holy Spirit (1 Co 6:19), the bodies which are misused in sin are 'the members of Christ' (1 Co 6:20).

The sin of uncleanness does not descend to the indwelling presence of the Spirit; it overseas that nature which the Son of God made His own, and by the Spirit, who dwelleth with Him, he is forthwith

1. 'Hoc est, tibi deus, qui capite, in corde. Deum, deum, Deum; et tu, quicumque sumis comperti, in corde. Deum, deum, Deum.'

2. See HDB, s.v. 'Unclean, Uncleanness,' 'Holiness.'

4. De Puritate ad Deum.

5. See E. C. Trench, Synonyms of the NT, Cambridge, 1854.

6. ζητεοντος του τελουμενον ἐν τοις ἀνθρώποις, κατὰ τὸ ἐν ἰεροῖς τοῦ θεοῦ ἀνθρώπους.

8. Hist. xii. 11.5, quoted in Lightfoot, p. 514.
the body is for the Lord, and the Lord for the body' (1 Co 6:13). We find an echo of this language in passages like Genesis 2 and Isaiah 53, expressing the purity and dignity of the material which the Son of God has condescended to assume and to hallow.

'God forbid that He should abandon to everlasting destruction his own hands, the object of His care, the receptacle of His own Spirit, the queen of His creation, the heir of His holiness, the preserver of His religion, the soldier of the heavenly, the sister of His Christ.'

Christian purity is in fact sanctioned by motives peculiar to the religion of the Crucified. It forms a part of that self-control (τελειοτροπία) which is the most characteristic mark, print in the Christian morality, and which was 'primarily identified with sexual purity, and then extended to include renunciation of the world and mortification of the flesh.'

Purity is the spirit which strives to bring every bodily impulse, every affection, every passion, every faculty — thought, imagination, memory — into subjection to Christ. But it is important to remember that purity implies not mere abstinence from illicit pleasure but the positive dominion of the Holy Spirit over the body, which has been raised from the dead and made the temple of the Spirit, so that no longer can be employed as an instrument of sin (Ro 6:13).

The prominence of this doctrine in the NT is a proof of 'the intense dislike which religion has to the fouling of life against whatever might destroy, waste, or pollute them. Christianity erects a sacred fence round the most dangerous places in our life. It does not despise the body, but labours to preserve and increase vitality. With this motive, it visits with its sternest censure any assertions of the individual's right "to do with himself as he will with his own body."'

Further, if purity implies the right direction of desire, the gospel brought to bear upon the force of the self-affection, of the love of self as the most dangerous power of all, the life of the flesh, of the flesh's desires, in so far as it inspired and developed the love of God and of man for God's sake.

(b) Christ's law of mortification has an obvious bearing on the process of self-purification. If the former is larder, pluck of the soul, purging in the sense of purgation, implies something more than mere self-restraint, the habit of which in other matters is so essential a condition of victory over fleshly sin. It implies the cutting off of every innocent pleasures that are found to ensnare purity. 'If ye are mortifying the flesh, it is not a matter of asceticism. It means also the vigour which is against the beginnings and least occasions of evil.'

(c) Occupation is also a valuable and necessary safeguard. While sloth and ease are the frequent forerunners of impurity, any kind of employment which leaves few vacant spaces of time is of great benefit.

(d) Of the power of prayer and of the recollection of the Divine presence it is needless to speak. Without them purity in its perfection is impossible. One particular remedy may, however, be mentioned, namely, the profession of the sympathy of Christ with the tempted. He has felt the full pressure of temptation, yet without sin (He 4:15), and one great aid to purity is the thought of His example, of the travail which He underwent in order to be made in all things like unto His brethren, and of the cross on which He endured the open shame which is the appropriate penalty of secret sin (He 2:12).)

Finally, we must bear in mind that the desire which occasions the sin of impurity finds its appropriate hallowing in marriage.

'de beautiful marriage hath a natural efficacy, besides a virtue by divine ordinance to care for the purifying of theart otherwise might afflict persons temperate and sober.'

2. Purity in the larger sense is virtually equivalent to 'simplicity' or 'single-mindedness.'

It is a virtue by divine ordinance to care for the purifying of theart otherwise might afflict persons temperate and sober.

Purity means the integrity of a will dedicated to God in perfect simplicity of purpose; it implies not the sacrifice of innocent desires, but the conscription of them; not the effort to acquire a single virtue, such as chastity or purity in the narrower sense, but the striving after goodness in the widest sense. Purity of intention consists in seeking to please God in all things and to make His glory the object of every act and word. The pure heart is that which is continually seeking God, passing through all things onwards and upwards to God, embracing one only object of life, and holding fast to a single purpose as against the bewildering multiplicity of calls and duties, claims and responsibilities, which make life difficult and complex. The pure heart is undivided, undistracted, unsophisticated. It imparts to character that 'moral unity, which consists in a supreme degree exhibits, the unity which springs from devotion to a single end — the love and service of God.

And the reward of this purity is vision, insight, illumination (Mt 5'). 'Cor purum penetrat caelum et inferentiam,' Augustine was correct in the sentiment 'Beati mundo corde,' etc., with the Holy Spirit's gift of 'understanding.' The reward of purity is a certain freedom from intellectual illusion and error; by purity of heart, 'etsi non videmus de Deo quid est, videmus tamen quid non est.'

Further, the soul which shall satisfy not only the intellect but every element in man's complex nature is the consummation of a process that begins in this life — the cleansing of the heart and conscience from all lower sin that is built up in the Temple of God. In its completeness is the effect on the character of true faith in God (Ac 16:15), the faith that works by love (Gal 5). So Bernard makes it to consist in two things which are both different aspects of love: in quae erat gloria Dei et utilitatem proximal. For purity is, as we have already noticed, not mere abstinence, not the mere cleansing of the heart from wrong or inordinate desires, but desire or love directed aright, and finding in God and His service the one true and satisfying end of human life. The pure heart seeks not God's gifts merely, but Himself. It thinks of Him as the only adequate response to the deepest yearnings of human nature. It believes that what He is, rather than what He gives, is the true life of man. Ille non aliquis ex ilia quaestandis; sed se ipsum ubi dati ad freudum, se ipsum omnium conditionem.'

PURUSA.—*Purusa* signifies in Sanskrit ‘man,’ then ‘the living principle in men and in other beings,’ and finally ‘the supreme Spirit,’ both the individual and the universal, and the impersonal world-soul in a pantheistic sense.

As early as the Rigveda (x. 90) there is found a hymn, which reappears with several variations in later Vedic texts, wherein the *purusa* is described as the principal being, as the personification and starting-point of the whole universe. The heavens, the atmosphere, and the earth proceed from the *purusa*, also the sun and moon, gods, men, and animals. From the head, the arms, the body of man are described as proceeding from the *purusa*. The individual souls are conceived (according to vv. 11, 12) the four castes of men, which are here mentioned for the first time in Indian literature. Since in this hymn, though only in mythological fashion, the idea of man as the image of the universe is expressed, we may see in it an anticipation of the main teaching of the Upanisads and the Vedānta (*q.v*.), that is, of the doctrine of the essential identity of the inner man, the soul, with Brahman as the soul of the universe.

In the philosophical systems of India the word *purusa* is used in the same sense as the more common *ātman* to denote the souls of living beings; and this is done independently of the particular meanings attached to the word *purusa*, as in *purusa śuddha*, the individual souls are conceived as one with the indivisible soul of the universe or, as in the Sākhyā, Yoga, Vaishēṣika, Nyāya (*q.v*.), as existing in infinite numbers.

**GARBE.**

**PUSEY.—** Edward Bouverie Pusey (1800-82), scholar and divine and leader of the Oxford Movement (*q.v.*) in the Church of England, later known as the Catholic Revival, was regius professor of Hebrew in the University of Oxford from 1825 to his death. This crown appointment, combining with it a canonry of Christ Church, gave him a central and independent position, from which he was able, by books, sermons, and individual teaching, to gain a unique character and aim to the Movement, both in its earlier and to a great extent also in its later phases.

1. His place in English life.—Pusey was by birth an English gentleman ‘of the old school’ (cf. the anonymous in M’Arthur’s *Life of Edward Bouverie Pusey*, i. 180), and it may be said that some of the best influences of his time had combined in the formation of his mind and character. He was one of the first English theologians to study German, and in two long visits to Berlin, the universities, and Götingen in 1825-27 he worked under Freytag, Ewald, Tholuck, Schleiermacher, and Eichhorn, and came to know what scholarship meant to them.

Eichhorn Pusey learnt the vastness of the world of modern learning and the standard of work which was necessary in order to explore it. When in later years he would say, ‘A German workman would think nothing of doing so and so,’ he meant Eichhorn (*Liddon*, i. 74).

Pusey was a fellow of Oriel at the time when this common-room was the intellectual centre of Oxford, and until his wife’s death in 1830 he mixed freely in what was called the life of the university. Even in the deep seclusion from ordinary society which he inflicted upon himself after that date he was in touch through his family with the life of the English upper classes, and such sermons as the following he said Dice: ‘In his Soul’ was printed (in all Saints’ Margate, St. Margate, Ash Wednesday, 1865), or ‘Our Pharisaism’ (delivered in St. Paul’s, Knightsbridge, on Ash Wednesday, 1868), show his unerring insight into their spiritual needs. This is an important element in Pusey’s life, which has not always been sufficiently recognised, of his attempt to combine no less a thing than the attempt to combine a man whom none could patronize or despise, and who knew how to speak to Victorian society about its vulgarities and worldliness with a searching directness which could not be evaded or ignored (cf. his reference to a lady in *Spiritual Letters of Edward Bouverie Pusey,* London, 1898, p. 77, and to the heads of houses in Oxford for their luxury [*Liddon*, ii. 110]). Students of 19th cent. manners would find a great deal of material in his sermons. In *Liddon’s Life*, i. 81, there is a charming account of Lady Emily Herbert, who was married to his brother Philip in 1822, and of her relations with Pusey, which helps to put this side of his life into true perspective.

2. His part in the Oxford Movement.—In the Church revival which began in 1833 the acknowledged leaders were Pusey, Keble, and Newman, and Pusey’s special part in the work may best be understood by comparing his mind with that of his contemporaries. Imagine, then, a young man, interested in religion, but inclined to scepticism, coming into contact with the three leaders of the Movement in its early days, and starting some controversial subject, which at first he was inclined to think only true for one Church. Keble, we can imagine, jealous for the truth of God, and looking at the matter from a high mystical plane, would make some shrill and unanswerable remark in very simple language, which would silence and perhaps convince the boy, even if it did not altogether convince him. Newman would instantly throw his mind sympathetically into the problem, and work out speculatively, as if trying to arrive at the truth about it for himself. Pusey, on the other hand, would concentrate his attention on the questioner, would study his character, and begin to try to convince him of the truth. He had, that is to say, pre-eminently the mind of a pastor, and had no taste or capacity for speculation. Thus in religious controversy his method would not be the mind that would originate the ideas, or even to give them striking expression. His work would be to translate them into action and to press them upon men’s attention. Pusey’s eminence lies in his immense strength of character and in his conviction that he had added very great learning, and the power of bringing it to bear upon the matter in hand in that cumulative and somewhat uncritical manner which was more controversially effective in those days than it would be in ours.

Pusey, ‘said R. W. Church, commenting on the significance of his adherence to the original Tract writers, ‘knew the meaning of real learning. In controversy it was his sledge-hammer and battle-axe, and he had the strong and sinewy hand to use it with effect’ (*Quoted in Liddon*, i. 358).

The most striking contemporary appreciation of his personality and influence is in an essay by J. B. Mozley about the sermons he preached on ‘The entire Absolution of the Penitent,’ at the close of his two years’ suspension (1st Feb. 1840).

The religious principles and ideas which it was Pusey’s work to press home in this way into the national consciousness, were in Victorian England not anything which he had acquired as the result of a sudden conversion; nor had they been adopted in any way as a working hypothesis to be tested by their success; they were part and parcel of his whole self, acquired by tradition in childhood, and confirmed by all the experiences and studies of early manhood. He never had any temptation to doubt, and was always in the mental position of a teacher. If the truth which he thus held so con-

fidently were attacked, his nature would rise up to defend it with all the ardour of a crusader, and he would be ready to face all reverses and difficulties with the uncompromising courage of an early Christian martyr. Church's judgment about him was that he was 'a man after all to rank with religious reformers. His mind was remark- able. While still an undergraduate, he had tried unsuccessfully to win an old school friend from atheism, and this experience left a deep and very important mark upon him (Liddon, i. 40). It is true, indeed, of all the early Tractarians that they felt themselves to be striving not for the triumph of one particular form of Christianity, but for the maintenance of genuine religion as a whole. In this they were far in advance of their time, and it is some reason perhaps for the strong prejudice which they had to overcome. Soldiers are not popular in countries which think themselves secure (cf. the striking speech made by Lord Salisbury after Pusey's death (Liddon, iv. 301 f.). This may have been also a cause of that simplicity in Pusey's outlook which made him to the Roman Catholic writer says, unable ever 'to calculate the effect of his arguments on any who differed from him.' With this directness and intensity of character he combined an equally strong capacity for affection. The controversies and work of the Tractarians must never be thought of apart from that estito dyary (1 P 4) which bound them to each other, and the refined family life which was the permanent background of all their activities. The Tractarian had indeed its centre in a university, but there was none of that easy tolerance or that cold-blooded aloofness from the real world in its leaders which make religious people rightly suspicious of the word 'academic.'

2. Theological position. The foregoing considerations are necessarily for a right understanding of Pusey's theology. The Tractarians were practical religious reformers, and the moral struggle against unbelief was always before them. They were the first to bring the whole study of the Bible into the centre of the Church as historians or critics or compilers of dogmatic systems. They were not, like the Scholastics, the products of a settled ecclesiastical world, nor, like the modern Biblical scholar, did they stand aside from the problems of practical religious endeavour. Their theological work was all called out by the needs of a religious revival and by the combat with teachers whom they felt to be hindering it.

Pusey's last contribution to the religious thought of his time is the conception of Christianity as being necessarily a single whole. This was the natural result of the apologetic preoccupation noticed above. God is one, and Jesus Christ is one, and the Word of God through Jesus Christ is one. So also must be the Life of the Church and the faith of the Church. In the previous chapters of this study, we have made no assumptions with Christians nowadays, but they are to a very great extent the legacy of the Tractarians and the result of the conflict of the Tractarians with the leading tendencies of their times. In the previous chapters of this study, we have made no assumptions with Christians nowadays, but they are to a very great extent the legacy of the Tractarians and the result of the conflict of the Tractarians with the leading tendencies of their times. In the previous chapters of this study, we have made no assumptions with Christians nowadays, but they are to a very great extent the legacy of the Tractarians and the result of the conflict of the Tractarians with the leading tendencies of their times.

3. Theological position. The foregoing considerations are necessarily for a right understanding of Pusey's theology. The Tractarians were practical religious reformers, and the moral struggle against unbelief was always before them. Their theological work was all called out by the needs of a religious revival and by the combat with teachers whom they felt to be hindering it.

Pusey's last contribution to the religious thought of his time is the conception of Christianity as being necessarily a single whole. This was the natural result of the apologetic preoccupation noticed above. God is one, and Jesus Christ is one, and the Word of God through Jesus Christ is one. So also must be the Life of the Church and the faith of the Church. In the previous chapters of this study, we have made no assumptions with Christians nowadays, but they are to a very great extent the legacy of the Tractarians and the result of the conflict of the Tractarians with the leading tendencies of their times. In the previous chapters of this study, we have made no assumptions with Christians nowadays, but they are to a very great extent the legacy of the Tractarians and the result of the conflict of the Tractarians with the leading tendencies of their times. In the previous chapters of this study, we have made no assumptions with Christians nowadays, but they are to a very great extent the legacy of the Tractarians and the result of the conflict of the Tractarians with the leading tendencies of their times.
rate give him credit for having in this way cleared the ground for the intelligent modern study of theology.

Even one in that day looked on the Bible as the source of religious truth, and for the Bible must the part he did not need to go behind that. Pusey's contention merely was that the Bible must be studied in its proper historical context of the early church. It was written to him by Evangelicals that by this deference to the Fathers he was thereby setting up an authority other than that of Holy Scripture, he would answer:

'The contrast in point of authority is not between Holy Scripture and the Fathers, but between the Fathers and us; not between the book interpreted and the interpreters, but between one class of interpreters and another; between ancient Catholic truth and modern private opinions; not between the Word of God and the word of man, but between varying modes of understanding the Word of God' (Liddon, i, 419).

This appeal to antiquity was, with Pusey, it should be noticed, something that could be applied in a mechanical way. It was an appeal to the whole mind of an age 'which had deeper and truer thoughts, an altogether deeper way of viewing things than moderns' (ib. i, 410), and the early Chris-
tian and their interpretation, without raising an infallible authority in matters of either faith or practice, but as being a great reservoir of true Christianity, in which those who would understand Holy Scripture for themselves should find the best and most standard is, of course, very difficult to apply to individual questions at any particular moment, and is perhaps difficult to defend in the face of a hard unsympathetic logic, whether from Roman Catholics or from sceptics, but Pusey believed that it represents a combination of a spiritual and theologically satisfactory conception of the authority of the Church, within which all that is true both in Romanism and in Protestantism is seen to be embraced. The effect of this line of thought on young men who had been brought up as a Methodist may be seen in Gregory's autobiography, and a clear sketch of the practical conclusions to which it led is given in a letter of Pusey's in 1840 answering the question, 'What is Puseyism?' (Liddon, ii, 140). For an account of the 'Library of the Fathers' which Pusey and his friends, in order to make the chief Patristic writings available for English readers, see ib. i. ch. xviii.

Attitude towards science and criticism.—Within the limits of space available in a work like the present it has seemed better to draw out to these broader aspects of Pusey's teaching than to go into the detailed controversies which accompanied the application of his principles to the life of the Church of England. A list of the main controversies is given for reference below.

The Oxford Movement proper was previous to the theological difficulties connected with evolution and other scientific hypotheses, and Pusey was one only of its leaders who lived on into that new period. He describes the change that had taken place in thought in an interesting letter to his old pupil J. B. Mozley when he returned to Oxford in 1871 as regius professor of divinity (ib. iv. 292). Pusey was not only friendly to the teaching of natural science when he felt it was not being used to undermine religion, and he was much more alive to its importance than many of the 'liberal' theologians of his time. In 1835 the first public meeting of the construction of the museum at Oxford would have been a disaster to him if he had known his friends had not supported it (ib. iv. 328). One of his last sermons bore the characteristically numerous title Un-science, not Science, adverse to Faith (London, 1879), and is described by his biog-

2 Pusey's overwhelming sense of the failure of the Church to minister to the great cities showed itself also in relation to the ordinary parochial system. At the time when he was composing the tract on baptism in 1835 he wrote an article on the need for new churches in London which gave the stimulus to Bishop Blomfield's Metropolitan Churches Fund. He and his wife gave up their carriage, and started to live much more simply in order that he might subscribe to the fund. In 1845 he founded anonymously the Church of St. Saviour's, Leeds, as a parochial scheme on the model of a mission, as Newman succeeded, and the course of nineteen sermons which were preached during the octave of the consecration was the first of those 'parochial
missions" which have now become an ordinary feature of English Church and Commonwealth, with this abiding interest in the spiritual welfare of the great cities may be mentioned the personal help that Pusey gave in Bethnal Green during the outbreak of cholera in 1866.2

The personal reminiscences recorded by those who have been favoured there give a pleasant and vivid impression of his personality.

1 'served on the Committee of the hospital with Dr. Pusey,' wrote a clergyman, "and very often I met him at the bedside of patients. The tender-hearted sympathy and interest which he showed were always acceptable. If the word "sweet" had not become somewhat cajoling—"I should not have been able to hear in the smile and quiet laughter which so brightened his face when he was pleased and hopeful" (Liddon, iv. 143). This smile of Pusey is, I should note, noted, was far from being his admirer in other ways. "Jenny Lind," wrote Dean Stanley in 1845, "has been in Oxford for three days. When animated she is perfectly lovely, and her smile is, with the exception of Dr. Pusey's, the most heavenly I ever beheld." (Letters of J. B. Morley, London, 1855, p. 197; cf. also Liddon, li. 103).

Pusey's influence upon individuals was very great. 'From 1858 onwards he handed confessions from persons in every rank of life (Russell, p. 78), and through strongly opposed to any idea of making private confession compulsory, he wished frequently to urge its practical necessity in the case of certain sins.3 His adaptations of Roman Catholic books of devotion, such as Scapolliti's Spiritual Exercises (Oxford, 1845), though much criticized at the time, have greatly enriched the spiritual life of Anglicans, and helped to break down a great deal of the prejudice which is due to ignorance against the Roman Church. In 1856 he held a devotional conference of clergy for a retreat in his house, and was one of the chief promoters in beginning systematically 'retreats' (g.v.).4 In this connexion also should be mentioned his commentary on The Minor Prophets (Oxford, 1877), and his little volume of Private Prayers (London, 1853), which shows the simplicity and fervour of his own devotional life. No undertaking for which he was responsible was nearer to his heart than the 'Companions of the Love of Jesus, engaged in Perpetual Intercession for the Conversion of Sinners,' and the volume of Eleemosynary Addresses (Oxford, 1859) he wrote for them for this gild would suggest why a place has been sometimes claimed for him among the English saints.7

PYRRHONISM.—See SCPTICS.

PYTHAGORAS AND PYTHAGOREANISM.—I. Pythagoras.—Pythagoras was regarded as more than human by the members of the society which he founded, and all differences between them were supposed to be settled by the formula aoros ep, ipso dieita. On the other hand, he had left no written statement of his doctrine, and little more than a century after his death there were conflicting accounts of it were already current. We find some Pythagoreans denying that the practice of asceticism formed any part at all of the master's teaching, while others gave it the first place. This divergence seems to have arisen from the ambiguous character of the society, which was from the first at once a religious order and a scientific school. We shall see grounds for thinking that the two things were one in the mind of Pythagoras himself, and that the society of his time was at least partly attracted some, while others clung to his religious beliefs and practices. By the 4th B.C. the divergence had become so great that it is hard to find anything in common between the two sects except the name and the general belief that the order of the numbers is the key to the universe. He is natural, we have no direct testimony from the Pythagoreans of the strict observance, though the denials of the more enlightened members of the society would sufficiently prove their existence. Fortunately, however, they were a fairly subtile race, and we still have a considerable number of fragments in which they are made fun of for their squalid and penurious ways. It is perfectly plain that they did, as a matter of fact, abstain not only from meat but from wine, and they chanced to keep their costume and went barefooted. They also looked for a privileged position in the next world, and regarded their present life as a sojourn in a strange land (aroschylia). For the rest, they are said to have been louche and dirty, which is the impression that ascetics are apt to make on men of the world. This is a matter of such importance for the history of Greek religion that it may be of great assistance when other documents. We shall most be mainly found in A. W. Pickard-Cambridge, Select Fragments of the Greek Comic Poets (Oxford, 1881). The sources are, however, in his Pythagoras, says: 'In heaven's name, do you think the men of tommor that turned Pythagoreans were so squalid because they were pious? Do you think that they wore dirty clothes? Not a bit of it, in my opinion. It was from necessity, seeing they had nothing to eat, that they invented a fine pretext for economy, and established canons useful to the poor. Why serve up to them fish or meat, and if they don't eat it up toss and all, I'm ready to be hung ten times' (Pickard-Cambridge, p. 69). And again: 'He said he had descended to the dwelling-place of those below and had beheld each class of them, and that the Pythagoreans had a great advantage over all the rest. He said that Plato would eat with them alone because of their piety'—The god is not particular, then, if he likes to keep company with his disciples, and mentions: "... And they eat vegetables and wash them down with wine, and none of our young men would be content with life and the costs of the and absence of baths" (ib. p. 70). In the Tarentines of Alexia, the following dialogues occurred: 'The Pythagoreans, as we are told, neither ate flesh nor anything else with life in it (fowls), and they alone drink no wine.'—Epicurides eats dogs, though, and he is one of the Pythagoreans.—'Yes, but he kills them first; for then they no longer have life in them.'—'They live on Pythagorean and subtle words and chiselled thoughts (gossips), and are well from the table. Their doctrines are that this is the cup of life, that's all.'—Why, that is prison fare! ' (ib. p. 65). Other extracts will be found in Diels, Vorrabatrisci, Berlin, 1852, l. 13, Liddon, 431, 439, and others. 9 The sons of St. Jerome, who was the 1st. cent. speak of the Pythagoreans very much as Aristophanes speaks of Socrates. The reference of 'Socrates to the Descent into Hadec' (Hades) from Diels, Vorrabatrisci (A30) is of special importance in the reconstruction of the system. The passage the arsaclyia will be referred to \newblock{\textit{Altes Weltbild}}

On the other side, we have the statements of Aristozenos of Tarentum, who had been personally acquainted with the leading Pythagoreans of the beginning of the 4th cent. B.C., and who had been
PYTHAGORAS AND PYTHAGOREANISM

a disciple of the Pythagorean Xenophilus before he joined the school of Aristotle. He affirmed that Pythagoras only enjoined abstinence from the flesh of the ploughing ox and the ram; and, with respect to the mystical doctrines of the Pythagoreans, he said that, as a matter of fact, they were the favourite vegetable of the Pythagoreans, who valued their laxative properties.

He also said that Pythagoras had a weakness for the flesh of young porkers and tender kids. In a similar spirit, though without the characteristic exaggeration of Aristoxenus, Diocles of Messene, another disciple of Aristotle, who maintained even against his master the superiority of the active to the contemplative life, endeavoured to represent Pythagoras as a legislator and statesman.¹ No doubt it is this divergence that accounts for the almost total silence of our earliest authorities about Pythagoras himself. Plato was very deeply interested in Pythagorean doctrine, and it is a very remarkable fact that the name of Pythagoras occurs only once in his work, i.e. in the first passage, where Socrates is told to say that the Pythagoreans regard music and astronomy as sister sciences.² On the other hand, Plato has a great deal to say about the views of those whom we know from other sources to have been Pythagoreans; the strange thing is that, for all Plato tells us, we should only have been able to guess this even of such leading men as Philelaus and Echecrates. Generally he introduces Pythagorean philosophical views anonymously as those of 'ingenious persons' (καλομενοι αρχιτρετοι), or of the like, and he does not even say that Pythagoreans, whose mouth he has placed an unmistakably Pythagorean cosmology, was a member of the society. We are left to infer it from the fact that he comes from Italy. This reticence must surely be attributed to Aristotle himself, and not to mass destruction.

The name of Pythagoras occurs only twice in the genuine Aristotelian writings that have come down to us. In one passage³ we are told that Alcmeon was a young man in the old age of Pythagoras, which is a useful piece of information; the other⁴ is a mere quotation from Aleidamus to the effect that 'the men of Italy who call themselves Pythagoreans.' By great good fortune, however, he also wrote a special treatise on the Pythagoreans, which is lost, but is quoted by later writers. These quotations are invaluable; for they are evidence that the miraculous legend of Pythagoras was not, as might have been supposed, the invention of a far later age, but was known at Athens in the 4th century. It may be assumed that Aristotle heard it from some of the Pythagorists of whom the contemporary comic poets, like Aristocles, Pythias, and Indikos, not at all congenial to him, and he probably wished to represent Pythagoras as a charlatan.

The intention of Aristotle seems to be shown by his statement that Pythagoras placed himself with him as a pupil, and that, 'he did not break with the miraculous mongering of Pherecydes.' (τον Φηράκτυν γενομένων και αὐτοῦ έκατέρων.) At a later date Socrates told Apollonius of Tyana and Iamblichus were not able to quote Aristotle's authority for the miracles of Pythagoras, and in this way that philosopher unwittingly became one of the founders of Neo-Pythagoreanism—a thing which was enough to make him turn in his grave.

The earliest reference to Pythagoras is a practically contemporary one. Xenophanes, like Pythagoras, traveled to Egypt, took a home in the West 'when the Mede appeared'; and some verses from an elegy of his are quoted by Diogenes Laertius, in which we are told of Pythagoras that he once heard a dog howling and appealed to its master not to let it as recognized the voice of a departed friend. It is true that Pythagoras is not named in the verses themselves, but Diogenes, or rather the writer from whom he is excerpting, is more than usually precise in his method of citation; for he says that he was mistaken as the first line is a verse which he quotes. It is clear, then, that he had the whole elegy before him, and he can hardly have been mistaken when he said it referred to Pythagoras. If that is so, we have contemporary evidence that Pythagoras taught the doctrine of transmigration or rebirth (σαρκοτροπία). The verses are satirical, as we should expect from Xenophanes, and the next reference to Pythagoras is hostile too. Heraclitus says of Pythagoras that he conducted scientific inquiry (τεραπεύει) farther than any one, that he claimed its results as a wisdom of his own, and turned them into an art of mischief (χακτρεπία). Later still, though, within a century of the time of Pythagoras, Heraclitus, the master, perhaps, of his own 'philosopher' (i.e. scientific man) of the Helles, and says he had been told by the Greeks of the Hellespont that the legendary Scythian Salmoxis had been a slave of Pythagoras, son of Mnesearchus, at Samos, and had learnt from him the strange doctrine of immortality. Heraclitus does not believe this, for he is of opinion that Salmoxis lived many years before Pythagoras; but the story is evidence that Pythagoras was well known in the 5th cent. both as a man of science and as a preacher of immortality, and that is what we want to know.

The Life of Pythagoras by Diogenes Laertius is a Farrago of Alexandrian erudition and speculation, while those by Porphyry and Iamblichus are subsequent to the romantic reconstruction of the life of Pythagoras by Apollonius of Tyana. They all contain, however, a good deal of material derived from Aristoxenus and Diocles, which may embody genuine tradition in such statements as have no connexion with the particular views regarding Pythagoras which they were anxious to propagate. The historical setting came mainly from Timaeus of Tauromenium in Sicily, who was anything but a trustworthy historian, but who had special means of access to original sources for the history of the West. The result is that we can really be said to know may be very briefly stated. Pythagoras, son of Mnesearchus, was a Samian, and the period of his activity fell in the second half of the 6th century B.C. According to Aristoxenus, Pythagoras was contemporary with Hecataeus, because he is subsumed to the tyranny of Polycrates, which seems probable enough, though we do not require any special explanation for the emigration of Ionians to the west at this date. He found the Achaean colony in the Gulf of Tarantum, famous for its healthy climate and the number of Olympic victors it produced. Here he established his society, which was at once a religi-

of Pythagoras as Alkalides and Euphorbos. 1 If we could be quite sure of the identity of Ephorus and Euphorbos, we could compare Pythagoras with the war between Sybaris and Croton (311 B.C.), that would have been foril,3 though it may have been at the time. The residence of the leading Pythagoreans at Thebes towards the end of the 5th cent. is also a fact, and it is an interesting point how far to say the political career of Epaminondas and the brief supremacy of Thebes in Greece may be traced to their inspiration. At any rate Aris-

totle's 4 quotes a dialogue between Pythagoras and the 'philosophers' that the leaders of the Thebans, the city was conquered. He also knew his countrymen had made use of Ionian writers, in his dialogue de Genio Socratis describes the conversation that took place among the con-

spirators of Olynth in 357 B.C.5 It was the 300 Pythagoreans at Thebes by seizing the Cadmea. He tells us that the conspira-

tors had met in the house of Simmias, the Pythagorean disciple of Socrates when we know from the Phaido, and that, while they were talking, Epaminondas, who disapproved of their project, introduced a Pythagorean from Italy, Theaer of Croton, who had come to pour libations on the tomb of Lysis, whose spirit had appeared to the brethren and told them of his writing that survived, after the massacre at Metapontum, from which only Lysis and Philolaus escaped, it was unknown where Lysis was, till Gorgias of Leontini reported having met him at Thebes. The Pythagoreans in Italy wished to send for Lysis or to recover his remains if he were dead, but were pre-

vented by the civil wars and tyrannies prevailing at the time. Theanor did not believe him to disturb his body now: for he had heard a voice while he watched the tomb bidding him leave it.6 Lysis was also mentioned in connection with the Pythagorean burial, to which some supposed that, given Lysis a proper Pythagorean burial down to the most secret details. No doubt this may be a romance, but it implies a very definite connexion, and background to the mind of Plato, and he knew what he was talking about.

Pythagoras was an Ionian, and it is absurd to make him the champion of the 'Dorian aristocratic ideal,' as most German writers,7 like Brugger and O. Muller have done. To begin with, what they mean by the 'Dorian ideal' is really a fancy picture of the Spartan and Cretan ideal invented by Athenian conservatives of the 5th cent. and popularized by Athenian writers about 430 B.C. Croton and Syracuse were as purely Dorian as Sparta, and probably more so, and they will not fit into this picture. The source of the impression that there is something Dorian about Pythagoras is simply that the few fragments of genuine Pythagorean writings that survive belong to the generation when the Dorian Tarentum was the chief seat of the school, and were naturally composed, not indeed in the local dialect of that city, but in the 'common Doric' which was the Homer dialect of the 5th cent. and S. It is the common Doric dialect. The very numerous for-

gethers of Pythagorean writings naturally followed this model, and so there has come to be a sort of Doric veneer on the surface of Pythagorism. But Croton, Metapontum, and the other chief seats of the school were not Dorian, and there was no love lost between Dorian and Achianians, especially in Italy. Herodotus tells us that the Sybarites accused the Crotonians of getting the better of them by Dorian help—a suggestion which the Crotonians repudiated with indignation. Besides, if a Crotoniate at this date had anything important to say, he would have written in Ionic (as Alcmeon of Croton, who was a young man in the old age of Pythagoras, appears to have done for Ionia) and the recognized dialect for serious works, and even the Dorian used it. The literary use of Doric, except for farces and satires, dates only from the reaction against Athens caused by the Peloponnesian War. Groote protested long ago against the annexation of Croton to Sicily by Boeckh, and his protest has at last been listened to in Germany by Eduard Meyer. 8

Nor is there any evidence that the Pythagoreans espoused the Dorian aristocracy. They were members of the religious association, and we are told a good deal about the severe tests applied by Pythagoreans to aspirants to the novitate, but there is no hint that birth or wealth was essential. The character-

7 As, for instance, in the case of the Pythagorean calendar (perpetual or flori) with the most important event of his middle life. This would be the only connection it may have with the statement of Aristoxenus referred to above, that was dated by the era of Polydamas (552 B.C.). It is also clear that some estimates were based on the dates of the previous incarnations

Ons order and a school of science. It soon acquired a

dominant position in Croton and the other

Achaian states of these parts, and this naturally culminated in the destruction of the school, which was led by

a Cylon, a wealthy noble. It seems certain that

Ephorus and Timaeus connected the outbreak of

opposition to Pythagoras with the war between

Croton and Sybaris, supposed to have taken place as early

as 510 B.C. In any case, Timaeus said that Pythagoras lived at Croton for twenty

years, and then emigrated to Metapontum, where

he died. He also said that the Metapontines con

separated his house as a temple; and, as Polybius tells us, when

he was invited to go to Metapontum, he refused to

go to the house where he was to stay till he had

seen the place where Pythagoras died. The opposi-
tion of the partisans of Cylon to the Pythagorists

was carried on after their founder's death, and

ended in a regular massacre, from which very few of them escaped. Polybius tells us 1 that the days

when they set fire to the lodges (ασκήτηρια) of the Pythagoreans were followed by a period of dis-
turbance in Magna Graecia, 2 as was natural, since so many of the principal states had so unexpectedly perished, and the Greek cities of S. Italy were filled with bloodshed, civil war, and confusion of every kind, till at last they got the assistance of the Achianians in the Peloponnese, which was the period when Pythagoras were, in restoring tranquility.

No date is given anywhere for this persecution,

but Aristoxenus said that only two of the Pythagoreans in Croton escaped, Lysis and Archipus—for whom Plutarch 3 substitutes Lysis and Philolaus, and says that Pythagoras was exceedingly anxious of Epaminondas at Thebes, and, as Epaminondas cannot have been born much before 420 B.C., Lysis must have been still living in 400 B.C. We must

assumne, then, that the great persecution took place somewhere about the middle of the 5th cent. On the other hand, it must have been before the establishment of a Panhellenic colony by Pericles near the deserted site of Sybaris (444 B.C.), or we should have heard of these troubles in that connexion. It is evident from Plutarch that the Pythagoreans played a very important part in the affairs of Thebes, and that it was now one of the chief seats of the society. We know from Plato's Phaido 4 that Philolaus was resident there some time during the last twenty years of the 5th cent., and also that Ephorus, who was not a Pythagorean, but was known by Aristoxenus to have been Pythagoreans, were settled at Phlius near Sicyon. Some time before the death of Socrates, however, it must have been safe for the Pythagoreans to show them-
nselves in S. Italy again, for we gather that Philo-

laus had already left Thebes by that time, and we

know that he settled at Tarentum, henceforth the chief seat of the society, where it is represented in the next generation by the distinguished mathe-

matician, statesman, and general, Archytas, friend of Plato. The Pythagoreans of Tarentum were the centre of the opposition to Dionysius I. of Syracuse, and it was at their request that Plato undertook the education of his successor, Dio-

nysius II. The story of Damon and Phintias, which Aristotle quotes, was told by Archytas himself when in exile, belongs to this period.

The uncertainty of the chronology is a great difficulty. The dates usually given for Pythagoras himself were obtained by the usual proportion of age at death to age at death, 22 and 570 B.C. is the most important event of his middle life. This was supposed to be his exile to Italy, and on the basis of this statement of Aristoxenus referred to above, that was dated by the era of Polydamas (552 B.C.). It is also clear that some estimates were based on the dates of the previous incarnations

PYTHAGORAS AND PYTHAGOREANISM

istic of such associations in Greece and elsewhere is just that any one is admitted to membership who is able and willing to fulfil their requirements, whatever his condition may be. The prominent part he and his brother played in the various abstinences of the Pythagoreans first depends on this. It is probably true that Pythagoras dissuaded the Crotoliotes from giving up the refugees from Sybaris, but that was surely because they were suppliants, and not because they were aristocrites, as the tradition generally has it. Aristoëntes said expressly that Cylon, the leader of the opposition to Pythagoras, was a man distinguished by birth, position, and wealth, not a popular leader, as modern writers assert. Moreover, when the Pythagoreans did return to Italy, they settled at Tarentum, which was an extremely democratic state, and it is hard to see anything else that could have recommended a Doric city to them. It is true that Archytas was at the head of the Tarentine government for years, but he owed his position for the most part to the last, though, lastly, though Empedocles (q.v.) may not have been a member of the Pythagorean society, he was certainly an enthusiastic admirer of Pythagoras, and seems to have taken him as his model; and Empedocles was leader of the democratic party in another Doric state, Agrigentum.

It is no doubt possible that there is some truth in the statement of some authorities that the female Pythagoras was described by Empedocles as drawn after life. But it was not, certainly, to be submitted to the conquering Dorians. The exiles settled first at Lemnos, then they went to Aphrodisium and expelled the Athenians, when the family of Pythagoras settled at Samos. Pausanias says that he heard the matter at Phlius itself, and it is noteworthy thatboth Chalcidice and other Pythagoreans settled at Phlius in later days, and that the name Hippos was well known as that of a Pythagorean who revealed the secrets of nature to the Ionians, on which subject see notes, however, on the Ionian of Pythagoras; for the exiles from Phlius belonged to the first generation of Pythagorean exiles, after the Chalcidians and the Achaeans came, and whom we must identify with the Arcadians on the one hand and the Ionians on the other. If the family of Pythagoras possessed any notion of things, he would be less than ever inclined to sympathize with the "Dorian ideal." Nor were the Achaians Dorians. It may be that he spoke a very similar dialect, though we have not sufficient remains of it to be sure, but that can be sufficiently accounted for if we suppose that they both adopted the language of the original population before the not very remote date when the Ionians took to saying "Eides" instead of "Vasis," for instance. The reference of Pythagoreanism to a common language is not uncommon.

The whole question has been needlessly complicated by the unwarranted assumption that the Arundo-Cypriote dialect of Homer was the most closed and remote of all the dialects of Homer. It has actually been said that Pythagoras changed his name in order to make the Socrates of "Pythagoreanism" adherent to the "Dorian ideal!" Of course the form is due to the fact that we generally read of him in Attic writers who use the Attic form, and there is no reason to suppose that he ever called himself anything else but Πυθαγόρας, as he was still called by Democritus.

2. Pythagorean religion.—In the light of modern anthropology, the Pythagorean religion has become a good deal easier to understand than it was. We can see that, so far as the leading ideas on which it was based are concerned, it might have arisen anywhere; for those ideas are primitive and worldwide. The first of them is that the soul can leave the body temporarily or permanently and take up its abode in another body. The second is the kinship of men and beasts, which makes it possible for the same soul to inhabit the bodies of either. The third is the necessity of the observance of certain abstinences or tabus. To make a religion out of these ideas, it only requires a great teacher to give them an ethical character which they do not inherently possess, and that is why we find so many resemblances of Pythagorean religion which can have no historical connexion with it. Some of these had already struck people in the 5th century. Herodotus notes the agreement of the Pythagorean rule to bury the dead in linen with the Egyptian practice of excluding wood from temples, and he hints that not only this, but the belief in immortality and transmigration, came from Egypt. The rule about linen is simply, of course, that it should be of the best quality, as it would be of the best animal product, and may arise independently in many places; and Herodotus was wrong in supposing that the Egyptians believed in transmigration. It was probably an impression that he gathered from the semi-animal figures on the monuments. As the general horizon of Pythagoras was sent farther and farther afield for his religious instruction—to the Chaldceans and the Druids and other peoples. In modern times his system has been derived from China, and even now there are those who think it came from India. Now there are certainly some striking resemblances between Pythagoreanism and Buddhism, though the differences are more striking still. That can be explained quite naturally, however, when we remember that the Buddha, like the Greeks, has been bent for philosophy, and that the operation of philosophical speculation on the same basis of primitive belief would naturally yield somewhat similar results. The question of Egyptian influence is on rather a different footing; it is historically possible, and, if we remember the close connexion between Ptolemaic and Egyptian of Egypt, it will seem quite likely that Pythagoras visited Egypt. If we could find any real trace of Egyptian influence, it would be a more important fact in admitting it. It is strange, however, that Herodotus does not say that Pythagoras had ever been in Egypt, and that the first statement that he had occurs in a work which expressly disclaims any historical character, the Bulisiris of Ierocrates, and in a passage obviously based on the same that obscure remains of Herodotus. We must remember, too, that what Pythagoras might have learnt in Egypt at that date would have been the confused and artificial theology of the Saitic period, and we can find no trace of that. We shall see that the religion of Pythagoras, like everything else about him, has a definitely Ionian character, and that the doctrine of rebirth or transmigration was known in the Egyptian before his time.

The "Doric ideal," by which this doctrine is generally known, has only very late authority, and is based on confusion of ideas; for it would mean that the same body was inhabited by the soul after death in another world, which would have been μεταγενεσία, which is actually used by Plotinus and the Christian apologists. The proper expression is undoubtedly ἐναγγελεύσεια, or renewal. The first point to notice is the intimate association of Pythagoreanism with the cult of Apollo at Delos. We know from the Homer Ulysses that the Apollo (q.v.) at Delos had become a meeting-place for all Ionians long before the time of Pythagoras, though their official chief deity was the Minyan god Poseidon Helikions, who presided over the Panionion at Mycale. Now, as L. R. Farnell has rightly insisted, Apollo Lykeios, the wolf-god of Amorgos, nothing to do with the sun in classical (Greek literature) columns, and his connexion with Lycia, which may have been called after him, is secondary, and due to Achaian colonization in those parts. Everything points to his having been a god of the northemers who came to Euboea after the fall of the old 14th century B.C. There is nothing strange in his having been adopted by the Ionians. When great sanctuaries like that at Delos are established, the seats of the gods become fixed, even though the people from whom the original sects either appeared or disappeared, as the Achaian were by the Ionians of the Egyptian. In much the same way, those Achaians who were able to maintain their separate nationality after the Dorian conquest of

viii. 125.
PYTHAGOREANISM AND PYTHAGORAS

the Peloponnesse, when they expelled the Ionians from the southern shore of the Corinthian Gulf, took over the worship of Poseidon Helikonios which they had found there. The Peloponnesians kept the trace of the northern origin of Apollo is the bringing of the offerings of the Hyperbores to Delos every year by one or more ancient routes, and Apollo himself was supposed to revisit the Hyperbores after his departure. An Aristotelian work on the Pythagoreans tells us that the citizens of Croton gave the name of Apollo Hyperbores to Pythagoras.

For the Hyperbores and their offerings see Farnell, CGS iv. 205 ff. Purification (eubateia) came to be so closely associated with Apollo that Socrates, in Plato’s Cratylus, 358 b, proposes to derive his name from eubateia or eubates, both of which mean “to make holy.”

But we can go further than this; for we can show that Pythagoras had Ionian predecessors in his cosmogony as well as in his doctrine of the soul. There are traces of cosmogonical theory even in Homer, and it is perfectly possible that Pythagoras may have imported the cosmogonical figures at the beginning of his Theogony; for he introduces Chaos and Eros without a word of explanation, and there is no indication of the parts they played in the creation of the world. As Gomperz very justly observed, ‘Hesiod’s system is a mere hank of thought which must once have been filled with life.’ Moreover, his doctrine that the men of the Golden Age have become ‘holy spirits’ (sacred eyes) who watch over moral facts, and their estimate of the Orphics, and there is no doubt that they held cosmogonical doctrines and entertained beliefs about the soul of the very type that we are now considering.

Iv. 32.

1. Pythagorism was a literary expression. Pythagoras and his school were not a sect, but a small group of men who sought the secrets of nature and of the immortal soul. They were a sort of religious league of men who believed in the immortality of the soul and in the transmigration of souls. They believed in the doctrine of the Pythagorean, the idea of the transmigration of souls.

2. Pythagoras was a mathematician, a philosopher, a mystic, a religious reformer, and a religious leader. He was a man of strange and contradictory times who was influenced by the spirit of the times and by his own peculiar personality. He was a man of great and uncommon genius who was able to unite the materials of his time and of his own mind into a grand and unique system of thought. His work was a great contribution to the development of Greek thought and a great factor in the development of modern philosophy.
PYTHAGORAS AND PYTHAGOREANISM

far; for what we have to account for is the existence of cosmogonical speculation and an elaborate doctrine of the soul, which presents many common features in all the religious movements of the time, so that it is rather to be looked at as a later development of the Pythagorean doctrines, which was what we have in mind. The original affinities of Hittite and of Syriac are the same. But the original Pythagorean doctrine is not shown in the very close examination of the Thaegeton to be wrong. Hesiod is certainly repeating those things at secondhand. It is of great significance that he is not quoting any myth or legend for his material, but is for Homer. It is mentioned in passing that he is the son of Zeus and Semele, but there is no hint that he is an important god. That seems fatal to the view that there are Orphic elements in Hesiod.

Since the close of the 10th cent. it has been possible to look at these things in another light, though it is not easy to adjust our vision to the new information. It is now clear that there was a highly developed civilization in the Aegean dating from the Neolithic Age, and excavations at Minoïd and Miletus have shown that it passed by gradual transition into the early Iron civilization. This is the age in which the ancient barbarous invaders from the north as the main stock of the Greek people, i.e. the people to whom we owe Greek civilization and everything that makes Greece of value to us to-day. Every day brings fresh confirmation of the view that the Achaeans or Helenes, or whatever they called themselves, adopted the language and civilization of the conquered Aegean people and were ultimately absorbed by them. Now we can have no difficulty in supposing that the people who first used the Aegean civilization were incapable of theological speculation. Nor is there any need to suppose that they were dependent on Egypt or Babylon in any way for this. The Aegean civilization is as old as that of Babylon or Egypt, and in many ways superior to either of them. The Achaeans and Helenes did not bring civilization to the Aegean, but in some ways set it back. What they did bring was apparently the Olympian gods and the war-chariot and the chariolarious ideal as we find it in the poems of Homer. In that way, no doubt, the inspiration of the most obvious survivals in Armenia—an exception that proves the rule and gives us a hint of the route by which Indo-European speech must have reached the Aegean. It is the fact that the oldest datable traces of Indo-European speech are to be found in Asia Minor, and this is so whether the new view of the Hittites proves to be sound or not. Hittite, if it has been correctly interpreted, is a language of the Italo-Celtic type, and has no special affinities with any of the known IE languages. The Hittites possessed no proper language, though they seem to have known it. The Romance languages have become eaten languages in historical times. Now, if these views are correct, then all the evidence of a semantic character begins to confirm the view that there is no difficulty at all in supposing that an older form of Greek was spoken in the Aegean in the Bronze Age, and that we have a memory of this original pre-Hellenic or pre-Dorian from the north, who must originally have spoken a form of Celtic. Of course they would introduce a number of their own words, notably ede, which is inexplicable as a native Greek formation. The continuity of early Aegean and Ionian speculation, which is being assumed in this article, has, there-fore, nothing starting about it. In this respect, at least, Ridge-way says something good and lay when there was much less evidence than there is now.

If this view is correct, we can easily understand how there came to be 'theologians,' an Aristotelian call for an earlier logos long before the time of the Pythagoreans. We still have a priceless fragment of one of the latest of these, Pherecydes of Syros, now an island close to Delos (see art. COSMOLOGY AND COSMOLOGY [Greek]). It is the oldest piece of Greek prose to have reached us, and was written by Pherecydes, a certain Kontaros, from the city of Clement of Alexandria, while the beginning and some of the continuation of it have been recovered from an Egyptian papyrus published by Grenfell and Hunt. This introduces us to speculations which are most easily understood if we suppose them to be old Aegean in character, such as that of the cloak (φαρός), embroidered with 'Land and Ogenos and the homes of Ogenos,' which Zas (Zeus) gave to Cithonie (Earth) at their 'holym marriage,' and which was spread over a 'winged oak' for a few weeks (τοῦ ἄνθρου λειά ποδος). The important point is that our earliest authorities, including Aristoxenus, who was not anxious to emphasize the mystical side of Pythagoreans, agree in representing him as the disciple of Pherecydes. Aristotle too, to the extent that we can see, spoke of the miracle-working (τεταρτευσία) of Pherecydes. This means at least that Pherecydes was acquainted with a speculative cosmogony, and probably with a doctrine of the soul's immortality rather than that of the body, though in character he can contribute to Aristaeus or Abaris. At any rate the discovery of an actual fragment of Pherecydes in Egypt makes it much more likely than it seemed before that later ages had some real knowledge of his doctrine, and that Cicero may have had some authority to make a statement that he taught the immortality of the soul.

The fragments of Pherecydes will be found in Diels, Poetik, 6. 108, and also in the same way as that of the Pythagoreans, as Diels supposes. The 'winged oak' points to Arcadia or Dodona rather than Miletus. Nor can it have any connexion with Babylon, where there never were any oaks. The scholiast on Apollonius Rhodius, i. 645, quotes Pherecydes for the statement that Al室友ides, the son of the ArgoNauts, received the boon that his soul should be at one time in Hades and at another on earth, and from Apollonius himself we learn that he had also the gift of remembering his former lives. If we can trust this, it is very important; for Hermes is an Arcadian (and therefore, as is well known, that god, and those to whom he is most acceptable). Now Al室友ides was regarded as a previous incarnation of Pythagoreans, Euclides being the next. The statement of Cicero (De Officiis i. 74) is not as strong as that of the followers of Pythagoras, or the true doctrine of the immortality of the soul, which only means that he was the first extant writer to do so. The immediate source of the statement is probably Posidonius.

There is no reason, then, for supposing that the doctrine of rebirth or transmigration was the original contribution of Pythagoras to religion, and the same may be said of his detailed prescriptions as to the avoidance of certain acts and the observance of certain abstinences. There can, in fact, be no doubt that most of the Pythagorean precepts are tabus of a thoroughly primitive type, and mark them as survivals of practices passed down to people to-day. Later writers, of course, interpreted these ἀκομομηματα, as they are called, as symbols or allegories of moral truth; but that view will not easily be accepted now, in view of our increased knowledge of such things. It is possible, however, that, as followers of Pythagoras, these precepts were the most important of his teachings, and that there was a rift between the higher and the lower Pythagorism from the first. That is only human nature, and is one of the explanations that are told about the hierarchical organization of the society. It is very significant that one of the names given to the lower grade is ἄκομομηματος, which can hardly mean

1 Met. A. 6. 2071 b 26, the first occurrence of this false word.
PYTHAGORAS AND PYTHAGOREANISM

anything else than those who made the precepts, or ἀδικεῖα, the principal thing. The distinction between Pythagoreans and Pythagorists had no doubt been exaggerated in the early centuries, and modern scholars are right in holding these distinctions to be of late date, but the difference between those who were capable of assimilating only the external side of the religion and those who could reach its inner meaning, was indeed acute. As much, however, had been first, and, as we have seen, it soon became so accentuated that it split the society in two. The same consideration throws light upon what we are told of the obligation of secrecy imposed on the members of the society. As much has probably been over-stated. It is clearly an attempt to explain how certain doctrines were apparently unknown to the mass of the members, and so far it is unhistorical. Pythagorean doctrines were apparently quite well known, and influenced outsiders from an early date. At the same time, it is quite credible that novices were bound to silence for a period. That is too common everywhere to excite surprise, and the words which are used to describe this obligation, ἐγκυρία and ἐκκυρία, suggest this rather than the disciplina arcana. Now these words are distinctly ironic in character, and that is a good reason for believing that they have come down from the early days of the society.

The following extracts of the ἀδικεῖα τῆς ἐγκυρίας: 'Not to pick up what has fallen,' 'Not to break bread,' 'Not to stir the fire with an (iron) sword,' 'Not to eat from a whole loaf.' 'Not to let anybody share one's bread, not to look in a mirror beside a light.' There can be no doubt how precepts of this kind are to be classified, and we cannot take seriously the later explanations such as that 'Not to stir the fire with a sword' only means that we should not further provoke an angry man.

But this all, however largely it bulked in his teaching, was only a part, and not the most important part, of the contribution of Pythagoras to religion. There must have been something to account for the striking difference between the development of the Orphics and the Pythagoreans sects. The former seems to have become utterly corrupt in a very few generations; and in a conversation supposed to take place well before the close of the 5th century, Plato makes an Orphic teacher at Athens, a shade of Orphic religion as a mere traffic in pardons and indulgences. We know that there were Pythagorists at Athens in the 4th century, but nothing of the kind is suggested of them; they are only lauded in an Orphic form of the Psalms. And there is another difference in the simple life. On the other hand, there were at the same date a number of eminent scientific men, calling themselves Pythagoreans, who paid no respect to these external observances, and even tried to explain them away. Now the one great difference that we can discern between the Orphics and the Pythagoreans is just this—that the Pythagoreans all agreed in tracing everything to the inspiration of a great individual, while we do not hear of any great Orphic teacher at all. Those whose names have come down to us, like Onomacritus, are known chiefly because they were suspected of literary frauds. We may reasonably infer from this that the higher side of Pythagorean religion came from his founder himself. There is no reason to be conclusive as to what this higher doctrine was, but an examination of our earliest evidence will afford us some positive indications. In the Phaedo Plato makes Socrates express surprise that the, Celts and Simmias have not become Pythagoreans. In the Phaedrus we are told that it is unlawful for a man to take his own life. The first reason, which he says he is a 'high doctrine' and not easy to understand, is that our souls are bound in the prison-house (ἐγκυρία) of the body, and we have no right to try to escape till God gives the signal. There is a further doctrine, which Socrates accepts, that we are the chattels (τρήματα) of the gods, and they watch over us. There can be no doubt that the Pythagoreans were divided in their doctrine; for Philolaus was the most distinguished Pythagorean teacher at the time of which he is speaking. We are also told that he did not give any clear account of this doctrine, which was therefore presumably one of which he had inherited from his predecessors. Now it will be seen that it has a distinctly ethical tendency, such as we do not find in anything that we know of Orphism. The imprisonment of the soul in the body has a disciplinary character, and the gods or God (the two forms of expression are used) (see indiscriminately) have imprisoned it on us for the good of our souls, so that it is our duty to submit. So much we may fairly infer from this passage, which is really our oldest and best authority.

If we may also regard the famous description of the true philosopher in the Theaetetus as inspired by Pythagorean teaching, we may go a step further and attribute to Pythagoras the doctrine that the end of man is to become like God (διάδοχος τοῦ θεοῦ). We are not able to prove this indeed, but it is so far confirmed by the fact that Aristothenes makes the 'following of God' (τὸ ἀκολουθεῖν τῷ θεῷ) the keynote of the Pythagorean system as expounded by him; and an unknown writer excerpted by Collobus follows the doctrine that Pythagoras precept, and calls attention to the agreement of Plato with it. It is obvious that this is on a different level from 'Do not stir the fire with iron' and the rest of the ἀδικεῖα, and it appears almost as close to the best meaning of Pythagoras. It gives Pythagorism something more than the mainly negative attitude to life of Buddhism, and distinguishes it from Orphism, which emphasizes 'release' (ἐλευθερία) above everything else. To the Orphic the body was the tomb of the soul (σῶμα ψυχῆς), and what we call life was death; and that is a very different thing from regarding the body as a house of correction. There is, in fact, no evidence that the idea of a final release from the 'wheel of birth' played any part in Pythagoreanism; and whatever that might mean it attributes it to the defectiveness of our information. Pythagorism without a final release, says, would be like Buddhism without a nirvanā. The present writer would suggest that, imperfect as our information may be, it would be extraordinary that it should afford no evidence of this doctrine, if it had ever existed. We have the excellent authority of Aristotle for saying that the Pythagoreans divided rational living things into gods and men and 'such as Pythagoras,' and so it would seem that the fully purified soul becomes incarnate in a philosopher and religious teacher who seeks to raise others to his level. So far as we can judge from the Phaedo, its final destiny is not any sort of nirvanā, but 'to dwell with the gods.' It is an interesting point that the purified soul remains its previous incarnations. It is said that Pythagoras remembered that his last incarnation had been as Enorphus the Dardanian, who, by Apollo's help, wounded Patroclus Υ. Υ. xvi. 17, and is not uncommonly useful to believe this or to attribute it to imposition. Men were very excited in those days, and it is perfectly possible that Pythagoras was in deadly earnest when he saw the shield of Enorphus dedicated by Memorians at Athens. It is therefore not necessary to believe in him, or to take this to mean anything. We may gather from this the further information

3 Psychos, Tübingen, 1910, ii. 165, note 2.
4 Frag. 132 (Rosc): τῷ ἄνθρωπῳ τὰ τοῦ Μεθυστὶ τοῖς τέκνων τοῦ Μεθυστί, τοῦ δὲ ἰδώρων, τοῦ δὲ οἰκείων Φιλοποιόρον.
that there was an interval of several generations between each rebirth, which, if we regard the name of the Milesian philosophers as indicative of the doctrine of reincarnation, as Pythagorean, were spent in purgatory, the very name of which has a definitely Pythagorean sound.

For the doctrine of the body as the tomb of the soul see Plato, Phaedrus, 246 C, where we are told that the Pythagoreans used to call the ἀνατολήναμον (ἀνατολήναμον, because the soul is now paying the penalty for those things for which it pays the penalty), and that it has a covering (ἐπιτειχίαν, with the theory of a prison of a penal nature) that it may be kept safe (τόπος τον ἀφαίρεσιν) till it has paid in full all that it owes. The word ἀνατολήναμον is derived from αὔνατολήναμον, and so very like an attempt to explain the Orphic doctrine in terms of the Pythagorean.

3. Pythagorean science.—This is not the place for a full discussion of Pythagorean science, but it is necessary for our purpose to establish its Ionian character—which will prove that it goes back to Pythagoras himself—and it is desirable that it should be shown, if possible, in what, if any, relation it stood to Pythagorean religion. The subject is difficult because, while the religion of Pythagoras underwent no important changes from the time of Socrates to the present day, the science not only in its general lines but in its minor details is not as far as we know, Pythagorean science was extremely progressive. That, again, is because, while the leading Pythagoreans took their religion for granted or neglected it altogether, they were obliged to defend this scientific teaching against the criticism of all kinds, and of course it became greatly modified in the process. In particular, we see that it was necessary to account for the 'four elements' of Empedocles, which had become the foundation of medical science, and above all to take up a definite attitude towards Zeno's very serious criticism of the Pythagorean view of space and the unit. We are safe in referring theories which show a preoccupation with problems of this kind to a later generation of the school. On the other hand, Parmenides, who describes himself as a youth in his poems, must have written not very long after the death of Pythagoras, and there is clear evidence that he had been a Pythagorean. The cosmology which he expounds in the second part of his poem, and which he tells us has no truth in it, cannot well be anything else than Pythagorean, and, considering the time at which he wrote, it must be practically the doctrine of Pythagoras itself. It is true that we have only some fragments, though they are instructive enough, and show pretty clearly which parts of the Pythagorean cosmology may be regarded as original. In view of the relation of Pythagoras to Pherecydes, it is not surprising that his expositions should have taken the form of a cosmogony, and we even gather from a chance remark of Plato that it contained stories about the gods such as were usual in cosmogonies. The cosmogonic Eros is mentioned in a fragment that survives. It is clear, however, that the leading ideas of the doctrine are essentially Ionian and another source than Pherecydes. In the first half of the 6th cent. B.C. science, as we understand the word, had arisen for the first time in the world's history at Milesian on the mainland not far from Samos, and thence the idea that the universe was one extended and infinite world spread beyond the sea, and influenced ancient and modern Thought. Water and earth and other solid substances were explained as condensed air, while fire was air still further rarefied. In this limitless mass there were immemorial worlds, each with its own heaven and stars and earth which passed away like bubbles in the limitless mass of vapour. Moreover, Anaximander, the second of

1 Symp. 105 C.
instead of with zero, as it should be, and this is where Zeno's criticism proved fatal. The definition of the point as 'unity having position' enabled Pythagoras to treat geometry as a form of arithmetic up to a certain point; but Zeno showed the difficulties of this, as the following lines have shown. There are on the doctrine that things are numbers and to substitute the statement that things are like numbers. Nevertheless it was a magnificently daring conception of reality and, but for the necessary imperfections of its first statement, it is substantially the same as that of Descartes.

For all this the reader is referred to Burnet's *Early Greek Philosophy*, chs. i., ii., and iv., with the modifications contained in his *Greek Philosophy*, v., vi., vii., viii. to Plato (London, 1914), chs. ii. and v. As a proof of the remarkable scientific insight of the Pythagoreans, it should be mentioned here that the successors of Pythagoras (though not so far as we can judge, Pythagoras himself) held that the earth and the other planets were not, indeed, identified with the sun, which was supposed to be a planet like the earth, but it was a very great step to regard the earth as a spherical body. Pythagoras carried his theory a step further by his great discovery that the intervals of the scale recognized in his day—the fourth, the fifth, and the octave—could be expressed by simple numerical ratios. This discovery was not, indeed, based on measurements of the length of the string which corresponded to these intervals, and it suggested a solution of another Milesean problem. The Milesean system had been dominated by the idea of the 'four elements': earth, air, fire, and water; and a clear conception of the cold, wet, and dry, which appeared to be at war with one another, and Anaximander had spoken of the observance of a due measure between these as 'justice' (δικαιοσύνη). If we imagine high and low pitch could be brought together in a perfect attunement (ἀποφθέγμα), it was natural to suppose that all other opposites could be similarly treated and that all stable reality would prove to be a 'blend' (ἐπίστασις) of opposites in proportions which could be mathematically expressed. There were certain 'means' (μέσους) between each pair of them, of which the arithmetical mean (corresponding to the octave) is only one. It is the same idea of combination in fixed proportions that Dalton in his *New System of Chemical Philosophy* (1787) presented as the key of the world, and perhaps it is. He applied it among other things to the problem of the relative distances of sun, moon, and stars, which he expressed in terms of the intervals of the scale. That ideas of this kind need not be altogether futile is shown by the fact that Bode's law of the planetary distances, which is based on a similar conception, has been of use in giving a direction to astronomical research, though it has not been empirically verified, and that Mendeleef's periodic law has actually led to the discovery of new elements. The meaning of the statement of Socrates in Plato's *Republlic*, that the Pythagoreans made music and astronomy sister sciences, will not remain.

It was in medicine that the other great application of this principle was made, chiefly, it would appear, by Alcmeon of Croton. Health was regarded as the proper tuning (ἀποφθέγμα) of the body, so that the right proportions between hot and cold, moisture and dryness, and the disproportionate action of one of them. Alcmeon expressed this further by comparing health to the reign of equal laws (λαόνος), and disease to monarchy. This is the original sense of the phrase 'temperament', though the term is now applied in ways so great a part in the history of medicine; for *temperamentum* or *temperatura* is but a translation of the Pythagorean term *εὔμεση*. So far we have been dealing with those 'anticipations of nature' to which after all science owes its most striking advances, but at this point the religions teacher and mystic comes into contact with the man of science. If the sun, moon, and stars really corresponded to the development of the octave, they must give forth sounds like the tuned strings of the lyre. If we do not hear these notes, that is because our souls are out of tune and do not vibrate in unison with them. This is the theory generally known by the misleading name of the 'harmony of the spheres'—an expression which is meaningless as applied to astronomy before Eudoxus. It has had a great history and inspired not only Shakespeare and Milton, but everyone else; and it seems to have definite meaning to the precept 'Follow God.' It explains at once the remark of Aristoxenus that the Pythagoreans used medicine to purge the body and music to purge the soul. Alcmeon of Croton said the soul was immortal, because it was 'like to the celestial sphere' and it had this likeness in virtue of its being always in motion; for all divine things, the moon, the sun, the stars and the whole heavens are in continuous motion. He also said that the reason men die is that 'they are not in the path of that which moves us towards the heavenly bodies do in their revolutions.

We find the same doctrine of the circles of the heavens and the circles of the soul in Plato's *Timaeus*, which is in the main a statement of the later Pythagorean doctrine, and we may infer that the saying quoted by Socrates in the *Phaedo*, that 'philosophy is the highest music,' is Pythagorean too. If that is so, we have found the connecting link between Pythagorean religion and Pythagorean science. The highest purification (ἐξορθώσεως) of all was just science, and especially mathematical science.

In the *Ode on the Nativity* Milton course introduces the *crystal spheres*, and in other respects gives us a later form of the doctrine. Shakespeare's statement of it is put into the mouth of Lorenzo in the fifth act of the *Merchant of Venice*. In the *Book of Homage to Shakespeare* (London, 1916) the present writer has tried to throw some light on the channels through which the wisdom of the Pythagorean doctrine may have reached the England of Shakespeare's youth.

The doctrine was capable, however, of being applied in a way that Pythagoras could never have foreseen, and that was to the downfall of Pythagorism as a religion. It was only a step to say that the soul was itself an attunement (ἀποφθέγμα) of the body, and that was fatal to the doctrine of its immortality. We are told distinctly in the *Phaedo* that this tenet was maintained both by the Pythagoreans of Thebes and by those of Phlius at the end of the 5th cent., and Aristoxenus continued to maintain it even after he had become a member of the school of Aristotle. This may account for the vagueness of Philolaus on such subjects as reported by Cicero and luminous, and it is noteworthy that Plato represents Socrates as relating the theory on his dying day. It seems clear that the preoccupation of the Pythagoreans with medicine had led them to regard the soul more and more as a part of the body, which was already been asserted that Philolaus wrote on medicine and played a considerable part in the development of that science. That was the end of the Pythagorist religion among the more enlightened members of the order. The doctrines which were continued underground, as it were, by other followers of Pythagoras, who handed them on to the Neo-Pythagorean and the Neo-Platonists (p.66), who revivified them by bringing them into contact with the Middle Ages, but the man who was the true successor of Pythagoras, whose doctrine was represented in a one-sided way by

1 Aristotele, de Anim. A. 2. 406a 29.
2 Arist. Probl. 401a 20.
both sects of his nominal followers. In this way scientific Pythagoreanism became merged in the Academy (q.v.), while religious Pythagorism had a good deal to do with the rise of Cynicism (q.v.).

4. Pythagorean ethics.—It is necessary to speak of a Pythagorean system of ethics. The constitution of such a system was the work of the schools of Athens and, with the exception of some indications of ethical theory in the fragments of Democritus (q.v.), of them alone. On the other hand, it is necessary to insist that the ethics of Socrates, Plato, and Aristotle were based on a Pythagorean foundation, and are not fully intelligible unless we bear this in mind. It may be added that Democritus too was a pupil of the Pythagoreans and wrote a book entitled Pythagoras.

Being a religious community, the Pythagoreans had of course a rule of life, and it has recently been urged with great plausibility that certain hexameter verses, which are quoted as much too early a date, and which may have been derived from the work of Timæus of Tauromenium, are actual fragments of this rule. The Golden Verses are spurious, of course, but they may well have been made in this way in later times. It seems certain that the members of the society had to make an examination of conscience morning and evening. They had to go over the events of the day that was past and ask themselves, 'In what have I transgressed, what have I done that I ought not to have done, and what have I left undone that I ought to have done?' It is obvious that a rule of this kind would be favourable to the rise of speculation on ethical subjects.

For the probability that there was a rule such as that described by Aristotle, cf. Diogenes Laërtius, Σωκρατικά, in Συνεχεία, xxxiv. [1910] 175 ff. Delatte has been misled by some of his German authorities when he says that the original form of Pythagoreanism was Doric and that the original form of the doctrine was that things are like numbers, but he makes out a good case for the thesis that verses like πέντε στροφές; τί ξέρειν; τί έστιν άνθρωπος; are really as old as the 5th cent., and formed part of a 'rule' in hexameter verse. Five verses (including the above) are quoted in Porphry's Life of Pythagoras (47 Nauck) and give a description of the Pythagorean examination of conscience.

Now, we find that the ethical theories of Plato and Aristotle everywhere take for granted a classification of human lives into wisdom-loving, honour-loving, and gain-loving; and this is closely bound up with what is usually called the doctrine of the three persons of the one immortal soul—μανθανομενον, ἀλληλον κακομενον, κανναι νομομενον. It seems very difficult to doubt that it is Pythagorean, and, as a matter of fact, Posidonius¹ said that he had found the doctrine of the tripartite soul in the writings of the successors of Pythagoras. The story was that Pythagoras himself had used the word φίλοσοφος for the first time in a conversation with Leon, tyrant of Phlius or Sicyon, and it is everywhere implied in Plato that it was perfectly familiar to Socrates and his circle.² 'Is not Euenus a philosopher?' asks Socrates in the Phædo,³ and the answer comes at once, 'I think so.' It seems to mean a man who holds a certain doctrine about the soul, and to have a much more specialized sense than the corresponding verb, as it is used in Herodotus. Life, Pythagoras is said to have told Leon, is like a gathering of philosophers who get together for the Olympic Games. There are three classes of visitors. The lowest are those who come to buy or sell, and next above them are those who come to compete; the best class, however, are those who use the time to look on. To this day, a knowledge of the life, the work, and the theory and the teaching of Pythagoras himself, we can see at once that it is the foundation of all subsequent Greek ethics, and in particular of the doctrine of the privacy of the theoretic life (lit. the life of the spectator), which was held by Plato, with important reservations as to the duty of philosophers to take their turn in descending into the cave from which they had escaped (περνάμενοι τε ἐπειδή), and by Aristotle with no reservations at all.

The importance of Pythagoreanism in connection with the rise of Greek ethical theory has been too much neglected, as is well shown by J. L. Stocks in his paper, 'Plato and the Tripartite Soul,' published in Mem. Acad. 1910, n.s., vol. iv. [1910] 179 ff. Important evidence of the Pythagorean origin of these ideas is given by the last chapter of the Tripartite Soul, where some one, presumably one of the Pythagoreans who are the subject of the comedy, says: 'No man of some kind can bear a judgment against himself, otherwise we shall not be able to come near our neighbours. Do tell not what that is called living is but a name, a euphemism for our human lot? For myself I cannot tell whether any one will say that I judge rightly or wrongly, but the view I take on reflection is this, that all human life is wholly ephemeral, and that we that are living have as our portion merely a sojourn in a strange land (συνοικία), like men released for a gathering (συσυγκέντρωσις) from death and that goodness is an attainment (δικαίωμα) of the soul. The moral drawn from these considerations is that we should eat, drink, and be merry, which is not exactly Pythagorean, but the point may well have been the inconsistency between the doctrine and the practical inferences from it. That has always been a favourite subject of comedy. The verses are quoted [only to show that the idea of the μακρύντες (Vanity Fair) and the αἰσχροὶ are Pythagorean].

This, then, seems to be the source of the view of life which is in common with Plato's Phædo and bk. x. of Aristotle's Ethics, but there is a further side of their ethical doctrine which is derived from Pythagorean science rather than Pythagorean religion—the doctrine that goodness is the health of the soul, and vice versa, is also derived by Plato, though it is one of Plato's latest dialogues and he had for a long time given up his early custom of making Socrates the central figure. Already in the Phædo he makes Socrates use the doctrine of the soul, and says, it is one. This is a great step forward in that just the meaning of the doctrine of the mean as we find it in Aristotle's Ethics. There is a fragment of Archytas in which he speaks of μεσοτετράγωνον and λοίπα very much as Socrates is now and which has been made to do in the Gorgias,² but that breaks off before it comes to the point, if it ever did. But, after all, it is not a far cry from what Aelian says about the health of the body to the doctrine of the mean as determining the health of the soul, and it may be that this step was already taken in the Pythagorean society. In any case it is based on Pythagorean ideas, and was implicit in the teaching of Pythagoras from the first.

It is certain that Pythagoras is entitled to be called the father of religion in this sense. As a religion and more clear that all European religion and ethics, so far as they do not originate in Palestine, can also be traced back to him. There is still a great deal of work to be done, however, before we can grasp his historical character firmly. It is one of the most recent and least known of all the ancient religions that have left a mark upon our knowledge. Undoubtedly they are forgeries, and there is no chance of their being rehabilitated as genuine documents. At the same time, it is clear that

QADIANI

QADIANI.—Qadiani was the name originally given to the followers of Mirza Ghulam Ahmad of Qadian, Gurdaspur District, Panjab, in order to distinguish them from orthodox Muslims. In 1890 they were, at their own request, entered in the Government census lists as Ahmadiyya Muslims, and they have since been called by that name. Mirza Ghulam Ahmad (1839–1908) was a man of some learning and unusual powers of leadership. In 1889 he announced that he possessed the right to receive bai'at (‘homage’) from his followers. Two years later he declared himself to be the ‘promised Messiah’ of Jews, Christians, and Muslims, and the Mahdi expected by Muslims at the last day. In asserting that he fulfilled in himself the prophecies relating to both the Messiah and the Mahdi, he controverted the usual Muhammadan belief that the two will be distinct personalities with different missions. He said that he had come ‘in the spirit and power’ of Jesus and of Muhammad, and he later declared that he was greater than Jesus, since he was the Messiah of Muhammad, as Jesus was of Moses. Shortly before his death he announced that he was likely to be the final incarnation (avatāra) of Vigna, whom Hindus had been expecting; and since his death his followers have added the further claim that he was ‘the latter-day reformer of Parsis and ‘the Budhha of the East.’

The proofs by which he sought to establish his claims were declared to lie in revelations and miracles, the latter chiefly taking the form of prophecies of the death or disembowelment of his enemies among orthodox Muslims, Christians, and members of the Arya Samaj. After the sinister fulfilment of one of these prophecies, in the death under suspicious circumstances of a prominent leader in the Arya Samaj, the Mirza was compelled before the District Court of Commissioner District, dated 24th Feb. 1890, to refrain from further predictions involving the death or disgrace of another. One of the so-called miracles, which served to prepare the way for the announcement of the Mirza’s Messianic office, was the alleged discovery, through a divine revelation, of the existence of the tomb of Jesus Christ in Srinagar, Kashmir. Jesus was said to have been taken down from the cross in a swoon and healed by the miraculous ‘effusion of Jesus’ (marḥem-i-faw). He then set out on a mission to ‘the last sheep of the house of Israel’ in Central Asia and Kashmir, finally dying, at the age of 120, in Kashmir, where his tomb in time became confused with that of a local saint named Yus Asaf. No serious evidence has been brought forward in proof of this novel theory, or of the miracles said to have been worked by the supposed Messiah, or of the claims of Mirza Ghulam Ahmad and his followers admittedly rests.

Regarding his claim to be the expected Mahdi, the Mirzā was constrained perhaps by political considerations to make known a revelation alleging that the Mahdi would not be ‘a man of blood,’ as had been universally supposed, but was rather to lead Islam to triumph by means of a peaceful holy war (jihād). In this connexion he made much of his loyalty to the British Government. In further substantiation of his manifest claims he pointed to the corrupt condition of modern society and of the character of the accepted priests and teachers in every religion, which called for a great reformer and prophet, like himself, to bring to all hearts a new and quickening certainty in things religious. He drew a sharp line of demarcation between his followers and orthodox Muslims by enjoining all true Ahmādis to refrain from following orthodox imānos in their prayers, attending non-Ahmadi funeral services, and giving the hands of their daughters in marriage to Ahmadi girls; whereas their sons might marry non-Ahmadi girls. He also turned his face resolutely against all political controversy, and denounced as mischievous the activities of the All-India Moslem League and the Muhammadan Educational Conference.

The movement has grown steadily since its inception in 1889. In 1896 it claimed 313 members. In the 1901 Government census 1113 males were returned for the Panjab, 931 for the United Provinces, and 11,087 for the Bombay Presidency (obviously an inaccuracy). In 1904 the Mirzā claimed ‘more than 200,000 followers,’ and before his death he estimated the total number of his followers at 500,000. Against this manifest exaggeration the Census must be placed the returns of the census for the Panjab in 1911, viz. 18,695 Ahmādis. Probably 60,000 would be a liberal estimate of the total strength of the movement throughout India to-day. There are also a few scattered followers in other countries. Before his death in 1908 Mirza Ghulam Ahmad appointed his close friend and early disciple, Ḥākim Nūr al-Dīn, as his successor, the ‘first khilīfah’ of the movement. Under the direction of the khilīfah the work was to be carried on by a board called the Sadr-Anjuman-i-Ahmadiyya. During the ensuing six years, before Nūr al-Dīn’s death in 1914, a schism developed within the sect. One party, led by Khwājā Kamāl al-Dīn, a

QADIANI

they are the work of men who knew a good deal more about Pythagoreanism than we do, and they would have had no chance of passing off their productions as genuine if they had not been careful to give them an air of verisimilitude. It is not enough to condemn them because they contain ideas and use terminology which we are accustomed to regard as Platonic or Aristotelian, for nothing is more certain than that Pythagoreanism is the basis of Athenian philosophy, and some even of Aristotle’s terminology is demonstrably of Pythagorean origin. That, so far as can be seen, is the direction which research may most profitably take at present.

LITERATURE.—The older works on Pythagoras and his school are antiquated, and the time has not yet come for a new synthesis. A. E. Chaingnet, Pythagore et la philosophie pyth.

porticène, 2 vols., Paris, 1873, was an attempt to apply reasonable principles of criticism to the subject, but it was premature. An intelligible historical view of the subject was first made possible by Erwin Rohde’s Die Quellen des Platonismus in seiner Biographie des Pythagoras,‘ Rheinisches Museum, xxxvi. [1871] 554 ff., xxvii. [1873] 22 ff. These made clear for the first time that some of the Pythagorean and Eleatic writers’ theories were recommended to those who desired a lucid exposition of the mathematical side of the doctrine. The histories of philosophy (E. Zeller, T. Gumpertz, etc.) generally give a fair view of the state of the question at the time of their publication, though it must be said that German writers, to whom a great loss, have done scant justice to the admirable work produced in France.

JOHN BURNET.
prominent barrister, began to take part in political controversy, and in its religious literature showed a leaning towards the rationalism of Sir Syed Ahmad Khan, the founder of the Muhammadan Anglo-Oriental College at Aligarh. The other positions of leaders in the empire, the unique position of Mirza Ghulam Ahmad, and continued to emphasize the evils of present-day Islam and its priests. In short, the former wing sought to bridge the chasm separating the sect from Islam generally, whereas the latter stressed the points of difference as fundamental. When Nur al-Din died, the split widened. The son of the Mirza, Hazrat Mahmud Ahmad, now hailed as ‘the promised son of the promised Messiah,’ was hastily elected the second Khalifat ul-Masih by a group of his adherents at Qadian. The rationalistic party forthwith seceded, and founded a new society in Lahore called the Anjuman-i-Islah-i-Islam, whose interests were vested in a group of men rather than primarily in a single individual. Two of the members of this group, Khwaja Kamal al-Din and Maulvi Sadr al-Din, are the founders of a Muslim mission at Woking, England, through the instrumentality of which some scores of English people, including one year, Lord H. H.se, were led to Islam. 

The Qadian party continues to publish The Review of Religions in English, and several vernacular papers, conducts a successful high school, and carries on considerable missionary work. It can claim to have a better organized party and tradition of the founder and his original followers. J. N. Farquhar thus succinctly sums up the position and importance of Mirza Ghulam Ahmad’s teachings in relation to similar movements in India to-day:

A part from these personal claims, his teaching is an attempt to find, amidst the irresistible inrush of Western education and Christian thought, a middle path between impossibility and orthodoxy and the extreme rationalism of Sir Syed Ahmad Khan (Modern Religious Movements in India, p. 140).

Recent events indicate that the middle path was destined to fail early in its course. 

H. A. WALTER.

QARO.—Joseph ben Ephraim Qaro, a famous codifier of Rabbinical Judaism, was born in Spain in 1488, and died at Safed, Palestine, in 1575. On the expulsion of the Jews from Spain in 1492, which paved the way for the diffusion of the Spanish-Hebrew dialect, his parents went with him to European Turkey, settling first in Nicopolis. Here he received thorough instruction in the Talmud from his father, who had been a Hassidic Talmudic teacher. Later he lived in Adrianople, Salonica, and Constanti nople—successive steps in his long-cherished journey to Palestine, which he reached about 1535, Safed becoming his place of residence.

In the age of mystical tendencies in Judaism, which is so inerently opposed to such influences from the earliest times. Owing undoubtedly to long periods of persecution, which reached its climax in Spain, an added stimulus was given to Kabballistic dreamers, whose fantasies took firm hold on many susceptible minds which had lost judgment and balance under the burden of exile and wretchedness. Turky, which opened its dominions to the oppressed, and where large and fairly prosperous communities could be found, provided an outlet for the untoward spiritual excitement and curiosity which is usually expressed in some outlandish way. Safed in particular proved a seat of mystics, and Qaro’s early fantasies were revived and strengthened by the new environment.

He had met some years before Solomon Molcho, who strove of the Messianic ideas, and accepted death at the stake in 1532, and he gave full vent to his mystical ideas which, long cherished, were clamouring for expression. He was so far overwrought as to invoke a familiar— even in his Nicopolis days—and for fifty years he kept a diary which recorded his discussions with this imaginary genius. The book of visions, called Muyjid Mosharim, whether actually written by him or merely ascribed to him by a zealous disciple, as occurs not rarely in literary history, makes him a double personality—a mystic as well as a codifier. Happily, and as one evidence that the diary or collection of desultory notes is not entirely genuine, the comprehensive works upon which his fame is really based show no mystical influences.

Qaro’s early prophecies were for the Kabbalistic dreamer of dreams, he gave undisputed first place to the Talmud, with his logical mind, and was impelled by the needs of the times to popularize and strengthen this hold on the life and thought of Judaism. He was not the first intellectual whose imagination was to prove an incentive, not an opiate.

Qaro’s fame depends chiefly on his two digests of Rabbinical law. He wrote these in an age of dispersion when in the Jews were scattered among countries which were never wholly secular, the fundamental law and authority of Judaism were imperilled as much by the violent and arbitrary changes in environment as by the half-knowledge of leaders and the almost total ignorance of the people. Considering these conditions, one can understand how his passion for saving from destruction the traditional creed and customs worked upon a susceptible nature and fostered fantastic reveries as well as fantastic assertions. They were not the Messiah in the popular sense, he could save his people none the less by inculcating the authority and permanence of the law.

As early as 1522 in Adrianople, he began the first of his great works, Beth Yosef; ‘House of Joseph,’ which, completed in 1542 at Safed and published in 1550-59, raised him to the front rank of Talmudists of his own age or earlier. This work, while a commentary on Jacob ben Asher’s Arba’ah Turim, ‘Four Orders,’ whose method he closely followed, is more than a digest of the authorities cited therein. It gives a careful critical view of many Rabbinical opinions not quoted by his predecessor. Hence it furnishes an unsurpassed wealth of material. The range of his understanding of the Talmud literature, together with the critical sagacity in the study and comparison of authorities, leaving little uninvestigated, gives a monumental character to the work. A sturdy independent mind, untrammelled by the standard authorities, al-Fasi, Malmondies, and Asher ben Jehiel, are accepted. Qaro’s aim throughout was partly to familiarize the Rabbi with the duties that devolved upon his high office less as a professional scholar, but as a religious leader his student clearly and methodically how laws are developed from the Talmud through later Rabbinical literature. It was not merely to answer the Epicurean, but to stimulate to study and research, and to gain for practical life an intelligible,
harmonious system which would maintain the old faith for all time.

Not wholly satisfied with both, Yosef, in later years, prepared his second great code, Shulhan Arakh, ‘Prepared Table’ (1565; according to Steinschneider,1 1555). It is possible that he underestimated its value and character, for in the introduction he speaks of having prepared it for young people as an7“expounding document for understanding the halakhah.” He preferred the other digest in his decisions—it was for experts, for Rabbits deep in the law. Yet the Shulhan Arakh has rapidly outdistanced the earlier code as authority. Despite continuous controversy—indeed largely by reason of the attacks made upon it—it has become the Rabbinical code which defines Judaism to our own day in the lives and opinions of the great majority of Jews throughout the world. For almost a hundred years the contest waged—it was a bloodless battle of the books, however—the chief opposition being on the part of Talmudists who were Ashkenazim, of German stock, as contrasted with the Sephardim, or Spanish, to whom Qarō was naturally acceptable. It is the opinion of L. Ginzberg2 that the Ashkenazim of Germany were the mostitional authority only after Isserles, who addsuces still later views, had subjected it to criticism and extensive supplements. After the period of censure came the age of admiration, with a host of commentators that made it a household word in the 17th century and to our age. Its authority was firmly established, with here and there an eminent Rabbi, with a bent to individualism, who refused to recognize its guidance as binding.

Since the development of Reform Judaism and the rise of modernism in various lands there have been countless attacks on Qarō and his code. On the whole, most of these have been rather unjust: for he is not responsible for laws, opinions, and customs that have existed in Israel from grey antiquity. His function was to photograph Jewish tradition, to record and interpret it according to the authorities, so as to weld still more firmly past, present, and future. His office was not that of an apostolic, but that of a codifier. Great claims that Qarō erred in citing all opinions, however transient and trifling, and made his work a store-house of views which do not always reflect credit on Judaism and have really furnished bits of evidence, for the anti-Semitic. Therefore, that Qarō erred himself with food and preparation, and the slaughtering of animals for food, Jew and non-Jew in their relations to each other, duties to parents and charity, religious customs connected with agriculture, and the like, is a contradiction.

The third part treats of marriage and divorce from the civil and religious points of view. The fourth and concluding section discusses legal proceedings, laws as to business, and the relation of man to man in an everyday working world. All life in its variety and complexity is considered as a part of the life of religion. In the dark ages that were upon the Jew as the 17th and 18th centuries arrived the work preserved him from disintegration. Whether its influence was to be as salutary, with the spreading of civil and religious liberty among other nations, as the gradual passing away of the Ghetto and its necessarily narrowed life, if not vision, cannot be so summarily answered. All depends upon the point of view.

Qarō’s life in Safed was much influenced for a time by R. Jacob Berah, one of his most learned associates in that place. The recognized head of its Jewish community about 1535, he was the centre of a number of disciples and was called ‘teacher’ by Qarō. In 1535 he attempted to restore the Rite of ordinance, with no less an object in view than the re-establishment of the Sanhedrin in Palestine as seat of the highest authority in Israel. Qarō was startled by the idea and became one of the four disciples to be ordained as the first. Without any instructions two years later and the grandiose scheme failed to be realized. Qarō, with all his ardent leanings towards the Messianic rôle, sensibly preferred his work as teacher and author. He lived until 1575, and had restored his fame and authority more and more generally acknowledged, while hundreds of students, some of high distinction, thronged his lecture-hall to hear his opinions and interpretations.

In addition to his two codes Qarō published in his life-time Kezef Mishnah, ‘Double Money’ (Venice, 1574-75). For his death appeared Beci'k ha Bayith, ‘Repairing of the House,’ supplementary and corrections to his Bet Yosef (Salonica, 1625); Ketole ha Ta'mud, ‘Principles of the Ta'mud’ (1659); Abbat Roked, ‘Powder of the Merchant, Decisons’ (1701); Maggid Rokel, ‘Who preaches Righteousnesses’ (Lublin, 1646, with supplements, Venice, 1654). Some fragments in the Bodleian, a few sermons in the collection Oz Gedolim, ‘The Strength of the Righteous’ (Salonica, 1719), and a number of commentaries on the Mishnah and on Rashi’s and Nahmanides’ commentaries, which seem to have disappeared, complete the list.

A. S. ISAACS.

QUAKERISM.—See FRIENDS, SOCIETY OF.

QUEEN OF HEAVEN. This expression occurs in the AV of Jeremiah (716•• 44••89••) and seems to be the natural rendering of the Hebrew when vocalized malkat hokitaymin, and is strongly supported by the versions. But the view that the expression should imply the same idea as the often mentioned ‘host of heaven’ apparently suggests different derivation, from nelek, the sense of ‘work’ or ‘cult,’ and led to a different vocalization which influenced other versions.

The ritual as ascribed to the worshippers of the Queen of Heaven by the prophet Jeremiah lays emphasis on the consumption of food prepared especially for the female deities. The women made these cakes with much ceremony: the boys of the family gathered firewood, the adult males kindled the fire, and the women kneaded the dough. The offering was made ‘by fire’ accompanied by libations. Jeremiah alleges that it has been a common cult in the cities of Judah and the streets of Jerusalem. It may not be wise to insist too strongly on the details, as the prophet’s indignation may have led him to caricature to some extent, but this and the name are all that we have by which to identify the cult.

THE QUETIES.

The cakes, knekrumin, which the LXX translators and the Vulgate renders placenta, are not without parallel in Greek cookery. It is precarious to argue from such parallels. The name is literally the same as the Babylonian karsatu, denoting the cakes or biscuits used in the cult of Ishtar, and is a reference to the fact that the demands burning of the cakes in the act of offering or refers to the process of their manufacture is not easily decided; but it can hardly mean to burn incense as an accompaniment of the offering.

The difficulty felt in identifying this expression as a name of Ishtar is largely due to the fact that, while Ishtar is commonly called belit šarratu or bârīt šarratu, 'lady or queen of heaven,' melket šarratu has not yet been found as her epithet. That melket šarratu is an equivalent of 아עד cannot be denied, but the question remains open whether we have in this worship a mere transfer of a Babylonian cult of Venus in a local variation of the same. The Tannin worship which Ezekiel mentions (48) makes it likely that we have to do with a Venus cult here. On the other hand, a connexion of melket with the configuration of the sky would agree with the astral theory. The form is difficult to account for as a Hebrew word, but would be correct as a transliteration of the Babylonian; only this supposed Babylonian prototype has not been authenticated. Still the cakes are very suggestive.

There is nothing to suggest an identification of the Queen of Heaven with the moon, which is a male deity in the Semitic world.

QUESTIONS OF KING MILINDA.—See MILINDA.

QUICHES.—See MAYANS, POPOL VUHI.

QUETIES.—Quietism may be defined as the exaggeuation and perversion of the mystical doctrine of interior quiet. Viewed as a tendency, it is co-extensive with the history of mysticism (g.v.), and it might successfully be argued that some early and medieval mystics were more definitely 'Quietist' than most of the members of the post-Reformation group known as Quietist. Viewed as a specific movement, Quietism swept over the religious life of Europe in the latter part of the 17th and the early part of the 18th cent., gaining sway in many countries and taking deep root within both Catholicism and Protestantism.

I. DOCTRINES.—I. PASSIVITY.—On the surface it is not easy to distinguish between the Quietist doctrine of passivity and the 'orthodox' mystical doctrine of quiet, and we find so competent an authority as Hebbe asserting that the teaching of Molinos was substantially identical with that of St. Teresa; 1 but it might with more justice be asserted that the characteristic doctrines of Molinos are traceable, not to his appropriation of St. Teresa's doctrine of the orison of quiet, but to his deviations from it.

(a) St. Teresa.—For St. Teresa, as for the medieval mystics, the state of quiet is that 'busy rest' in which the soul abandons all superficial activity and communes with God in the deepest activity of opening itself to God. It contains of necessity a passive element, for the soul that would hold the Divine Word as a shell holds the ocean must be self-emptyed and set a watch upon its unanalysed impulses even when they urge it towards the divine. But such 'wise passiveness' does not exclude the active aspect of 'stretching' towards God. Its stillness—to use the fine simile of D. A. Baker, 2 the Benedictine mystery—is the stillness of the soaring eagle, which cleaves its way through the blue with motionless wings. It is 'the rest (that) springs ... from an unusually large margin of voluntary self-control': 'Very often,' says Lewis, 3 'is produced by Action 'unperceived because so fleet,' so near, so all fulfilling.' Moreover, such mystic quiet is not an end, but a means—not a goal, but 'like the repose of a traveller who, with a child, is passing a night in a hut by the road. He then continues with new strength upon his way.' 4

(b) Molinos.—When we turn from St. Teresa to Molinos, we find that, while the latter, in his Guida Spiritualis, says much about interior quiet that is in complete accord with the conceptions of classic mysticism, the main trend and ultimate teaching of the book is Quietistic; i.e., the quiet for which he contends is in the last resort the negative, impassive, sterile state which Ruybrooke 5 castigated so severely in its earlier manifestations. In communion with most mystical writers, Molinos distinguishes between meditation, in which the reason is active and the mind occupied with definite aspects of Christian faith and life, and contemplation, which may be defined as an absorbed, loving contemplation of those truths and mysteries, a spiritual apprehension of God and adhesion to Him.

To quote St. Thomas Aquinas, 6 as epitomized by Luis de la Puente, contemplation is 'a simple view of eternal truth without a variety of contemplation, assimilating the mind to the most great affections of admiration and love at which ordinarily no man arrives but by much exercise of meditation and discourse (i.e., reasoning, or analysis and synthesis).'

But, while the great mystics insist that pure contemplation is of necessity incomplete and intermittent and that, while discursive reasoning is suspended, the intellect (higher reason) is present and active, 7 Molinos demands a State of which intellect as well as feeling is uncompromisingly renounced:

'Miner Solitude consists ... in a perfect abnegation of all purpose, desire, thought and will ... For if the Soul does not detach herself from her own appetite and desire, from her own will, from spiritual gifts and from repose, even in spiritual things, she never can attain to this high end. Undeceive thyself, and believe that if thy Soul be to wholly united to God, she must lose her self and renounce life, feeling, knowledge and power; whether living or not living, dying or not dying, suffering or not suffering; without thought, or reflection. ... Their lives [i.e. the lives of true contemplatives] are so described, that though they have no supernatural Graces, yet they are not changed nor affected thereby; because they have no other desire than that they may always be in the highest of their Hearts a great lowliness and self-contempt dwelling humbly in the abyss of their own unworthiness and vileness. They are always of a secret and even-minded in Graces and in extraordinary favours as also in the most rigorous and bitter torments. No news comes them as a joy, no event saddens them. ... Consider nothing, desire nothing, will nothing, endeavour after nothing, and then in everything thy Soul will live reposed in quiet and enjoyment.' 8

(c) Madame Guyon.—In the writings of Madame Guyon the same tendency is traceable, though in a logically undeveloped form. The highly emotional character of her work and its loose and inconsistent style of expression make it difficult to determine the precise extent of her Quietistic convictions.

While emphasizing the active element in the orison of quiet, 9 her writings abound in passages which can be construed only in an explicitly Quietistic sense.

1 See in particular the following:
2 The Mystical Element of Isolation, II, 132.
4 St. Teresa's Element of Perfection, 11, 134 f., and passim.
5 Adoison of the Spiritual Marriage, bk. ii. ch. lvii. f.
6 Summa Theol. ii. ii. qu. cxxxix.
7 For the treatment of this question see the references to the quotation of what she calls 'the eliciting from one subject many thoughts or reflections' (Life of St. Teresa, tr. David Lewis, London, 1867, ch. xii. p. 39).
8 Summa Spiritualis, it. xii. 119, 123, 125.

QUIETISM

"My prayer from this moment was without form, with images. [i.e. of any definite thought]. . . All of me was out to exhaustion, my heart was too much moved with motives or reasons for loving. That soven of the powers—the will—swallowed up in the spirit, the soul is too much sunk in the object to unite them better in it.\(^1\) The killing pain which one feels when one loses the definite consciousness of the Divine Presence shows that one has not yet become perfectly indifferent and that one is still tied to gifts of God.\(^2\) I had no more a will to submit; it had, as it were, disappeared in another. It seemed to me that this powerful and strong One did all that pleased Him, and I no more found that soul which was attached to the object determined to die of a extreme love. He appeared to me alone and as if the soul had given place to Him or rather had passed into Him, henceforth to be no more than a part of Him.\(^3\)

This losing of the soul in transcending the state in which it is shepherded by the divine love marks the extreme of Quietistic theory, and, while Madame Guyon's language cannot be pressed too far, its general tendency is unmistakable.

(d) Fénélon.—In Fénélon Quietism found its apostle. His Maxims of the Saints was written with the express purpose of defending Quietism against the popular charges of 'idle basking in the Divine Presence' and of immoral apathy.\(^4\) It is all the more significant that, in the very act of seeking to distinguish between true mysticism and Quietism, he moves in that atmosphere of negation and abstraction which is the logical presupposition of Quietism in its most extreme and exaggerated form.

*Pure contemplation,* he says, *is negative, being occupied with no sensible image, no distinct and nameable idea; it stops only at the purely intellectual and abstract state of knowing.*\(^5\)

That he makes this idea include as distinct objects all the attributes of God, the Trinity, the humanity of Christ, and all His mysteries is only one instance of the contradictions which make his work of comparatively little value as an authoritative contribution to the literature of Quietism.

2. The one act.—In close logical connexion with the Quietistic conception of passivity as a negative and abstract state is the doctrine that the soul's surrender to God is made once for all in an act not to be repeated. Madame is emphatic in his assertion that there exists an absolute surrender to God *by means of the act of pure Faith* remains in an indestructible state of union with God.

He contends that the soul *may persever in prayer thought the whole of her days; she may be occupied with various and involuntary thoughts.*\(^6\) For, according to Quietistic doctrine, *Faith and Intention alone* move man to God; he contends, in contrast, *that the more simple is that remembrance, without words or thoughts, the more it is pure, spiritual, internal and worthy of God.* While thus long as thou retractest not that Faith and Intention of being resigned, thou walkest always in Faith and Resignation, and consequently in Prayer, and in virtual and acquired Contemplation, although thou perceivest it not and remember it not, neither makest new acts and reflections.\(^7\)

3. Pure or disinterested love.—The doctrine of a continuous and *habitual* state (as distinct from occasional aspirations, which Roman Catholic theology has always counted among the highest exercises of the soul) of loving God purely (i.e. *secundum Se*), without hope of reward or dread of punishment or any regard to even His most sacred object has received special prominence through the famous controversy upon the subject between Bossuet and Fénélon. Bossuet's point of view is summed up in his extraordinary assertion:

*Pure love is opposed to the essence of love, which always desires a reward. It is an object, and as such to the nature of man, who necessarily desires happiness.*\(^8\)

Against this view Fénélon urges that a selfish or mercenary love is obviously a contradiction in terms. This is, of course, the normal Christian view, but Fénélon passes beyond it to an explicitly Quietistic interpretation.

He declares that *a man's self is his own greatest cross ... Uncompromising separation of this wretched self—that is the true crucifying of the flesh.*\(^9\) He goes so far as to say that *all concupiscence is despicable, delusive . . . and diabolical quality. One must wholly die to all friendship.*\(^10\)

Love, he contends, loves no particular thing or object and never returns, even in kind. His definition of sanctification, as a state of holy indifference and utter non-desire, applies equally to his conception of disinterested love. And, while he seeks to guard against the Quietist error by insisting with Paul that His love, must abide, his whole teaching implies an indifference to salvation which robs the term *hope* of every true meaning. Conceived with greater mental stability and expressed with more caution, his position is ultimately very much the same as that of Madame Guyon when she declares that the soul must become dead to all desire, even to its desires for spiritual gifts and graces and for salvation itself, and that it must learn to love God and prove its love by the utmost self-sacrifice and devotion that has been conceivable, whether it cares or responds.\(^11\) The whole trend of his teaching is towards a Stoic or Buddhist conception of self-renunciation and non-desire which logically excludes love of any kind, whether *pure* or interested.

4. Summary.—The Quietistic doctrine of passive contemplation, of which the doctrines of the one act and of disinterested love are corollaries, is based upon the Neo-Platonic *via negativa,* which from Dionysius to moderns took an Asiatic rather than a Greek form, representing *a sense of the divine transcendency run riot.*

Molinos appeals to Dionysius in teaching that *we know God more perfectly by negation*; he says: *We must love more than know God,* by knowing that *He is incomprehensible than by conceiving Him under any image.*\(^12\)

But, while the roots of 17th century Quietism are struck deep in metaphysical soil, it must be borne in mind that the form the Reformation mysticism takes on in particular is not metaphysical, but theological. Seventeenth century Quietism is the mystical expression of the doctrine of the total depravity of man, the necessity of all absolute submission in Protestant theology and the counter-Reformation had sharpened to a despairing conviction of *the utter miseralism of the creature.* Fénélon expresses this conviction in characteristic fashion:

*As the ascetic at the end of the stage stuffs out the altar candle one after another, so must grace put out our natural life; and as his extinguisher, ill applied, leaves behind it a guttering spark that melts the wax, so will it be with us if one single spark of natural life remains.*\(^13\)

It is abundantly clear that such a sentiment is derived from Augustine rather than from Dionysius, to whom any counsel to abhor the self that is God's temple was entirely foreign. Moreover, while the 'nothingness' of Dionysius refers to that 'divine darkness' in which the soul perceives and apprehends the ineffable, the nothingness of Molinos is a nothingness of the soul itself, and amounts to annulling of all that natural gift of union with God in any real sense. None the less we may see in Quietism the negative method, stimulated to its 'drying spasm' by Reformation influences. Its exaltation of an empty consciousness— this void without the limits in which distinction of actions vanishes—and the soul can neither will nor not—paralyzes morality.

It resolves religion at its highest into an experience in which the soul is translated to a region 'beyond good and evil,' and so cuts the nerve of morality, which always implies a clear vision of the distinction between good and evil and a definite choice in which the whole personality is active. In its consistently logical form Quietism makes communion between man and God an impossibility by annihilating the distinction between them, ultimately reducing God to a vague and empty abstraction, and dehumanizing man. Its radical acosmism 'conceives the Good outside of humanity and removes conduct to a sphere of fictitious interests where it will cannot act.' Although Christian Quietists have always to a greater or less extent formulated their doctrines in terms of Jesus Christ and His gospel, Quietism per se is fundamentally opposed to incarnational religion. On the practical and devotional side, it resolves itself into pure fanaticism, i.e. 'the fanaticism of expecting from God a grace which He never gives.' Its determining motive—the desire to cleanse religion from selfishness and to emphasize an inwardness which seeks the Giver altogether more than the gifts—is a valid one. While the antithesis between gift and giver as applied to God is largely false, and rests upon a conception of 'grace' which externalizes it into something 'given' by God and separable from His self-giving, Quietism represents a genuine and still much-needed protest against a theology which debase grace to a form of magic and imports the crassest self-interest into the soul's commerce with God.

It is necessary to note that term 'Quietist' was first used in the 14th cent., when its Greek form, Ἰσχωποσταϊ, was applied to a certain community of monks on Mount Athos who, inter alia, indulged in trance-experiences not unlike those of the Indian Yogi. Quietistic teaching was first popularized by the Beghards and the Brethren of the Free Spirit (q.v.). Condemned by the Council of Vienna in 1311 and sorely persecuted, these mystical groups persisted for more than a century and familiarized the common people with Quietistic conceptions of religion. Eckhart was included in the ecclesiastical disapproval of Quietism, Pope John XXII. condemning his views on interior quiet in 1329; and the castigations of Quietism in the writings of Ruysbroeck and Tauler show how wide-spread was its influence and how disastrous it was in its extreme and debased forms. It must be borne in mind, however, that the primary motive of the official opposition to Quietism was ecclesiastical rather than religious. The Church authorities recognized its anti-institutional character, and no expedition was deemed too cruel or too mean, provided it bade fair to secure the extinction of Quietism.

But, while large tracts of pre-Reformation and counter-Reformation mysticism admit of a Quietistic interpretation, there never was any organized mystic movement to develop the implications of what were, after all, only latent or sporadic tendencies. Such an impulse was provided by the new religious spirit, the new demand for personal experience, and a clear vision of the Counter-Reformation (q.v.). The 17th cent. Quietists were, for the most part, devoted Roman Catholics and derived their immediate inspiration and authority from the great mystics of the counter-Reformation, one of whom, Jeremias a Simeon, was more radically anti-institutional than Molinos himself. Yet they were essentially a fruit of the Protestant spirit—a fact which Rome was swift to discern.

While by common consent Quietism in the strict sense of the term is taken to begin with Molinos, the first half of the 17th cent. already exhibits individuals and groups representing strongly Quietistic convictions. Prominent among such were the Spanish mystic, Juan Falconi (1596-1638), who attracted a following, and whose Alfabeto et Lettera prepared the way for the Guida Spirituale; Marie de l'Incarnation (1599-1672), an Ursuline of Tours, afterwards of Quebec, whom Bossuet called 'the St. Teresa of our times and of the New World'; and Jean de Bernières Lovigny (1662-99), Treasurer of France and greatly admired by Fénelon, the influential writer, Desmaret de Saint-Sorlin, first Chancellor of the Académie Francaise (1635-1676); the profound but often fanciful secular priest, Henri Marie Boudon (1624-1709); the gifted ascetical writer, Jean-Joseph Surin (1600-65), formally approved by Bossuet; and many others. The Pelagini (a society called after its founder, Giacomo Filippo di Santa Pelagia, a layman of Milan) and the 17th cent. group of the Alombrados or Illuminati, which had been crushed out by the Inquisition for holding that one could dispense with the ordinances and ignore the requirements of the Church. But there were many Quietistic movements in France at least twenty years before the term 'Quietist' was first applied to the followers of Molinos in 1681 is shown by Nicole's rare book, Les Imaginaires et les visionnaires—an attack on the 'new cult of the angels.'

In 1675, Miguel de Molinos published his Guida Spirituale, Juan Falconi's Alfabeto et Lettera had prepared thousands of earnest souls in Spain, Italy, and France to welcome the new doctrine. Born in Saragossa in 1640, Molinos took the degree of Doctor of Theology at Coimbra and migrated to Rome in 1669 or 1670. His pietistic, learning, and sympathetic personality soon made him one of the most sought-after spiritual directors and a noted figure in Roman society. Among his friends were many of the cardinals, including Cardinal Benedict Odeschalchi, afterwards Pope Innocent XI., who sanctioned his position as the most esteemed confessor in Rome by giving him lodgings in the Vatican. Cardinal D'Estaix, the representative of the Church, was in some degree hostile in those days, and, when his Guida Spirituale appeared, it bore the approbation of various distinguished ecclesiastics, among them four inquisitors. Priests advised their penitents to discard formal prayers and devotions for the simple method of Molinos; societies for the study of this method were formed everywhere, and within six years the Guida Spirituale had passed through twenty editions in Italian, Spanish, French, and Latin. But soon the Jesuits realized that the method of prayer and devotion of Mason and formal devotions was contrary to the interests of the Church. Father Paul Segneri, one of their ablest and most popular preachers, was selected to confute Molinos. He did so in a small book entitled Le Contemplaition mystique acquise par la grâce de Dieu in the form of a dialogue (The Harmony between Effort and Quiet in Prayer), which was published five years after the Guida Spirituale. But so firmly was Molinos entrenched in popular favour that Segneri, lashed to the stake, was canonized as St. Joseph of Cupertino, after posthumous denunciation, and there is reason to believe that even his life was in danger. A commission was convened in 1682 to inquire into the writings of Segneri and Molinos, and a book entitled La Contemplation Mystique Acquise,
QUIETISM

written by the saintly Cardinal Petrucci, a loyal friend of Molinos. After the Seigneur, a book was consecrated, Petrucci was made Bishop of Jesi, and the teaching of Molinos was triumphantly vindicated. The Jesuits, however, were determined to gain the victory, and, seeing that the Vatican protected Molinos, they appealed to Cesar in the shape of King Louis XIV. The French King, Père La Chaise, they roused the apprehensions of the king, and induced him to bring pressure to bear upon the pope. Innocent XI. was induced to refer the matter once more to the Inquisition, and this directed the fate of Quietism within the Roman Church. Molinos and Petrucci were summoned before the Inquisition in 1685, and the former was cast into prison; but it was not until two years after, when the popular indignation against his imprisonment had spent itself, that the Jesuits determined to strike. In 1687 about 200 persons, including many members of the aristocracy and some priests, were arrested and imprisoned. A commission inquiring regarding Quietism in monastic houses resulted in the discovery that many monks and nuns had exchanged the prescribed devotions of the Church for the 'Prayer of Quiet.' A panic was created among the orthodox. Molinos was formally charged, on the ground of 68 specific propositions, partly derived partly from the declarations of his followers, with grave errors in doctrine and serious offences against decency and morality. He was also stated to have himself confessed having committed improper acts, and the populace that had once idolized him now clamoured for his execution. In the end it was announced that he had confessed his sins and was willing to absolve his heresies, in consideration of which he had been sentenced to life-long imprisonment. The recantation took place with all the obsequiousness respecting canonical procedure. Nothing more is known of the fate of Molinos except that he died in prison in 1697. His books and papers were burnt; persons known to have been attached to him or in sympathy with his teaching were hunted down throughout Spain and Italy; and all writings of a Quietistic character were rigorously suppressed. Among those who fell victims to this relentless persecution was the blind mystic of Marseilles, François Malaval, whose La Pratique de la doctrine théol. mystique was first published in 1670.

In France the drama of Quietism played itself out in an atmosphere of political intrigue and personal animosity. Its central figure was Madame Guyon. Born at Montargis in 1648, Jeanne-Marie Bouvier de la Motte Guyon showed an early bent towards mysticism and asceticism, and as a child desired to enter the Order of the Visitations. Her parents had other plans for her, however, and in 1662 she was married to Jacques Guyon, Seigneur de Chesne, a wealthy man, twenty-two years her senior. It was, as might have been expected, an exceedingly unhappy marriage, sorely aggravated by the petty tyranny of a malignant mother-in-law, and the highly-strung girl turned more passionate in the eyes of the public. She had no difficulty in finding guides and helpers in her search for the inward way to God, since the France of her day abounded in souls of a genuinely mystical type; and, at the age of twenty, the world opened itself to her. When she was twenty, she turned in her need and who bade her seek God within her own heart finally started her on her spiritual pilgrimage. Her mystical experience was exceptionally sharply defined, falling into three component phases: the two former, subjective, spiritual, and the latter, objective, spiritual, intellectual, and objective. The latter was an almost overwhelming influx of the Divine Presence, 'without word, thought or image,' which awoke in her soul a fierce joy of possession. This was succeeded by a period of dryness and desecration, during which outward troubles as well as inward trials increased. Her father, husband, and daughter died in quick succession; her son turned against her; small-pox destroyed her beauty, and she was followed by one disease after another. But suddenly, a few grinding hours gave place to a 'unitive' state, in which she recovered all the joy that she had lost, and experienced in addition a sense of infinite freedom—a new 'God-me' taking the place of the old 'self-me.' This state was entered upon under the influence of the Barnabite monk, Avere of Segneri, who was the Barnabite Order at Thonom, who proved to be her evil genius. A man of quite mediocre mentality, deficient in moral sense, and of an unstable, neurotic temperament, he yet succeeded in exercising a hypnotic influence upon her. It was during the La Combe period that her two most original books were written—Les Torr. spirit. comp. Les Moyen cour. and très facile de faire avouer—books which are characterized by profound spiritual insight, but which none of the less exhibit some of the fatal weaknesses and extravagances of Quietistic piety. Her consciousness of an apostolic mission to found an 'interior' Church and inaugurate a world-wide spiritual reformation also dates from the period. It was of spiritual fecundity or 'maternity' involving much suffering ('I can bring forth children only on the cross'), it was accompanied by certain unpleasant hysterical and neurotic symptoms which brought constant ridicule and persecution upon her. It was in 1681 it seemed as if she had found her vocation as the head of the newly-founded community of Les Nouvelles Catholiques at Gex—an institution for the training of the daughters of Protestants and other converts to the Catholic faith. But the work proved uncongenial, and it was not long before she abandoned it, taking refuge with the Ursulines of Thonon. From 1681 to 1688 her fortunes were closely intertwined with those of La Combe, who, in the autumn of 1687, accompanied her to Paris, only to be arrested on his arrival by order of the archbishop as an alleged follower of the ill-starred Molinos. Madame Guyon herself was arrested in the following January, but was released after eight months, thanks to the influence of Madame de Maintenon, who was deeply impressed by her piety. As the protégée of Madame de Maintenon, she soon became a prominent figure in the inner spiritual circle of the court of Louis XIV. It was at this time that she first met Fenelon.

François de Salignac de la Mothe-Fénelon was at that time a rising young ecclesiast with a growing reputation as a director of consciences whose spiritual genius, religious fervour, and magnetic personality attracted the belle époque of Paris. He was superior of the community of Les Nouvelles Catholiques, in which capacity he wrote his manual De l'éducation des filles (Paris, 1687), and had been on a six months' mission to the Protestants in Switzerland during which outward troubles, and a spiritual virtue. In Madame Guyon he saw not merely a woman of commanding gifts, but also a saint, and his championship of her cause was whole-hearted and generous. She, on her part, recognized him as her spiritual father, and the extraordinary correspondence which passed between them bears witness to what Rufus M. Jones describes as 'a subtle conquest,' designated by Madame Guyon herself as 'spiritual filiation,' and as the 'inward way,' and to the strange friendship which sprang up between the two. By the side of Madame de Maintenon, Fénelon was the cool and cautious partner in this intense relationship. His pastoral instinct and

1 Harvard Theological Review, x. 41.
sound sense warned him against a spiritual condition which took its own impulses for divine movements, and he would not allow himself to forgo reason in his enthusiasm for Madame Guyon's spiritual genius.

In 1659 Fenelon was appointed tutor to the young duke of Burgundy, for whom he subsequently wrote Les Aventures de Télémaque (Paris, 1669). His success as an educator of princes brought him into high favour at court, and in 1695 he was made archbishop of Cambrai. Meanwhile, in 1638-94, the storm which had been gathering round Madame Guyon broke, and involved Fenelon in bitter controversy which ultimately drove him into exile. Madame Guyon's doctrines had penetrated to Madame de Maintenon's school at Saint Cyr, and this roused the suspicions of Bossuet. He subjected her to a stringent examination, extending over six months and ending in her imprisonment as a heretic. Fenelon never saw her again, and he might easily have extricated himself from a very difficult and perilous position had he consented to join in signing her condemnation. This he refused to do, and his refusal which lost him his many influential friends, including Madame de Maintenon.

There ensued the stormy controversy between Bossuet and Fenelon which stirred all France. In his History of the Reformation he denounced 'pure' faith (i.e. faith without content), disinterested love, and the prayer ofquiet. Fenelon replied by publishing his famous Explication des maximes des saints sur la vie interieure, in which he restated Madame Guyon's doctrine in the form of a more sober and cautious way. The book, which, in spite of its dry, guarded, and not always lucid manner, teaches Quietistic mysticism in an extreme and extravagant form, created intense excitement, and divided France into two opposing camps. Bossuet attacked its author with a personal animosity which amounted to persecution, and the court ranged itself on his side. Although Fenelon had the support of the Jesuits and the secret approval of the king's confessor, the clergy sided with Bossuet, and in the end Fenelon was ordered to leave Versailles and banished to Cambrai. He appealed to Rome and, after long hesitation, the mild and cautious Pope Innocent VIII, impelled by urgent pressure on the part of the Jesuits and by the conflict, condemned certain propositions extracted from the Maximes. Fenelon spent the remaining eighteen years of his life quietly in his diocese, devoting himself to the welfare of priests and people alike, and dying at the age of sixty-three, greatly beloved and lamented.

Madame Guyon suffered successive terms of imprisonment, and, after being liberted from her last prison in the Bastille in 1703, passed her remaining years in quiet seclusion at Blois, where she died in 1717.

Among the minor prophets of Quietism Antoinette Bourignon (1610-90) occupies a distinctive place. Born at Lille, she was, like Madame Guyon, a precocious child with an abnormally developed religious instinct. As a girl she wished to become a Carmelite, but her father, who disapproved of cloistered religion and set her to find a better way of retirement from the world. When, in 1630, her father tried to force her into marriage, she escaped from home in male disguise. After some years she married and moved to Paris, where she was thought to have fled to an monastery, but finally fled to Mons, where she placed herself under the protection of the archbishop, and under his patronage made a short-lived attempt to establish an ascetic community on primitive lines. On the death of her father she brought a successful law against those who had sold his entire property for herself. About this time she came into contact with a decidedly questioner admiral of mystical religion, Jean de Saint Saulien, who induced her to an orphan home for girls, which she subsequently placed under Augustinian rule. The experiment came to an abrupt end in 1652, when she was accused of gross cruelty to her young charges and had to take flight. Her enforced wanderings took her to Mechin, where she found her first 'spiritual child,' Christian de Cort, superior of the Lazarists, and the woman who had once been her confessor, excelled her system (if such it can be called), which embodied the characteristic features of extreme Quietism in a fantastically exaggerated form. As in the case of Madame Guyon, 'spiritual maternity' occupied a central place in her consciousness. She was 'the woman clothed with the sun,' 'the bride of the Holy Ghost,' God's chosen vessel who would restore 'the Gospel spirit' to the world, 'the virgin who would bear many sons' and found a communist, priestly brotherhood.

In 1662 she went with de Cort to Amsterdam, where she spent a period of happy intercourse with the many heretics who had made that city their Cave of Adullam. An attempt, inspired by de Cort, to establish her rule among girls on a small island in the North Frisian Sea, failed. Her attempts to introduce the Maximes into a convent, and her idea of a female order of nuns, met with only partial success. In 1670 she took up a position of retirement in her convent at Mechin, where she died in 1717.

Among those who represented the practical and devotional aspect of Quietism as it appealed to the unlearned, Nicolas Herman of Lorraine (Brother Lawrence) is the classic example. Born about 1610, he was the bastard son of a Carmelite, a poor labourer, and finally lay brother in a Carmelite monastery, where he was charged with the humble duties of the kitchen. His Practice of the Presence of God, as set forth in his letters, which is to-day probably the best known of all books, was based on the central doctrines of Quietism with a winsome simplicity and a rare degree of practical wisdom. His Maximes give further instruction to those who would realize the presence of God in the same homely and wise vein. He died in 1691.

LITETATUR.A.—1. GENERAL.—The standard work is H. Huppe, Gesch. der quietistischen Mystik in der katholischen Kirche, 1873.
QUR'AN

—Names.—The names of this, the sacred book of the Muslims, are reckoned at fifty-five, of which the most familiar and the most frequently used in the book itself, al-Qur'an, seems to mean 'The Lesson,' being the abstract noun of the verb alquran, 'to read,' 'to teach,' occasionally employed in the original sense.

E.g., lxxv. 17: 'Verily upon you is the collecting and the reading (qur'anan) thereof; and when we read it, thou (O Muhammad) dost read, 'in the hearing, in the mouth, (qur'anan al-'asr), and it is not read to thee the reading'; x. 62: 'Thou dost not recite any reading (qur'anan); what thou dost recite is the written (qur'anan) of the synonymous verb bii'd, 'told.'

The word is normal in formation (cf. kufuran, ghufran, muqarrab), and is not borrowed from any other language, though it may be an imitation of the Hebrew miqraq, applied by the Jews to the Bible, of which the Arabic analogue maqra' is occasionally used for 'reading.' Other etymologies are collected by Sayyuti (see below), but they are fanciful, though it is worthy of note that a grammatical etymology pronounced the word quran as though the root were grn, 'to associate'; and his interpretation 'collection' is at least suggested by lxxv. 17 (cited above). The word is not used by Muslims except of their sacred book, but Jews and Christians commonly used it to designate a Hebrew Bible. Almost as familiar is the name Mushaf, which is said to have been invented by the Khalifah Abu Bakr, and is evidently the Ethiopic for 'book.' The word kitab (Arabic for 'book') is often used in association with the Qur'an in the work itself and in the principles of jurisprudence, but ordinarily requires some eulogistic epithet (e.g., 'the precious book').

Both this word and Qur'an can be used of separate texts as well as of the whole. The name Mufasal is applied to the last seventh of the Qur'an, but, as it repeatedly described itself as a book 'whose texts are distinct' (quadstial), there seems no reason why it should not be applied to the whole work; and indeed there are various opinions as to the portion of which this name may be used.

The etymology of the name Dergen in xvi. 107, 'A Qur'an, which we have divided up (farsagha) that thou mightest recite it unto the people leisurely,' is probably correct, this name being a plural of a root qur, 'to divide' (see x. 158). It has not been revealed to Moses and Aaron, Hebrew prafqin, i.e., 'sections'; but this particular form is Syrian and means 'deliverance'—a sense which it sometimes has in the Qur'an. The Hebrew Mishnah (Arab. Mathanih) seems to underline the name of the book, Mathanah, said to be the plural of mathan, which appears to be used of the whole Qur'an in xxxix. 24, whereas in xv. 87 the Deity states that He has given the Prophet seven matha'at and the mighty Qur'an. The interpretations of this passage are very numerous and divergent, as may be seen from Lane, p. 300. Other names are descriptive or eulogistic—e.g., 'The Guidance,' 'The Wise Record,' 'The Revelation.'

The chapters of the Qur'an are called by the enigmatical names of surah, plural suras, of which no satisfactory account has as yet been given. It is sometimes explained from the Hebrew sôrah (Is 26:9), 'row,' 'order,' used in the Jewish oral tradition for a row or rank of men, but this sense is not applicable to a row of bricks in a wall, in which case it is clearly derived from sîr (11b, shîr), 'wall,' and its transference to the region of literature may be analogous to that of column. In the Qur'an it evi—

—E.g., by Sahâki, Tûr Musâbî, Cairo, 1886, p. 217.

—Quoted a number of times in the Qur'an.

—See J. Levy, Neubiblische ... Wörterbuche, Leipzig, 1876-80.
ently means 'homily,' 'discourse,' and is usually construed with the verb 'to send down.' Thus xxiv. styles itself 'a sûrah which we have sent down and ratified and wherein we have sent down clear signs.' Probably both sense and form are adequately accounted for by identification with the Syriac šbūtā, 'preaching,' 'gospel,' 'message,' as in the title of Mark, 'the Holy Gospel, preaching (šbūtā) of Mark.' The several texts are called āyāt (plural of āyat), often used for 'sign' or 'miracle,' and clearly identical with the Hebrew ēth, 'sign,' 'letter,' 'miracle.' Its sense 'letter' is perhaps retained in the opening verses of certain sûrah, where after a sur, a series or a passage, there is at times an attempt at maintaining chronological order, but at other times it is neglected.

The narratives most frequently recounted are those connected with Noah, Abraham, Lot, Moses, and the otherwise unknown prophets Hūd, Sālih, and Shu'aib. The story of Adam is told in ii., vii., and xx., that of the nativity of Christ in iii. and xix.; numerous stories are told only once—e.g., the story of Tubba (a contemporary of Jethro in xiv. 1), the story of the Queen of Sheba (xxvii.), that of the Seven Sleepers in xviii., which also contains a fresh story about Moses and one about Dhu'l-Qarnayn, thought to be Alexander the Great. Of the OI prophets the Qur'an knows to have been those of Noah and Enoch; it also contains some information about David and Job. Of Arabian history it knows the name Tubba (xiv., l.), the ruin of the Sabean empire (xxiv.); the persecutions of the Christians in the Jewish state of S. Arabia (lxxv.), if the last passage is correctly interpreted; and the Abyssinian attack on Meccah (cv.), if the interpretation be correct and the attack historical. Of contemporary history outside Arabia, it notices the Persian invasion of the Near East.

Where the same story is repeated, the various versions at times contain fresh details; thus sûrah xli. ('the Believer,' is called after a believing subject of Pharaoh who delivers a monothestic appeal to the Pharaoh), contains an episode not mentioned elsewhere in connexion with the story of Noah, which is told in xv. 1-9; or in xvi. 1-23 in xvii. 1-27 there is an account of a disobedient son of Noah who perishes in the Flood, and who also is not mentioned elsewhere in connexion with the story of Noah. Though the story of Moses is often repeated, especially in the latter part of the book, and though a few details are omitted, or added, in sûrah xxviii., these repeated versions, then, to some extent supplement one another, though they cannot always be harmonized.

The content of the author is to prefer the apocryphal accounts to the earlier narratives in the canonical Scriptures, whereas Solomon is represented as understanding the language of the lower animals and having at his disposal the forces of the jinn; the mountain is said to have been raised over the heads of the Israelites, and Jesus to have made lards of clay and animated them. Descriptions of the phenomena of nature are not uncommon, though usually exceedingly brief; their purpose is of course not scientific, but the demonstration of monotheism. A literary feature of the writing is the parallelism, a kind of meter is interspersed, taking (as usual) the form of personal addresses by the Deity to the Prophet. The consolatory sûrah (xiv. and xlviii.) striking specimen of this class; lxxvii., and lxxviii., which contain exhortations to the Prophet, are similar; lxxiv. describes a personal experience which the Prophet is told to repeat; it is how certain of the jinn, hearing the Qur'an recited, were converted. Three sûrah deal with his domestic affairs, which of course were of importance to the whole community, and in which the author has made a few alterations or additions.

The only names of contemporaries mentioned in the book are those of his adopted son, Zaid, and his unbelieving uncle, Abū Lahab. Allusions to others occur, but reliance has to be placed on the traditions connected with the identification.

Owing to the intensity of the Prophet's loves and hates and other emotions, and the frequency with which the expression of these takes the form of a revelation, the Qur'an might in many parts prove a hard book to read; it records doubts felt by himself as to the reality of his mission and its likelihood of success, critical situations at different times in his career, what he said when they occurred, and hard blows which he received and gave. It thus constitutes the most important set of materials for

1 See Ghazali, Mustaghfa, Cairo, 1924, ii. 256.
his biograpy, its utility being somewhat impaiired by the absolute want of chronological arrangement. Its contents are preserved chiefly on the basis of the later official biography, which is itself largely based on the Qur'an.

3. Sources.—That the material of the Qur'an is in the main identical with that of the Former Leaves, i.e., the Jewish and Christian Scriptures, is admitted in the work itself; these 'Leaves,' more accurately described as the 'Leaves of Moses and Abraham who was faithful,' are quoted in iii. 37-55 for a variety of matters.

The narratives of the destruction of the tribes 'Ad and Thamúd, also quoted from these 'Leaves,' are certainly not to be found in the Christian Scriptures. It is not a matter of dispute.

'The Law' (Taurát) is quoted in verse 49 for the rule, 'soul for soul, and eye for eye, and nose for nose, and ear for ear and tooth for tooth'; the reference is to Ex 21:24, where, however, 'hand' and 'foot' are added in text, 'mouth for mouth.' The Psalms (Zubár) are quoted in xxi. 105:

'We have written in the Psalms after the Record: My plou servants shall inherit the earth.'

The reference is to Ps 37:9, but the phrase, 'after the Order,' is not a quotation of the Mishnah of Sanhedrin, iv. 5, is cited in v. 35:

'On account of this we have written for the Children of Israel that whosoever slays a soul save for a soul or for mischief in the land, God hath said, though he had slain an angel; and whosoever saves one, it is as though he had saved all mankind.'

The exceptions are not found in the text of the Mishnah, but otherwise the citation is accurate. A somewhat vague allusion to reference to the Law and the Gospel is in xlviii. 29:

'That is their likeness in the Law and their likeness in the Gospel: Like the seed which putteth forth its stalk, then strengtheneth it and it groweth stout, and riseth upon its stem, rejoicing the husbandman.'

The reference to the Gospel appears to be to Mk 8:35, where the Law is again quoted. Thus, it is likely the precise wording of the text:

'These are probably the only actual quotations; reproduction of matter or of phrases occurring in the OT, the NT, the Talmud, or the NT Apocrypha is found throughout the Qur'an, and this is at times sufficiently close to render the term 'quotation' not inappropriate.

Noticeable cases are vii. 39: 'Nor shall they enter Paradise until the camel passeth through the eye of the needle' (34 109); xxvi. 104: 'The day whereof we shall roll up the heaven as the scribe (i) rolleth up the book' (Is 24:1; xxvii. 70: 'We gave him [Cain] treasures of which the keys would weigh down a company of strong men' (B. Pamshineh, 119:4: The keys of the treasures of Corah were a burden for three hundred white mules); xxvii. 26: 'If all the trees that are upon the earth were burned, and the wood became pens, and if God should after that swallow the sea into seven seas of (ink), his works would not be exhausted' (midrash Rabba, Genesis, xxxvii. 26). In other cases were he read the earth, and the heavens and the earthroll, and all mankind scribes, they would not suffice to write the Law.'

Borrowings and wordings it would not be permissible to infer that the author of the Qur'an had direct access to the Bible, Apocrypha, and Talmud; still less would it be permissible to infer from their inaccurecies that he had no such access for the information of which they were incapable of being said. When numerous appliances make the verification of quotations exceedingly easy, we find experts in Homer confusing Andromache with Penelope, etc., and Biblical exegesis in the Zend Avesta, etc. When verification was a cumbersome process, the standard of accuracy was far lower. Now, the Qur'an exhibits intimate acquaintance with the books of Genesis and Exodus, out of which it reproduces various chapters—sometimes, fastened on, mixed up with Midrashic matter; and this reproduction is often accompanied with serious inaccuracy, as when Moses is said to be sent to Pharaoh, Haman, and Qur'an (Corah). In both matters it is nothing more than a garland, and a literal confusion Abraham with Jacob (Acts 7:2), and Paul uses Midrash as though it were Scripture (1 Co 10:9), though doubtless it differs in degree. The latter practice seems to come from the constant association of certain comments with the text, and has its parallel in the practice of the science of archeology.

That the work of ours own time, where, e.g., the statements of the Homeric poems are mixed up with inferences drawn from it by later authors. The most natural conclusion would be that the Prophet had at some time studied those two books (Genesis and Exodus) with the aids current among the Jews, and had afterwards reproduced his information without verifying his references. His acquaintance with other parts of the OT is much slighther, yet he displays some knowledge of the books of Judges, Samuel, and Kings. In these cases, too, Midrash is mixed up with Biblical matter, and the attempt to reproduce the story of the scene between David and Nathan (xxviii. 20-23) suggests that he had known the story at one time, but had afterwards forgoten its context and many important details.

Of the NT he clearly knows far less, the only personages belonging to it whose names he mentions being Zacharias, Yaluyi (John the Baptist), Maryam (the Virgin), 'Isa (Jesus), and the angel Gabriel. Maryam is the daughter of 'Imran (Amram), and the sister of Hårûn (Aaron). His 'Gospel of the Nativity' (in sūras iii. and ix.) is similar to what is found in the Protevangelium Jacobi Minoris, but contains certain details drawn from other sources; one of these, that the Virgin supported herself on a palm-tree during her threes, is clearly traceable to the Greek myth of Leto. The employment of the title 'Word' (rûmân) for Christ must go back to the Fourth Gospel.

The difficulty of assuming that the Biblical matter of the Qur'an was got at first hand from books lies in the fact that there is no evidence of any parts of the Bible having been translated into Arabic before the Alter Period. Khadijah's relative Waraqah translated a Gospel is obscure, and may mean merely that he copied it—and none of the Prophet having studied any language but his own, coupled with the circumstance that both the proper names and the names of religious technicalities in the Qur'an belong to some four different languages. Thus Jákwnam (Gehenna) is Hebrew, Nāth (Noah) Syriac, Alyûs (Maryam) the Virgin, 'Isa (Jesus), and the angel Gabriel. Maryam is the daughter of 'Imran (Amram), and the sister of Hårûn (Aaron). His 'Gospel of the Nativity' (in sūras iii. and ix.) is similar to what is found in the Protevangelium Jacobi Minoris, but contains certain details drawn from other sources; one of these, that the Virgin supported herself on a palm-tree during her threes, is clearly traceable to the Greek myth of Leto. The employment of the title 'Word' (rûmân) for Christ must go back to the Fourth Gospel.

the Syriac Mazmûrê. Names which seem to be Biblical but cannot be identified with certainty are those of the prophets Ishir, Dhû'l-Khânî, Dhû'l-Nun, and others. The subject from which surah v., said to be the latest, derives its name, 'The Table,' appears to exhibit a strange conflation of different matters; the apostles (v. 112) ask 'Isa to pray that a table be sent down to them from heaven, and he, after other ways that may be sent down 'to be a festival to the first and to the last of us'; and the prayer is answered. The basis of this appears to be the phrase 'the table of the Lord,' in 1 Co 10:31; but there seems also to be an allusion to Christ's feeding of the multitude and to the vision of Peter (Ac 10:10). The extent to which the Prophet's memory and imagination, or the peculiarities of his informants, gave rise to these and similar statements will never be accurately determined. Hence we not the Protovangelium, we might have attributed to him the confusion between Samuel and the Virgin Mary which appears in surah iii. Certain lost works appear to have contained matter which resembles what is found in the Qur'an e.g., the Ḥisâb al-rovḥâ 'Arov- crâal,$ which mentions that Muhammad had the statement that not Christ but another had been crucified, which is near the Qur'ânic doctrine (iv. 150), in which the Jews are charged with falsely asserting that they had killed Christ, whereas this had happened only in simulacra. Of matter that is not Biblical but is obtained from Christians, the story of the Seven Sleepers (q.v.) and probably that of Dhû'l-Khânî are examples; that of the adventures of Moses with a personal essay about some of whose details, the Muslim al-Khidâr is said to have a similar origin. Of acquaintance with any foreign literature other than that belonging to these communities there appears to be no certain trace, though there are references to the Magians, whose literature is known, and the Sabæans, who are still a puzzle. When we read, 'The whole doctrine of the Qur'an concerning Ibîs and the genie, or Satans of the Qur'ân, has been borrowed for the most part from the Magi of Persia,' it is hard to see how this can be proved. For the data of the Qur'ân story are Biblical; that Adam was created from earth is known from Gn 2, and that the 'ministers' are of flaming fire is known from Is 104; 'that the words, 'Let all the angels of God worship him ('14:32)' are all taken, on Abûl-Fadl's account, from Genesis, the world is known to the author of the Epistle to the Hebrews (11). The doctrine that fire is more honourable than earth, whence Satan's refusal to carry out this order is intelligible, and made the ground of it, is an Aristotelian commonplace. What we have then is a Midrash worked up in Qur'ânic style, precisely as the story of Abraham and his father's idols (xxi. 52-71) is worked up from the material preserved in Genesis Rabbah, 38. That there was no native literature in the possession of the Arabs to whom the Qur'ân addresses itself is stated so frequently and emphatically that we are compelled to believe it. Passages of this type are xvi. 3: 'Bring me a book before this or a monument of knowledge, if ye speak true'; xvii. 37: 'Have ye a book wherein ye study?'; xcvii. 43: 'We have not given any book to stand nor remain to them before thee'; xxvii. 36: 'Have ye given them [i.e., the pagan deities] a book, wherein they have proofs?'; xxvii. 2: 'Are they then the only people that have lost the sayings that surpassed their former ones before'; xxvii. 156: 'Have ye any clear authority? Then bring your book, if ye speak true'; li. 41: 'Are they in possession of the Book that they are the near of Allah? And ye have sent among the infidels a messenger of themselves to receive their signs.' Clearly, then, the Prophet had not, like the Christian missionaries among the pagan Greeks, to overthrow the authority of books which served to maintain an older system; nothing could be cited against his assertions but immemorial practice. Although the language of the Qur'ân must represent in itself that which was current in Mecca when it was composed, and to the creation of that idiom many persons have contributed, it is improbable that the Prophet had in the language of his country any literary model to which he was indebted for either form or content. Indeed, know of the existence of poets, who 'roam in every valley and say what they do not do' (xxvi. 225), and was himself charged with being a jinn-ridden poet, though he asserts that God had not taught him poetry; but it is evident, both consequent and as it could not be the subject of these persons and from what it puts into the mouth of the Prophet's adversaries, that they were not writers of authority who aspired to become national classes.

According to Tabari, certain Arabs in the Prophet's time possessed the book of Luqman, some of whose sayings are reported in surah xxxi. In the later literature he figures as a writer of fables and is often quoted for maxims; yet it is not clear whether any saying was known apart from the passage in the Qur'an. The story of Thâmûd and their prophet Šâlîh is located in N. Arabia, and the name of the tribe is attested by classical geography; the rock tombs were mistaken for houses of the tribe. The story is unknown, as is that of 'Ad and their prophet Hûd. Tabari derives this tribe from the son of the Biblical Uz, also located in Arabia, and the name seems to be the Biblical word for 'eternity,' and to be about as historical as Cudamus. The phraseology and to some extent the statements of the Qur'an are often illustrated from 'pre-Islamic poetry'; and some of this came to be recognized as classical at any rate in the early Abûbad period. These poets, unlike those of other communities, seem to be entirely ignorant of their national or tribal religions, whence it has been suggested that they were all Christians! There appears, however, to be no possible method of reconciling their existence with the statements of the Qur'ân cited above or, more plausibly, the false and shameless falsehoods, the work should have produced some argument or reason for ignoring the poets' words, which (e.g., the Mal'âlaqah of Zahâr) contained moral precepts and at times allusions to the Prophet and the Qur'ân (e.g., the poems of Umâyah b. Ali Šâl.). The source of every statement or expression in the Qur'an cannot of course be traced, and there is no reason for denying its author considerable originality. The requirements of the rhyme must of themselves have led to the invention of new phrases, and even of historical details—e.g., the location of the call of Moses in 'the holy vale Tuwâ' (xxix. 16), and of the meeting between Moses and the magicians 'at midday' (xx. 61). The same consideration perhaps dictated the specification of the 'tree Zaqqûm' as the food of the damned, which seems to have provoked criticism at Mecca (xvii. 62), and the description of Pharaoh as 'the man of the stakes' (dhûl-auôtâd) (xxviii. 11). But though this may conceivably be a misunderstanding of the Greek word ἀνθρόπος. Originality is doubtless displayed in the descriptions of hell and paradise, though in these some details are traceable to the Johannean Apocalypse. The same collection of stories is not as the result of study in itself different from that urged by other poets, who professedly obtain their information from the Muse, etc. It may have been taken too literally by the Prophet's opponents; consequently, as it could not be withdrawn, it had to be maintained as a fact.
4. Original theory of revelation.—The Qur'an is, on the one hand, something written, on the other, something read or recited. The written document, however, is in heaven.

It is an honourable Qur'an in a hidden book which shall not be unrolled except by God's permission (xvii. 94). This point is, however, somewhat elucidated by another passage: ‘It is a record on honourable, cleansed, exalted leaves in the hands of honourable, pure scribes’ (xxxvii. 11-14).

This, however, ‘contains the permanent writings’, which ‘are recited by an Angel from God’ (xviii. 2), are thus thought of as in heaven; and in v. 7 the ‘book’ is clearly distinguished from such as are on ordinary materials.

Had we sent down unto thee a book written on parchment, and they had touched it with their hands, the infidels had surely said: ‘This is sought but plain sorcery.’

Since in vii. 142 it is stated that the Deity wrote for Moses on the Tables a homiletic and encyclopedic work similar in character to the Qur'an; which is itself said to be on ‘a guarded table’ (lxxviii. 22), it would seem that revelation means the mental perusal by the Prophet of the divine book, which is in heaven, whose contents he communicates to his countrymen. And indeed the Jews are spoken of as ‘those who read the Book before thee,’ whom the Prophet is to consult, if he has any doubt about his revelations (x. 94). It is supported by the language that the dawning light and grace is heavenly (xiii. 2-7), which is then translated into Arabic so as to be intelligible. Of the divine language it is probable that the letters prefixed to some of the sûras are specimens. This theory accounts in part for the fact that so many of the sûras are repetitions of the same matter; the reproduction by the Prophet of the portions of the divine book which he was privileged to peruse would not necessarily be verbally coincident. The book would be ascribed to the Prophet, as is the case with the Psalms in the Old Testament (xxvi. 193), called Gabriel (ii. 91), to the Prophet's heart, while it is also in the books of the ancients (xvii. 97), and in the breasts of those to whom knowledge has been given (xxiv. 48), i.e. learned Ismaelites (xxvi. 197). For even the reduction of the Law of Moses to parchment is supposed to be an innovation (vi. 91), its proper seat being the memory of the rabbis (v. 48). It might have been revealed in a foreign tongue (xxvi. 198, xlii. 44), but this would have involved various objections. According to this theory, the Prophet’s own people only (xvi. 4); hence the notion of reproducing the contents of a concealed book has a tendency to give way to that of bearing a message, which the messenger would naturally express in his own words.

There does not appear to be any reference in the Qur'an to any but oral communication of its contents. The passage cited above from vi. 7 plainly indicates that it was not produced on parchment, and similarly in xvi. 95 the Meccans ask for a book to be brought down from heaven ‘which they can read themselves.’ The texts are recited either by the Prophet or by his followers (xxii. 71); there is little suggestion that the one or the other had a written copy, though perhaps vi. 146, ‘I find not in what has been revealed to me save . . . ’ might be interpreted of a search through MSS. Hence, when the Qur'an quotes itself, it quotes rather the general sense than the exact words, with the exception of passages which were obviously meant to be remembered.

E.g., iv. 139: ‘He hath sent down unto you in the Book that when ye hear the Signs of God denied and mocked, ye shall sit with them in the fire . . . ’ The passage cited is vi. 67: ‘When ye hear the Signs of God, then deliver them to them; and if they disbelieve, let them be among the evildoers.’

Where obliteration of texts is mentioned, the reference is to alterations made by the Deity in the divine original (xiii. 30, xlii. 23); to erase in this case has for its equivalent ‘to cause to be forgotten’ (ii. 100).

The tradition at times agrees with the Qur'an in this matter, as where the Prophet is made to confess that he has forgotten a text which is attributed to him, the genuineness of which he acknowledges, or to explain differences between the forms in which the same text is current by the theory that the Qur'an had been revealed in seven different forms. At other times it assumes that some one who had written down the texts as soon as they were delivered and kept at hands which h. Thabit was summoned by the Prophet to write down a text which had been revealed (iv. 97), and brought a shoulder-blade for the purpose; presently some one complained that the verse was hard upon him, and some additional words were revealed meeting the case. Certain verses were lost because 'Aishah kept the scroll which contained them under the Prophet's bed, and let it be worm-eaten during his illness. Long lists were given of people who 'copied down the revelations.'

On the whole, the phenomena displayed by the Qur'an itself render it difficult to suppose that it was committed to writing in the Prophet's time, though its character was greatly changed by the translation from Islam from Meccah to Medina. The clumsiness of the language, the repetition of sentences, the resemblance of this body of literature to the compositions of the rabbis or others, and the absence of a sequel, if it is a sequel to other books, to the beginning of the Qur'an, appears to our minds to make the whole more intelligible if it is thought of as a lecturer's treatment of a subject than if it is regarded as a permanent document; the repetitions of the same narratives with insignificant variations are natural in the former case, almost unthinking to the extent to which they are found in the Qur'an in the latter. But, if any revelation became fixed in writing, the need for having the whole so fixed would speedily make itself felt. The assemblage of materials from which the statement of the Qur'an were absolutely consistent with one another and with the earlier Scriptures, which were reasonable enough when men were concerned with the general sense of what had been uttered, assumed a very different character when, by being committed to some writing material, they became definitely fixed.

When an official copy had been circulated to the exclusion of others, a theory of verbal and literal identity was not to be attained, and ultimately became dominant, though barely. The history is sometimes found where we should least expect it; thus Buhârî says that the text, 'except that ye knit a relationship between me and you,' was revealed, but the commentators acknowledge that they cannot find it, and suppose the words to be a paraphrase of xlii. 22: 'save love of my kin.' Ib. Mas'hûd (t. 32), when ordered to alter his copy in accordance with the official text, declared that he had heard seventy sûras from the lips of the Prophet, and could not adopt these alterations; readings of his were employed as late as 322 A.H., when their use was forbidden on pain of execution, and the books which contained them were burned. These variants consisted mainly in the substitution of synonyms, but were also by grammarians to cite God who is exalted for grammatical forms and rhetorical ornaments. A Masarah arose which counted not only chapters and verses but words and letters (the various computations are given in the Muhâdhîb, 193, vi. 321).
In the early days of Islam inaccurate citation was common for a time at least; a Khărijite woman declared that the ignorance of God's book displayed by Umayyad governors had led her to revolt. Some fragments which, whether by the Prophet or not, were not included in the official Qur'an were here and there preserved as having once belonged to it; and, when a reader made a spurious addition to a sûrah, it was not always easy to detect its inferiority to the genuine matter. Stories are told of lengthy interpolations by ministers in public assemblies, which were tendered to them for their own ends, and of others which were harmless supplements to the texts. See, further, art. INSPIRATION (Muslim).

5. Chronology and arrangement. The order of the sûrah (114 in number) is evidently according to length, but this is far from strict, and early traditions suggest that certain sûrah were grouped together owing to their reaching a certain length, but that their order within those groups was haphazard.

In the Masnad we read: 'Said Ibn 'Abbas: I said to 'Utham: What induced you to take the Surah Anfâl (viii.) which is one of the Mathahî (sûrah of less than 100 verses) and one of the six sûrah (ix.) which form the hunding sûrah (sûrah of between 100 and 200 verses), and write them, not without the words of 'Umar, 'I announced to God, and to place them among the seven long sûrah? He said: As time passed numerous Sûrah were revealed to the Prophet; what was revealed to him, he was used to summon one of his scribes and bid him place it in the Surah wherein such and such matters are mentioned; when a group of two or more Sûrah were revealed, he used to say, Place these texts in the Surah wherein such and such matters are mentioned; and he would say the same when a single text was revealed. Now the Surah Anfâl was one of the first of the Medîne Sûrah, whereas the Surah Bara'â was one of the last Surahs of the Qur'an. And if we examine the order in which they are supposed to have been explained, we shall see that it belonged to it, and the Prophet died without distinctly ascertaining that it belonged thereto. This was the reason for our present order.

In the same work we are told that al-Jâhid b. Khazmânah brought 'Umar the last two verses of sûrah ix.; 'Umar recognized them as having been uttered by the Prophet; had there been three, he added, he would have made of them a separate sûrah; as there were only two, he made al-Jâhid find a suitable place for their insertion; he accordingly placed them at the end of sûrah ix.

These traditions indicate that both the second and the third Khalîfsah had a hand in the arrangement of the Sûra, and that the final arrangement was the Prophet's; and it is noticeable that 'Uthamân, who, according to the most familiar tradition, is responsible for the circulation of a uniform copy and the destruction of all others, in a saying put by Tabari into the mouth of one of his murderers, was the first whose hand wrote the Mufasal, implying that his edition was the first written edition. Usually the collecting of the Qur'an is placed in the reign of the first Khalîfsah, whose scruples were overcome by the fear that the book might be lost if the readers should perish in the wars; and indeed it was asserted that parts actually perished with some of the martyrs of Yemamâh; but admirers of 'Ali declare that he, not the Khalîfsah, was the author of the Sûra. After the death of the Prophet, immediately a copy of the Qur'an from memory in three days; and this, wanting some leaves, was said to be still in existence in the 4th century. If there were any truth in this story, it seems that the people had wanted those verses which the person—Zaid the Thamâni—said to have edited the ordinary text found with difficulty; so, according to Bukhârî, he copied the leaves into his edition, he missed a verse (xxxiii. 23) which he had heard the Prophet recite; finally he found it in the possession of Khuza'imah, the Ansârî, whose evidence was worth that of two men.

The persons who produced these stories had to accommodate a text which is generally acknowledged, viz. that the sûrah often contain matter which belongs to very different periods, coupled with the assumption that single texts or small groups of texts were often revealed. If, e.g., Surahs II 203-204 (consisting of the story of 'Umar, whereas ix. 1-10 was delivered on a different occasion to 'Ali, how came these various texts and groups of texts to form one unit called a sûrah? In the Masnad the location is said to have been dictated in most cases by the Prophet; and the tradition admits that the sûrah had at least, neither names nor numbers, so that they could only be distinguished as 'containing such and such matter.' Perhaps the only passage in the Qur'an which suggests that the Prophet arranged the texts is for. ' If this rich restricts the pronoun of verse 66, that 100 Muslims should overhear 100 unbelievers, to a promise that they should overcome 200, prefixing to the reduction the words, 'Now God has lightened your burden,' knowing that the superiority in numbers of the believers to the infidels 'now' indicates that an interval has passed between the two promises. But the suspicion lies near that this reducing verse is not from the Prophet himself, but from some later annotator. Ordinary, where one statement corrects another, they are widely apart. So in viii. 9 the fighters at Badr are promised a reinforcement of 1000 angels; but in ii. 120 f. the number is increased to 3000 or even 5000, though the occasion on which the promise was made is the same, but no further comment is added on both (viii. 10 and i. 129). It could scarcely have been the Prophet's intention to let both reports of his oracle remain.

Hence it is more usual to suppose that the sûrah, where they are evidently collections of matter belonging to different times, represent the results of private effort, and the process called 'collecting the Qur'an' probably refers to this preliminary putting together of revelations delivered by the Prophet. According to the tradition, as early as the time of Uthman, Surahs were assigned to those who had collected the Qur'an, and in proportion to the amount which they had collected; one Mujammâ', son of Hârîthâ, who figures in some incidents of the Prophet's biography, got his name from his carrying out this process; the name of the first person who 'collected the Qur'an' in Yemen is recorded; and we are told that 47 men of one tribe, who had collected the Qur'an, were killed on one morning. Four persons are mentioned in the tradition as having collected the Qur'an in the Prophet's time. Where, then, the same verses with slight differences are found in different sûrah, the Prophet may be repeating himself, or the repetition may be due to copying the matter in the collections of different persons.

Cf., e.g., xliv. 61: 'Say, O ye that have judged, if ye judge that ye are friends of God out of all mankind, then desire death if ye speak truly. But if ye speak not truly, then desire death if ye speak truly. But never will they desire it owing to their previous hard work, and God knoweth concerning the wrongdoers.' With li. 88: 'Say, if the last world be yours exclusively out of the grace of God, then desire death if ye speak truly. But never will they desire it owing to their previous hard work.'

It is hard to say whether this represents two reports of the same message to the Jews, put together by different collectors, or two messages delivered by the Prophet at different times, with a
very slight difference in the wording. And similar cases are frequent, notably the statements about the miracles in the wilderness, the entry into the Holy Land, and the transformation into apes of Israelites who broke the Sabbath, which occur in vv. 160, 161, 162, 166 and ii. 84–87, 61, though these surahs are supposed to have been delivered respectively in Meccah and Medinah.

To some extent, then, the surahs present phenomena analogous to those of the Gospels; i.e., the same matter is repeatedly produced with variation in form, and with apparently divergent authors. It is not to be wondered at, then, that it is difficult to think of these as reports of different matter; they are much more like reports of the same discourses with the variations inseparable from oral tradition.

An example may be taken from ii. 98: 'O ye that believe, say not, "rā'īnā" but say "unpurakā" and "hear,"' and in iv. 48 there is the following: 'Among those that Judea are such as corrupt the phrase from its location and say: "We hear and disobey," and "hear, not made to hear," and "rā'īnā," twisting their tongues and attacking the religion. Had they said: "We hear and obey," and "hear, not made to hear," it would have been better for them and more correct.' In ii. 87 it is said of the Israelites that they took their book away from them and put to them, 'Take what we have given you with power, and hear,' they said, 'We hear and obey.'

Now, the Arabic words quoted, of which one is apparently corrupt, and another appears to be synonymous, and in the later literature are both in common use; the phrases 'we hear and obey' and 'we hear and disobey' are contradictory; the phrase 'hear, not made to hear,' for which 'hear' is often substituted, is unintelligible. In surah iv. all three are offered as examples of improper expressions used by the Jews with malevolent intent; in surah ii. the phrase 'we hear and disobey' is recorded as the defiant reply of the Israelites when commanded by their oppressors to return to Sinai, whereas unpurakā is stated to be the proper substitute for the improper rā'īnā, while the improper substitute for 'hear' is not recorded. In v. 45 we have another version of the commence-
ment of iv. 48:

"Among those that Judea are hearers of falsehood, hearers of other people who have not come to thee, who corrupt the phrase from its location.

The account which seems to agree best with the facts is that we have the inaccurate records in these various places of the same sayings put together by different persons long after they were delivered, when the circumstances of the original delivery were very largely forgotten. By the phrase of 'corrupting the phrase from its location' in one surah is thought to refer to the conduct of the ancient Israelites, in another to the Prophet's Israelitish contemporaries, in a third to incorrect reporters of the Prophet's sayings, to whose testi-
mony the Israelites of his time attached value.

Thus the questions of chronology, arrangement, and genuineness are inextricably connected, and any attempt at arranging the surahs in chronological order is impeded by the fact that the surahs are themselves largely agglomerations, while the probability that much was not committed to writing till long after the texts to be reproduced had been uttered necessarily affects the genuineness of a surah; and doubts about the genuine-
ness of texts are not altogether wanting in the Muhammadan chronicles.

According to Tabari,1 when Abū Bakr after the Prophet's death, during the period when the Prophet's death is mentioned, 'the people did not seem to know that this text had been revealed to the Prophet until Abū Bakr recited it to them;' whereas when the Prophet's death is distinctly foretold (xxxix. 33) were repeated on this occasion, according to another account,2 certain persons swore that they heard the Prophet say that the recitation before the Prophet's death would be preserved.

The authenticity of the two final surahs was denied by some persons. European critics have naturally fewer scruples than Muslims about

1 1816
2 Tabari, i. 1819.

obelizing verses, but, since these interpolations, if there be any, must belong to a period which is very imperfectly known, not many verses have been condemned. Certain passages very clearly belong to definite epochs in the Prophet's biography, and in the order of the surahs the second, of which Ithāq is generally trusted, though its authority was clearly not established in the 2nd century. Thus the authoritative Shāfi'i places the Raid of Dhiḥ al-Riqā', which was the occasion of iv. 103 f., after the Battle of the Trench, whereas in the narrative of Ibn Iṣaḥ the raid was in the year 4, and the battle in the year 5. The number of texts that can be dated by these considerations is comparatively small; for a great many com-

1 Rādīlah, Cairo, 1323, p. 27.
2 I. 2963.
explained to you what food he had made unlawful for you, and though this may be a reference to vi. 146, yet, since the list there begins with the words, 'Say: I find in that which has been revealed unto me nothing forbidden save,' etc., the reference to xvi. 116 seems the more natural; for, if the reference be to xvi. 116, it is explained are no unclean meats. There is no difficulty in the verse, since there will be a reference to a Medinean surah in two Meeccan surahs! Dating by the supposed development of the Prophet's psychology is naturally an unscientific proceeding; nor does it seem possible to draw any help from the development of his knowledge. We are told that about the year 617 the Prophet learned that the stories about Hûd and Saiwib were apocryphal, and in consequence was careful to make no further allusion to them. In fact he alludes to them in sârah x. (71)—according to the tradition, the last sârah but one, or the last, in the Qur'ân.

6. The miracle of the Qur'ân.—The meaning of the miraculous nature ascribed to the book has been the subject of much discussion, and the treatise to which its explanation is referred to in the text has been too long to be here reproduced. It is evident that the circumstantial evidence to which the Prophet referred may have been insufficient to satisfy the inquiring mind of a Bâzâl, but it was his desire, as related above, to demonstrate that revelation had come from God, even in the Meeccan period. The stories of the sârah of the Prophethood were either not narrated, or were narrated in surprising form. We find indications of this in the genealogy of Muhammad (xiii. 1, 2), and in the story of the Angel Gabriel (xxvii. 13, 14). But there have been instances of the accuration of stories which could rival it, and is assured that the united efforts of mankind and jinn would fail in such an enterprise (xxvii. 90). This doubtless limits the effectiveness of the miracle in the first place to the Arabs and in the second to experts in style; but it is pointed out that in most matters the majority are liable to be deceived, and that even the most critical sects and networks are composed by rhetorical experts who show how everything in the book is expressed in the best possible way; the recently published Târîb, by the Zâidi Khalifâh Yâhi'â b. 'Abdallah (â 749 Â.). Of these objections Ibn Wazir, Cairo, 1914, pp. 152, 153, and discusses the famous allusions, e.g., in the phrase 'and thou wilt do which thou didst' (xxvi. 18).

Possibly these expressions of self-approbation in the Qur'ân do not differ much from those employed by other Oriental authors and at times by Europeans. What we learn from its statements is that the Meeccans in general found it intolerable, and demanded a 'reading' of another kind (x. 16); and even in the late Medineh period (ix. 66, 125) of the Prophet his own claim to be guided was found to cause annoyance, ridiculed the revelations. A curious method of dealing with the miracle is that ascribed to a Mu'tazil doctor, who supposed it to lie in the failure of the Arab poets and orators to take up the challenge of the Prophet's 'moral' performances; or if in spite of their number and ability they abstained, they must have been supernaturally prevented. It is urged against this view that, were it correct, the miracle would not be the Qur'ân, but God's; but it is asserted that innumerable passages of revealed prophecy and miracles of very doubtful validity—one, that there were at the time numerous poets and orators, and a second, that the challenge was not taken up. Indeed, it seems certain that a rival Qur'ân was produced by the pretender Maslamah or Muzzainah; and Palgrave suggests that much of it was preserved in Yemamah as late as the 19th century. The claims of this work as against the Qur'ân were settled by the sword. The challenge has probably been taken up at various times—and indeed the Qur'ân comes near admitting this for its own time (vi. 93)—notably by the famous Abûl-'Ala of Ma'arrâh (+ 449), of whose Fâsul wa-Ghâyat some fragments are preserved; the work itself was destroyed from pious motives, though the person who destroyed it has been allowed to exist as a monument of failure. The eminent vizier Ibn 'Abâd was not displeased when told that his own compositions were equal to the Qur'ân; and we casually hear of books written by professing Muslims in which the defects of the Qur'ân were pointed out; one Ibn Abîl-Baghl, who aspired to the viceroyalty in the 4th cent., is credited with a work of the kind.

The magical use of the Qur'ân appears to have begun at an early time; the practice of opening it for sârâf is mentioned in the year 38, and has been common ever since; and rules for this employment of the work are found in some MSS. Certain passages are written on amulets, and the water in which some have been washed is thought to be a cure for all ills.

7. Literary form.—The style of the Qur'ân is twice described in the work itself by the word tartîl, the purpose of this artifice being to fix it in the Prophet's memory (xxx. 34); the sense of the word is not exactly known, but it is likely to refer to the rhyme, the existence of which cannot be denied, being indeed demonstrated by the variation in the order of the names Musa and Harun, of which the former as the more eminent should...

properly have the first place. But it is said to be improper to apply to this style the ordinary name for rhymed prose, *saj*, which, according to a tradition, was said by the Prophet to be characteristic of paganism. Orates that are intended to have been delivered by pagan wizards (*kithos*), are, indeed, in a style that differs from that of the Qur'an by the regularity of the rhyme; these are most probably all spurious, as are other monuments of pre-Islamic Arabic prose; in the later literature of this style was popular especially for orations and official letters, the unit of the rhyme being usually a couplet, sometimes extended to a triple, whereas in the sermon style the rhyme has a tendency to be maintained in a line, or perhaps in imitation of the Qur'an. Judged by these performances, the rhyme of the Qur'an is iliterate, but such a view is naturally regarded as impious, and it is thought better to regard it as inimitable.

In the Meccan period the Prophet was regarded as a poet by his countrymen, and this title might well be earned by the early ejaculatory *sura*s; it is, however, repudiated with vehemence in the Qur'an, partly perhaps because the poets were thought to go against the *sura*s, therefore, the poets, texts of the Qur'an admit of scansion according to one or other of the recognized metres, this is not supposed to be intentional; and there is nowhere sufficient of a series to make the word *metre* applicable, though *sura* is often fulfills the conditions.

Certain *sura*s contain besides special artifices; thus in lv. the texts are followed for the most part by the refrain, 'Which then of the bounties of your Lord wilt ye deny?'; this refrain may be compared with the refrain in the Song of the Three Holy Children and that in Ps 136. In xxxvii. after the story of each prophet the words 'Peace upon Ibrahim,' etc., follow, either the sentence or the name of the Prophet being accommodated to the rhyme.

The tendency of the earlier *sura*s is to employ short sentences, whereas rhythms more accommodated to prose prevail in the later parts of the work. It is noticeable that neither the anthologic method is characteristic of Hebrew poetry nor the counting of syllables which is usual in Syriac forms an element in the style of the Qur'an. The language claims to be perspicuous Arabic, and attention is often called to the clearness of the teaching. One characteristic phrase, *a* *kata*' of the employment of phrases which require explanation: about a dozen times some phrase is employed followed by the formula, 'What is there to tell thee what it is?' Though extreme orthodoxy denies the existence of foreign words in the Qur'an, it is generally recognized that its style admits not only foreign proper names, but a considerable number of words borrowed from other languages; a meritorious collection of these is to be found in the work of Sayyid Khayr Awad, which, however, contains many inadmissible statements. Many words have evidently of Persian, Ethiopic, Syriac, Hebrew, Greek, and Latin origin; but it is impossible for us to discover whether they were introduced by the Prophet or were already familiar. Some of the foreign usages can more easily be distinguished and located by European than by native critics—e.g., the employment of *fath* in the sense 'judgment' (Ethiopic), *futara* for 'create' (the same), *jabbar*, 'mighty' (Hebrew as applied to God), etc., where the Arabic language is usually parallel or identical.

8. Place in Islam.—No sooner was the Qur'an published than it became the basis of education, being studied immediately after the acquisition of the alphabet; so the first Umayyad Khalifah, Mu'awiyah, became he appointed a man governor of Taif, said, 'He is in his ABC'; when made governor of Meccah, 'He is in the Qur'an.'1 Men were chastised by the Khalifah Walid I. for not having read it. The peculiarities and characteristics of the style consist largely in the repetition of portions of it; verses employed by the Prophet himself for this purpose are specified in traditions collected in the *Musnad.*2 After the Prophet's death it became the primary source of law, for in his own time it was liable to be adduced for regulations and, in v. 48–55 Jews and Christians who require their causes judged are referred to the Law and the Gospel. The difficulties of using the work compiled by 'Uthman for this purpose were very great, though not too great for the ingenuity of the jurists, who began to arise in Medinah shortly after the Prophet's death. The difficulty of teaching the Qur'an to foreign converts is said to have given rise to the study of Arabic grammar, for which of course it supplies an absolutely firm foundation. Orthodox theologians, arguing from certain statements in it, declare that it contains all possible knowledge. If Fakhri al-Din al-Razi († 906) could find 10,000 problems suggested by the *Musnad,* the very fact of such an attempt, it is said, makes it possible to discover a 'detailed account of everything' in it by the use of suitable methods.

Citation of and reference to the Qur'an are exceedingly common in Muslim works, whether grave or light. Copies of the sacred texts fall into the hands of non-Muslim secretaries, these persons were compelled by the needs of their profession to acquire a competent knowledge of the book, though the strict interpretation was not required. By the Emperor 'Uthman the cleansed shall touch it,' is thought to render such study highly improper; and anecdotes are recorded of divine favours shown to grammarians who had refused to teach Jews or Christians their subject because of the necessary reference to Qur'anic usage. It is not easy, however, to reconcile with this theory the doctrine that the unbeliever should be converted by the miracle of the Qur'an; the doctrine has to give way to the theory, so that those who read the books of unbelievers are forbidden to carry the Qur'an with them into infidel hands. Translation of the book was certainly not contemplated by the Prophet; the rhyme obviously constitutes a great difficulty, and the initial letters of some *sura*s an even greater one; Muslim sentiment has ordinarily been against attempts at translation even where the language of the version is one of those habitually and mainly used by Muslims; still such attempts have been made, though nothing resembling an 'authorized version' appears to exist in any Muslim language.

The Muslim notion of the sacred book as the main authority on law, the chief source of grammar, and the unapproachable model of eloquence not infrequently causes Muhammadan writers to misunderstand the place assigned to the Bible in the other hand, there seems little doubt that this theory has influenced the Jews and Christians who are resident in Muslim countries.

9. Interpretation.—The sacred book gave rise to a great and edifying of studies, partly grammatical, partly exegetical; and the names of the authors who distinguished themselves in those lines with their works occupy some eleven pages of the *Fihrist* (28–39), though that work was composed near two centuries after the 4th century. Although Muhammadan learning attaches the very greatest importance to what is orally handed down, there is reason for thinking that the students had little to utilize besides the consonantal text fixed by

2 *Ib. b. 1271*, anno 96.
"Uthman at a time when the Arabic script left such much ambiguity; certain peculiarities may therefore be due to misreading of this text—e.g., the form Yahyah for Yuhannah (John), Taghib for Ta‘ith, and even Shu‘ab for Hobab. Where either the text or the digression offers difficult readings, it does not appear that there was any trustworthy tradition which the interpreters could employ; e.g., in vii. 174, when the Prophet is bidden tell the history of a man to whom we vouchsafed our signs, and who demanded details as to the city of the Khalifas. In general this chapter is given to the Prophet's contemporary Umayyah b. Abi Salt; a third suggestion is that he was 'the Monk,' i.e. a resident in Medina who was unable to accept the mission of the Prophet. In xvi. 49 there occurs a phrase of which the meaning is said to have been known to Umar, and very unconvincing explanations of it are given. On the whole it may be said that the tradition furnished no help that is of value for the explanation of hard passages, though the Prophet's biography, where it is independent of the Qur'an, furnishes some.

As Islâm developed sects, the dogma of the infallibility of the sacred book was common to all; hence the champions of those sects were compelled to argue on the grounds of the text; sectarian commentaries arose, of which not many specimens survived the establishment of Ashârite orthodoxy. The popularity of the Kashaf of Zamakhshari (538), in which Mu‘tazilite opinions are boiled down into moral truisms, and must be due to the author's fame as a grammarian and lexicographer. That orthodoxy does not always easily to reconcile with the text may be illustrated by his comment on iv. 51:

"Verily did forgiveth not association with Himself, but He forgiveth what is less than that to whom He will," which he says means:

"God forgiveth not to whom He will association with Himself, but He forgiveth what is less than that, if He do repent." Yet perhaps the ortho dox exegeses have at times to resort to equally drastic expedients. The most popular of the latter, the Mu‘alla al-tanzil of Baihash (691), is largely copied from Zamakhshari's work, and, though its author's object was to refute the unorthodox views of Yaqiq (v. 101), it does not reflect the appearance of some critical work. For European scholars neither of these works has the interest of the much earlier commentary of the historian Tabari (310), which is swollen to gigantic proportions by the chains of authorities quoted for each gloss; even so, it is said, it is an abridgment of a work three times the size, but it appears to give a complete record of the Qur'anic interpretation current in its author's time. Hence it is of great value for tracing the sources of statements found in later works, from which the chains of authorities are omitted. Great praise is bestowed by Sprenger on the commentary of Thalâbi (427), which is as yet unpublished; and even greater is bestowed on that by his pupil Wāhidî (457) in the latter of these works, especially as it assigns to the author a cable reports which are not unfavourable and which is universally acknowledged. Mystical and devotional commentaries were produced by Sûfîs, whose interpretations naturally wander far from the obvious sense of the passages; but to a very considerable extent this is ascribed to Ibn 'Arabî.

D. S. MARGOLIOUTH.

10. Editions and various readings.—We have seen that the inspired oracles delivered by the Prophet under human circumstances of his life were not generally committed to writing. The Prophet himself given orders not to hasten with the Qur'ân before its inspiration was decided (xx. 113), and intimated that its collection, reading, and interpretation were lawful only to him (lxv. 16). Our knowledge of how it was collected and put into the form in which we read it is commonly derived from writers belonging to the 'Abbasid period, or approximately to the 9th Christian century. The necessity for a reasoned history of the Qur'ân does not seem to have been felt very acutely under the Umayyah and the Pious Khalifas; what occasioned the appearance of some critical works on this subject was the era of religious controversies which animated the learned circles in the city of the Khalifas. At the end of the 8th cent. Timothy, Nestorian patriarch residing in Baghdad, had a public discussion before the Khalifah Mahdi and the Muslim theologians of his time; Abu Nab, secretary to the governor of Mosul, was writing about the same time a refutation of the Qur'ân in his native town (c. A.D. 820). Al-Kindi was completing his famous Apology of Christianity at the court of Ma'mân. These public discussions and apologies, which contain severe criticisms of the Qur'ân, had the salutary effect of inducing the Muslim theologians to define their positions with regard to their scriptures. The method of reasoning from data furnished by authors living more than two hundred years after the event would be less well suited to a people. At the same time there are scholars who would give but little credence to their stories. In view of this sceptical attitude of outsiders, great care is taken by the Muslim authors to authenticate their statements, by a chain of uninterrupted links, of which the latest was given by the Hijrah; frequently also there is reference to some accounts of men living at the end of the 1st Islamic cent., who in their turn had heard them from companions of the Prophet; but, as these intermediary traditions of written nothing which is derived down to us, it is practically with men of the 9th cent. and even of a later date that we generally work. These oral traditions afford for our investigations a field extending from the lifetime of the Prophet to A.D. 705, or roughly from A.D. 1 to 86. According to their attribution of the Collection (Jum') of the Qur'ân (1) to the lifetime of the Prophet, (2) to the time of the Pious Khalifas, (3) to the time of the Umayyah Khalifas, (4) to the time of the Abbasid Khalifas, (5) to the time of the last Abbasid Khalifas, these oral traditions will be classed in three groups.

If any Qur'anic verses were written in the Prophet's lifetime, they must have been written by secretaries and amanuenses. From different sources we have the number of these amendments in the text, or rather, the number of words which have been corrected, but it is very doubtful whether many of them did really help the Prophet in his literary task. The longest list is given by Ibn al-Athîr, 1 Davarkâh, 2 Nâwâwi, 3 and Tabârî. Ibn 'Sâd's enumerates ten different persons who had collected the Qur'ân in the time of the Prophet. Bukhârî reduces this number to four; the Fihrist gives seven. Tabârî counts also four persons as having accomplished this task, but, as their names differ sometimes considerably in the various lists, it is not certain that the preceding list, which was given by a servant of the Caliphs, has received much consideration, and it is probable that the text was corrected by 'Umar himself. Suyuti has gathered a considerable number of such traditions, two of which have appealed to the critics of last century; 1 Ibn Kathir, 8, 198, 199, 1 4. 2 Tâhirî, Cairo, 1255, 1, 59. 3 Tâhirî, Cairo, 1255, B. 131. 4 Tabârî, ed. P. Wustenfeld, Göttlingen, 1812-17, p. 37. 5 Anâ the, ed. M. von L Running, 1780, ii. 523. 6 Tâhirî, Cairo, 1255, B. 131. 7 Tabârî, Leyden, 1812, ii. 112-114. 8 Talibî, Cairo, 1255, B. 131. 9 Tâhirî, Cairo, 1255, B. 131. 10 Ibn Sa'd, in Nisba'sches, des Chem, Göttlingen, 1812, ii. 113. 11 Ibn Idrîs, ed. Câlcutta, 1854, p. 138.
they are those first reported by Bukhārī and then reproduced by many subsequent writers. They state that Zaid ibn Thabit, one of the amanuenses of the Prophet, undertook the collection of the Qur'an in the time of the first and third Khalifahs, and that he made two recensions of it, his sources for the first recension under Abu Bakr being palm-branches, white stones, bones, and memory of men; the second recension, which took place under the Khalifate of 'Uthmān, would be an official revision of the previous one, its primary object having apparently been to put an end to the “discrepancies about the Book as the Jews and the Christians have.” His work finished, the Khalifah found himself powerful enough to destroy or burn “everything else from the Qur'an (found) in the form of qurriμah or muṣḥaf”; to circulate his version, he sent “to every country” a muṣḥaf of what Zaid had transcribed. Nothing is said about what happened to the direct witnesses of the revelation—the white stones, bones, and palm-branches; but in the absence of better data the story is generally accepted as true by all writers belonging to a period later than the 9th cent., and is quoted in our days almost in every collection of the sacred text for the sake of the hadīth. The plausibility of the account is brooded over by some subsequent writers, who put the following accusation into the mouth of the third Khalifah’s enemies:

“The Qur'an was in many books, and thou discredited them all but one,” and he “tore up the Book.” 3

It would be unsafe, however, to believe that this tradition can account for all the difficulties. For instance, there are numerous verses which refer to the Qur’an as kalāb not only in the sense of “written thing,” but also in the sense of a ‘real book’ (xlvii., Ixviii. 37, etc.). These verses, if not interpolated, can hardly be explained if the sources for the first edition of Zaid were only palm-leaves, white stones, memory of men, bones, and such things.

An attempt to produce an official edition of the Qur’an is also attributed to the Umayyad Khalifah Abdal-Malik and his lieutenant Ḥajjāj. They are said to have written copies of the Qur’an and sent them to different provinces, as the third Khalifah had done before them. 4 Some historians tell also that they proscribed various readings which were used in their time. 5 Others go even so far as to ascribe to them the final collection of the Qur’an. 6 In none of these cases put in the mouth of the Khalifah the important saying,“I fear death in the month of Ramadān—in it I was born, in it I was weaned, in it I have collected the Qur’an (Qana‘al Qur’ān), and in it I was elected Khalifah.” 7

It is a well-known fact that the Shi‘ah writers accuse them of the elimination of many verses.

After A.H. 86 the process of collecting the Qur’an came to an end, and, so far as we are aware, there are no historical data after this period for its further standardization; and therefore it is highly probable that the text with which we are familiar is the very text sanctioned by its qurānī (reciters and readers) of the end of the 1st Islamic cent., and officially recognized by the third Khalifah.

Besides the official copy of the State, traces are found of the recensions made by other collectors of the Qur’an, and the Muslim traditionists have preserved the names of some of them. Three deserve special mention: al-Bayyān b. Khalīf, “All b. Ali” Taḥlīb, and ‘Abdallāh b. Mas‘īd. The two first are believed by all the best and earliest authorities quoted above to have even collected their Qur’āns in the time of the Prophet, but, as the Sufīs and their officials had proscribed their copies, sometimes under pain of death, the author of the Fihrist 4 was unable to find a single one for purposes of comparison, and he contents himself with reporting the saying of Ṣa‘d b. Ṣa‘dāh that some of his Friends had been, copies of ‘Alī’s recension, the order of which he gives; on p. 20 the order followed by Ibn Mas‘īd is also exhibited on the authority of the same man. As to the nature of our wording we are somewhat more fortunate, since the commentators have recorded it whenever it was known in their time. Zakamshari is in this respect the best source of information. Some words are so different that we are entitled to believe that at least a few of them come from a source completely foreign to that of the official text.

In xix. 67 the official text has, “I shall come forth”; but Mas‘īd reads, “And He will give thee.” Mostly, however, these variants consist of synonyms or of one or two added or eliminated words, such as “saying” for “order” (xix. 65), “they will become cloven” for “they will burst asunder” (xix. 92), “people were driven” for “it is driven” (lxvii. 3).

Some Shi‘ah books give examples of wonderful interpolations, and their authors state that the words that they have added had been purposely deleted from the official text, but there is reason to believe that most of them are the outcome of political intrigues which cannot seriously affect the early edition. One of the best works on this theme is the Kāf of Abu Ja‘far-al-Kulīnī († A.H. 228), which was lithographed in Persia in A.H. 1281. From a MS in the John Rylands Library we extract the following example (fol. 161):

‘And if ye are in doubt of what we have revealed unto our servant, concerning Allāh, then bring a Surah like it.” (Il. 21)

The same author says that some of these interpolations were found in the Qur’āns used in the time of Imām Rida († A.H. 259); his contention is set forth in such an emphatic manner that we are obliged to believe him. The end of v. 11 and the beginning of v. 12 of sūrāt xiii. were, according to him (ib.), as follows:

‘A group of lovers, as it were, to whom the Prophet said, “Who is that which thou call est them to, O Muhammad, concerning the authority of Allāh’.”

More serious is the attempt of contemporary scholars who have called attention to some interpolations, political or religious. P. Casanova has gathered several of them.

The variants of the official text itself are of two kinds. Some are due to the defective character of the Arabic script, which has many letters distinguishable from one another only by an extraneous dot put over or under them. Since the ancient Qur’ānic MSS were unaltered, qurrā of one country often read words with letters different from those adopted by qurrā of another country. A second series of variants consists mainly of the addition or omission of one or two consonants, such as the copulative particle so‘or and the feminine t. Many books have been written to collect these various readings, the handiest being the Muhknī of Dānī (A.D. 1052). Even in the 12th Christian cent. Zakamshari tells us that there were 150 of them. Occasionally added complete words to the standard text.

In xx. 39 some copies which he used added ‘he ordered me,’ and in xx. 18 some others added, ‘How can I show it to you (this hadīth)?’

Our knowledge of these variants is derived exclusively from the commentators and some works written ad hoc by Muslim theologians. There are

in public libraries of Europe many Qur’ânic MSS of high antiquity, the oldest dating probably from the 2nd Islamic cent., but, apart from some anomalies of spelling due to the rudimentary character of the early Arabic orthography, no real variant can be detected in them. This conclusion is borne out by Nöldeke, who examined some such MSS, and by the present writer, who for the purpose of this article consulted three of them particularly. By a process of collation and comparison, Toerring has shown that, knowledge, therefore, the only extant MS which offers slight variations is a palimpsest in the possession of Mrs. A. S. Lewis; its underscript contains scraps of Qur'âns written by different hands, and its variants consist of the addition or omission of a few consonants which, however, do not injure the general meaning, although in two cases it has words completely foreign to those of the official copy; there are sufficient grounds for stating that some of these scraps belonged to those early Qur'ânic copies of Medina, Kufah, and Damascus, which, according to Dâni and other writers, exhibited such variants.

11. External evidence for the existence of the Qur’ân.—If we mistake not, there is no mention of a written copy of the Muslims before the end of the 8th cent. The date of the Christian sources corresponds approximately with the first written records of the Muslim world. A curious fact is that the Christians of the beginning of Islam did not call the Muhammadans by the words ‘Muslims’ or ‘Hunafites,’ which refer to a religious belief, but simply applied to them the adjectives ‘Hagarians,’ ‘Ishmaelites,’ and ‘‘Mayâyé,’ which denote their ethnological origins rather than their religious beliefs. The pagans believed that these Hagarians had come not so much to spread a new religion as to conquer new towns. The Muslims were helped in their conquests by many Christian Arabs, such as the powerful tribes of Bann Taghlib, ‘Akal, Tanakh, and ‘Au, whose evangelization goes back to the 4th cent. John of Pheneke1 expressly states about A.D. 690 that among the first Arab conquerors there were many Christians, some Monophysites and Melchites, and some Nestorians.

The anonymous historian printed by Guidi2 gives Muhammad in the second half of the 7th cent. as a mere general professing the old Abrahamic faith preserved in the town of Medinah (Medinah), named after the fourth son of Abraham from Keturah. From the title of Pheneke the attributes to him certain practices deviating in some points from the customs of the Old Covenant, but the word bachalalainth which he uses suggests that in his time and to his knowledge there was nothing yet committed to writing among the Muslims. This view of a political rather than doctrinal character of the Prophet’s teaching is generally followed by all early Christians. Joannes Damascenus, writing at a later date, is more precise. Although not named in this book, he refers to some Qur’ânic doctrines and expresses his opinion about Muhammad as follows:

1 Down to the time of Heraclius (the Ishmaelites) worshipped Jesus; from this time to our days a pseudo-prophet has risen to them named Masâaff, who taught that the Arab monk had access to the Old and New Testaments, and founded a new sect.
2 From a discussion which took place in Syria on Sunday, 9th May, A.D. 639, between ‘Amir the ‘amir’ and John I. the Monophysite patriarch of Antioch, it would seem that the teaching of the Qur’ân on the matter of the, heritance, the, denial of the, death of Christ and, the, death of, Christ, and, on the subject of the Tarâh, for which Muhammad’s oracles show a marked predilection, was familiar to the Arab conquerors present in the discussion; but, on the other hand, it is certain that no Islamic book was mentioned in the course of the colloquy. This much is certain: the Syriac text of which has been published by F. Nau in J.A vi. [1915] 218, is recorded by the historians Michel3 and Barhebræus.4 The Qur’ân dogma which, however, is from the 5th cent., or some hundred years after the death of the Prophet. It is told in a modified form so persistently by Eastern and Western writers, and by Muslim traditionists themselves, that it is Plausible that it may contain some vague elements of truth.

The legend tells that an excommunicated monk called Sergius helped Muhammad in his literary, political, and religious career, and that after his death in 578 A.D. his successor was taken to by a Jewish rabbi called Kalb. According to Joannes Damascenus,5 Sergius was an Arian monk. More probable is the opinion held by all the Eastern and many Western historians that he belonged to the Nestorians. The Nestorians claim that the Christian dogmas were all adapted to the Nestorians the Arianism are the Arabic Apology of al-Kindi (c. A.D. 820) and the Syriac text printed by W. Göttheil in Z.A. xliii. If. (1898 ff.), which here and there contains elements dating from the same period. Some scholars of our day have even gone so far as to assert that the story of Sergius is necessary for the right understanding of the Qur’ân.6

To Sergius are attributed, in their hypothesis, the very numerous passages worded in the following manner:

"If God bring thee back to a company of them, and ask thee to go forth, say, "You shall never go forth with me!""

In this sentence the subject of the imperative ‘say’ can hardly be ‘God’; otherwise instead of the word ‘God’ we should have had the pronoun ‘I.’ Until the story of Sergius is more surely established, nothing definite can be made of these passages. The Muslim traditionists have as usual modified proper names foreign to them; so instead of mar ‘Abbû they read the uncommon Murkhû; and instead of naming Sergius they generally adopted for his proper name the Syriac word Bhrûn. This means ‘the wise man,’ and which is applied by the Syrians to every monk as a title. The Muslim traditions bearing on the subject have been gathered by Spranger and Nöldeke,7 and the Byzantine sources have been analyzed by Nöldeke8 and Sauer9.

12. Translations.—The Qur’ân has been translated into many European languages, but, as its miracle lies in its art, it is doubtful whether any of these translations can satisfy all the exigencies of a Semitic language exhibiting the phonetic and rhyming peculiarities of the Orontian tongues, and coloured by the tints of local

10 Loc. cit.
topics are also to be counted among the many difficulties the translator has to meet, not to speak of the play on words, or intended catchwords of which only the original Arabic can give a true idea.

The first translations came into existence immediately after the period of the Crusades, when Western peoples became more acquainted with Islam. At the initiative of Petrus Venerabilis, abbot of Cluny, the Qur'an was rendered into Latin by Robert of Retina and Hermann of Dalmitia in 1143, and published in Basel in 1543 by T. Biblbiander. A better translation is that of L. Maracci (ca. 1698). An Arabic-Latin Qur'an was published (Leipzig, 1768) by J. F. Froriep.

The first French translation is apparently that of A. du Ryer (Paris, 1647). Better translations are those by M. Savary (do. 1753), M. Kusimirski (do. 1840), and G. Pantliger (do. 1852).

The first English translation is the extremely bad one made from du Ryer's version by A. Ross (1648–88). A much better, but somewhat paraphrastic, translation is that of G. Sale (London, 1734). J. M. Rodwell's version of 1861 marks the first attempt to arrange the Sūratās chronologically; the translation of E. H. Palmer (SBE vi., ix., Oxford, 1880–82) is more literal.

The earliest Italian version seems to be that made by the abbot of Cluny by A. Arriva

The first German translations were made from the Latin, the Italian, and the English. A better translation is that of G. Wahl (Halle, 1828), which is a revision of that by F. E. Boysen (do. 1773). A more recent version is that of L. Ullmann (Bielefeld, 1853).

There are also several Dutch versions, the best of which, it is said, is that by H. Keijzer (Haarlem, 1860). A Russian version appeared at Petrograd in 1776. J. Torberg undertook in 1876 a translation into Swedish.

All the above translations are by European Christians. Some Muslims have in the last few years translated their Scriptures into English; the translation by Muhammad Abdul-Hakim Khan (London, 1905) and that by Mirza Abdul-Fazl (Allahābād, 1913) deserve special mention. The editor of the Islamic Review has announced a new translation, but al-Mannārī is protesting against such an enterprise. Possibly it is of this translation, comprising, it is said, 30 volumes, that the first instalment appeared in 1916.

We cannot know the precise year in which the Qur'an began to be translated into Oriental languages. The public libraries of Europe contain many MSS showing translations of the Qur'an into Persian and Turkish. These versions do not seem to go back much before the era of the first Latin translations. There is reason to believe that a translation into Persian was in existence in the 13th century. The oldest MS to our knowledge which contains a translation into old Turki is found in the John Rylands Library—a beautiful MS of several volumes. The old Turki version which it contains may possibly date from the 14th century. The MS contains the Arabic text with an interlinear translation into Persian and Eastern Turkish, but the translation differs sometimes from the text (so the Arabic text of the MS in ii. 116 has 'and it befall them,' while both Persian and Turki translations have 'and if it befall you'). There are many modern translations into Persian; the edition of Calcutta (A.D. 1831) and that of Delhi (1815 H.) have the widest circulation. Apparently the Turkish Government did not encourage the translation of the Qur'an into Osmancı Turkish, and it was only after the proclamation of the so-called Constitution in 1908 that a certain Ibrahim Hilmi could in 1912 print his version at Constantinople. It is said that the most used translation into Urdu is that by Wāli Ullah (Delhi, 1799). We learn from the Modern World that a Christian missionary, W. Goldsack, had in 1898 undertaken a translation into Bengali.

LITERATURE.—A bibliography of works which had appeared in Europe bearing on the Qur'an was published by V. Chaminade, Bibliographie des ouvrages arabes, vol. xiv., 'Le Coran et la Tradition,' Liége, 1907. Of native works, Jalal al-Din Yuṣūfi (1191 A.D.), Ḥujjat al-'Umm al-Qur'an, first printed Calcutta, A.D. 1557, is the most complete.

RABBINISM.—See JUDAISM.

RACE.—1. Race-feeling and ethnology.—The word 'race' is used in different senses by men of science and ordinary people. The scientific ethnologist is concerned to find some precise, objective classification of mankind, and he employs the word 'race' to denote the particular differentiation by which he classifies. As he classifies principally by physiological factors, such as shapes and proportions of skull, degrees of pigmentation, facial angles, cross-section of the hair, and so on, he groups the human species into corresponding 'races'—dolichocephalic and brachycephalic, brunette and blonde, prognathous and orthognathous, and so on. This physiological classification is dealt with in detail in the art. ETHNOLOGY, but there are other objective or apparently objective characteristics which can be, and generally are, taken into account. Men can be classified by their language, and in this sense we can talk of the Latin, Tentonic, or Slav race. It is equally admissible to classify them by their social organization (matriarchy or patriarchy, blood-feud or criminal law, primogeniture or division of inheritance, etc.), or by their material technique (stone age, iron age, nomadism, agriculturalism, industrial revolution, etc.). All these classifications are taken into account by the ethnologist. See art. ETHNOLOGY, MOTHER-RIGHT, BLOOD-FEUD, LAW, INHERITANCE, FIRST-BORN, AGRICULTURE, HUNTING AND FISHING, PASTORAL PEOPLES, etc.

It is worth noting here that the ethnologist frequently blunders in attempting to make different schemes of classification coincide with one another. He tends to identify the group with yellow skins, round hair, and slanting eyes with the group that speaks agglutinative languages, or even with the group that keeps their shamanic family. There are yellow populations which are Christian, Muhammadan, or Buddhist in religion. The groups based on these
different factors of classification cut across one another; and these cross-divisions increase with the increase of civilization, for the "islands" of the human world are more highly differentiated and more subject to modification than those of primitive man.

The tendency to ignore this fact is an instinctive approximation, on the part of the scientist, to the popular conception, and marks the distinction between ethnology and race-feeling. Race-feeling represents the divisions between races as clear-cut and absolute. The idea that men can belong to one race and another, that one is quite foreign to it, and this simple view is not contradicted by the data of its experience, for many of the scientific ethnologist's differentiae are unknown to it. No racial feeling, for instance, has ever been excited by difference in skull-form, on which particular stress is laid in ethnological classification. Only students are acutely aware of the cranial differentia, which demands the application of exact scientific measurements to hundreds of thousands of human beings, and an elaborate synthesis of the experimental data, before it can be used. Yet, though race-feeling is unscientific and uninformed, it is a very real factor in social psychology, and it is the purpose of this article to explain this factor.

Race-feeling generally asserts itself by contrast with other social principles.

The bonds and divisions which it creates, and actions which it excites, are remarkably different from those produced by the feeling of race. As members of a state, men are nearly always prepared to go to war for their state and to fight members of another state which is thought to menace their own state's existence. Community of race-feeling does not inhibit in any degree this willingness to fight, and some of the fiercest political wars have been inter-racial; e.g., the white populations in the Northern and Southern States of the United States felt themselves racially one, yet, because they were divided politically into Virginians and Pennsylvanians, and so on, the Virginians held by "State rights," while the Pennsylvanians held by the "Union," they went to war with one another and fought out their difference. Again, the English-speaking ("Anglo-Saxons") of the United States is divided into political groups—the British Empire and the United States—which have been more hostile to one another than friendly. Britain is the only State against which the United States of America have fought twice since their independent existence. It has been the same with Prussians and Austrians on the European continent. Both were Germans, yet they went to war with one another repeatedly for more than a century to decide whether the Prussian or Austrian State should have the hegemony of Germany.

When we study this political feeling, it seems the paramount principle that divides or unites mankind. Yet all the time there are other relations between Germans as such, or "Anglo-Saxons" as such, as strongly as, or stronger than, the political barriers that happen to arise among them. The Northerners made the political rights of the Negro race the chief principle for which they fought, but their race-feeling towards the Negro has remained as strong as, or stronger than, the sociopolitical barriers that happen to arise among them. The tabu against intermarriage between the black and white races is still as absolute in the North as in the South, while Northern and Southern Whites have intermarried as freely since the Civil War as before it. Again, the political secession between the United States and Britain has not affected their feeling of a common racial inherit-

ance. The American draws his culture from Milton, King James's Bible, and Shakespeare; he lives like the Frenchman and the Englishman the Commonwealth of his civil liberties; he makes pilgrimages to English castles and cathedrals as shrines in which the romance of his early history is preserved, while the Englishman, on his part, takes pride in the voyages of Sir Walter Raleigh and the Pilgrim Fathers, which were the foundation of the United States. It is the same with the Prussian and Austrian. Turn their minds from Sadowa and Frederick the Great to Goethe or the hero Siegfried, and they become simply Germans, of one 'race' with one another and with the German-speaking Swiss.

In most human societies there is, in fact, a sense of some 'objective' grouping more permanent, and in the last resort more strong, than the political organization created artificially by acts of will. You may make and unmake social contracts, draw up acts of union and declarations of independence, make slavery a legal status or abolish it by emancipation, but these underlying bonds and divisions remain eternal, and are not to be modified by human desire or human contrivance. This objectivity of race is proverbial. 'Blood is thicker than water,' we say, when we see the bond of race-feeling overcoming the divisions of interest and accident. Can the Ethiopian change his skin, or when race-feeling emerges as a disruptive force and checks some effort after fraternity or common citizenship by the conviction that 'Black is Black and White is White,' and that good intentions cannot make black white or white black.

This sense of an objective grouping has played an important part in history, of which we shall give a brief account. But it is essential to note, once again, that we are dealing with the sense, or mental representation, of objective grouping, and not with the really objective classification which the scientific ethnologist sets out to discover. The factors which race-feeling represents to itself as objective, and from which its stimulus is derived, are often far from being objective in fact. They vary in importance, and are not in accordance with scientific norms. But it is the representation, and not the external stimulus of it in any given case, that is the important element in the feeling of race.

2. Racial myths.—In a completely isolated, and also completely undifferentiated, human group the race-feeling of the members would be an accurate scientific analysis of the real objective factors constituting the character of the group. These factors would be handed down unimpaired and unaltered from one generation to another, and their aggregate would be as constant as the race-feeling that it stimulated represented it to be. But this is only an abstraction, and there are no actual human groups of this kind. There is no known group which does not mix and cross itself to some extent with other groups of mankind, and it is probable historically that all existing groups are differentiations from a single original stock. Even endogamous communities, which aim (of course unsuccessfully) to keep themselves pure, tend, on the other hand, to a specially sharp differentiation of marriage-classes internally. Whether by internal differentiation or by coalescence with other groups outside, the permanence and objectivity of the group-character is permanently destroyed, and the sense of permanence and objectivity, which we call race-feeling, can therefore only express itself intellectually by a myth.

1 Even a so-called isolated and undifferentiated group this would be true only in theory, for it appears that the factors in the character of any living organism are infinite, or, in other words, that there is a constant process of variation which makes immunity from differentiation impossible.
There are probably the rudiments of a racial myth wherever race-feeling exists, though they are often inarticulate and do not attract our attention. There are cases, however, in which myths have been deliberately invented to express existing race-feeling or to stimulate race-feeling where it did not exist.

The name 'Belgium' is a myth of this artificial kind. In 1530-31 certain populations which had been grouped together politically and administratively were separated into three by a law of the Archdukes of Austria, with the consent of the local community, and given distinctive names, afterwards without any change incorporated into the states of the Holy Roman Empire, those which were combined under the name of 'Belgium.' The real connexion between the former 'Belgium' and the present 'Belgium' and the new group and state of Belgium was infinitesimal. Caesar's Belgae included modern Belgium, Namur, Luxemburg, and even the Romance-speaking half of the group were only very sketchily descended from Latinized Belgic peoples. The real connexion of the former 'Celtic' Belgiumers and modern France was traced in previous articles. Both groups drew their cultural inspiration from medieval Flanders and the English-speaking countries from their central position and the current from consequently the same source. This group feeling may be illustrated from the history of Athens. About 513 B.C. the Athenian statesman Kleisthenes wished to abolish the traditional groupings within the Athenian State, which were booted up with the old tribes, and to establish new groupings in their place which would stimulate a more democratic feeling in the members of them. The new groups that he planned were highly artificial in character. They were to be territorial, but, to prevent them from becoming valuable, his plans were completed before they could be scattered in three different parts of Attica. The reason for these new artificial groups were to be woven by the lines of kinship and locality, which Kleisthenes knew to hold the ancient Greek community together. He had planned the existing body of Attic mythology, which traced back the ancestry of each of the Ægean family to some hero worshipped by the Athenian people.

Kleisthenes decided to canonize his artificial groups by inventing an even more artificial myth for each of them. He drew upon a hundred Attic heroes asked the god at Delphi to select the ten most suitable, and then proclaimed these ten as the dippers ('ancestor' or 'founder') of his ten new Ægeas. To a modern statesman this would have seemed the stupidest waste of time and money: but the new heroes knew just where the vein of race-feeling in their fellow-citizens lay. The statues of the ten Ægeas were solemnly set up before the government house at Athens; festivities were arranged; a great sacrifice was offered in Attilien, and the contingent of each Ægeas was placed under its own hero's protection. When the new myth was thus fully worked out the new Ægeas were the most living myth in Athens after the mythical myth of Athene. They had appeared to their tribe-men in battle; they had protected their tribe-men in peace; they had helped the Parisian Ægeas during the Persian invasion; and the contingent of each Ægeas was placed under its own hero's protection. The new myth was well received. It spread into every nook and corner of the Athenian territory, and the dippers of each Ægeas became the object of collective worship.

Race-feeling is one of the strongest conservative forces in any life. It tends to stabilize any human institution, an institution or division, to which it once becomes attached, no matter how recent, artificial, or transitory in its nature that institution may be. This effect of race-feeling was known to Plato, and in a famous passage of the Republic, he exploits its ill-luminously and half in earnest, to conserve the highly artificial constitution of his ideal State. Plato's State is to be differentiated into rigid castes, with the sharpest division of function and privilege; but the castes are not imaginary, nor arbitrary, nor set up by its individuals, but each caste is hereditary, and every individual, starting as a child on an equality with every other, is to be assigned to his caste by a process of selective education.

The psychological problem before Plato is to reconcile the feeling that the development of effective like-mindedness and difference implied in the system of caste with the feeling of change, development, and competition implied in the process by which the castes are to be recruited. Unless his citizens feel that they each and all belong inevitably to whatever caste they have been assigned to, the castes will be mere forms without moral influence on the life of the community. But the competition by which each caste of individual is to be determined is calculated to stimulate the very opposite feeling—that humanity is not divided into artificial human relations; and the change, at an arbitrary moment, from competition to fixedness stage is likely to aggravate this feeling rather than to make it give place to the other feeling of objective determination, one caste in the other. Plato's answer to this difficulty is on the other hand, if once the sense of fixedness is implanted in the adults, they will tend to extend it to their own children in turn, and will feel that they must derive their caste from their birth, and not from the process by which the parents have originally passed them, and which, like caste, is the law of the State.

The problem, in fact, is to make the citizens of the ideal State hold two opposite views of social life, as all men do. Plato proposes to solve it by making them—if not the ruling caste, at any rate the rest—believe 'a single noble lie.'

'I shall try,' he says, 'to make them believe that the upbringing and education we gave them was all a dream, and that, while they imagined they were being given it, they were really being moulded and brought up in the bosom of the Earth, and that their arms and their conduct were of the Earth, and that from its surface and from the processes through which the parents have originally passed them, and which, like caste, is the law of the State.'

All of you in the State are brethren,' we shall tell them in our myth. 'And when you grew up, you were given the substance of those among you fit to rule, and that is why they are the finest; in the warriors he put silver; and iron and bronze in the peasants to the thoroughness with which stock, so you will generally beget children like yourselves; but sometimes there will be silver offspring from gold, gold from silver, and all the other possible permutations. So this is God's first and chiefest commandment to the rulers: Show yourselves good guardians and keep vigilant; guard above all things over the children, to see which metal is blended in their souls; and if your own children are born with bronze in them or iron, have no pity on them, but dismiss them to the workers and peasants, where they belong by nature; and if workers or peasants have a gold or silver child, put him too where he belongs and promote him where he belongs, for we shall no longer be allowed, as we were, to make the common people in our State. Thus shall the Lord, on the day when he rules the State is of iron or of bronze, on that day the State shall be brought to destruction.'

The imaginary speaker then proceeds to ask his interlocutor in the dialogue, the dogmatic official of the state, how he will implement this myth believed. 'None,' he answers, 'of making your citizens themselves believe it; but one could make their children believe it, and their children's children, and everybody that followed after.'

The suggestion is a dogmatic State education, and there is nothing visionary in expecting it to produce the belief in the truth of what Plato demands. The national states of the modern world have all organized this kind of education for their children in different degrees, and the stimulation of being in each state has been remarkably proportionate to the time since that which this has been done. But the racial myth is capable
of striking root without an educational propaganda, as is shown by the example of Kleisthnes quoted above. It can do so because the race-feeling, which gives form to the list of the imaginative social needs of mankind. But there are other feelings and myths on which human societies may be founded, but they show a strong tendency to revert to the racial type in the last resort. The Jews, for example, are known historically as a chosen people; their foundation-myth is a ‘chosen people;’ their historical hallmark is a skin which they cannot change or a statute which they are likely to add or to abrogate, but the artificial and deliberate disposal of the blood of circumcision. The covenant between Jehovah and Abraham is essentially an act of will on both sides (see art. COVENANT, § 3). Jehovah chooses Abraham, and Abraham accepts the covenant; and logically every member of the chosen people from Abraham onwards is so only by receiving and answering the same call. Yet the idea of race has been imported into the Jewish foundation-myth. Abraham’s covenant is made ‘for his seed for ever,’ and the chief factor in the Jewish group-consciousness is the racial feeling towards Abraham the covenantor. The reversion of the whole of our history to Abraham’s covenant does not mean that the Jewish race can raise up children to Abraham’s covenant, but it means that a profound criticism on the idea of race itself is made. It implies that an objective or external principle of grouping, even if it exists, will be uttterly inconsequent, if you trace Judaism by descent, any one or any thing may be a Jew without partaking of any of the factors essential to Jewish group-character. To be a true heir to Abraham’s covenant depends on a subjective not an objective factor—not on race but on will.

Christianity was in its origin a reaction against this reversion to race-feeling in the Jews. It proclaimed that the covenant was made not with every descendant of Abraham, but with any individual in the world who was converted to it and accepted it. Christianity deposed race and set up faith instead of it, and it is the more remarkable that Christianity, in turn, should have reverted towards race-feeling in the doctrine of predestination.

This doctrine may be reconciled with free choice by theological dialectic, but its underlying motive is to go behind free choice and represent it as a mere expression of an objectively determined classification of mankind. God eliminates the covenant will of man, and leaves only the will of God, which, being external to man, is, from the standpoint of man’s personality, as mechanical as physical phenomena. Predestination divides mankind into two races saddened from one another by an unalterable difference of spiritual morphology, just as ethnology divides it into races by the different morphology of pigmentation or skull-form. It is a racial myth considerably hypostatized, but it is a racial myth none the less, the myth of descent from Abraham, or from the ten apperettai, or from the Belge in Caesar’s Gaul.

This persistent return of the social consciousness to the racial basis is doubtless the response to a psychological need. It is the psychological need which experience it into an atmosphere of eternity and certainty. It is like a treasure laid up in heaven, which cannot be impaired by the weaknesses and vagaries of the human will. It is an antidote to the craving after security, and we know that it infects the world in time and space. But, though it lightens the burden on the individual, it also diminishes his power and cramps his initiative, and there is therefore a counter-current in mankind of revolt against racial determinism towards free association. That the universal myth is challenged by the hypothesis of the social contract, the system of caste by citizenship. This tendency towards self-determination in social grouping may be classed as political, in contrast to the racial tendency (though possibly too narrow) perhaps as the psychological, included under them here.

The two tendencies can be seen at tension in the course of history.

3. Historical survey. (a) General tendencies. — At all times, it seems to imply a standard—a common idea of what is the normal, and a common impulse to approximate towards this type. The need for ‘normality’ is illustrated by the case of the African Negro when he has made himself a white negro without seeing any white man but himself, used to be turned sick by the sight of his own white skin, which now seems to be an exception from the normal black.

The abnormal man is in fact usually more conscious of the type, and carries more keenly towards it, than members of the group who are not conscious of any peculiarity in themselves. He is his own most effective chastiser (for example, the Indian Sweeper, who accepts his caste as religiously as the Brahman, and is as careful as he keeps his proper distance when they meet in the streets, the three Brahman who is in danger of being defiled). It is this homage to type on the part of the individual who varies from it that gives the group-spirit its crushing disciplinary power, and makes a group, once constituted, so inelastic towards the addition of any person without. There is an element of rigidity in every group, which is probably necessary for its preservation; but the degree of rigidity varies vastly from group to group, in proportion to the degree in which the group-feeling is based on race or on free association.

The less advanced people are in civilization, the less their life (both physical and spiritual) is under their control. Nearly all the forces of nature, and many of the workings of their mind, are data external to their will instead of material to be moulded by it, and social groups are as rigid for them as all other phenomena. The internal bonds seem indissolubly intimate, the external barriers insuperably wide. Each tribe, each sex, each age within each sex or tribe, is discrete from every other; and it is just as incomprehensible (and formidable) that a boy should turn himself into a man, or a seed into a tree, as that a man should turn the tree-stem into a boomerang. Yet these miracles are happening all the time. Nature possesses no laws; she is like her, through the changes of birth, maturity, and death, and the human will is increasingly (though still unconsciously) imposing on its environment a purpose of its own. There is a contradiction in primitive man’s experience, and he solves it by an elaborate development of initiation-ritual, to tide over the changes of changing things, which are an intolerable abnormality in a group founded upon race.

In primitive man’s race-feeling is thus strong, but it is an obstacle in his path which he is using all his ingenuity and imagination to surmount. The initiation-ritual is the germ of free association and conscious control, and these constitute civilization (see INITIATION [Introductory and Primitive]). In the initiation it is naturally directed to the group, but it grows strong again in civilizations that are in bad health or on the decline—no longer as an obstacle now, but as a preservative.

When a group is decadent, it has lost its power of growth, and is threatened with dissolution; it is even losing the accumulated capital of the past; and change, instead of being the essential expression of its vitality, seems to be the process by which its vitality is wasting away. Change must be arrested if the decadent group is to survive, and the members of the group attempt to arrest it, not merely by conscious archaism and reactionary legisla-
tion, but by concentrating their group-feeling upon the objective, unalterable aspects of the group-character. If a Chinaman is always a Chinaman, if every Chinaman born inherits the qualities of the eternal Chinese race, then the China of the Boxer rebellion is as good as the Celestial Empire of the Han ancestors. Yet every Chinese, like the foreigner in a never-failing reservoir, is always bound to find the level of its highest altitude in the past. The ‘foreign devils’ may superficially be more clever and successful than the Chinaman of to-day, but that need not concern us. The Chinese is first and foremost a Chinese. They are children of to-day and will perish to-morrow, while he is of the race of the Han, who were at the zenith of human achievement when the foreigners lived like the brutes.

This characteristic of race-feeling is characteristic of all civilizations that have passed their prime—the Chinese, the ancient Egyptians (whose priests told Solon that ‘the Greeks were always children,’ and showed Hekataios the statues of 345 high-priests descending from father to son since the days of Osiris and Athene), like in the 1st and 2nd centuries of the Christian era, the East Romans in the Middle Ages. It is strong at the present day among the Jews in Europe and the Jewish and Near-Eastern immigrants in the United States. It is true that the primeval country of the Jewish nation is no more, and the motive of self-defence is here comparatively weak. These immigrants do not find themselves at a disadvantage individually as against the aliens with whom they come in contact. Unlike the Egyptians or Chinese, they adapt themselves successfully to the modern environment, and even attain the highest positions of wealth and power in the new groups to which they attach themselves. The pressure which maintains their race-feeling is not external, but arises within themselves. The Gentile group is not closed against the Jew; it is the Jew who will not merge himself in it, because that would be a tacit admission that his own group had lost its existence—a failure which he refuses to face. The more successfully, therefore, the Jew or Eastern European adapts himself to his present group-environment, the more jealously he cherishes the race-feeling that identifies him with the group of the past. He cultivates the ritual and language, prophets and heroes, folk-songs and national dress of the race, as if he were living amid the events of eighteen hundred years ago, by Muhammad the Conqueror or by Titus and Vespasian. Only a few individuals overcome this instinctive group-reaction and surrender themselves spiritually to the new group in which they live and have their individual being. Such individuals are often scorned for ‘losing their race’; they should rather be commended for casting out an irrational race-feeling which no longer corresponds to their real social relations, and giving their allegiance to the new group into which they have voluntarily entered. 

(b) Race-feeling in ancient Greece.—It has been suggested above that race-feeling in any human society tends to be inversely proportional to the vitality of its civilization. There is not space here to trace this curve of race-feeling through the whole of history consecutively, but it may be tested in two important instances—the civilizations of ancient Greece and modern Europe.

Ancient Greek civilization sprang more abruptly out of primitive conditions than ours, and was therefore penetrated by race-feeling more profoundly at its roots. The city-state (which was the ancient Greek state form, as the national state is modern European) was a natural product of the human community. Hence all ancient city-states were not racial unities at all. They were combinations of smaller groups—village communities scattered over a plain (φωτισμός), or bands of rovers flocking together from across the sea (φωσις), and even these smaller units were not homogeneous in themselves. They had come together in the Aegean from the four quarters of the earth, and an ethnologist would have analyzed in each of them the component racial elements. Yet race-feeling dominated the group-consciousness of the city-state and its structural parts. The city’s legendary founder was conceived as the ancestor of the living citizen-body. He had fixed the racial relations by being born into the family which was to be the race. There were those who were to live under it. The constitution could be supplemented by current administrative regulations, but (like the American federal constitution) it could be altered only by elaborate ‘initiation-rat’ or else by revolution. The citizen-body, again, could be supplemented by immigration; but the immigrants remained resident aliens. They might live in the city from father to son, build up its trade, pay its taxes, serve in its wars, and even create its literature (Lyssias, the model of Attic orator, was a Babylonian, a resident alien of alien family); but they were still aliens, without a vote and even without a status before the law (Lyssias, who could present the case of his citizen-clenmis, could not enter the court as an inhabitant). Because a city-state’s life could not make the blood of the founder flow in their veins, and citizenship was inseparable from this racial qualification. ‘Naturalization,’ like constitutional development, could be brought about only by revolution, and revolution, when it occurred, was generally complete. Every free inhabitant of the city-territory—citizen, free immigrant, or enfranchised slave—then became a citizen of what was virtually a new state, with a new internal organization and a new racial myth which made the new citizen-body just as exclusive as the old.

The city-states of ancient Greece were thus racial to the core, and that is why they were never transmogrified—a failure that was the political ruin of the Greeks. Greek national life, on the other hand, which sprang from the same origins as the city-state, emancipated itself from race-feeling easily and quickly. It has been mentioned that in Greece, as in primitive societies, every racial group judged itself to be by birth better, and religious feeling and religious feeling were co-extensive (see art. GREEK RELIGION, § 4). But there were several Greek groups—Delphi, Pisa, Eleusis—which, as it were, abnormally developed their religious side and received into their religious communion neighbour-groups which would have remained hopelessly snubbed from them and from each other on the narrow racial principle. Delphi, for example, by the 6th cent. B.c. had received into its ‘amphictyony’ about two-thirds of the Greek-speaking population on the mainland, and had given the common name of ‘Hellene’ to all Greek-speaking people. All ‘Hellenes, in turn, were admitted at Pisa to the religious festival of the Olympic group. To be admitted to the name of ‘Hellene’ became the test of ‘Hellenism’ or Greek nationality. This Hellenism was at first conceived racially. The Hellenism was contrasted with the ‘barbarian’ (the man who spoke jargon), and was thus distinguished by language. In this basis of ‘race’ than the ancestral basis of the city-state and its sub-groups, was still external and objective. But his Hellenism was never tested by his mother-tongue alone. Slaves, for example, were excluded. Yet by the last two centuries B.C. (the 6th and 5th century B.C.) the majority of Greek-speaking were Greeks by speech and ancestry; and a man was not necessarily a Hellene even if he spoke Greek and was free. In

The city-state. Hellenic barbarian Group-characters 'The many which untransmittable historians called barbarians, which is one thing, but to recognize a common humanity in men with brown skins or men who never tilted the ground needed a greater intellectual effort. The Greeks, however, accomplished this feat of imagination some time or other. and the Hellenes was the same bun but an metal stamped with a different impress by the diverse environments into which it had been introduced. Thus the experience of alien human types, so far from stimulating race-feeling in the Greeks, tended to make the Greek ideal of race altogether.

This explanation of group-differences by adaptation to different environments is worked out in a treatise on Atmospheres, Waters, and Localities included in the 5th. cent. collection of medical writings, the Work of Hippocrates. 'Some human natures, the writer lays down, 'are like well-wooded, well-watered mountains, some like thin-soiled, waterless country, some like meadow and marsh land, some like stiff, arable woodland.' The Skythians, he says elsewhere, 'are like one another and no other people in the world, and it is the same with those barbarians, who, as I am informed, have put these things into their physiqne by the heat, and the Skythians by the cold.' He explains temperaments in the same way. 'A wild, unsociable, barbarous nature,' is produced by a climate of extremes, for in such a climate 'the mind receives constant shocks which implant wildness and weaken the mild and gentle side of character and impair the even traces differences in temperaments. Temperament to differences in political constitution: 'The inhabitants of Europe are more born warlike by their institutions, because they are not ruled by kings like the Asiatics. Where people are ruled by kings, they are inevitably more warlike.' He discusses in detail the psychological reasons for this, and cites the exception which proves the rule: -'The Greeks and barbarians in Asia who are not under autocratic government are antibelligerent and labour for their own profit, are as warlike as anybody.'

But, if the group-differences between Hellen, Egyptian and Skythian, European and Asiatic, were accounted for by climatic and cultural influences, it would be evident if your group-character merely depended on whether you lived a thousand miles nearer the Equator or the Pole, in a swamp or on a mountain, whether you built your city with this aspect or that, whether you let yourself be governed by a king, then racial barriers were potentially abolished. Any barbarian, by taking thought, could raise himself into a Hellen, and any Hellen could sink into being a barbarian.

This conception of Hellenism, not as race, but as a culture, for all humanity, gained ground steadily from the 5th cent. on. Herodotus tells the story of the Skythian king who lived in a Hellen in a Greek trading-settlement several months each year, till his tribesmen discovered the double life that he was leading and killed him. The campaigns of Alexander gave vast populations the opportunity of 'Hellenizing' themselves freely: and, though this Hellenization was sometimes superficial (e.g., in the propaganda of Jason of Colchis), it bore the same high-productive fruit, and always proclaiming the paramountcy of *Hellenism*, but it was also his saying that *Hellenism* is king of all, and this idea entered profoundly into the attitude of the Greeks towards the likenesses and differences between group and group.

During the 5th cent. the Greeks became intimate with peoples strikingly unlike themselves—the Egyptians in the Nile valley and the Skythians in the Russian steppe; and this might have stimulated their race-feeling afresh. To recognize a common Hellenism in the descendents of the conquerors of the Macedonian king therefore looks like a reversion from the linguistic basis of Hellenism to the narrower ancestral basis of the city-state. Really, however, it marks an advance in the other direction, for the qualification required of him who could be a registered citizen of this city-state or that (as in fact he was not a citizen of Argos), but that he should be within the pale of the 'city-state culture.' Hellenism, by this ruling, implies not merely the free-man's status and the Greek mother-tongue, but a certain rub theorem of social life and other Greek historians besides Herodotus support this view. Thucydides calls the inhabitants of Epirus barbarians, though they too spoke Greek. Aristotle, on the other hand, talks of Rome as *παρθανοι* (i.e. barbarians) by lower or lesser constitution; and he also describes the constitution of the city-state of Carthage in his Politics—a work otherwise devoted almost exclusively to the politics of Greece.

The standards of Hellenism led up to the conception that Hellenism was not an inalienable and untransmittable race-character, but a quality that could be acquired. 'The Hellenic people,' says Herodotus, 'has in my opinion spoken the same language ever since it existed [a concession, this, to the objective notion of race]. It was originally an off-shoot of the Pelasgian people, and started weak; but from such beginnings it has grown to include a multitude of populations which have become assimilated to it—chiefly Pelasgians, but many other barbarian populations as well. As for the Pelasgians, I do not imagine that, as barbarians, they grew to anything great previously to the growth of the Hellenes.'

In other words, the essence of Hellenism is not a certain language spoken from time immemorial by a certain group, but a development of culture which enabled this group to assimilate far larger groups outside it—the population of Attica among others, which is a general evolutionary product, in which an ever-expanding group is distinguished progressively from the raw material of human nature, is sketched in by Thucydides:

Once all Hellen were arms in civil life like the barbarians. The parts of Hellas that still live like this witness to the life that was once lived by all alike. The Athenians were among the first to leave off weapons and change to less austere habits. . . . The Lacedaemonians were the first to strip naked and to take off their clothes in public exhibitions with oil when they took exercise. Formerly even in the Olympic games the competitors wore girdles when they competed, and it is not many years since this was given up. Among some barbarians, especially the Asiatics, they still wear girdles when they box or wrestle. In fact, a girdle is said to be absolutely indispensable to life. The ancient Hellenes was undifferentiated from that of the modern barbarians.6

This evolutionary view of Hellenism is the first to remove from the racial concept of *Hellen* and *barbarian* which pervaded the city-state, and contemporary Greek thinkers were conscious of the contrast. They called the two opposite principles *Hellen* and *barbarian*, and debated their relation to one another. But, while the one, the ruling concept, was always proclaiming the paramountcy of *Helenism*, but it was also his saying that *Hellenism* is king of all, and this idea entered profoundly into the attitude

generation of Hellenic rhetoricians, scientists, and poets, and a new school of Hellenic philosophy was founded in Athens by Phidias and Zeno. Taking the profound and the superficial together, it is true to say

that the idea of Hellenism in ancient Greek civilization did transcend completely the idea of race inherent in the city-state. It made possible a feeling of unity which was not passed over without a break into Christianity.

Christianity in its origin was the antithesis of race-feeling; its membership depended on an inward spiritual act, and within the Christian group, there was no more Jew or Greek, no more Teuton or Latin Pole, or barbarian. But in this had been anticipated by the little Greek *πατρία* of Eilenos, which had developed its primitive initiation-ritual into a spiritual religion and had thrown it open to all mankind.

(c) Race-feeling in modern Europe.—The history of race-feeling is more difficult to trace in modern Europe, because it is still unconsidered, but it is clearly very different from the development just outlined in the case of ancient Greece. European civilization did not spring straight, like Greeks from primitive social life, and was therefore partly emancipated from race-feeling at the outset. It had behind it Hellenism and Christianity—two social forces which were the antithesis of race—and a long history of its own, which translated Hellenism and Christianity into political terms by building a 'world city state'.

The Latin Church of the Middle Ages, with its common ecclesiastical organization, common culture-language, and common outlook on life, overrode race-feeling triumphantly. It assimilated the outer barbarians who broke into the Roman Empire in its decay. It initiated into European civilization populations which had lain entirely outside the Roman pale—Angles and Saxons, Scandinavians, Lithuanians, Poles, Hungarians, Lithuanians. It looked on all Latin Christendom as one, and on heathens and Muslims not as vessels of destruction, but as raw clay ready for the Christian mould. The legend of Prester John (q.v.), the mighty Christian king who was to come out of the heart of Asia or the heart of Africa or the heart of Asia or the heart of Africa and aid his fellow-Christians to make Christianity prevail all over the world, shows how completely free from race-feeling the spirit of medieval Christendom was. And the history of nationalism shows how living was the community of thought within the Christian group. A new doctrine travelled within a few years from one end of Christendom to another, was passed on from Croats to Albanians, from Englishmen to Croats, receiving a fresh but unbroken development from each of the wandering students or pilgrims by whom it was transmitted. No race-feeling inhibited this general interplay of ideas.

But this great anti-racial force on which European civilization was founded has been invaded by race-feeling to an increasing degree. The linguistic basis of association and dissociation, which had been transcended first by Hellenism, and of which Christianity in its origin had been independent, has been broken early to assert itself, and to split the Church, united by the subjective bond of a common belief and a common will, into a number of groups divided from one another by their 'mother tongues.' This relapse towards race-feeling as the basis of group loyalty is not merely a pathological effect springing from the Christian world. It first made itself felt in the disguised form of doctrinal disagreement. The Jacobites, Nestorians, and Gregorian Churches left the Catholic communion nominally because they differed on some articles of the creed or some ruling of a council; and the founders of those Churches were probably unconscious that they were also ministering to an impulse in their followers to have a liturgy and a literature in their own vernacular—Coptic, Syriac, or Armenian. A few centuries later the Orthodox Church broke communion with the Roman Church, also nominally because it was doctrinally opposed; but the principal issue was the struggle of the Greek and Latin languages each to become the official language of the Church, and the inability of either to conquer the whole field of Christendom from the other. This linguistic element was the most noteworthy, and with which the Greek Orthodox Church allowed its Slav converts in the Balkans and Russia to form autonomous Orthodox Churches with the Bible and liturgy in their native tongue. And it is noteworthy that among the Slavs on the Adriatic littoral, who bordered on the limits of Orthodox missionary expansion, the papacy was forced by competition to make equally liberal linguistic concessions, in complete contradiction to its general policy elsewhere.

The Protestant Reformation (q.v.) in W. Europe was in its larger part a linguistic movement too. The Hussites (q.v.) in Bohemia took up arms for 'common in both kinds,' but they were in fact the Czech peasantry reacting against German penetration, feminine (q.v.), who translated Hellenism and Christianity into political terms by building a 'world city state.' The Latin Church of the Middle Ages, with its common ecclesiastical organization, common culture-language, and common outlook on life, overrode race-feeling triumphantly. It assimilated the outer barbarians who broke into the Roman Empire in its decay. It initiated into European civilization populations which had lain entirely outside the Roman pale—Angles and Saxons, Scandinavians, Lithuanians, Poles, Hungarians, Lithuanians. It looked on all Latin Christendom as one, and on heathens and Muslims not as vessels of destruction, but as raw clay ready for the Christian mould. The legend of Prester John (q.v.), the mighty Christian king who was to come out of the heart of Asia or the heart of Africa or the heart of Asia and aid his fellow-Christians to make Christianity prevail all over the world, shows how totally free from race-feeling the spirit of medieval Christendom was. And the history of nationalism shows how living was the community of thought within the Christian group. A new doctrine travelled within a few years from one end of Christendom to another, was passed on from Croats to Albigenses, from Englishmen to Croats, receiving a fresh but unbroken development from each of the wandering students or pilgrims by whom it was transmitted. No race-feeling inhibited this general interplay of ideas.

But this great anti-racial force on which European civilization was founded has been invaded by race-feeling to an increasing degree. The linguistic basis of association and dissociation, which had been transcended first by Hellenism, and of which Christianity in its origin had been independent, has been broken early to assert itself, and to split the Church, united by the subjective bond of a common belief and a common will, into a number of groups divided from one another by their 'mother tongues.' This relapse towards race-feeling as the basis of group loyalty is not merely a pathological effect springing from the Christian world. It first made itself felt in the disguised form of doctrinal disagreement. The Jacobites, Nestorians, and Gregorian Churches left the Catholic communion nominally because they differed on some articles of the creed or some ruling of a council; and the founders of those Churches were probably unconscious that they were also ministering to an impulse in their followers to have a liturgy and a literature in their own vernacular—Coptic, Syriac, or Armenian. A few centuries later the Orthodox Church broke communion with the Roman Church, also nominally because it was doctrinally opposed; but the principal issue was the struggle of the Greek and Latin languages each to become the official language of the Church, and the inability of either to conquer the whole field of Christendom from the other. This linguistic element was the most noteworthy, and with which the Greek Orthodox Church allowed its Slav converts in the Balkans and Russia to form autonomous Orthodox Churches with the Bible and liturgy in their native tongue. And it is noteworthy that among the Slavs on the Adriatic littoral, who bordered on the limits of Orthodox missionary expansion, the papacy was forced by competition to make equally liberal linguistic concessions, in complete contradiction to its general policy elsewhere.

The Protestant Reformation (q.v.) in W. Europe was in its larger part a linguistic movement too. The Hussites (q.v.) in Bohemia took up arms for 'common in both kinds,' but they were in fact the Czech peasantry reacting against German penetration, feminine (q.v.), who translated Hellenism and Christianity into political terms by building a 'world city state.' The Latin Church of the Middle Ages, with its common ecclesiastical organization, common culture-language, and common outlook on life, overrode race-feeling triumphantly. It assimilated the outer barbarians who broke into the Roman Empire in its decay. It initiated into European civilization populations which had lain entirely outside the Roman pale—Angles and Saxons, Scandinavians, Lithuanians, Poles, Hungarians, Lithuanians. It looked on all Latin Christendom as one, and on heathens and Muslims not as vessels of destruction, but as raw clay ready for the Christian mould. No race-feeling inhibited this general interplay of ideas.

But this great anti-racial force on which European civilization was founded has been invaded by race-feeling to an increasing degree. The linguistic basis of association and dissociation, which had been transcended first by Hellenism, and of which Christianity in its origin had been independent, has been broken early to assert itself, and to split the Church, united by the subjective bond of a common belief and a common will, into a number of groups divided from one another by their 'mother tongues.' This relapse towards race-feeling as the basis of group loyalty is not merely a pathological effect springing from the Christian world. It first made itself felt in the disguised form of doctrinal disagreement. The Jacobites, Nestorians, and Gregorian Churches left the Catholic communion nominally because they differed on some articles of the creed or some rul
The internal unity and external assimilative power which Christendom once possessed can be inferred by comparison with the Islamic world as it still is—Islam being an inferior reproduction of Christianity with a belated development of a new un-racial (in the sense of MUHAMMADANISM). The Muslim missionary in W. Africa or India makes more converts than the Christian missionary, because he really receives his converts into his own group, treats them as social equals, and gives them his daughters in marriage, while the European missionary is divided by the colour-bar from Christian natives just as acutely as from pagan, and can only organize his converts into a 'native church,' which is still outside the pale of the European communities.

It is noteworthy, however, that the Muslim populations which have approached nearest to the standards of European civilization are also losing their pan-Islamic sense of brotherhood and acquiring a sense of linguistic nationality of the European kind. Among the Arabs of Syria and the new nationalism, which is dividing them from their Persian or Turkish-speaking co-religionists, has tended in compensation to break down the barriers between Christians and Muslims of Arabic speech. Among the Bosnians the Ottomans have developed a nationalism of the purely dissociative kind. Before 1908 the Ottoman Empire, like medieval Christendom, was a group which gave the privileges of its membership to all inhabitants of its territory who professed the established group-religion, whether they inherited its creed or adopted it by conversion. The Young Turkish party, when it came into power, substituted for this pan-Islamic basis a programme of 'Ottomanization,' which made for the elimination of the Turks who were not included in the obligatory group-characteristic, and set out to eliminate all inhabitants of Ottoman territory who would not or could not be 'Ottomanized' by force. The racial persecutions in Turkey during the European War were directed against the European Arabs as well as the Christian Armenians; and, though the Armenians were offered the traditional alternative of conversion, those who accepted it either were distributed among Turkish families, if they were of the male sex, and children, or, if they were whole towns or villages, were driven away with as mercilessly as those who refused. Communities converted wholesale would have retained their linguistic nationality, as the Slav of Bosnia retained theirs after their wholesale conversion to Roman Catholicism, in the act of will introduced by the Turks set no store by the religious uniformity which had been the paramount social bond for their forefathers, if it left outstanding the external, objective differences that offended their sharpened racial sense.

This historical outline of the development of modern race-feeling raises a problem. Why should the most progressive Muslim populations be affected most powerfully by 'racialization,' which is clearly a retrogressive process and European influence is the cause? How has European civilization made such vigorous and constant progress as it has from the Dark Ages to the present day, with this equally rapid and steady counter-current carrying it in the opposite direction? What is the secret of the process which we have observed race-feeling?

1 In the case of forced converts, the uniformity would of course be purely nominal, and in no sense including a unity of spirit; but history shows that the spiritual bond, which the forced converts never feel, establishes itself almost automatically in their descendants.

1 It is typical of medieval Catholicism that its artists represented one of the Three Magi as a negro.

RACE

557

its continuity, and has increased rather than diminished in its sense of objectivity and its intolerant spirit. It still produces persecution, civil war, and war between state and state, by a fanatical belief in the necessity and rightness of external uniformity, and by an uninhibited craving to impose this uniformity by violence. And this ideal of linguistic uniformity is the religion of Europe in the 20th cent., as far as religion is a group-phenomenon. And this is, as we have seen, the idea sponsoring the religious doctrinal uniformity was in the 17th. In spite of the superficial change of orientation, the creed of 'Cuius regio cius religio' has persisted, because the race-feeling behind it has remained the same.

Thus the inheritance of internal unity which European civilization derived from Hellenism and the Christian Church has been shattered away, and the anti-racial group-feeling of Catholicism has degenerated gradually into the acutely racial group-feeling of nationalism. There has been a corresponding 'racialization' of the division between those inside and those outside the civilized pale.

It has been said that medieval Catholicism divided mankind into Christians and pagans (including Muslims), and regarded the latter, not as creates of another species, but as potentially Christians capable of becoming actual Christians at any moment by an individual act of will. But, about the time of the Reformation, the great maritime discoveries brought Europeans into contact with other populations markedly different from the people of Europe and W. Asia in externals. Their pigmentation was at the opposite extreme of the human colour-scale; their culture was too primitive to be placed in any scale of comparison at all. They were thus the Turks, the Chinese, the Tartars, whom they lived was tropical instead of temperate. In coming into contact with these populations, Europeans were having the same experience as the Greeks when they came into contact with Egyptians and Skythians, but their reaction to it was not the same. The Greeks, struck by the environmental contrast as much as by the contrast in human type, explained the latter by the former, and concluded that all human beings, however acute their superficial differences, were the same in essence, and that all could and ought to be potentially transmutable into every other. The Europeans were struck so forcibly by the external differences that it never occurred to them to explain their origin by the secondary influence of environment, or to look forward to their elimination by change of environment or progress in culture. The differences hypnotized them as the one overwhelming fact. The black man might become a Christian, he might adopt European clothes or habits of life; but he remained black, and the European white. The colour-barrier presented itself to the European as insurmountable, and it displaced religion for him as the dividing-line between people within the pale of civilization and people without. Instead of classifying mankind as Christians and pagans, transmutable, by conversion, into one another, he now classified them as 'white men' and 'natives,' the 'white race' and the 'black race,' divided from one another by external differences of which the colour-barrier will on either side could surmount. And, just as the Greek's hypothesis of adaptation to environment, as an explanation of the Egyptian and the Skyth, reacted on his own feeling of Hellenism, making it monotonous and un-racial in quality, so the European's hypothesis of a natural difference between Black and White reacted on his own growing nationalism and made it more uncompromisingly racial than it need otherwise have become.

20th
progressively gaining ground other and anti-racial forces were disengaged. The schisms of doctrinal theology were not only expressions of libertarianism but fields for intellectual activity; the Lutheran Reformation was not only a descent towards the national state but a victory for freedom of thought and conscience; and the narrowest and most inscrutable racial dogma of the 20th century is not a mere substitution of dogmatic barriers for the brotherhood of mankind, but the struggle towards equality of populations, which, through disunion, numerical weakness, illiteracy, or other adverse social and political conditions, may be induced by other groups or had altogether lacked a group-consciousness of their own. The stimulation of race-feeling, which resulted from these movements, and which we have so far considered in abstraction from the other consequences that they had, was often only the lesser backwash of a forward wave—the toll which liberation of mind and will had to pay to slavery. And there were also movements, like the American or the French Revolution, in which race-feeling was not the result of a definitely new stimulation of race-feeling can be traced to them, to offset the impulsion which they gave towards free association.

This anti-racial tendency in European civilization is the result of the racial tendency of nationalism by the whole span of European progress, is what we name 'democracy'; and modern democracy has liberated broad fields from race-feeling which Hellenism and Christianity never conquered.

There was the inveterate racialism of the ancient city-state, which on its political side was only superficially transcended by the Roman Empire; and the Roman Empire, at the time when Christianity was offering spiritual unity to all mankind, was disintegrating into the 'feudal system,' under which a man was bound to the soil on which he was born by more servile and prosaic fetters than the φυλή and φροντία of the historical Greek city-state, or the citizens of gold, silver, and bronze in Plato's racial myth. Feudalism is the great idea, though by no means the only, inebus of racialism inherited by European civilization and successfully thrown off. But, as was remarked at the beginning of this section, it is impossible to trace the history of European civilization with a certain hand, because it is still in the making. In the phase of history that led up to the European War nationalism made such formidable advances among almost all civilized peoples that race-feeling and democracy seemed on the way to equilibrium, and the continued progress of civilization probably depends upon the ulterior consequences of the war.

For this equipoise which is embodied in the contemporary 'democratic national state' is not, after all, a stable condition. Nationality and democracy are really opposite tendencies—the one towards race-feeling and the other away from it—and one of the two must have the mastery in the end. But the data are insufficient for speculation into the future, and we must be content to study race-feeling as the past history of it, of which has been outlined in this article.

A. J. TOYNBEE.
by the Sādhus, as it resounds through all regions. He then teaches them to mount on this spirit-current and to rise on it to the highest temple of the inner spirit-world, the Supreme, except through the sacred Sāngamū. So that all men ought to have, for the time being, a book to read. The secret discipline is called Sarvat-Bhū-Tēg, 'union of the human spirit with the Word.' The methods of this discipline are not known further than this. It is the most refined and noble art that the guru gives the disciple his photograph, and bids him contemplate it as the revelation of God in his meditations. In addition to the secret practices, men are told that prayer, works of faith and charity, a vegetarian diet, abstention from intoxicating drink, and attendance at meetings of the sect for worship are necessary for the holy life.

The second guru died in 1899. Besides the English booklet mentioned above, he left behind him four volumes in Hindi verse, named Premā Pratīva, 'Love Letters.'

The third guru, Brahmā Sunkara Misra, a man of Bengali extraction, resident in Benares, guided the sect from 1899 until his death in 1992. His book, Discourses on Rādhā-Kāsī Faith (Benares, 1900), contains brief statements about the gurus, which have been used in this article.

Since the death of the third guru the sect tends to fall into two sections, one of which is in favour of the second guru and the other opposed to it. The former section recognizes at present Anand Swārāj as their guru, while the other party is led by Mādhyā Prasād, who refuses to be called a guru.

Radha-Vallabhis are held to be identical with the Supreme Being, and receive lofty titles to express his dignity. The worship of the sect therefore centres in him. All the excesses of Hindu guru-worship are reproduced among Rādhā Soānis. They not only prostrate themselves before the guru, adore him, meditate on his virtues, pray to him, and believe that everything that has touched his body is filled with spiritual power; they also follow certain Hindu sects in a number of disgusting practices. They drink the water in which he has washed his feet, eat certain products of his body, and, after his death and cremation, drink his ashes in water.

When a guru dies, his relics are placed in a tomb, his photograph is affixed to it, and round it is erected a circular temple, because it is sanctified by the relics of the guru, is called a guru-deva. Since three gurus have passed away, there are three guru-devas: (1) the shrine of the first guru, who is called Rādhā Soāni, or Soānīlī Mahārāj, is at Kusumā Chānḍī, four miles from Agra; (2) the shrine of the second guru, who is called Huzoor Mahārāj, is at Pipālmandi, Agra; (3) the shrine of the third guru, whose title is Mahārāj Sahib, is in a fine new building in Madho Das's garden, Benares.

Apart from the adoration of the guru, the worship of the sect is a simple service consisting of scripture-reading, hymn-singing, prayer, and a sermon. Their scriptures are the writings of Kabir and of certain other Hindu saints and the works of their own gurus.

Since the sect is largely guided by Kabir, and recognizes one God only, the visiting of Hindu temples and the worship of Hindu idols are discon- nected. Yet a Hindu, a Musalmān, or a Christian may remain outwardly a member of his old religious community and conform to its usages, while secretly avowing himself a Rādhā Soāni and partaking in the worship and private meditations of the sect.

The name of the sect is rather an enigma. The word santsaṅg is quite clear, for it is a Hindi word used by the Sikhs for a company of pious people; but Rādhā Soāni is obscure. It is a phonetic misspelling of Rādhāvānī, 'Lord of Rādhā,' a term used of Kṛṣṇa in relation to Rādhā, his famous cowherd mistress, in the latest cycle of the myth. It is most strange that, in a sect which worships Kṛṣṇa as God, the name of God and should also be used as the title of the first guru of the sect, and to form the name of the sect itself. No credible explanation has ever been given by any writer of the sect. It is transpires, however, that the first guru's name used to be dress up as Kṛṣṇa and Rādhā to receive the worship of their disciples; and when, in February 1914, the writer of this article visited the gurudwāra of the first guru, he found two photographs hanging on the walls of the gurudwāra, one of the sect, who acted as cicerone, said that they were the photographs of Rādhā and Soāni, the first guru's wife and the guru himself. Thus it is probable that, during the lifetime of the guru and his wife, when the disciples went to worship them, they addressed them as Rādhā and Soāni, and that the double name thus became associated with the chief act of worship of the sect. That would be sufficient to account for the way in which it is used.

LITERATURE.—The chief publications of the sect have been mentioned in the course of the article. A valuable pamphlet, The Radha-Kasim Sect, by H. D. Griswold, was published many years ago by the Cwmpnore Mission Press, but is now out of print. The fullest account of the sect will be found in N. Farquhar, Modern Religious Movements in India, New York, 1915, pp. 167-173.

RĀDHĀVALLABHIS.—The Rādhāvallabhis are a Vaishnava sect of N. India, numbering about 25,000 adherents, and founded in the early part of the 16th century by one Harivānsh, the son of a Gurū Brāhmaṇa living in the Saharanpur District. Harivānsh's name appears in the list of teachers on the third Guru, named Radhavallabhis, of the Radhāvallabhis, a sect of the Vaishnavite sources, certain phrases and ideas are clearly Christian in origin. In many points both of teaching and of practice there is a curious similarity between them and the Kuśinagara.

celebrated as the companions of Kṛṣṇa during his youth spent in Vṛndāvana. The legend of his sport with these herdmasters is pretty old. It was superseded, or supplemented to the Mahābhārata, and in the Vīṇa and Bhāgavata Purāṇas, but it is not till we get to the Brahma Vaivarta Purāṇa, a late sectarian work, that we find prominence given to Rādhā as the leader of the herdsmen as Rādhā’s beloved mistress. Here we are told that Rādhā, from the beginning of all things, had been Kṛṣṇa’s ṣāktī, or energetic power, and that, when he came down to earth in human form, she also became incarnate.

In many religions there has been a tendency exhibited to worship a female counterpart of the deity, as his energetic power. This was not confined to India. It has even appeared in corrupt forms of Christianity which substituted the Virgin Mother for the Third Person of the Trinity. In India this ṣāktī-worship became most developed among the Saiva sects, but it has also obtained some currency among Vaiṣṇavas, some of whom direct their prayers more particularly to Lakṣmī or to Sītā, the spouses of Vishnu and Rāma, respectively, but among Rādāvallabhāśis this is carried to an extreme length. Rādhā is the supreme object of worship, and the writings of the sect are devoted to singing her praises, and to describing, with marvelous adjectives and conspicuous allusions to the union of Kṛṣṇa with his beloved. The whole is, of course, capable of mystic interpretation, and is so interpreted by the pious, but Growse,1 in commenting on one of Harivaihsa’s devotional poems, is not unfair in saying:

1 Ever the language of the brothel was borrowed for temple use, it has been so here. But, strange to say, the Gosains, who accept as their gospel these nauseous savagings, and who insultingly refer for the most part to respectable married men, who contrast rather favourably, both in sobriety of life and intellectual acquirements, with the professors of rival sects that are based on more respectable authorities.

To indicate the fervour of his love for Rādhā, Harivaihsa took the premonition of Hita, “affectionate,” and he is generally now known as Hita Harivaihsa. This custom was followed by his disciples, so that we find names such as Hita Dvura Dasa and Hita Dāmodara as those of his pupils and imitators. Harivaihsa was about sixty-five years old at the time of his death. He was the author of two works. One of these is the Rādāvallabha, ‘Store of the Nectar of Rādhā,’ extending to 170 long couples. The other, the Chaurāṣi Pada, ‘Eighty-four Stanzas,’ is in Hindi. They are both very erotic in character and exhibit much poetical fancy. Portions of them have been translated by Growse. Stray verses attributed to him are also recited. Wilson mentions a work entitled the Śrīnāsakhi-vyāy, ‘Sayings of the Companions in (Rādā’s) Service.’ He states that it is a more ample exposition of the notions of the sect and of their traditions and observances, as well as a collection of their songs and hymns. He does not mention the author’s or compiler’s name.

By his later marriage Harivaihsa had two sons, one of whom, Vraja Chandra, or Drāj Chand, was the most successful, given to the temple of Rādāvallabhāś in Vṛndāvana, the chief temple of the sect. It dates from the end of the 16th or the beginning of the 17th century.

Literature.—The only English authors who have written original works on this subject are H. H. Wilson, Notes of the Religious Sects of the Hindus, London, 1853, p. 172 ff., and F. S. Growse, Mathura, a District Memoir, Allahabad, 1856. Other authorities may also be consulted: Nābhā Dāsa, Bhāktamālā (see EEE ii. 546), verse 190, and Prabandhakārīn, ‘A Skilful Singer of Songs of Service’ (see Sūnīkā, 1913, 3), and Rādāvasīrāga Bhagavān Prāśāda, Benares, 1895 (the account in this is summarized by Wilson, and given in full by Growse).
RAIN

When the Chaungthaw, or leader, of this group is about to hold a rain-making ceremony, he sends messengers, called Innawra, to the surrounding groups, to inform them of his intention, and to call the members of the tribe. At the appointed time the men are assembled ... the men of the totem march into camp, and then rise up and with their mouths open ... bunches of eagle-feathered hats on the crowns and sides of ... a signal from the Chaungthaw all sit down in line at once ... and sing. At another signal they all jump up and walk in single file out of the camp, and spend the night a few miles away. At daybreak they scatter in all directions in search of the animal, which, when found, he must not touch until water be drunk, or the ceremony would fail. While some of the men provide the animal, others erect a wooden shelter of boughs, near the main camp. When the decorating is complete, the men march back to the Chaungthaw silently and in single file. The young men enter first and lie face downwards at the inner end, while the older men, after decorating the leader, take up a position near the opening. Singing continues for some time, and then the Chaungthaw walks up and down a trenched outside the Chaungthaw, his body and legs quivering in a peculiar manner. This performance is repeated at intervals during the night, the singing continuing practically all the time. At daybreak he executes a final quiver, and, thoroughly exhausted, "declares the ceremony to be at an end, and at once the young men jump to their feet and rush out of the walled encampment in imitation of the spur-winged plover. The cry is heard in the main camp, and is taken up with varied effect by the men and women who have remained there." On the following day, the next night, and so on, the "singing mouse" which with uncooked food, which they prepared for themselves in a place apart. When, however, they sat down to eat, they found no portion of the meal, Rai Dass had dispensed himself, and was sitting and eating between each of two of them. This opened their eyes; and they became more and more devoted to the dishes. Rai Dass then tore open his skin, and, showing to them beneath it his former Birman body wearing a sacred coat of tigers' fur, he went to the river and washed it. These legends were recorded by Priya Dass, under the instruction of Nabhâ Dassa, who lived only three generations later than Rai Dass, and their marvellous character illustrates the impression that his teaching must have made upon his immediate successors.

LITERATURE.—Practically the only authority is Nabhâ Dassa, Bhaktamala (see ERD ii, 546), verse 54, and Priya Dass's account, written by an old man, Dr. A. N. NABIAN. The best ed. of the Bhaktamala is that of Sitâsârasâra Bhavanâ Prasada (Benares, 1850). A summary will be found on pages 165 ff. of the work. The Bhaktamala is cited in abundance in the Hindu's, London, 1861, p. 113 ff., where the legends about Rai Dass are gathered together more or less haphazardly, and for the most part are quoted in accordance with the original. Cf. also Dhruva Dass, Bhaktamalanâ, ed. with a full commentary, by Râdhâkrïa Dass (Sagar Prachâriya Sabha), Benares, 1913. In this Rai Dass is no. 110. According to the text, there are still descendants of Rai Dass in Benares, who carry on their ancestor's tradition of rain-making. For an account of the songs see the text above (p. 560).

RAIN.—Water is the first need of man, since without it vegetation withers and animals languish and die. It is therefore not to be wondered at that in countries inhabited by primitive people where rain is scarce magico-religious ceremonies are resorted to in order to regulate the supply. In Australia it is this simple cult that is in effect a special class of magicians, and, in some cases, a particular totem, are set apart for the due performance of rain-making ceremonies. From an anthropo-geographical survey of the distribution of these rites it is evident that the supernatural control of rain is chiefly found in areas where there is no abnormal rainfall, as, e.g., in sultry lands like Australia, and parts of E. and S. Africa, where for months together the sun "bakes" from a cloudless sky the unfortified bodies of men and the parched and withering vegetation. At the same time it must be remembered that it is not unknown in the moister climate of Europe, as in Russia.

1. The water-totems in Australia.—Among the Arunta tribe of Central Australia is a group of people who have water for their totem, and to whom the secret of rain-making was imparted in the remote past by the former chief of the Elam district. By his individual named Irchroughta, who also settled upon the exact places at which the intichiuwa ceremony should be performed. One of the most important of the water-totem groups is a local subdivision of the Arunta, inhabiting a district about 50 miles to the east of Alice Springs, called by the natives the "rain country" (Karntwa guhtcha), VOL. X.—36
RAIN

...under which an ancestor who was in his day a great rain-maker has been worshiped. Rain dances are accompanied by sprinkling water on its roots, so that the rain-maker may send them rain.

Such ceremonies as these can hardly be described as magical, if magic imply the presence of an automatic efficacy, since they imply a belief in a contrived effect, for the下雨, the rain-maker, is made by the supernatural powers of the deceased.

(c) Bull-roarers are used for procuring rain in Australia, Africa, and Central America. The reason for the association of this ceremonial object and rain- making in Afric, is the bull-roarer, which makes a mimic storm may be made only on the roof of a pine tree which has been struck by lightning, thus showing the connexion between a thunder-storm and the instrument.

Among the Zulu Indians the rain-maker whirs a bull-roarer, while one of his associates whips a mixture of water and mud into rings on the ground. Then the rain begins, and the bull-roarer is thrown on the fire. 'All this is an invocation to the gods for rain—the one is for water, the bull-roarer is a maker of the rain. The bull-roarer is then laid aside, and the offerings are sprinkled six times on the consecrated water, whereupon the bull-roarer is again taken up, and the rain is at last sent forth.

It is significant that in parts of Africa, where the bull-roarer is little more than a toy, the Kafirs still have sufficient regard for the rain-making qualities of the instrument to forbear to play with it when they want dry weather, lest a gale of wind should be attracted.

3. Dances.—From Carl Lumpholtz we have a detailed description of the rain-dancing of the Tarahumare Indians of Mexico.

In describing the relation of these Indians to nature, he says that rain 'is the focal point from which all their thoughts radiate,' since the people obtain their subsistence from the products of the soil. In order to induce the gods to let it rain, dancing, consisting of a series of monotonous rhythmical movements, is kept up sometimes for two nights. 'The dancing is accompanied by the song of the shaman, in which he communicates his wishes to the unseen world, describing the beautiful effect of the rain, the form; and the mist of the vegetable earth. He invokes the aid of all the peoples, and the shaman also dances to appease the rain-god from the rains of flood. Therefore dancing expresses not only prayers for rain, but also petitions to the gods to ward off evil to the crops or man. Sometimes the family dances alone, the father teaching the boy, one being deputed to bring down the fructifying rain by this means, while the rest of the family plant, hoe, weed, or harvest. In the evening the others sometimes join the unfortunate dancer for a while, but often he goes on alone all night. In winter they dance for snow, at other times in order that the clouds from the north and south may shun and bring down rain to make the grass grow and the deer and rabbits multiply.

4. Prayers.—Reference has already been made to prayers for rain. In Australia the only actual instance of prayers being offered to supernatural beings is in connexion with rain-making.

In the Dieri country the sky in which the sun rises—the predecessors and prototypes of the blacks—live is supposed to be a vast plain inhabited by wild tribes. The clouds are regarded as the dwellings of these beings, and rain is much in demand and is always of considerable moment. In times of severe drought the Dieri call upon these supernatural beings to send them rain. They then make a heavy rain, fall, proclaiming in loud voices the impoverished state of the country and the half-starved condition of the tribe consequent upon the long time since they have possessed food to preserve life. In S.W. Africa, if a drought has lasted long,
the whole tribe goes with its cattle to the grave of some celebrated old sorcerer, drinks milk from a gourd, and sets up a rock over their plaster: "Look, O Father, upon your beloved cattle and children; they suffer distress, they are so lean, they are dying of hunger and want!" 18

In Upper Burma, a Bantu people living in E. Africa, and among other African tribes is rain-making. So important is the aspect of their oil the land is a rule that, should the chief be unable to make rain himself, he must procure it from some one who can. 1 The Nandi rain-makers belong to a special clan. 2 In olden times the chief was the great rain-maker among the Akikuyu, and he allowed no one else to compete with him, lest a successful rain-maker should be chosen as chief in their stead. 3 The rain-maker invariably exerts great power over the people, and so it is important to keep this function in the 'right' house. Tradition always treats the power of making rain as the fundamental glory of ancient chiefs and heroes, and it therefore probably played an important part in the origin of chieftainship, hedging round the chief's person with tabus, though not necessarily, as Frazer suggests, with divinity. All influential people are sacred, but the most sacred do not work — e.g., the Mikado. If the chief were divine, so sacred would be his person that he would not be able to execute his functions. An ordinary chief or king is charged with mana only to an extent sufficient to hedge him round with simple tabus. Frazer's divine kings are a specialization of the conception of kingship, occurring only where the mana aspect of chieftainship is exaggerated.

The rain-maker — usually a medicine-man — who is endowed with mana (q.v.), by means of which he is able to control the weather by supplying wind, rain, thunder, famine, and plenty at will and for a price. It is not surprising, therefore, if this is the part of the world in which recurring periods of drought are frequent, the powers of the rain-maker cannot be lightly esteemed. Among the Dinka rain-makers are considered to be animated by the spirit of a great rain-maker, which has been handed down through a succession of rain-makers. By virtue of this inspiration a successful rain-maker enjoys great power. In fact, so sacred is the office that the holder thereof is put to death before old age and infirmity creep on, lest his demise from natural causes should bring distress on the tribe. But so honoured a life and death are not always the lot of the rain-maker. His position is beset with difficulties. Though a successful career offers great rewards, the unskilled practitioner is doomed to poverty. When people believe that a man has power to make the rain to fall, the sun to shine, the winds to blow, the thunders to roll, and the fruits of the earth to grow, they are also apt to attribute drought and dearth to his negligence or evil magic. Thus, the Banjars of W. Africa beat the chief in times of drought till the weather changes, and the tribes on the Upper Nile rip up the abdomen of the rain-king, in which he is supposed to keep the storms, if he does not make the showers fall. 4

7. Rain-gods. — The Dieri believe in rain-making supernatural beings, known as mure-nureus, who live up in the sky and make the clouds, which are the body or substance of rain. The rain-making ceremonies are thought to be seen by the mure-nureus, who cause the clouds to appear in the sky, unless they are angry or influenced by the evil magic of some other tribe. In Africa rain is attributed to a high god. The Aikikuyu believe rain-gods also go up and down, and are good and bad. The first sends rain and riches, the second good wives and healthy children, and the third sickness and loss. All three are called ngai, but it is the god who sends the rain that is considered the supreme deity and credited with divine powers.

The Akikuyu regard their deities as common to other tribes, such as the Masai and Akamba. 1

The Eve-speaking people associate a falling star with a powerful rain-god, who sends the showers from the sky. In times of drought they call upon him by night with wild howls, and once a year an ox is sacrificed to him. The priests are also conspicuous in the flesh, while the people smear themselves with the pollen of a certain plant, and go in procession through the towns and villages, singing, dancing, and beating drums. 2 The Dinka believe in a great god who sends the rain from the 'rain-place' where he dwells, and who animates the human rain-maker. His name, Dengdit, means literally 'great rain.' It was he who created the world and established all things in their present order; and, according to the Niel Dinka, he was the ancestor of a clan which has rain for its totem. Bullocks are sacrificed in spring to a spirit, Lepiru, for the purpose of inducing him to move Dengdit to send down rain on the parched earth. 3 Likewise among the Shiluk a bullock and a cow (or bull) there are to be sacrifices yearly to the semi-divine ancestor of their kings. One (or both) of the animals is slain, while the king prays to the divine hero for rain. 4

In Mexico Tlatoani, Tlatoatlcochtli, is the god of rain, thunder, and the fertilizer of the earth. He is thought to reside where the clouds gather, on the highest mountain-tops, especially those of Tlaloc, Tlascalin, and Toluca, his attributes being the thunderbolt, the flash, and the thunder. Prayers were offered to him in times of drought, as the chief of the water-gods, to look down in mercy on the sufferers of man and beast, and give the things which are 'the life and joy of all the world, and precious as emeralds and sapphires.' When the rain came down the forty children are sacrificed to Tlaloc by being closed up in a cave. 5

The rain-god of the Kandhs is Pidzu Pennu, a being who rests on the sky and whom the priests propitiate with eggs, rice, and sheep, and invoke with prayers, so that he may send down water upon them through his sieve before men and cattle die of want. 6 The Koi tribes of Bengal consider their great deity Marang Barn, 'great mountain,' to be the rain-god. His dwelling is on one of the mountains, and the top of the place is called Chota Nagpur. In times of drought the women climb the hill, led by the wives of the pathans, with girls drumming, to carry offerings of milk and bet-leaves, which are put on the rock at the top. When women thus invoke the deity to give the seasonal rain, wildly gesticulating and dancing till the prayer is answered by distant peals of thunder. 7

E. B. Tylor thinks that the rain-god is usually the heaven-god exercising a special function, though sometimes taking a more distinctly individual form, or blending in characteristics with a general water-god. 8 Although the tribal All-Father in very primitive cults is remote and in need of nothing that man can give, and therefore is not one of the folk of the human affairs, the rain-maker being the function of the marua-maraus — yet it seems that the rain-god proper is a heaven-god. This view is supported by the evidence from the Akikuyu, where it is the supreme deity who sends down water in showers to foster the parched earth in answer to the prayers of the people. Likewise, Dengdit is the creator and sustainer of all things. The Mexican Tlaloque was probably originally a heaven-god, since he is supposed to reside where the clouds gather, and is evidently superior to the god of the earth. Pidzu Pennu, the rain-god of the Kandhs, rests on the sky, and Marang Barn of the Koi tribes dwells to the west of a high hill. In classical times it was to the heaven-god Zeus that the Athenians turned with requests for rain, 9 while in later and still more enlightened ages it is the Lord of heaven and earth that men supplicate in times of drought by solemn litany and procession to send such 'moderate rain and showers that they may receive the fruits of the earth to their comfort and to His glory.'

8. Conclusion.—Frazer is of the opinion that the method adopted by the rain-maker is usually based on homoeopathic or imitative magic. In other words, he seeks to produce rain by imitating it. 10 Now, there can be no doubt that many of the rites associated with rain-making imitate the natural processes of creation, e.g. when the deer crosses a hut over a hole in the ground and drop blood on the men sitting round, while others throw handfuls of down in the air, they symbolically represent the natural phenomena connected with rainfall. The Adivasi, on the other hand, according to Agar, make the drizzle from the cirrus clouds, the dropping blood the rain. The two large stones in the centre of the hut suggest gathering clouds presaging rain, and the overthrow of the hut by men battering at it with their heads is the piercing of the clouds and the downpour of rain. Such a rite as this certainly contains an element of imitation, but only because the savage is a man of action, who 'dances out his religion.' 11 When he wants wind or rain, he does not, in the lowest term of the process, prostrate himself before his remote All-Father, but gathers certain people together, often members of a water-totem, to perform magico-religious rites. Thus he expresses by actions, sometimes accompanied by suitable exclamations, his inmost desire. Rain-making ceremonies, therefore, may be described as outward and visible signs of inward emotions and longings.

It is not surprising that primitive ritual is often of such a character as to imitate the process of Lolnhum, which in higher cult is expressed by utterances. Frazer's theory of imitative magic does not take into account the emotional and representative aspect of rudimentary religion—the pent-up desire expressed discharging itself on the mere symbol of the object. In developed magic the operator is more or less aware that he is dealing with a symbol, yet, in his need for emotional relief, he makes himself believe that the desired effect, though enacting on the symbol, is actually transmitted to the real object. 12 What applies to magic in general is equally applicable to rain-making in particular.

A modern community is chiefly dependent upon the weather for its incomes and outgoings, and for the variation in the prices of bread and vegetables, yet even so it is not easy for us to understand a condition of life in which a bad harvest means starvation. But in primitive society, where the food-supply is governed directly by the rainfall, the process of culture towards the one of grave anxiety calculated to produce states of emotional intensity. The emotions must find outlet somewhere. This they do in representative and emotional ceremonies to produce the desired result.
When the savage wants thunder to bring rain, he does not imitate it, but simply swings his bull-roarer in order that he may actually make it. It is not a noise like thunder that he imagines he hears, but the thunder itself. It is only as the bestowal of a new name upon the thunder-deity, that the idea of thunder was assimilated to the primitive ideas of making or being a thing de
genenerate into a merely imitative ceremony, a piece of frivolous and valueless mimicry. Thus the prayer attitude is but the more developed expression of the same, with which the so-called 'magical' rite is instinct.

RAJPUT.—Rajput (Skr. rājāputra, 'a king's son,' 'a prince') is the general term applied to a group of septs which constitute the so-called 'military' class of India. At the census of 1911 they numbered 9,430,095, appearing in the greatest numbers in the Panjab, United Provinces, and Bengal. In Rajputāna, the head-quarters of the tribe, they were 675,789.

1. Ethnology.—Within the last few years an important change of view regarding the origin of the Rajputs has taken place. Following the universal tradition of the Hindus, it was generally assumed that they were the direct successors of the Ksatriyas, one of the four groups (varṇa, 'colour') which constituted the Vedic polity. According to Manu (Laws, i. 89), the Creator commanded the Ksatriya 'to protect the people, to bestow gifts, to offer sacrifices, to study (the Veda), and to give himself to pleasing and comforting pleasures.' The true position of this group of septs has now been clearly ascertained.

So far back as the time when the Dialogues of the Buddha were composed, the Ksatriyas were recognised as an important element in society, and in their own estimation stood higher than the Brahmans. The fact probably is that from very remote days ruling class of Ksatriyas essentially similar to the Rajputs of later days, existed and were continually forming new states, just in the same way as in the medieval period. But their records have perished, and only a few exceptionally componious dynasties are at all remembered, and so stand out on the stage of history, in a manner which does not fully corres
don with the truth. The term Ksatriya was, I believe, always one of very vague meaning, simply denoting the Hindu ruling classes. Quite recently, however, it has been claimed occasionally a rāja might be a Brahman by caste, but the Brahman's natural place at court was that of minister rather than that of king (V. A. Smith, The Early Hist. of India's, Oxford, 1914, p. 458).

In the tradition, which in India ranks as history, there is a sudden gap: the old Ksatriyas disappear, until the 6th and 9th centuries A.D., when we find a group of states under Rajput rulers. But it is impossible to say whether these rajas were merely successful adventurers, or how far they were the heads of dominant clans. The true situation has no record. This is partly due to a want of evidence in N. and W. India. It is clear that the break in the tradition—in other words, the disappearance of the old Ksatriyas—was the result of the invasion of India by successive hordes from Central Asia. K. A. F. Wright has studied the Sakas in the 1st cent. B.C., followed by the Yueh-chi or Kushāns in the 1st cent. A.D. It is believed that the chiefs of these invading hordes rapidly succumbed to the in
tfluence of their new environment, became Hindus, and assumed the rule, ruling princes, the old name of Ksatriya. But it is assumed that pedigrees of any of the ruling clans go back to this period. During the 5th cent. A.D. and the early part of the 6th cent. the Huns (or Hūnas, as the Hindus called them) made a fresh invasion and crushed the Hindu polity. They settled principally in the Panjab and Rajputāna, their most important group being that of the Gūjaras, who, in name at least, are represented by the modern Gūjars (E.E. vi. 453). The Gūjaras founded important kingdoms, and gave their name to the province of Gūjarat. They were soon admitted to the status of Hindus, and we are thus enabled to interpret the strange legend of the fire sacrifice at Mount Abū (E.E. i. 51 f.). Their passing through the fire was a mode of expressing the purification which they underwent; their topographi
cy was removed, and they became fitted to enter the Hindu caste system (W. Crooke, 'Rajputs and Maharratas,' J.R.A.I. xl. (1910) 42).

In later times the same process of introduction into the Rajput body has continued. Many chiefs of the so-called aboriginal races, with their fol
dowers, have marked their rise to the status of rulers by assuming the title of Rajput, which, as has been said, merely implies the fact that they claim to be rajas or cadets of a ruling house. For further details of this, the most recent and important advance in our knowledge of Indian ethnography, see Smith, p. 412 f.; Crooke, p. 41 f.; BG ii. ix. p. 1 (1910) 443 f., where full details and references are found.

This mixed body, containing perhaps some survivors of the older Ksatriyas, reinforced by foreigners and aborigines, being thus admitted to the Rajput status, were naturally desirous of authen
ticating to antiquity. In common with the heralds of modern times, were ready to provide pedigrees linking the new ruling class with the gods and ancient heroes, just as Livy and Virgil affiliated the new Roman Empire with the heroes of the Trojan war. Hence arose the mass of legend ascribing to the Rajputs the descent from the sun or moon or other gods, or from the heroes who fought in the great war described in the Mahābhārata epic. These legendary pedigrees are recorded in great detail by J. Tod, the enthusiastic historian of the Rajputs, in his Annals of Rajputana.

2. Religion.—As might be expected from what has already been said, the Rajput cults and beliefs are of a mixed type, including those taught by their bards and Brahmans who trace their pedi
grees to the foreign or aboriginal stocks from which the Rajputs are derived.

(a) The place of Rajputs in the development of Hinduism.—In the early Hindu period tales are told which describe the antagonism between the Ksatriya and the Brahman. Some refractory rajas are said to have opposed the pretensions of the Brahmans (Manu, Laws, viii. 38-42). Visvāmitra, a Ksatriya, is said to have attained the rank of a Brāhman (Muir, Orig. Sm. Texts, i. (1885) 58 f.). The same feeling appears in the rise of the Bhakti
mārga, or the monothestic Bhāgavata religion, which was the work of Kṣatriyas (E.E. ii. 351 f.). In the same way, both Buddhism and Jainism were the result of a Sanskrit segregation against the despotic power of the Brahmans to retain the monopoly of admission into the ascetic orders (E.E. vi. 694, vii. 209). Even at the present day some Rajput septs assign a higher rank to the bard than to the Brahman, though, as our author remarks, the arrogance of the Brahman is such that even a degree of respect is only due to him, tenacious of practice among some classes of Brahmans in Rajputāna (E.E. vi. 693). But the Brahmans are anxious to accept the new situation, and by politic concessions to Rajput feeling lose no opportunity of regaining their position in the courts of the reigning princes.

(b) Cult of Śiva and the mother-goddesses.—As a martial race, many Rajputs favour the cult of Śiva
dhāvēda combined with that of his consorts, the latter being largely drawn from the non-Aryan races, but now freely admitted into Hinduism
If, as some believe, the cult of Siva had its origin in the Himalayas, we may suspect that it was introduced, or rapidly assimilated, by the Scythian or Hun invaders, Vatasen, king of the Kushana (c. A. D. 140-173), frequently on his coins the image of Siva with that of his bull, Nandi (Smith, p. 272). The chief Siva temple in Rājputāna is that known as Elding, 'he that is worshipped under the form of a single ūṣāṅga, Rāja or Rākat, Mount ... Mount in the Himalayan seat of the god. It is situated 12 miles from Udaipur, the capital of Mewār (H. D. Erskine, Rājputana Gazetteer, ii. A. [1908] 106; Tod, i. 499 ff.). The Rānas of Mewār combine the functions of lord and priest, and the vice-regents (ādhośīn) of the god (Tod, i. 182). With the cult of Siva is combined that of his consort Durgā.

In another form she is known as Māmā Devī, 'mother of the gods,' and round her image are grouped those of the other gods (ib. i. 553). Again, as Gaurī, the 'yellow' or 'brilliant' goddess, probably representing the ripe corn, she is the subject of a special cult, when at the Gangaur festival her image is taken to the lake at Udaipur and cere- monially bathed in order to purify her from the last year's pollution, or as a rain charm; as in the worship of the Bona Dea, no male may be present at the rite (ib. i. 544; IA xxxv. [1906] 61). She is also worshipped as Anāpūrṇā, 'who is possessed of a seat,' and her mimic marriage to Siva is performed (Tod, i. 455). In other forms she is worshipped as Sākambhari, 'nourisher of herbs,' Matā Janamī, 'the birth mother,' and Asāpūrṇā, 'who fulfils desire.'

Thus the popular belief Kṛṣṇa is the deity of the Yādava tribe, and he has his seat at Mathurā (q.v.), where he sports with the gopiṣ, or milkmaids. In another form, at Dwārākā, he is god of the dark storm-cloud (J. Kennedy, J.R.S, 1907, p. 951 ff.). His shrine is at Nāthdwārā, 30 miles N.E. of the city of Udaipur. His image is said to have been removed from Mathurā to escape the persecution of Aurnagbhīth; when the ear came to this place, the god refused to go farther, and a shrine was erected for him, which is so near the temple that it is daily, receiving donations from merchants throughout the Hindū world, and his pontiff is a personage of great sanctity and authority (Tod, i. 415 ff.). It is strange that the gentle Kṛṣṇa should be worshipped side by side with his godfather, his name is recognized, as to have a good effect on Rājput society, and Tod quotes a case in which he interposed to prevent satī (i. 423).

(d) Ancestor-cults.—It is the primary duty of the Rājput to visit the cenotaphs of his ancestors in the season of mourning, and to feed their hungry ghosts. Special veneration is paid to the maḥā- satī, or place of sacrifice of faithful wives.

'The Rājput never enters these places of silence but to perform stated rites, or anniversary offerings of flowers and water to the manes of his ancestors' (ib. i. 573 ff.).

He also venerates the heroes of his sept, as in the remarkable court at Mandor, which contains images of the heroes of the Rāños (ib. i. 573 ff.).

(e) Tutelary deities.—Each sept worships its tutelary goddess; Rāthasen or Rākhyasenā is the embodied luck of the Sesodins of Mewār, as Nag, necha, the serpent, protects the Rāths, and Vāyān Mātā the Cīvādās, while Khetrapāla, the 'field-watcher,' is the patron of agriculture (ib. i. 229 p. 291 ff.). He sometimes played the part of a sort of chief to the battle. On one occasion the Rāthor god fell into the hands of the Kachchhālas of Jaipur. Their prince took him to his capital, wedded him to the Jaipur goddess, and returned him with his compliments to his defeated adversary. 'Such,' says Tod (i. 87), 'were the courteous usages of Rājput chivalry.'

The tutelary god of Kotah is Brajnāth or Kṛṣṇa, and the chief at every battle used to carry his golden image on his saddle. He too was lost in battle, and was many years before he was found, 'to the great joy of everyone' (ib. ii. 413).

(f) Cult of youthful heroes.—The cult of the youthful hero (putra) is common among the Rāj- puts. Laut, the young hero of Ajmer, is worshipped by the vulgar, and, as he wore at the time of his death a silver chain anklet, this ornament is tabu to the children of the sept (Tod, i. 200 n.). The cult is not confined to youths. The queen of Gānor, who killed himself by means of a poisoned robe in the presence of the Musalmān who attempted to outrage her, receives no special worship, but in the spirit of sympathetic magic a visit to her tomb cures tertian ague (ib. i. 497).

(g) Worship of natural objects.—Water-spirits are honoured by throwing coco-nuts into the water. The spirit of the Banār river used to raise her hand over the water to receive the offering, but, as in the common fairy-gift legend, 'since some unhallowed hand threw a stone in lieu of a coco-nut, the arm has been withdrawn' (ib. i. 523; Tod, i. 637 ff.). It is the duty of the Valās, when at the summons of Rājīla Śālītya, the seven-headed horse which bears the chariot of the sun rose to bear him to battle (Tod, i. 179).

(h) Snake-worship.—The Pushkar lake is provided with a remarkable snake legend indicating a conflict of cults (C. C. Watson, Rājputana Gazetteer, i. A. [1904] 19). The Śāṅkhanch festival, 'the cobra's fifth,' is celebrated in its honour (Tod, i. 462). The usual tales are told of the serpent protecting or recognizing the true heir to the throne (ib. i. 236, ii. 281). The worship of snake heroes, like Tejaji, Gugā, and Pipā, is common (FR. i. 231 f.; Tod, i. 580).

(i) Sacred animals and trees.—Next to the cow, the boar is sacred to the Rājput, and possibly represents the corn-spirit (GBP, pt. v., Spirits of the Corn and of the Wild, London, 1912, i. 298 ff.). Birds of augury are carefully protected, and the pigeon, as the bird of love, has become associated with the erroneously Kāshā, and is still kept at every courtyard in Rājputāna. Among trees the varieties of the fig are especially sacred. It was from a pījāl-tree (Ficus religiosa) that Asāpūrṇā, the tutelary goddess of Būndi, appeared to protect the queen (Tod, i. 339).

(j) The Rājput festivals are numerous and interesting. The reader may be referred for details to Tod's classical account (i. 444 ff.). But, when he compares the ritual with that of Egypt and other countries to the west of India, it must be remembered that his theories are, to a large extent, obsolote.

LITERATURE.—The classical authority is J. Tod, Annals and Antiquities of Rajasthan, 2 vols., London, 1859-62 (the original is now very scarce, but it has been often reprinted; the references in the text are from Routledge's popular ed., London, 1914). For the Rājputs of districts outside Rājputāna see A. Forbes, Rājput Land, London, 1973; H. A. R. Kennedy, Glossary of the Tribes and Castes of the Punjab and the N. W. Frontier Provinces, vol. i. 1910; vol. ii. 1914; D. O. K. Pethick, Ethnography, Calcutta, 1883; W. Crooke, Tribes and Castes of the N. W. Provinces and Oudh, do. 1890; R. V. Russell, Tribes and Castes of the Central Frontier, London, 1907; W. Crooke, RĀMAIS.

RĀMAIS.—1. History.—Vaṁśavāc, one of the two main divisions of the Hindū religion, includes the sects which worship Vishnu in a proper form as a supreme personal god, two large sects embracing not only the great majority of the Vaṁśavāits, but also a very considerable portion of the Hindus of to-day. These two parties are the caritavāc or the sects of Vīvanāta, Kṛṣṇa and Rāma. The cult of Rāma as a chief god at the present day prevails over an ex-

1 See art. INCARNA(TION) (Indian), vol. vii. p. 113.
tensive area in India. But Rāma was at first only an epic hero; for in the original part (bk.s. ii. vi. vii.) of the Sanskrit epic, the life and deeds, he is represented as an essentially human character. On the other hand, in bks. i. and vii., which are admittedly later additions, his divine nature is fully accepted. In another passage also (v. 117), which is without doubt an interpolation, the gods, with Brahmā at their head, appear and declare Rāma, who had till then regarded himself as a man, to be Nārāyaṇa, i.e. Viṣṇu, the highest god. The character of Rāma, already a model of morality as the hero of the Rāmāyaṇa, was still more exalted by later poets, including those of the Purāṇas and especially by Bhavabhūti (first half of the 5th cent. A.D.), the author of two Sanskrit dramas concerned with the life of Rāma. Having thus become immensely popular, the epic hero was before the lapse of many centuries generally acknowledged, by a people ever prone to deification, as an incarnation—an already familiar feature of the Hindu religion—of the supreme god Viṣṇu. Though there is not sufficient evidence to show exactly when Rāma came to be accepted as an avatar, there is good reason to regard this belief as having already existed in the early centuries of the Christian era. Thus in the 10th cent. of Kālidāsa's Ayodhyāyī, one of his masterpieces, the first half of the 5th cent. A.D., the poet, before relating the story of Rāma's birth, represents Viṣṇu as promising to be born as a son of King Dasaratha for the destruction of the demon Raivata. The Viṣṇu Purāṇa, which probably belongs to the same century, also refers to his divine character. Much later, A.D. 1014, we find the Jain author Amītāgati making the statement that Rāma was regarded as the all-knowing, all-pervading protector of the world. But, though the divinity of Rāma had thus become, from the 10th cent. onwards, to be an atavā, i.e. incarnate, every cult in his honour existed during this long period. It cannot, however, have been established much later than the 11th century A.D. Thus Madhya (q.v.), otherwise called Anandātirtha (the founder, in the 12th cent. of a Viṣṇu sect), which aimed at confuting not only Saṅkara's theory of the unreality of the universe and the identity of the human soul with the supreme deity, but also Rāmānuja's doctrine that God is the material cause of all, was succeeded, as is well known, by the whole of Saṅkara's Bhāgavad-gītā, an adaptation of Vālmiki's Rāmāyaṇa, composed in Hindi by Tulasi Dāsa, the greatest of modern Hindu poets, in the 16th century. What the Bhāgavata Purāṇa and the Bhāgavad-gītā are to the Ḫaṅgāte, Tulasi Dāsa's poem, together with the Sanskrit Rāmāyaṇa, is a major work in the vernacular language of Western religion. Like Jahweh, Viṣṇu is a personal supreme deity who is an object of worship, finite forms of which can now be found in the many millions in India. 

3. Doctrine.—The following are the doctrines held by all Rāmāṇa in common: (1) the deity is not devoid of qualities (as brahman, the impersonal world-soul of Saṅkara); (2) Vyākhyāṇa is the supreme deity and should be the object of worship together with Lakṣmi, his wife; (3) Rāma is the human incarnation, or avatār, of Viṣṇu; (4) Rāmānuja and all the great teachers who have succeeded him were also avatāras of the supreme deity, for the first three of these doctrines afford a parallel to the conceptions of Western religion. Like Jahweh, Viṣṇu is a personal supreme deity who is an object of worship, while the relation of Rāma, as a human manifestation of the supreme deity, to Viṣṇu is analogous to that of Christ to God. The Rāmānt attitude resembles that of a Western deist who might adopt Christ as the main object of his devotion.

4. Sub-sects.—Rāmāṇanda, fifth disciple in succession from Rāmānuja, from whose school he seceded, was the founder of the Rāmānt sect which goes by the name of Rāmāṇava, since it is engaged in the study and worship of Rāma. He named his sect Kīl, separated from Rāmāntsvas by a succession of several disciples, founded the Kīlav pairs, and so forth. The last of this line of the Rāmānt sect is a priest, who is the head of the deistic movement, and the moving spirit of the tendency of Hinduism to eclecticism and compromise. See also art. RĀMĀNUJA.

the other two being Dayānanda Sarasvatī (1824–93) and Śrīvāṇi Vivekānanda (1862–1902). All three adopted in early youth the life of the ascetic devotee—striking illustrations of the deeply-rooted conviction which prevails among Hindus that re-nunciation (q.v.) is the highest religious ideal, and which whoever, than two or three hundred years has led innumerable young Indians to give up home, marriage, property, and money for the attainment of union with God.

I. Life.—Gopalārā Chatterji, the son of a poor but honest Brāhman, was born on 20th Feb. 1854, in the village of Kamarapukur, situated in the Hugli district of Bengal. Losing his father when he was seventeen, he migrated to Calcutta, where for a few years he earned his living as a pothead, or ministrant attending to the worship of the household idols in Hindu families. In 1855, when a temple of the goddess Kālī, built on the bank of the Ganges by a rich Bengali lady named Rāni Rāsmoni, a few miles from Calcutta, was opened, his elder brother was appointed priest, while he himself not long after became one of the assistants. His religious instinct, of which he had shown signs as a boy, now developed into passionate worship of the image of Kālī in the temple. The Holds of an unknown universe and as his own mother, he used to sing hymns, talk, and pray to her by the hour till he became unconscious of the outer world. He would then pass into the state of religious trance called saṃprāptī, which of being and lost of attachment, in which the action of the pulse and the heart became imperceptible. When he was twenty-five, his relatives, hoping to cure him of his religious ecstasies, induced him to undergo the usual cere-men, which he thought of as a death at the age of six and would not live with him as his wife till she was eleven or twelve years old. Returning to the temple and being now convinced that it was possible to see the deity visibly, he renewed his devotions with such intensity that he neglected his duties and could no longer retain his official position. So he left the temple and settled in a neighboring wood, where for the next twelve years he lived a life of strenuous prayer and self-re-pression in continuous efforts to attain union with the soul of Kālī. Though rejected as a teacher or training, he was helped during this period in his aspirations first by a Brāhman nun, who instructed him in yoge, or the system of exercises producing mental concentration, and in the Ṭantras, or manuals dealing with the worship of Kālī and the theology concerned with her cult. Afterwards he came for nearly a year under the influence of an ascetic named Tōtāpuri, who expounded to him the monistic Vedānta doctrine of Saṅkara, that God is impersonal, that the human soul is identical with God, that the world is an illusion, and who taught him the highest stage of religious trance in which every trace of consciousness disappears. Tōtāpuri also initiated him as a saṃsāris, or ascetic. His approval was received with enthusiasm. In accordance with the practice of such devotees, Gaḍāḍhara now assumed a new name. Hencefor-ward he was known as Rāmakṛṣṇa; and later he received from his friends the title of Paramahamsa, which means the one by whom the soul is delivered from ignorance and sanctity. After Tōtāpuri's departure he lived for six months almost continuously in a state of exalted religious trance. This condition ended in a severe attack of dysentery, from which, however, he was cured by a nun named Kṛṣṇa, who afterwards became his wife. Rāmakṛṣṇa now entered on a new phase of religious aspiration—the craving to realize the Vaiṣṇava ideal of passionate love for God. This aim he sought to realize by imagining himself one of the great devotees of ancient stories. Thus at length in a trance he saw the beautiful form of Kṛṣṇa. Now he was satisfied; he had at last achieved mental peace. By this time (1871) he was thirty-seven years of age and was becoming famous. His wife, who was now eighteen, came to see him. When he explained that, being a saṃsāris, he could not live with her as her husband, she agreed to reside at the temple as his pupil and be taught by him how to serve God; she thus remained a devoted disciple till the end of his life. As the supreme enjoyment of her husband many days, during which she regarded him as an incarnation of God Himself, and endeavoured to further the work that he had begun.

Though as an ascetic he no longer had any caste, he now began to feel that he had not yet given up his Brāhman prejudices towards the lower orders. Having accordingly resolved to do the work of men of the lowest caste, he acted as a scavenger in the temple and cleansed it like a Pariah during the night. He also collected and ate the fragments of food left by the beggars who were daily fed at the temple, and who included Muhammadans, outcastes, and bad characters.

The last stage in his religious development was the result of a new desire that arose in him to do good to mankind, and which he resolved to give vent to by going to live with a Muhammadan saint, becoming temporarily a Muhammadan in dress, manner of life, and religious practice. He then turned to Christianity and once saw Jesus in a vision, but in the end he renounced the idea of being able to speak of anything else but of Him and His love. These experiences led him to the conclusion that all religions are true, as being various paths leading to the same goal.

At the age of 42 one of his intimate friends, Paṇḍit Vaiṣṇava Chārān, took him to Calcutta, where he stayed till the beginning of the following year. During this visit he made the acquaintance of Dayānanda Sarasvatī, the founder of the Arya Samāj. About 1875 Keshā Chunder Sen, one of the leaders of the Brāhma Samaj, made the acquaintance of Rāmakṛṣṇa, and, becoming deeply impressed by his devotion and conversation, went to see him often, occasionally accompanied by a number of his adherents, and drew public attention to him in his daily talks and by writing about him. The result was that Rāmakṛṣṇa was now visited at his temple by many educated Hindus from Calcutta, and also made the acquaintance of the young men who became his attached pupils and continued his work after his death. His conversation is described as brilliant, and was listened to by many noted Indians who went to see him at his temple. During the last seven years of his life he was constantly engaged in talking to his visitors. He never wrote anything, even in this last period; but his disciples made copious notes in Bengali of his sayings, of which several collections were published after his death. He was essentially a conversationalist, and not a formal ascetic. He was a humorous and by writing about him. him at the temple of Dakshinadeva at last told on his health. In 1885 he began to suffer from an affection of the throat, which after a short time progressed into a swelling. He was removed to Calcutta, where he was attended by the best physicians. They advised him to keep the strictest silence; but he could not refrain from addressing the crowds that gathered wherever he went. He would still fall into trances, on awaking from which he would talk incessantly as before. Even when his throat became so constricted that he could hardly swallow even liquid food, he continued his efforts, cheerful and undaunted, till 15th March 1886. On that day he fell into a samadhi, from which he never returned. After his death a group of his disciples decided to devote their lives to the spread of his teaching, and to become sannyasis. The most prominent of these was Narendra Nath Dutt, a Bengali, who on becoming an ascetic took the name of Vivekananda.

2. Habits and character.—Ramaekra had not many personal traits. Though a sannyasi, he not only dressed, but lived, like an ordinary Bengali. He is described by one of his disciples as distinguished by profound humility and childlike tenderness, the outward manifestation of which was a singular sweetness of expression. His character was simple, for every detail of his life can be exactly ascertained. A nothing particle of pride entered into his relations with God, which mastered his whole being. It was this that made him at an early age enter the life of a sannyasi, in which he renounced all earthly ties and by tremendous self-repression completely conquered the sex instinct and acquired a hatred of money. His averance to gold and silver became so great that he could not even touch them, and the simple contact of a coin, even when he was asleep, would make him shrink convulsively. In his later days he could touch no metal, not even iron. Mathuramahatma, the son-in-law of the foundress of the temple, repeatedly offered to hand the temple over to him together with a property yielding an income of 25,000 rupees a year, but he refused and threatened to leave the place of the offeror if the gift of 25,000 rupees were paid to him by another wealthy man was similarly declined. His deep sincerity and exclusive devotion to God won him the boundless love and reverence of his disciples, who regarded him as a living revelation of God.

3. Belief.—Ramaekra had no proper education. He knew no Sanskrit and scarcely any English, and he possessed no scholarly knowledge even of Bengali. Never having had any systematic training in philosophy, and deriving, with the aid of a retentive memory, practically all that he knew of it from this occasional intercourse with the religious teachers with whom he came in contact at his temple, he neither was nor claimed to be the founder of a new religion. His belief regarding God and the relation of God to man and the world was based on the Vedanta system. It may be summed up thus: God is unknowable and utterly beyond the reach of man; on the other hand, every human being and every thing that exists is a manifestation of God, who is so truly all that is that everything that happens is in a sense done by Him, and therefore moral distinctions become oblitered in Him. Hence, as he looked upon even himself and his soul as a manifestation of God, Ramaekra would, if he met an unfortunate, bow down before her in adoration. Like ordinary Hindu, he also regarded all deities as manifestations of the impersonal Supreme Soul. But he believed all the spiritual teachers to be the manifestation of God as the divine mother of the universe. He worshipped her more than any other of the universe, and that by means of idols; for he implicitly held the Hindu belief that the divinity fills every one of his own idols with his presence. He further advised his disciples to worship any spiritual teacher, declaring that the disciple should never criticize his own guru and must unquestioningly obey his behists. Thus he was a true Hindu, and was always ready to defend the whole of Hinduism. In these respects he was one of the multitude of very devoted Hindus who might have lived at any time during the last 2500 years.

4. Distinctive doctrine.—What differentiated his belief from that of other revivalists was the doctrine that all religions are true, because in their inner essence they are identical, and that each man should therefore remain in the religion in which he has been born. In order to illustrate the idea of the harmony of all religions and of the part played by Ramaekra in introducing it to Keshab Chunder Sen, a pupil of his caused to be painted a symbolic picture in which a Christian church, a Muhammadan mosque, and a Hindu temple appear in the background, while on one side of the picture is a group in which Chaitanya and his disciples are seen being initiated into a group in which Christ and Chaitanya are dancing together, and a Muhammadan, a Confucianist, a Sikh, a Parsi, an Anglican, and various Hindus are standing round. Ramaekra's universalistic theory of religion was a strong defence of Hinduism because it implies that no Hindu should abandon his religion either as a whole or in any of its individual doctrines.

A. B. MACDONELL.

RAMANANDIS, RAMAWATS.—The Ramanandis or Ramawats are an important Vaisjyav sect in N. India, numbering from 1,500,000 to 2,000,000. Their founder was Ramananda, a teacher who flourished in the ninth century, and whose name is frequently that of Ramanuja (5th), the Bhaktamala giving the succession as (1) Ramanuja, (2) Devacharya, (3) Harivansha, (4) Raghavannada, (5) Ramananda. According to the N. Indian tradition regarding Ramananda’s life and times, Raghavannada was the last great teacher of the Ramakrishna church founded by Ramanuja. He travelled over India spreading its doctrines, and finally settled in Benares. In the year 4400 of the Kaliyuga, corresponding to A.D. 1299, Ramananda was born at Prayaga, the modern Allahabad. His father was a Kanyakulja Brāhmāna named Punsadasa (or Bhūrkīrd or Dvāla), and his mother’s name was Susīla. The child was named Rāmadatta, and, as he grew up, he acquired knowledge rapidly, so that by the time he was twelve years old he had become a finished pandita, and went to Benares to study religious philosophy. There he attached himself to a Śrāmaṇa teacher, who followed the Advaita philosophy of Śūkradvarāhyā. One day he happened to meet a Śrāmaṇa teacher of Rādgavha, who spoke of the power of foretelling future events, and who expressed his sorrow that Rāmadatta had not yet taken refuge with Hāri (i.e. Rāma), as his days were fulfilled and he had but a short time to live. Rāmadatta returned to his Śrāmaṇa teacher and reported the conversation. The teacher had to 1 So all native authorities, Bhāgyān Prasāda (Bhaktamāla, p. 433) refers to eight or nine, and quotes three. Tradition says that the ingredients of the amarkvatā in which Rāmananda has thus have occurred in A.D. 1137.

2 It is noteworthy that both Rāmānuja and Rāmananda are represented as having been followers of Śaṅkarā, and later to have seen the error of their ways.
confess that the prediction was a true one, and that he himself could offer no remedy. He therefore recommended him to throw himself on the mercy of Rāgahavananda. Rāmādatta did so, and Rāgahavananda received him, taught him the Śrī Vaṣayānī initiatory mantra,1 and changed his name to Rāmānanda. He also instructed him in the yoga methods of suppression of breath, etc., leading the practitioner into intense mental absorption, and, when the time for his death arrived, with their aid, put him into a trance. Death came to take him away, but, finding him in this death-like condition, departed leaving him unharmed. Rāmānanda then awoke from his trance, and, thenceforth devoted himself to attending on and learning from Rāgahavananda, who blessed him and gave him the boon of an exceptionally long life.2 After serving his guru for a considerable time, he went on a pilgrimage over the greater part of India. A persistent tradition asserts that he even visited the island of Gangesgāra at the mouth of the Ganges, and that there he discovered the site of Kapila's hermitage, all trace of which has long been lost. After completing his pilgrimage he returned to Benares, and settled at Pāńchganga Ghat, where his footprints can still be seen by the faithful.

The Śrī Vaṣayānī church, of which Rāgahavananda and Rāmānanda were members, allows only Brāhmans to occupy the post of teacher, and imposes upon all the strictest rules as to the preparation and consumption of food. When Rāmānanda returned from his long wanderings, he essayed to rejoin the brotherhood, but they refused to receive him, alleging that it must have been impossible for him during his peregrinations to carry out the rules of the order, and imposing the condition that Rāgahavananda should impose a penance upon him. Rāmānanda resisted this, and in the discussion that ensued Rāgahavananda finally solved the problem by deciding that Rāmānanda must go his own way, and might form a sect of his own. This quarrel thus resulted in one of the most momentous revolutions that have occurred in the religious history of N. India. Its effects were by no means confined to Rāmānanda's immediate disciples, for his teaching worked as a leaven among all classes of mankind. Among the Brahmans, Rāmānanda took his guru at his word, and founded the Rāmāvat sect—also nowadays called, after him, the sect of the Rāmānandas. The philosophical system is the same as that of Rājananda. Rāmānanda, however, was very learned. His ethical system was based, not on spiritual pride, but on spiritual humility. It was developed in various directions by his successors, but through all their teaching we find insistence ever laid upon two great principles: first, that faith in God consists in perfect love directed to God, and (2) that all servants of God are brothers. Rāmānanda called his followers 'Avadūttas,' because they had 'shaken off' the bonds of narrow-mindedness. His system, however, carried this doctrine of catholicity still farther, and—what is more—his general acceptance by the masses of Hindōṣṭān, seven generations later, through the works of modern India's greatest poet, Tulasi Dīsa.

teaching, and that which has so captured the mind of India as to be enshrined in a proverbial saying, is that, so long as a man or woman has genuine loving faith in the Supreme, his or her caste and position in life are matters of no importance. The Śrī Vaṣayānī addressed itself to teachers, and only people of high caste as lay members. But Rāmānanda permitted no such bounds. As the saying referred to above says, he taught:

जीति पय चित्ति नौह लिडी, हरी-कु बलाई, सो हरी-कु बलाई.

'Let no one ask a man's caste or with whom he eats. If a man shows love to Hari, he is Hari's own.'

Hari is the name given to the Supreme when he is used to denote a loving father, and, in this character, it is to the incarnation of Viṣṇu as Rāmachandra, the hero of the Rāmāyana, that the devotion of Rāmānanda and his followers was more particularly directed. His initiatory mantra, or formula, was the words 'Śrī Rāma,' 'the salvation among members of the community being 'Jaya Śrī Rāma,' 'Jaya Rāma,' or 'Sītā Rāma.'

Of these six were women. Regarding Padmāvatī nothing is known. Surasisari was the wife of Suraṇaraiṇānanda, and the Bhāvakanta (67) tells a pretty story of how she was once wounded by the forefinger when she was attacked by Musalmān robbers. Thereupon Rāma took the form of a lion, and guarded her, like another Urs, till she was out of danger.

A Nārāhaṣṭiṣṭiṇa was Rāmānanda's first disciple. He is most famous as the author of the Bhāvaṇa (6). He was a wanderer, and one day was converted by a miracle at Sambhar, recalling that of the barren fig-tree in Mk 11:22. (Bhāvaṇa, 35). The third in descent from Rāmānanda, a famous teacher and pupil, was Nāth Dāsa, the author of the Bhāvaṇa. Sūkhānanda was a poet. His hymns are famous, and have been collected in a volume entitled the Sūkhāsasara (Bhāvaṇa, 64).

Suraṇaraiṇānanda, the husband of Surasisari, was famous for his faith. The Bhāvakanta (65) tells a curious story about him, the lesson of which reminds us of Mk 7:24. A wicked Musalmān gave him a piece of cake. The same secretaries gave him a pig's head (an impurity). He accepted them as food offered in the name of the deity, and they all ate the food. Then the Musalmān told the disciples of the brahman [author's addition], that unless Master is in the soul that served him, he would not let them eat the food. The Musalmān then晚饭 from their mouth. Then he vomited, and showed them that by his faith the impure meat had been converted into the food of the soul, and that the same was the case with the pig's head. He is of importance, for through him Tulasi Dīsa traced his descent from Rāmānanda in line of teacher and pupil.

A curious story is told about Nārāhaṣṭiṣṭiṇa. One day, being in want of fuel to dress food for a party of holy men, he took an axe, and went to a temple of Dēvi and cut away it a sufficient portion of wood. Dēvi promised, if he would desert from spelling her temple, to give him a daily supply of fuel, and so it came about. A covetous and ungrateful neighbour, hearing of this, thought that he would follow the saint's example, but, as soon as he applied his axe, Dēvi attacked him. He complained to her angrily that, when people came for him, they found him at death's door. Dēvi spared him only on condition that he give the rest of the wood to the people of Nārāhaṣṭiṣṭiṇa. He did not agree. He said he would not let them take the wood from the fuel. (Bhāvaṇa, 67).

Pīpa was a Kajjūṛī rāja of Gārgarān. He was originally a worshipper of Dēvi, but was commanded by her in a dream to become a disciple of Rāmānanda. Rāmānanda refused to accept him, saying that he had no dealings with men of war like him, and, when Dēvi persisted, angrily told him to go and fall into a well. Pīpa at once tried to cast himself into the well in the courtyard of Rāmānanda's house, and was saved by the bystanders. Rāmānanda admitted him, put him on probation as a disciple. After a year's trial he was fully admitted, and his death is noted in the Life of the Baktamāla, Baktamāla, by Śrī Viṣṇu, the biographer of Rāmānanda.

1 The list given by Wilson (Religious Sects, p. 56) is incorrect, being based on a mistranslation of the Baktamāla.

2 Almost alone in duty of recitation the followers of Rāmānanda was that of showing hospitality to wandering holy men. The necessity of providing the means for this seems to have been held to justify almost any course of conduct.

We shall see extreme instances of this in the case of Pīpa. Cf. also the story of Dhanā, below.

1 Ṣrī Rāma (name).
2 The legend of this boon is of some importance. Rāmānanda does seem actually to have lived to a great age. Nāth Dāsa takes pains to record that he 'bore his body for a very long time,' and tradition says that he lived 11 years.

RAMANUJA.

— Tradition dating from the 13th cent. A.D. ascribes the birth of Ramanuja to the year 933 of the Sakas epoch (= A.D. 1016-17). In his youth he lived at Conjeevaram, and was a pupil of Yadavaprakasha, an adherent of the strict Advaita philosophy of the Upanisads. However, the influence of the Vaishnavism which had been made current by the efforts of the Alvars in the Tamil country, and separated on this ground from his preacher, attaching himself instead to Yannanmuni, who represented the philosophical aspect of the creed of the Alvârs. In due course he succeeded his new teacher as the head of this school of opinion, and settled at Srirangam near Trichinopoly, where most of his life was spent. In his old age he is said to have fallen under the disfavour of the Chola king, Kulottunga, who was an adherent of Saivism, and to have removed his residence in 1006 to the dominions of the Hoyalsa princes of Mysore, where in 1008 he succeeded in converting to his faith Bījī Deva, or Vīrā Deva, the time then reigning king; he dedicated to his brother, Ballâla, and later (1104-31) himself king. Another tradition recorded in Nârisâsa's Śmītyarthasāgara2 refers to him as alive as late as 1127, and it would clearly be unwise to attach too much weight to the pontifical dates assigned for his birth; his activity, it is certain, fell in the last quarter of the 11th cent. A.D., with which accords the statement of the Pratyâmyânta3 that in 1091, towards the end of his life, he dedicated an image of Nārisâsa on Yadava-râchâla. Numerous works are attributed to him,4 in many cases doubtless without just cause; of special importance are the Vedânta-sûtra, the Vedântasâra, the Vedârthasâra, and the Vedânta-sûtrâdâsa, which are independent works, and his commentaries (bhâgas) on the Brahma-sûtras and the Vedânta-sûtras, cited.

1. Philosophical tenets.—The essential contribution of Ramanuja to Indian thought was the effort to develop in a complete system, in opposition to the uncompromising Advaitism of Sâkara, a philosophic-and-dogmatic doctrine of devotion to God which was presented in poetical form in the hymns (prabandhâs) of the Alvars—a task for which his training under a teacher of Advaitism rendered him specially fit. In attempting this task, which he undertook on the bidding of his teacher, Yannanmuni, he was, it is clear, not developing any essentially new line of thought, and he makes no assertion of originality; in his interpretation of the Brahma-sûtras as a text-book of Vaishnavism, he claims merely to be following the commentary (suttis) of Boddhâyana and the opinions of previous teachers, of whom elsewhere he enumerates several—Tâïka, Drandâla, Guhadeva, Kapardin, and Bârâuchî; of these Drandâla at least preceded Saîkâra, and is represented in Saîkâra's own commentary that Ramanuja's claim to be following tradition is not unfounded. The disappearance, however, of the works of his predecessors and the hopeless obscurity in itself of the Bhâsya, it is impossible to determine what degree of independence is to be assigned to Ramanuja. The Srimâbhâya, his commentary on the Brahma-sûtras, conveys an impression of no mean philosophic insight, and it is fair to assume that his work in substantial part is a complete and precise far outdid any previous effort to find in the Brahma-sûtras a basis for monothelism.

To Saîkâra the whole universe was one, Brahman without a second (adhvaite), without qualities, consisting of thought, but without differentiation of subject and object; the world of experience arises from the association with the one reality of illusion, and has therefore but a conventional existence, being the object of the lower knowledge as opposed to the higher knowledge of the one reality. Escape from the fetters of transmigration, which is an essential part of Advaitism, is obtained by the use of intellectual intuition which appreciates the illusory character of the empirical universe. A creator (Īsvara) exists, and his grace serves to secure in some degree this intuition, but the existence of God, as also of the soul itself as individual, is in ultimate analysis mere illusion, and His grace is equally illusory. To establish this scheme Saîkâra does not rely on the human faculties unaided: freely as he uses argument, he bases his views on the Upanisads and the Brâhma-sûtras as an eternal and conclusive revelation.1 Ramanuja is no less dogmatic, but the doctrine which he deduces is very different. In the Upanisads his opinions find their chief support in the antaryami-brâhma, contained in the Bhâgavatapancasîka. Upanisad, and this is described in detail as the inner ruler of the whole of the universe in all its aspects, and in a passage in the Śvetâvatara Upanisad5 in which stress is laid on the threefold unity in Brahman of the empirical subject (jīva), the objective world (bhūkṣya), and the prâvritti which instigates (prâvritti). He teaches, therefore, a monism, for all is Brahman, but a qualified monism (visishtadvaita), since room is found for the reality of individual souls and the external world. The higher reality of God is conditioned with all desirable qualities, not consisting of knowledge alone, but having knowledge as an attribute, all-powerful, all-pervading, and all-merciful. Whatever exists is contained within God, and therefore the system admits no second independent element. But within the unity are distinct elements of plurality which, if effects or modes (prakāra) of God, are yet absolutely real, and not figments of illusion. These are souls of varying classes and degrees (ātman) and matter in all forms and functions, which exist as constituting the body of God, standing to Him in the same dependent relation as is occupied by the matter forming an animal or vegetable body towards the soul or spirit. Both matter and souls exist eternally in God, and have had absolute beginning and will have no absolute end. But there are two distinct forms of this existence. In the pratyâya condition, which occurs at the end of each world-period (kalpa), matter exists in a subtle state in which it possesses none of the qualities which make it an object of ordinary experience; the souls likewise cease to be connected with bodies, and, though retaining the essential quality of being cognizing agents, are unable to manifest their intelligence; in this condition all things are to be in the causal state (kārayeavasthā). From this condition creation develops by the will of God: subtle matter takes on its gross form,4 souls expand their intellect, entering at the same time the world of living bodies; then we have for the deities in previous forms of existence; in this condition Brahman occupies the state of an effect (kāryayeavasthā). But between the two states there is no essential difference; the effect is the cause which has undergone

1 P. Deussen, Des Systeme des Vedânta, Leipzig, 1883, p. 59 f. 2 Int. vii. 3. 3 The details of the process are borrowed bodily from the Śâkhyâ system, and have no independent value.

a process of development (parinîtana). The difference, however, serves to explain in the view of Râmâyana, the conditions in the Upanishads which seem to deny all duality: in the causal state the differences are merely implicit and may be ignored; passages which assert the creation of the material world, while assuming the eternal existence of soul, are explained away on the foundation of its subtle state, which may be regarded as in a sense non-existent, since it has in that condition none of its essential qualities, while even in the pralaya condition the soul remains essentially intelligent. The, however, clear proof that Râmâyana, an difficulty in determining to himself the relation of the non-sentient matter to Brahman: in discussing the Brahmastûtra\(^1\) there are presented, as possible explanations of the relation, the views that such beings are special arrangements (sveñathânavigdo) of Brahman, as are the coils of the body of a snake, or that the relation of the two entities is comparable to that of the luminous object and light, which are one in that both are fire, or that the material world is a part (anîka) of Brahman, which is the position definitely assigned to the soul. The relation of souls and the material world causes Râmâyana no difficulty; he accepts the same frankly realistic position as Śâṅkara, though in the case of the latter the realism is ultimately illusory.

As with Śâṅkara, the fate of the soul is determined by its knowledge, but, as the nature of that knowledge differs entirely in the two systems, so does the fate of the soul. Knowledge means not extinction of, ignorance a life by heavy, eternal bliss, distinguished from God Himself merely by the fact that the released soul does not possess the powers of creating, ruling, and retracting the world which are the special characteristics of the supreme soul.

2. Religious system.—The actual system of religion expounded by Râmâyana and his school, while resting on the basis of the metaphysics of the Śrîdhâra, is clearly largely the traditional inheritance of the Pâñcarâtra or Bhâgavata school; in the Śrîdhâra itself the only sectarian hint is the use of the term Nîrâyana as a synonym of Brahman. In the theology of Râmâyana God manifests Himself in five forms. The first is the highest (parama), and is common to all schools. He dwells in His city of Vaikuntha, under a gem pavilion, seated on the serpent Seva, adorned with celestial ornaments and bearing His celestial arms, accompanied by His consorts Lakṣmî (prosperity), Diti (the earth), and Liśa (sport); in this condition His presence is enjoyed by the delivered spirits. The second form of manifestation consists of His three or four vyāhâras, conditions assumed for purposes of worship, creation, etc.; of these Śâṅkara possesses the qualities of knowledge (jñâna) and power to maintain (bala); Pradyumna has ruling power (âsvarya) and abiding character (vīrya); Aniruddha has creative power (śekti) and strength to overcome (tÇga); while Vâsudeva, when included as a fourth vyāha, has all six qualities. The third form comprises the ten avâltas of the ordinary mythology; the fourth the antaryâmin, in which condition He dwells within the heart, can be seen by the supernatural vision of the Yogi, and accompanies the soul in its moral journey to heaven or to hell, and the fifth form is that in which the deity dwells in idols or images made by men’s hands.

The individual soul, which is a mode of the supreme soul and entirely dependent upon and conditioned by the latter, is endowed with intelligence and self-consciousness, without parts, unchanging, imperceptible, and atomic—a doctrine denied energetically by Śâṅkara. Souls are classified as etcd, bhakti, in a special sense, such as those of Ananta or Garuḍa, which dwell in constant communion with Nârâyana, released (muktâ), or bound (budha). Of the latter some seek merely earthly gains, others return to the sky to enjoy the thousand offices of their sky, while the others are precluded from obtaining the eternal bliss of final deliverance. For the latter two means of attaining the end desired are available; the former is confined to the three higher classes alone, excluding the Sûdra; it leads subsidiary means, including the gift of gold, books, and bhakti, while the latter is open to those who despair of accomplishing this elaborate process and fling themselves upon the will of God (prapattî).

The karmayoga is the teaching of the Bhagavad-Gîtâ, which bids man perform acts without desire of reward; it includes the ceremonial worship of the deity—the practice of sacrifice, the bestowal of charity, and the performance of pilgrimages. It serves as a preparation for the jñâna-yoga, in which the devotee attains the knowledge of himself as distinct from matter and as a mode of Brahman. This, again, leads to bhakti, which for Râmâyana is not ecastic devotion, but a continuous process of meditation upon God. This meditation is to be promoted by subsidiary means including the use of defiled, polluted food, charity, the performance of rites, the practice of such virtues as charity, compassion, abstaining from taking life, truth and uprightness, the maintenance of cheerfulness, and the absence of unkindness. Results in an intuitive perception of God, the highest state realizable.

Prapattî, on the other hand, consists in the sense of submission, the avoidance of opposition, the confidence of protection, the choosing of God as the source, the placing of oneself at His disposal, and the consciousness of utter abasement.

The relation between bhakti and prapattî was left obscure in Râmâyana’s teaching, for it immediately formed a subject of bitter division between the two schools which claimed to follow his teaching—the Vadagalâ, or northern school, which used Sanskrit as its medium of teaching, and the Ten-galâ, or southern, which resorted to the vernacular, thus continuing the tradition of the Alâvs. The reason for this conflict was partly the temper of Râmâyana in its conservatism and restraint, claimed that prapattî was merely one way of salvation, not the only way, and that it should be resorted to only when it was found impossible to attain the desired result by the other modes; moreover, they found in it essentially an element of human action in that it demanded a distinct effort on the part of the prapattî, resulting from the effect of his sense of submission, etc. The southern school, on the other hand, maintained that prapattî was the only mode of salvation, and that it precluded any action on the part of the devotee,\(^2\) action emanating from God alone, and that the sense of submission, etc., was the outcome of prapattî, not the means of producing it. Similarly, the southern schools differ in their treatment of Śâṅkara: the Vadagalâ confined equality to conversation alone, and forbade the teaching to them and indeed even to Kâśîtîra and Vaisnava of the mantra of homage to Nârâyana with the syllable Òî; the former, however, reserved the mantra for the higher classes alone, and the equality of the castes and permitted the use of Òî by all.

In addition to bhakti and prapattî Râmâyana is credited with permitting the attainment of deliverance by evidene in which he endows the votary places himself under the control of his

\(^1\) See Brahmasûtra, ii. ii. 19-32.
\(^2\) Cf. art. PRAPATTI-MERQOA.
teacher, who performs for him the necessary acts to attain deliverance.

Greater importance attaches to the ceremonial worship of the deity in the practice of the school than was seemingly laid upon it by Rāmānuja himself, though he fully accepted it and made an important part of his system. The modes of worship prescribed include the stamping of the discus or conch of Hara on the body, the wearing of a mark on the forehead, the repeating of mantras, the doing of service to his devotees, fasting on the eighth day of both lunar fortnights, the laying of tulasi-leaves on his idol, the drinking of the water in which the feet of the idol are washed, and the eating of the food presented to Hara. Importance attaches to the last practice, for it bears a certain resemblance to the Christian sacrament and suggests the possibility of borrowing from the Nesterian Christian communities of S. India.

The same conclusion is also indicated by certain features of the doctrine of proppati, and above all by the method of salvation in which the sādhaka performs the necessary steps, while the part of the devotee consists in implicit faith in the teacher—a mode which bears a remarkable similarity to the doctrine of vicarious sacrifice. It is unnecessary, however, to connect the proppati, which in the system of Rāmānuja were borrowed by him personally from Christian teaching; they are much more likely to have been already incorporated in the Viṣṇuvism which he expounded and defended.

The epic was translated into several languages rather than as a whole. The emotional character of Rāmānuja’s teaching that he ignores the aspect of Viṣṇu’s character in which he appears as Gopāla-Kṛṣṇa and sports with Rādhā and the cowherdsmen, and that even Rāma does not appear to have been the object of his special devotion.

A. DEBBEDEALE KEITH.

RĀMĀYANA.—1. Character. —This poem, "the Career of Rāma," is one of the two great Sanskrit epics of ancient India. Both have been a national possession for at least 2000 years, deeply influencing the literary production as well as the moral and religious thought of the Indian population. But they offer several contrasts. The Mahābhārata (12,000 sections) is the larger, more popular and the older, while the Rāmāyaṇa belongs to the class called kṛṣṇa, or artificial epic, in which form is regarded as more important than the story, and poetical ornament is likely to be used with much greater profusion. The Mahābhārata, being a congeries of many parts only loosely connected by the thread of its epic kernel, which forms not more than one-fifth of the whole work, is hardly an epic at all, but rather an extended collection of the West similar to the Iliad and the Odyssey, of which the source is unknown, and the traditional name of its final reductor, Vyāsa, "the arranger," is evidently mytho- logical. The Rāmāyaṇa is a real epic of the romantic type, being homogeneous in plan and execution, on the whole the work of a single author named Vālmiki. Being in its main and original narrative almost free from interpolated and secondary episodes, it is also much shorter than the Mahābhārata, containing about 24,000 as compared with 100,000 stanzas. The warfare in the epic nucleus of the Mahābhārata is that of 100,000 horsemen fought on both sides; in the Rāmāyaṇa it consists of conflicts with monsters and demons such as are described by writers of fairy-tales without first-hand knowledge of real fighting. The Mahābhārata was composed in the northern plains of N. India, the ancient Madhyadeśa, or Middle Land, which lies between the eastern conifères of the Panjāb and the city of Allāhābād, while the Rāmāyaṇa arose in the ancient kingdom of Kosāha, which lay to the north-east of the Ganges, and roughly corresponds to the modern Oudh.

2. Importance.—The importance of the Rāmāyaṇa is twofold—literary and religious. It is the first product of the artificial epic, or kṛṣṇa, literature of India. It thus always served as a model to be imitated by the later classical poets, who regarded it as the ‘first epic’ (ādi-kṛṣṇa) and its author as the ‘first epic poet’ (ādi-kṛṣṇa). It supplied the subject of Kālidāsa’s epic, the Rāghu- vampī, ‘The Family of Raghu,’ as well as of two of the plays of the great dramatist Bhāskara the Great. Even at the present day the recital of the Rāmāyaṇa is listened to with delight by many thousands of Hindus at the great festival of Rāma held every year at Benares. In the Middle Ages the Sanskrit epic was translated into many languages of India, beginning with the Tamil version, which appeared at the beginning of the 12th cent. and was followed by adaptations and renderings in the vernaculars all over the country. On the Rāmāyaṇa the whole of the Brihadāraṇyak Upanishad (11.26) to 12.42) is borrowed and inserted throughout the poem. Dās (1532–1623), founded his religio-philosophic poem in Hindi, entitled Rām Charit Mānas, ‘Lake of the Doings of Rāma,’ which as a lofty standard of purity and virtue is like a Bible to over 90,000,000 of the population of N. India. Dramatic representations of the story of Rāma are still performed at religious festivals in the towns and villages of India. Thus the ‘Play of Rāma’ (Rāma Līlā), in which the most popular scenes from the Rāmāyaṇa are exhibited, is annually performed at Lahore before the Emperor and at the court of the Mughal Emperors. Probably no work of world literature, secular in its origin, has ever produced so profound an influence on the life and thought of a people as the Rāmāyaṇa. The nobility and majesty of Rāma’s character and the conjugal devotion and fidelity of his wife Sītā, have, for a great many centuries, exercised a far-reaching moral effect as paragons for imitation among Indians. His early dedication has, moreover, secured to the hero of the Rāmāyaṇa the worship of the Hindus down to the present day. The belief that he was an incarnation of Viṣṇu, which forms the fundamental doctrine of the religious reformers Rāmānuja (q.v.) in the 12th and Rāmānuja (see art. RĀMĀNANDĪ) in the 14th cent., has contributed much to counteract the diffusion of the degrading superstitions of Saivism in the south as well as in the north of India.

3. Recensions. —In its present form the Rāmāyaṇa consists of almost 29,000 verses, composed almost entirely in the ordinary epic metre called śloka, which consists of two hemistichs of sixteen syllables with an iambic cadence. It exists in three recensions—the Bengal, the Bombay, and the Madras. The last is a recension of about one-third of the verses contained in each do not occur in the other two. The oldest appears to be the Bombay recension, in which the irregularities of the epic language have not been removed, as is the case in the other two. It must not,
However, be regarded as representing the original text of which the other two recensions are mere revisions. The variations can for the most part be attributed to the two recensions, and the popular tradition that the Iksvaku, by the time when these three recensions came to be written down. There is, moreover, evidence to show that those recensions existed at a comparatively early period. Thus quotations from the epic in works of the 8th and 9th centuries indicate that a text allied to the Bombay recension was then in existence, while a poetical abstract of the Ramayana composed by Kesemendra proves that at least i. t. to have been written by Ayodhya to that author in the first half of the 11th century A.D.

4. Present text.—The Ramayana, as it has come down to us, consists of seven books; but careful and detailed research has shown that the first and last were later additions. The former not only contrasts as inferior in language and style with the original, but contains both internal contradictions and statements conflicting with the following books. Thus it includes (in cantos i. and ii.) two tables of contents which must have been composed at different times; one of them, which takes no notice of the first and last books, was evidently made before these were added. Again, Lakshmana is introduced in bk. ii. as having been married to Ayodhya at the same time as his brother Rama, while at a later period, in bk. iii., he is expressly said to be still unmarried. The original poem evidently came to an end with the conclusion of bk. vi. For in bks. i. and vii. the thread of the narrative is characteristically interrupted, as in the Mahabharata, by numerous episodes, myths, and legends, while this feature is very rare in the other books. Some cantos have been loosely interpolated in the genuine books also, but these consist chiefly of extension of the limit passages added by processors in rapid succession, and show the same lack of popular taste. Though the additions to the original poem must have been made before the three recensions came into being, it is evident that they could have become part of the epic only a long time after the old part was composed.

5. Place of origin.—There is evidence indicating that the Ramayana was composed in the country of which the capital was Ayodhya, the royal residence of the race of Ikṣvāku. Thus it is stated in bk. i. that the Ramayana arose in the family of the Ikṣvāku; the hermitage of Valmiki is described in bk. vii. as situated on the south bank of the Ganges; and the poet must have been connected with Ayodhya, for Sītu, Rama's wife, sought refuge in his forest retreat, where her twin sons were born, brought up, and taught to recite the epic by the poet. In or near Ayodhya, therefore, Valmiki may be assumed to have worked into a homogeneous whole the various episodes and adventures of the court bards of Ayodhya about the life of the Ikṣvāku hero Rāma. This poem was then learnt by rhapsodists, who wandered about reciting it in different parts of the country.

6. Age.—The age of the age of the Ramayana is involved in some doubt, because the arguments bearing on it are rather inconclusive. There is no evidence to show that either the Mahābhārata or the Ramayana existed even in its earliest beginnings before the end of the Vedic period (c. 800 B.C.). As regards the relative age of the two, however, one passage in the Ramayana does place the conclusion of the Ramayana was finished before the epic nucleus of the Mahābhārata had assumed definite shape. For, while the leading characters of the latter are not referred to in the Ramayana, the story of Rāma is often mentioned in the sister epic. Again, two of Valmiki's lines (vi. 81, 28) are quoted in a passage of the Mahābhārata (vii. 143, 66) which there is no reason to regard as a later addition. There is an episode of Rāma (Rāmopakhyāna also) in the Mahābhārata that presupposes the existence of the extended Ramayana, in which Rāma was already deified as Viṣṇu. The Ramayana, moreover, was along with its later additions a complete work by the end of the 2nd cent. A.D., and was already an old book by the time the sister epic had more or less attained its final shape in the 4th cent. of our era. With this divergence in the date when their growth was completed the permission of all the old parts of the Mahābhārata with new matter is in keeping, while in the Ramayana such permeation hardly extends beyond the first and the last books. Both epics not only have, in all their books, many phrases, proverbial idioms, and whole lines in common, but the numerous agreements in language, style, and metre. Hence it may safely be concluded that the period of the growth of the Ramayana coincides with that of the Mahābhārata, though it came sooner to an end. In other words, the Mahābhārata may, however, be older than the original Ramayana, because the former has certain archaic features compared with which Valmiki's poem shows an advance. Thus, while speakers are introduced in the longer epic with prose formulas such as 'Yudhishtira spoke,' in the sister poem such expressions invariably form part of the verse. The Ramayana, too, comes decidedly nearer the classical poets in the use of poetical figures. Various sources of evidence have been examined in order to determine, with some approximate accuracy, the historical and logical limit of the Ramayana. The history of early Buddhism supplies no decisive information. In the oldest Buddhist literature, the Pali Tipitaka (see art. LITERATURE [Buddhist]), there is no mention of a Ramayana; and in a Jātaka (q.v.) concerned with King Daśaratha there are twelve verses in which Rāma consoles his brothers for the death of his father, Daśaratha, and that one of these verses actually occurs in our Ramayana. The fact, however, that there is only one verse in common indicates that some old story about Rāma rather than the epic itself is the source of the Jātaka verses; for there is not a word in the whole Jātaka about Rāvana and his following, though it is full of fabulous matter and has much to say about demons and rakṣasas. On the other hand, excepting one evidently interpolated passage, there is not a trace of Buddhism in the Ramayana itself. Such silence, however, may very well be due to the absence of any reason to mention Buddhism in a poem like this. Now, H. Oldenberg has shown (Gautampitakaavumādī, Leipzig, 1896, p. 9f.) that the metre of the Ramayana represents a later stage of development than that of the Jātaka, and that this evidence would place the composition of the original Ramayana appreciably later than the rise of Buddhism, c. 596 B.C.

Excepting in two passages, which have been shown to have been interpolated additions, the Ramayana contains no reference to the Greeks, who first came into direct contact with India during Alexander's expedition in 327 B.C.
A. Weber's belief that Greek influence can be traced in the
Ramayana in the concept of Agastya can no longer be
accepted. There is no real parallelism between the
story of the abduction of Sītā by the demon Rāvana in the
Mahābhārata and the abduction of Persephone by Pluto,
both of which are described in the Odyssey. The
Greeks were familiar with the Odyssey, but it is
unknown whether they read it in Sanskrit. It is possible
that these stories are independent, but it is impossible to
state that they are independent.

Thus far we have no reason to go back much
further than 288 B.C. for the genesis of Valmiki's
poem. H. Jacob, however, adds some arguments
based on the political conditions prevailing in the
city of Ayodhya to show that it dates from before the
rise of Buddhism.

In the first place, he notes that the city of Ayodhya (now
Patna), which had become the capital of India by 300 B.C., is
not mentioned at all, though Rama is described (L. 35) as passing
his very site, and the poet makes a point of referring (L. 322)
to the foundation of various actual cities in India. India
shows remarkably little growth in any direction in two
hundred years. It is generally accepted that the city of
Ayodhya had spread beyond Kosala, the country of its origin; he
could therefore hardly fail to mention it is not uncommon in In-ka for two languages to be
old part of the Ramayana the capital of Kosala is always called
Ayodhya, while to Buddhists, Jainas, Greeks and Parthians (c. 180 B.C.) it was a much
inhabited city, and that even in Buddhist literature we find
that Lava, one of Rama's twin sons, established his government in
Sārvastī, a city which is not mentioned at all in the original
Ramayana. We must therefore know to have been the
capital of the time by King Prasenajit of Kosala. From these data he infers that
the poem was composed no earlier than 288 B.C. The capital of Kosala, before its name of Sāke was known,
and before the seat of government was shifted to the
capital of Kosala. It would therefore be better to allow the
Sāke to be the older name, which also mention Ayodhya and, though added much later,
do not know the name Sāke, must have been composed
socially before the rise of Buddhism. Ayodhya is
the highest degree improbable. Jacob finally notes that in
b. i., Mithila and Vaisali are two cities governed by separate rulers, while it is known that by Buddha's time they had become
a single city named Valisā ruled by an oligarchy.

It is to be observed that these arguments are
based on data to be found in the late first and last
centuries B.C., and hence just after the rise of Buddhism
and before must be regarded with suspicion. They
do not appear to the present writer to have any
cogency as proof of a pre-Buddhist date for the
original Ramayana.

A further argument has, however, been added
to show that the old part of the Ramayana dates
from before the time of Buddha.

The Ramayana is a popular epic and its language is a
popular Sanskrit. Now, about 260 B.C., we have史诗
texts in the dialects of the Ganges countries, and in
popular dialects resembling Pali. Budhis himself before 500 B.C. preached not in Sanskrit, but
in Prakrit, the language of his people. The stories of
the Ramayana have been composed in a language that was already dead, but
must have been written in one that the people understood.
The language must therefore be earlier than the
Buddhist period when Sanskrit was still a living tongue.
Now, the foregoing argument is not cogent, because Sanskrit
has always lived as a literary language beside the popular
dialects, and has been understood by large sections of the
population. There is nothing strange in Sanskrit
epics being composed and listened to while Jain and Buddhist
monks were writing poetry and preaching in popular
dialects, especially when these dialects had as yet diverged comparatively
little from the literary language.

Even at the present day the evidence which for the Ramayana and
Buddhism is a well-known fact. Sanskrit has always lived as a literary language beside the popular
dialects, and has been understood by large sections of the
population. There is nothing strange in Sanskrit
epics being composed and listened to while Jain and Buddhist
monks were writing poetry and preaching in popular
dialects, especially when these dialects had as yet diverged comparatively
little from the literary language. Occasionally verses occurring in the Mahabharata and
Ramayana are also found as Pali or Prakrit verses in Buddhist
and Jaina literature. The Sanskrit stories have been
translated into Sanskrit from popular languages.

The Ramayana and the Mahabharata are also called Dīna-kīrti (Childhood
Section), commencing with an introduction on the origin of the
poem, goes on to narrate the legends and stories that the
Buddhist and Jaina hermeneutics were preparing to
describe worthily the fortunes of Rāma. While he was
watching a young cow, a tiger shot a hunter and fell to the ground
with its prey. The poet, touched by the grief of the bereaved
female, related the legend of the death of Vīraśeṣa and the
remembrance of the murderer on the murder.

As he wandered towards his hut pondering this
occurrence, the god Brahma appeared and, announcing to the poet
that he had awakened created the rhythm of the god, he
bade him compose the divine poem on the life and deeds of
Rāma in that measure. This story possibly preserves a histori-
cal reminiscence: it may seem that the epic Ṛkṣa, which in the form of the anonymous Sanskrit poem, is transmitted orally throughout the Mahābhārata and the Rāmāyana, was fixed in its final form by Vālmiki. The epic Śāstra, in which the wise and mighty Dāsāratha ruled, the king, being for a long time without a son, resolved to offer a horse-sacrifice, to direct his son, at the close of the sacrificial ceremony, to the moon as a minister, and to this end that time the gods were suffering many things from the violence of the demon Ṛavana. Vālmiki, inspired by his consent to be born in human form, because Ṛavana was immune from death except by the hand of a human being, the three daughters of Dāsāratha, the three wives of the king bore four sons, Rāma, Laksmana, Ṛukumāni, and Pratāpa, the Sumitṛa of the pair Laksmana and Śatrughna. Of these sons Rāma was the eldest and eldest son, and when, at the age of fourteen years, Laksmana was particularly devoted from the beginning. After the sons were grown up, the great seer Viśvāmitra, who had come to Ayodhya, conducted the two princes Rāma and Laksmana to the court of Janaka of Videha. That king had announced that he would give his daughter in marriage to the prince who could bend a powerful bow. Many had tried in vain; Rāma not only bent the bow, but broke it in two. The wedding of Rāma and Sītā, attended by King Dāsāratha, was then celebrated with great festivities. For many years after the young couple lived in great happiness. In back to Ayodhya, book the thread of the narrative is just as in the Mahābhārata, interrupted by numerous episodes, many of which, in different versions, recur in the sister epic, and with which the narrative of the Rāmāyana closely follows. One of these (I. 51-65) deals with the enmity of the Rāvana, which has already been referred to, as has the story of the war-god, which the latter undertook great penances which extended over thousands of years, and in which he resisted the seductions of beautiful nymphs, which he also became reconciled to his rival Yāsīṣṭha. Among others may be mentioned the story of the battle (I. 25-30), of the birth of the war-god Kumara or Kārttikēya (I. 35-37), and of the churning of the ocean by the gods and the demons (I. 35). The story of the two lovers-and-friends, of which the latter relates how the sacred river was brought down from heaven to earth in order to purify the remains of King Naga's 60,000 sons, put to death by the eight-armed Asura and by their disturbing his devotions.

(Rāmāyana ("Ayodhya Section"), with which the main story of the epic begins, describes the event that occurred at Dāsāratha's court of Ayodhya. The king, by this time growing old, held an assembly, in which he announced, an island general approval, his intention to make Rāma his heir-apparent. Kaikeyi, Bharata's mother, whose heart was set on her son in the throne, now reminded Dāsāratha of his former promise to grant her any two boons she might choose to ask for. She then requested the king to appoint Sītā his successor and to banish Rāma from Ayodhya for fourteen years. Kaikeyi having refused to withdraw her demand, the king, at the close of a day, when the consecration of Rāma was to have taken place, the king sent for and explained the situation to her, who accepted the conditions with equanimity, without delay set forth in exile, accompanied by Sītā and his half-brother Laksmana. The two brothers were converted to themselves entirely from Kaikeyi, remained with Rāma's mother, and died after a few days, lamenting the banishment of his son. Bharata, who had been living with his maternal grandparents at Rājarṣa, was now summoned to Ayodhya, but, indignantly refusing the succession, set out for the purpose of bringing Rāma back as king to the capital. In the wild forest of Dandaka he found Rāma living happily with Sītā and Laksmana. But Rāma, though deeply affected by the magnificence of his brother's request, declined to return, considering it his duty to fulfill his vow of exile. He accordingly took off his gold-embroidered shoes, and handed them to his brother, in token of transferring the succession to him. Bharata then went home to Ayodhya, and, after a time, three Rāma's shoes surmounted by the royal umbrella as emblem of sovereignty, retired to Nandagrama, whence he administered the affairs of Sītā and Laksmana, and, as a part of the original epic, which deals with the world of reality.

(4) Second part.—With bkk. lii., the Adbhuta-Kīrtīya ("Forest Section") begins. The Rāma is constantly engaged in adventures and conflicts with foreign princes, especially with the king of Ayodhya, whose subject Rāma is.
RAMOSHI—RANTERS

heaven, and Sittā prays that, as surely as she has not even thought of any other man than Rāma, the goddess Earth may open to receive her. Scarcely have the words been uttered when the moon drops from the highest heaven, and Sittā disappears with her in the depths. Rāma in vain implores the goddess to sit back to him; but the god Brahmā appears and explains that the moon was the bodhī tree of the forest of Rāma's birth, which he has withdrawn into heaven. Soon after Rāma, making over the kingdom to his two sons, Bhadrapāla and Bhāsa, he signs his title of Rāma, and Nātha, of the slaying of Vītra by Indra, of Uvasī, beloved of the gods Mitra and Varuṇa, besides several others aiming at the same object. The Poinams is quite in the spirit of the later parts of the Mahābhārata.

2. TRANSLATIONS.—English: by R. T. H. Griffith, Benares, 1874 (verso); M. N. Dutt, 7 vols., Calcutta, 1892-94 (prose); Ramesh Dutt, Rāmāyana: the Epic of Rama, rendered into English verse (sældred tr.), London, 1900; Italian: by G. Gorresio, 5 vols. on account of their absurdity, Pavia, and 9 vols., do. 1854-58 (worthless); A. Rousseau, 3 vols., do. 1893-99 (sound). German: only highly condensed verses in context, by F. Röckert, Rams Krishna und Silas Kodaks, Frankfort, 1868; bu. i. in prose by J. Menrad, Munich, 1897.

RAM MOHAN RAY.—See BRĀHMA SAMĀJ.

RĀMOSHI.—The Rāmoshi, also called Nāik (Skr. nāyik, 'leader'), a jungle tribe found in the Deccan and W. India, profess to derive their name from the demi-got, Rāma, who is said to have created them when on his way to Lankā to recover Sittā; others doubtfully connect the name with Skr. aranyāsina, 'jungle dwellers.' At the census of 1911 they numbered 60,664, found in Belgaum, the small body in the Central Provinces and Berār.

Those in the Deccan appear to be an outlying branch of the Kanarese or Telugu tribe or group of tribes known under the general name of Bādr or Bādari, sottis, and wool-woolers. The fact that the branch in Poona is divided into two groups, Chāhān and Yadava, names of leading Rājput sept, has been held to indicate an admixture of higher blood. Like their neighbours the Kolis (see art. Kol., KOILIRIAN), they were for a long time noted for their extreme hereditary and predatory habits. They supported the Marhāt leader, Sivajī, against the Muhammadans, and under British rule, as late as 1879, they committed outrages in Satārā and the neighbouring districts. In recent years additional depredations from Rāma, some of the tribes in the Poona are called Rāmbhākt, 'worshippers of Rāma,' and are vegetarians. But more generally they have adopted Siva in his form Kānhābā as their tribal deity. He is reputed to have been a sorcerer, and his women, Vāni (or merchant-women), his wedded wife, and his Dāhangar (one of the jungle tribes) combine behind him. As turmeric is a vegetable in which Kānhābā is supposed to dwell, they swear by it, and not by the cow milk. A few objections, but the oath ritual prescriptions that the person swearing shall take a leaf of the bel-tree (Aegle marmelos) sacred to Siva, a few grains of millet, and some turmeric powder which has been laid on the śīfa. The oath is recited with an imprecation against perjury, a little powder is eaten, and some is rubbed on the forehead. They also revere Kedārī, now regarded as a form of Siva, the tutelary deity of the subjects of the Rāmoshi, under the name of the Parvatis, whose image Rāghūrū, one of their leaders, is said to have laid his turban, with an oath that he would never wear this head-dress until his tribe should be restored to the privileges of which they had been deprived by the Marathas. Besides these they worship many local gods, Musalmān saints (pir), the demon-leader Vetāla, who has many female spirits, or 'mothers,' in his train. The tomb of an Englishman in the neighbourhood of Poona is called by them Rāmdevā, 'Rāma's temple,' and is tended by an old Rāmoshi woman, who pours water over it, keeps a lamp burning, and allows no one who has eaten meat that day to visit the place.

Mackintosh marks that both men and women had frequently to 'undergo the expiatory penance of the swinging ceremony, when the penitent is elevated to a considerable height and swung a few times in front of the tribe's tomb, or temple, supported by a hook run through the skin and sinews of the back.' 1

Indications of totemism are found in the badge, or crest (derāk), which is generally some tree or a bunch of the leaves of several trees. Persons with the same crest are regarded as brothers and cannot intermarry, nor can they eat the fruit or use the tree in any way. They dread the spirits of the dead, and at a funeral, on the way to the grave, the corpse is turned round and the bearers change places in order to baﬄe the spirit and prevent its return. As an additional precaution, heavy stones and thorns are placed in the grave. The same fear of the dead appears in the marriage rites. If a woman has lost three husbands in succession and wishes to marry a fourth, she holds a cock under her left arm, and the tribal priest marries her to the bird before she is joined to her new husband. The intention is that the vengeance of her former husbands may fall upon the bird. Their belief in amulets is shown by the story told of their noted leader, Dālji. When he was brought to execution, it was impossible to baﬄe him until he had made an incision in his arm and removed a tiny flesh genet which had been inserted as protective. Like other tribes in the same state of culture, they are much vexed by witches and sorcerers, and have a profound faith in omens.

W. CROOKE.

RANTERS.—The term 'Ranters' was the nickname given to an antinomian movement—hardly cohesive enough to be properly called a sect—in the period of the English Common-wealth, appearing about 1644. The name is derived from the English, i.e. 'to talk in a high-flown manner' (cf. Shakespeare's phrase, 'I'll rant as well as thou' (Hamlet, v. 1. 307)).

The Ranters constituted the somewhat chaotic 'left wing' of the earlier dissenting groups that were maintained in England in the 17th cent. A type of Christianity confirmed to apostolic, primitive Christianity, free from what the leaders of this movement called 'the apostacy,' and loosely enough conjugated and

---

1 E. Thurston, Castes and Tribes of S. India, Madras, 1909, p. 180 ff.
organized to allow very wide individual liberty of thought and action. The central individualism of the movement tended to produce a great variety of religious ideas and consequent conflict. England at this epoch appeared to be 'swarm with sects,' though the 'sects' were hardly more than marked variations of one general ground-swell movement. Ephraim Pagitt's description is vivid and well enough gives the horror which the guardians of orthodox felt as this 'infection' swept over the country:

The plague of all diseases most infectious: I have lived among, and known the worst about them, and have seen and heard of great care and provision to keep the city from infection. The plague of herey is greater, and you are now in more danger than you were in the late pestilence. They of London, seeing the convulsions of the saints of God, and knowing what England swarne appears almost incredible. The sober Puritans were confoundedly afraid of it, and called it a remission of the judgment of the sands of Libya, where searching scns produce new monsters every year ' (Hist. of the Life of John Norris, p. 15).

All movements, such as this one, which expresses a deep popular striving to escape from the rigidity of old systems and to secure a large area of individual freedom tend to develop an extreme wing. Persons of unstable equilibrium are swept on by the movement. They may be driven to做出 an abnormally responsive to suggestion are certain to be carried along with the movement. These psychopathic persons, lacking in perspective and balance, bring into strong light the dangers that are involved in complete religious liberty. The Ranter were largely composed of this type of person, and some of them were obviously insane. The Ranter, so far as they can be differentiated from the general ferment of the time, show two marked characteristics: they were (1) pantheistic, and (2) antimonian. Masson says:

'Pantheism or the essential identity of God with the universe, and Indwelling in every creature of nature, has been the belief of most Ranter's that could manage to rise to a metaphysics' (Life of Milton, v. 18).

Richard Baxter says of them:

'some such men as these, ... to set up the Light of Nature, under the name of Christ in Men, and to dishonour and cary down the Church, the Scripture, the present Ministry, and every thing Disorderly; and so Men to harness to Christ within them.' (Religio Baxteriana, i. 70).

Joseph Salmon and Jacob Bauthumley may be taken as characteristic specimens of the leaders and exponents of the Ranter idea. Bauthumley (or Bottomley), who was called by George Fox 'a great ranter' (Journal, ed. N. Penney, i. 151), was the author of a pantheistical book with the title The Light and Dark Sides of God (London, 1650). This book opens in his best and sanest vein as follows:

'O God, what shall I say thou art, when thou cantst be named? What shall I speak of thee, when speaking of thee I speak nothing but contradiction? For if I say I see thee, it is nothing but thy seeing of thyself; for there is nothing in me canst see thee: if I say I see thee by me, or the knowledge of me, I am rather known of thee than know thee. If I say I love thee it is nothing, for through me, there be not in me to do and love. If I say I love thee, it is nothing but lovesth thou dost but love thyself. My seeking thee is no other but thy seeing of thyself' (p. 1).'

On p. 27 he develops his extreme doctrine of the inward Light:

'It is not so safe to go to the Bible to see what others have spoken and writ of the mind of God as to see what God speaks within me and to follow the doctrine and leading of it in me.'

Joseph Salmon wrote Heights in Depths, and Depths in Heights: or Truth no less Secretly than Secretly, Sparkling out of its Glory (London, 1651). This strange tract recounts in extravagant style the mystical experiences of the author as one conformed into the abyss of eternity, nonintellectual into the being of beings, my soul split and emptied into the fountaine and ocean of divine fullness, expired in the expiring of pure life' (p. 13).

The tract is throughout a presentation of extreme pantheism. A tract entitled The Smoke of the Bottomless Pit (London, 1650-51), written by J. Holland Porter, who claims to be an eye and ear witness of those many details of the Witches' views and their manner of life. All contemporary writers unite in the opinion that the Ranter were morally disorderd in their way of living, and that they held antimonian views of conduct, i.e., they were 'able' and wrong. George Fox's Journal gives many concrete accounts of personal experiences with Ranter, and these accounts generally emphasize the two aspects under consideration—the pantheistic and the antimonian. In 1648 Fox went to visit a group of Ranter in prison in Coventry. He says:

'When I came into the jail, where the prisoners were, a great number of them, and their appearance struck me with a spirit gathering to this end, God's Church and light of God. At last these prisoners began to rant, and vapour, and blaspheme, at which my soul was greatly concerned, and I recollected myself, and I thought we could not hear such things. When they were calm, I stood up and asked them whether they did such things by motion, or from any necessity, as they said, from being at hand, I asked them to point out that Scripture; and they showed me the place where the prophet John directed that, and it was said to him, what was sanctified he should not call common or unclean. When I had showed them that Scripture, they appeared to have reconciled all things to themselves, things in heaven, and things in earth. I told them I owned that Scripture, and showed them what was was to them for their purpose either. Then seeing they said they were God, I asked them, if they knew whether it would rain to-morrow? They said the will of God. I told them, God could tell. Again, I asked them, if they thought they should be always in that condition, or should change? And they answered they could not tell. Then I said unto them, God can tell, and God doth not change. You say you are God; and yet you cannot tell whether you shall change or not' (Journal, bi-centenary ed., i. 477).

Under date of 1654 Fox writes:

'During the time I was prisoner at Charing-Cross, there came among us a raving ranter. Another of those that came to see me, was one Colonel Pucker, with several of his officers; and while they were with me, came in one Cobb, and a great company of them. The Ranter began to call for the drink and tobacco; but I desired them to forbear it in my room, telling them, if they had such a desire, they might go into another room. One of them cried, "all is ours" and another said, "all is well" ' (ib. i. 211).

Richard Baxter's testimony almost certainly overstates the case against the Ranter, but, as it is the opinion of a highly-minded contemporary, it must be given due weight. After presenting the views of the Ranter, he describes their manner of life:

'But at last, they conjured a Curious Doctrine of Libertinism, which brought them to all abominable filthiness of Life: They taught as the Familiarita, that God regardeth not Actions; the outer Man, but of the Heart; and that to the Pure all things are Pure (even things forbidden): And so as allowed by God, they spake most hideous Words of Blasphemy, and many other things, which are not written. There could never Sect arise in the World, that was a lower Warning to Professors of Religion to be watchful, and watchful... But the horrid Villains of this Sect did... speedily Extinguish it' (p. 764).

The Ranter were vigorously dealt with by Acts of Parliament, and many of the extreme Ranter were transported or hanged, and for acts considered either blasphemous or immoral. The better element in the groups of Ranter were 'convinced' by the preaching of George Fox and became Quakers. The Ranter were gradually disappeared from public notice, though the antimonian tendency has at intervals continued to reappear sporadically both in England and in America.
RASHI—

KUPUS M. JONES.

RASHI.—This is the name familiarly applied to Rabbi Solomon ben Isaac; it is, indeed, derived from the Hebrew initials of his name. Some writers erroneously called him Yarchi (Yarhi), supposing that his name was connected with the city of Lamen (yarchi = lune = moon). He was called Rashi, however, everywhere, and died in the same town in 1150. Like most of his contemporaries, Rashi did not derive any emolument from his work as rabbi. He was among the many Jews of his epoch in France who engaged in viticulture. His fame is an index of his learning as an author, and his works have won an enduring fame. No medieval commentator is more studied in modern times. His exposition of the Pentateuch is still beloved of Jews, while his Commentary on the Talmud remains absolutely indispensable to the understanding of that work.

The first Hebrew book to be printed (of known date) is Rashi’s Commentary on the Pentateuch (Reggio, Feb. 1475). Rashi expounded most of the Bible, and wrote now and again in his own language. In this Commentary he combined the newer grammatical method with the older Midrashic style, creating a harmony of unique charm. Nicholas de Lyra (1270-1340) familiarized Europe with Rashi’s Biblical exegesis, and through de Lyra, Luther the Pl. on Med. Berchem, and in his work, the German influence into his Hebrew. A well-known line tells of Luther’s indebtedness to de Lyra: ‘Si Lyra non lynasset, Lutherus non saltasset’; and Lyra, on his part, was much indebted to Rashi.

Rashi’s Compendium, Biblical and other compendia, but apart from his Pentateuch he is best known for his great Commentary on the Talmud. He did much to settle the text, and added notes which for lucidity and brevity have few rivals. The Talmud is invariably read with Rashi by Jewish students, and all scholars are dependent, either directly or indirectly, on his interpretation. This has stood the test of time, and the numerous super-commentaries and annotations on Rashi have only brought out the supreme merits of his work.

RATIONALISM.—I. Definition. — Rationalism, says A. W. Benn, means the hostile criticism of theological dogma, ‘the mental habit of using reason for the destruction of religious belief.’

Custom has come to mean that the submission of belief to reason is the characteristic rationality in reference to every branch of natural knowledge, and rationalism only when it leads to the rejection of religious constructivism with which religion has become identified.

J. B. Bury has the following:

'The uncomprising assertion of reason by her absolute rights throughout the whole domain of thought is termed rationalism, and the slight stigma which is still attached to the word reflects the bitterness of the struggle between reason and the forces arrayed against her. The term is limited to the field of theological belief, and the argument of reason was most violently and peremptorily opposed.'

The usage involves us in obvious difficulties. An argument will or will not be rationalistic, not according to its intrinsic content, but according to the kind of reason or to its effects upon the hearer—and indeed certain theses of geology or astronomy which have been classed as rationalistic in one century have in a later century been accepted by all parties. A further difficulty lies in this: (1) An argument by the weight of the word, in itself, seems impossible to deny the right and the duty of good thinking, of the utmost use of intelligence, in every department of life. Even the appeals to revelation or to authority, to the usefulness of a certain belief, or to the needs and rights of feeling and action, are themselves appeals to our intelligent judgment for comprehension and sympathy. Thought can be criticized, on whatever grounds, only through thought.

The use of ‘rationalism,’ indeed, whether as a war-cry of repudiation of reason of reproach, is a use belonging to popular philosophy, and cannot be pressed with too much exactness. (Its more technical uses in the theory of knowledge are not considered here.)

On the whole, the usage is going to be used with reservations.

(1) An argument is rationalistic when it is directed against a belief which by many of its holders at any rate is counted a ‘religion’ belief. The person bringing the argument may or may not have a constructive philosophy of his own to maintain, but may be a pamphleteer attacking polytheism, or a debater criticizing the doctrine of the Trinity; he may be a materialist, or an agnostic, or none of these things; the ‘rationalism’ of his argument lies in its attack, in the name of sound thinking, on the particular shape of a particular religious system. Obviously such arguments, though anti-religions in one sense, may be used in the service of religion. A higher form of religious belief in conflict with a lower must sometimes use negative criticism of higher to maintain its own. Such may be a monotheist attacking polytheism, or a debater criticizing the doctrine of the Trinity; he may be a materialist, or an agnostic, or none of these things; the ‘rationalism’ of his argument lies in its attack, in the name of sound thinking, on the particular shape of a particular religious system. Obviously such arguments, though anti-religions in one sense, may be used in the service of religion. A higher form of religious belief in conflict with a lower must sometimes use negative criticism of higher to maintain its own. Such may be a monotheist attacking polytheism, or a debater criticizing the doctrine of the Trinity.

(2) In its derogatory use, on the other hand, the name of ‘rationalism’ is specially applied to a certain kind of bad thinking—an unimaginative criticism from the outside. If a difficult idea has been cruelly and imperfectly stated by those who have groped after it and only half attained it, the lower rationalism makes no attempt to reach it and to state it better, but fastens on the crudities of the accepted statement, is triumphant in showing the untenableness of this as it stands, and there-with rejects the whole conception.

In this sense ‘reason holds off, as it were, from trying to comprehend what is most characteristic in religious experience. Instead of allowing the paradoxical nature of religious doctrine to give a provocative and instructive stimulus to further effort, the rationalistic understanding makes it a ground for declining to consider them further. Thus doctrines like the New Birth, the Absolute Sin in Christian theology are set aside because in arithmetic one and three are different, and because the citizen of a civilized state will not accept responsibility for his ancestors’ criminal acts. The question is not put, why such obvious contradictions and absurdities have ever been held and considered of high importance. Or it is put, and the answer is suggested that we have been always at all times fit to understand them. Further the question is not raised, why they are not discarded here also; for it is plainly not because they have not been tried. The effect of close criticism ought only to bring out the need of putting and answering such enquiries; but it may simply lead to the neglect of the whole subject.
Historical Development.

2. History.—There can scarcely have been a century or a country in the history of the world where rationalistic thoughts have not existed in some men's minds. For the Western world rationalism may be traced back to a kind of philosophic reaction against the lingering survivals of paganism and paganism on rationalistic grounds. In the Middle Ages the controversies among Christians and Jews and Muslims were strongly similar to the spirit of rationalism. When men of one religion dispute with men of another, they can appeal only to the human intelligence which is common judge for both. After the Reformation, again, when Church opposed Church, or Church collided with State, reason was invoked by all parties.

In the development of Christian thought rationalistic contributors or opponents have stood sometimes outside the Christian Church and sometimes inside it. Of their arguments, drawn from philosophy, science, history, or the criticism of documents, some have fallen to the ground; others have had real effect in modifying or developing the doctrines grouped together under the general name of Christianity. For this, like every other system, the movement is the sum of the parts, by taking up criticisms into itself, and it is almost inevitable that disputes should arise in each generation as to the amount of new modification that can be allowed if the system is still to retain the names used.

It is not possible to write the history of rationalism as one would write the history of a religion or a science, or that of a nation. The story of England can show a continuous line of movement; it is comparable to that of the Bible. The history of thought on England will have disconnected factors of the most various kinds. A religion has unity and definite movement, but the series of criticisms brought against that religion may have little of either. Some slender thread of historical development must, indeed, run through it, appearing and disappearing, since to some extent the criticism must follow the movement of religious thought—changes in this either giving rise to new forms of attack or abolishing old forms. Or, again, the stage of the world of ideas is in itself a philosophy, and that has been affected by the way that the Bible has been used. Sometimes one knows what the Bible means, and in some cases it means whatever the critic of the age is disposed to give it, and the result is that the Bible has not been able to preserve its historical integrity.

At the same time, it must be observed that the history of rationalism is the history of a great number of ideas, and the fact that each of these ideas is of great importance and is capable of being developed into a new system makes it more difficult to follow.

Renan’s own difficulties, indeed, were comparatively specialized, numerous as they were:

1. ‘If I could have believed that theology and the Bible were true, none of the doctrines . . . would have given me any trouble. My reasons were not merely of a philosophical and critical order: they were not in the least a metaphysical, political, or moral kind. These orders of ideas seemed to me scarcel y tangible or capable of being applied in any sense. But the question as to whether there are contradictions between the Fourth Gospel and the synoptics is one which there can be no difficulty in grasping. I can see these contradictions with such absolute clearness that I would stake my life, and, consequently, my eternal salvation, upon their reality without a moment’s hesitation.’

A clearer example than Renan’s of doubts arising from ten thousand years of reasoning may be found in one who, like Renan, started from the most devout and orthodox standpoint of his time, and could not bear to see it go. This man’s name has come to oppose what he used to believe. This was Francis William Newman, younger brother of Cardinal Newman. In Phases of Faith, or Passages from the History of my Creed (London, 1850), he describes his evangelical upbringing and youthful belief, then his testing of various points by his Bible reading. In one matter after another—the Sabbath, the Mosaic Law, infant baptism, episcopacy, the Lord’s supper—he found discords between the teaching of the NT and what he had been taught himself. Persisting, as a lay missionary in Persia, in trying to read the Gospels with fresh eyes, he found the Fourth Gospel clash with the Athanasian Creed, and returned to England to find himself cast off by his friends as a heretic. He moved from house to house through the land, under the same heresy, and the rejection of eternal punishment, original sin, and the vicarious suffering of Christ. He had already begun to discern that it was impossible with perfect honesty to defend ‘every little contained in the Bible’, for he felt the need of ‘a religion capa ble of being applied to the task of the world’.

The idea of a gradual formation of the world and its inhabitants is a good deal older than Darwin, but, since it was taken up into the form that it got from him, it has become almost overwhelming. The idea that man has gradually ceased to exist as a six days creation. For the third point—the exhibition of fragments of other histories—the illustrations just given would still serve, since they belong not only to the story of religious opinion but also to that of the study of documents and of natural science. Or we might select a different fragment: part of rationalist argument in the last four generations has been the cutting edge of a change in the science of religious thought. This may be called ‘rationalism’; in the last century it has not only against certain religious doctrines but against some older criticisms of them. D. F. Strauss, e.g., offers his ‘mythical’ account of the Resurrection deliberately as superseding older explanations, such as the suggestion that the disciple flung the body of Jesus for the sake of its own ambition and self-interest, or the other suggestion (which Strauss calls specially ‘rationalist’) that Jesus recovered consciousness after a deep swoon but was never able thenceforth to persuade his disciple that he was not a being from another world. We are probably safe in saying that these explanations have indeed been superseded by the growth of a psychological school in which Strauss may stand as one of the pioneers.

Nevertheless, it is impossible to arrange individual rationalists in a clear order of historical development. The threads cross too much. Opinions and criticisms which are obsolete in some circles are not obsolete in others. Different men may use the same language in different ways. They often use the language of the diverse schools of thought; and few men can be fairly described as if they were specialists of a single argument. What Renan says of himself is true of most—that their doubts arose not from one strain of reason, but from ten thousand strains of reasoning.
rked them or of God; and the kind of evidence on which his New writers accepted them was def-
initely inadequate for a modern mind.

Newman claimed that what was left to him in the end was still the essential part of religion—the heart's belief in the sympathy of God with individual man. This was kept not in the traditional form of miracles, but in the sympathy of a scholar, a poet, and an Eastern traveller with the persons who founded Christianity. His Vie de Jésus (Paris, 1863) was not intended as a scientific work either for historians or for theologians, but simply as a personal essay. In it, the clearest and the tenderest colours at his command, of a picture which religious tradition had veiled, he thought, from many readers.

A very different book on the same subject was published almost immediately afterwards—D. F. Strauss's Leben Jesu für das deutsche Volk (Leipzig, 1884). His more famous Leben Jesu had appeared nearly thirty years before. The purpose in these books is not to paint a picture, but to re-
interpret the growth of a doctrine. Stories of miracles arise for the most part, the author urges, not by any one's deliberate invention, but out of the unconscious imagination of a community. As with ancient myths, the fact is created by the idea that is needed. The lapse of the time, this line was not new as regards the OT, but Strauss was the first to apply it with anything like such thoroughness to the narratives in the Gospels. His view in 1835 was that very few of these were newly created myths; most were based on OT legends and pictures, transferred, between the Exile and the birth of Jesus, to the person of the expected Messiah. The Messiah must be trans-
figured like Moses, must multiply food and raise the dead. Elijah and Elisha, must perform works of healing because Isaiah had said that in His day the eyes of the blind and the ears of the deaf should be opened. In 1864 Strauss left much more room for the growth of legend within Christian circles, reflecting the growth of Christian experience and thought, and laid less stress on the OT correspondences. It was far easier of course to apply interpretation by myth to the Gospels, if once it had been admitted that none of these was the work of an eye-witness; and Strauss, though not the first to do so, was the most faithful critic of the Bible. He studied most attentively the contemporary work of F. C. Baur and others. His sketch of the doings and the personality of Jesus is less vivid and definite than Renan's, largely because of his scrupulousness in evaluating the sources and con-
cluding himself to what he thought to be proved facts.

While Strauss worked at re-stating the history of the Christian form of religion, his contemporary, L. A. Feuerbach, in Die Wesen des Christentums (Leipzig, 1841), re-stated its philosophy. The universal reason of the human race operates on an uncultured man only under the image of a personal being. He must separate from himself the element in his own nature which gives him moral laws, and place it in opposition to himself; thus we have the picture of a personal God. Yet, if God were really a different being from myself, why should His perfection trouble me? God is the final human being of the truth of man; to doubt of Him is to doubt of the racial spirit. Our gods are strong first, because physical strength is the first thing we count as glorious; then they are majestic and serene; finally, God loves and we love, so that the conviction of a deep feeling is absolute, divine in its nature. 'God loves man,' one of the figures of expression, is an Oriental expression of the truth, 'The highest conceivable is the love of man.' Not the attribute of the divinity, but the divinity itself or deity of the

RATIONALISM

tribute, is the first true Divine Being: When this projected image of human nature, this object of theology, it becomes an inexhaustible mine of falsehoods. The foundation of religion is man's feeling of the sacredness of man and nature; the result of religion too often is that he sacrifices man and nature to theology.

In the line of Strauss and of Feuerbach, whether consciously or not, stand several living writers, including in France Emile Durkheim (Les Formes élémentaires de la vie religieuse, Paris, 1912) and L. Levy-Brulé (Les Fonctions mentales dans les religions primitives, Paris, 1911) and in Germany F. M. Cornford (From Religion to Philosophy, London, 1912) and Jane E. Harrison (Ancient Art and Ritual, do. 1911, Themis, Cambridge, 1912, Alpha and Omega, London, 1915). For these writers the beginning and the foundations of religion is the 'collective consciousness' of a group, dominating the primitive individual as an irre-
sistible pressure from outside, and answering to itself as the voice of conscience within. He 'projects' it first, the figure of a totemic plant, later in other figures which grow out of primitive ritual. All such projections are embodi-
ments of collective emotion, desire, and law. High emotional tension is caused and maintained by the group; the individual cannot exist in a social group-consciousness in tension then makes a picture of itself, which takes finally the form of a god. The mystery-god is both human and demonic, re-created at every celebration of his central site in the community or group. Such a scheme provides the appropriate setting for figures half-human and half-divine—actual living prophets who during their lives or after their deaths become the demons of religions or groups. Group-action and group-emotion, not their formal action in any theology, make the essence of religion.

In this line of writers we certainly find a section of real history of rationalism. How far we judge them to have succeeded in interpreting the facts of religion will probably depend on our opinion, and on our estimate of these writers' opinion, of the reality of the concrete universal. In the common spirit within us, and in the diversity of the attribute, have we something which merely deludes us into forming a religion, or have we something of which the highest language of religion is really true?

There remain some typical or outstanding figures in 19th cent. rationalism which stand apart from those already described. F. K. C. L. Büchner (Kraft und Stoff, Leipzig, 1855) is not so much a landmark as a type recurrent in every century, though the special forms of the arguments change. He attacks the idea of the creation of the world; for no force can exist except as a property of matter; and matter itself can never be either pro-
duced or annihilated. Writing five years before the appearance of The Origin of Species, Büchner claims it as highly probable, even certain, that life may be spontaneously generated out of the non-living; and that higher forms are made slowlv by a natural process out of lower forms. No soul can exist without brain; the experimenter's knife cuts off the soul piecemeal. It would be waste of words to try to prove the impossibility of the human soul by arguments less a scientific person, who is convinced of the immutable order of things, can nowadays believe in miracles. There exist no supernatural or super-
natural things, and no supersensuous capacities; and there is no basis for the belief that the laws of nature would thereby be suspended.

Having laid down these metaphysical doctrines, Büchner adds that there is no such thing as meta-
REALISM AND NOMINALISM

philosophy, and that all metaphysical systems come to nothing and lose themselves in an unintelligible play. *Pseudo of Roger Bacon.* All our knowledge is relative; we can have no knowledge of anything except that which is a part of the Absolute—of that which transcends the sensual world.

Buchner ends with agnosticism, though he does not say so. The name 'agnostic' was originated by Huxley, but popularized by Leslie Stephen, whose *Agnostic's Apology* was first published in the *Fortnightly Review* for June 1876.

Dогматism, he holds, is a rare opinion, but agnosticism is increasing. The agnostic asserts that there are limits to the knowledge of science, and that theology is 'metaphysical' knowledge which lies outside these limits. In the whole history of the race no agreement on theological questions has ever been attained. In matters that are still involved in endless and hopeless controversy ignorance is no shame, but a duty. Many of the Christian doctrines have created far more numerous and far more horrible difficulties than those which they profess to remove. It is better to admit openly that man knows nothing of the Infinite and Absolute, that the ancient secret is a secret still.

Agnosticism is metaphysics binding her own hands, and constructive criticism of religious dogma will not come from this quarter. That different position belongs to philosophical workers whose negative criticisms are incidental, though necessary, in their own constructive thought. Such, among living writers, is J. M. E. McTaggart (3 vol., London, 1908). The subjects of religious discussion, he says, are the most important and the most practical in the world. Religion rests on a conviction of the harmony of ourselves with the universe, and nothing but exact metaphysics can justify us in holding this conviction. We are not justified in believing any dogma because all, or most, people believe it; nor because it is held by people who can work miracles; nor because of its importance for our happiness. Nor could observation without metaphysics ever give it sufficient support.

McTaggart's negative criticism is directed chiefly against certain conceptions of the Deity. If God is strictly omnipotent, He cannot be good, for He has permitted evil when He need not have permitted it. He cannot be just, for He has given benefits of human free will without also permitting the evil of sin, but there is nothing that an omnipotent being cannot do. When believers in God save His goodness by saying that He is not really omnipotent, they are taking the best course open to them; but then they must accept the consequences of their choice, and realize that the efforts of a non-omnipotent God in favour of good may, for anything they have yet shown, be doomed to almost total defeat.

Again, suppose God not to be omnipotent—can He be creative and still be good? A creator has nothing but his own nature to determine him, and, if a being who is completely self-determined produces evil, knowing that it is evil, how can we say that such a being is not wicked? Could there be a God, perhaps an omniscient, omnipotent, and good, but only a person more wise, good, and powerful than any other? He might be well deserving of worship, and might dominate the world. But much as an efficient schoolmaster dominates his school, it is a possible theory, though not an established one.

But, McTaggart asks, does religion require the existence of a personal God at all? Suppose our materialism to be right, do we believe that the universe consisted, not of matter, but of a harmonious system of selves. Then the directing mind of a God, though not disproved, would not be needed in any way to account for the traces of order in the universe. The non-existence of God would leave it as it was before the existence of God. Whether the friends whom all men may find could compensate for the loss of a being whom some men thought they had found is a question for each man to answer. In some cases, such a belief can never be answered permanently in the negative while there is still a further possibility in the positive.

'If we want to know the truth . . . we must have faith in the conclusions of our reason, even when they seem . . . too good or . . . too bad, that faith has the better claim to abide both hope and love than the faith which consists in believing without reason.'

It is this faith, surely, which is sought in the prayer, 'Suffer not for any man to put me to death.' And for those who do not pray, there remains the resolve that, as far as their strength may prevail, either the pains of death or the pains of life shall drive them to any comfort in that which they hold to be true' (p. 75).

LITERATURE.—For all except the most recent years A. W. Benn, *Hist. of English Rationalism in the Nineteenth Century,* 2 vols., London, 1908, covers the ground given by no great number of references. A smaller book is J. B. Bury, *A Hist. of Freedom of Thought,* do. 1913. Brilliant work within its own limits is *H. A. P. Phthis of Realism and Idealism* in *Theology in Germany since Kant, and in Great Britain since 1855,* Eng. tr., do. 1890.

**HELEN WODEHOUSE.**

REALISM AND NOMINALISM. — 1. Ancienient and medieval.—Although these terms are most properly used only of medieval schools of philosophy, the disputes of the Middle Ages were prepared and prepared the way for the fragments of Greek philosophy which they inherited. Plato was known as a realist, and Aristotle was usually believed to be opposed to him—in spite of the fact that after Thomas Aquinas 'Aristotle' is meant as a synonym of realism, and its opposite. We may judge, from the first statement of metaphysics which we now possess, the Platonic dialogues, that the forms (ideas) had been accepted as the explanation of the likeness between objects and individuals, before Plato wrote.1 This meant that the data of experience were (1) individuall, objects, or things, and (2) certain other realities called 'forms' (ειδη, ιδεα) with peculiar relations to the individuals. The relation was sometimes said to be participation in copying; and it was implied in the Platonic school that the scientific in some sense less real than, or dependent upon, the forms. Aristotle seems to have objected that this was only to add a new kind of individual existence to what was obvious; and his argument was perhaps intended to show that the forms were not ultimately real; but the result was that he appeared to make the forms less real than, or dependent upon, the individuals.

At the very beginning of medieval thought (cf. art. SCHOLASTICISM) Scotus Erigena2 attempted to reduce to logical coherence the confusion of semi-philosophical statements, primitive science, and popular superstition, which was known as catholica fides. But the guide that he took was irrationalism, and the result of the pseudo-Dionysius. In accordance with this, he established a form of realism. Being, the most general of all likenesses or forms, was said to be the ultimately real, and we departed more and more from reality in approaching the objects of sensation. The theological results we need not discuss; on the philosophico-scientific side, realism implied what that was usually called 'abstraction' is the correct method for the study of the real world to the subordination, if not the elimination, of sense-perception and the sense in which the real was contrasted with the apparent. The result was a form of mysticism in which all exact knowledge seemed to be useless.

Against this nominalism was a revolt. Aristotle himself said of the Donatists, 'They are not men of the age. We may be sure that the universe consist of material, not of matter, but of a harmonious system of selves. Then the directing mind of a God, though not disproved, would not be needed in any way to account for the traces of order in the universe. The non-existence of God would leave it as it was before the existence of God. Whether the friends whom all men may find could compensate for the loss of a being whom some men thought they had found is a question for each man to answer. In some cases, such a belief can never be answered permanently in the negative while there is still a further possibility in the positive.

2 De Divinis Natura
as predicates,' and the conclusion was made that universals, or the likenesses between things, were not res.

But, since the word res seemed to mean what we now mean by 'reality,' the nominalists were charged with saying that universals were merely words, not real. Such an attitude was known to the early nominalists only from their opponents. It is, however, quite possible that they were attempting to turn philosophical attention towards the individual objects of perception. Abelard (q.v.), the psychological thinker, on the other hand, that the classification of things as like, one to the other, cannot be due to the caprice of the perceiver and must therefore have a ground in the things. It is probably unhistorical to make Abelard a pure conceptuelist or to suppose that he had a theory of forms of the mind or categories due to the structure of mind. It is difficult to be historically just to the early medieval thinkers. They were probably even more simple and primitive than their words seem to imply. The general uncertainty extends with the introduction of more works of Aristotle; and Thomas Aquinas (q.v.) easily dominated the current of thought. He was a realist in the sense that, although he held the individual to be ultimate and real, he considered universals to be objective (in the medieval language, 'subjective') and are 'in the things' (universalia in rebus). Duns Scotus, the great opponent of Aquinas in other issues, in this did not differ very much from him, although he preferred 'thiness' (vakieitas) to the 'principle of individuality' (principium individuationis) as the explanation of the individual. It is to be noted, however, that both seem to hold the individual object of perception to be identical with a likeness, or likeness of universals (like, etc.) with some individualizing element added.

Realism, thus modified, was triumphant. It was conclusive in showing that classification was not arbitrary, and that objects or individuals were like one another quite independently of the perceiver. But it had in it the seed of its own destruction in the mistaken Aristotelian attempt to secure the universal by making it a component part of the object of perception.

The most significant of the medieval controversies was reached by William of Ockham (see art. SCHOLASTICISM), who to the mind of his time completely destroyed the realism of Aquinas and Scotus. His most effective argument was directed against the principium individuationis of his predecessors. He showed that the ultimate difference was nothing else than the individual itself; and, asserting that the individual needed no explanation, he turned upon the universals of the realists. He showed that they did not exist in re and the alternative, as he phrased it, was that they existed in mente. Probably Ockham was not clear as to what he meant; but he certainly did not mean that universals are fictions or even 'the work of the mind': for he expressly disclaims that theory.

At the same time he successfully defended the medieval prominence of the universals against the proposition of some of his predecessors (abstraction theory). In every new metaphysical theory, it was handed on through the Renaissance to modern philosophers. The accepted view was generally that perception of objects of perception were real and the source of all our knowledge; and the likenesses between them were mental or conceptual. There was still the implication that such likenesses were due to the structure of the mind or to the mind itself.

The concept of sense-perception for which Ockham's nominalism stood combined readily with the new interest in physical science. Thus Ockham was opposed to medieval realism, according to which universals were actual, but he is the precursor of modern realism in giving them conceptual (objective) existence and in refusing to suppose the thing to be made up of its qualities.

It is not quite fair to the earlier modern philosophers to class them as realists and nominalists; for this distinction is rather the same as the Renaissance. The two tendencies, however, continued, and conceptuelism (q.v.) was developed as a theory that the objects of perception were what they were because of the perception of them. He held that, as bodies were to Hume (qq.v.) seems to have implied that there was a certain human arbitrariness in classing things as like, one to another. The elaborate study of mental process added to the philosophical prejudices which implied that we never observe the thing 'itself'; and then with Hegel (q.v.) the whole of what the plain man regards as the world was supposed to be an emanation from percepient mind. The result was to make of exact science only a study of mental process or its effects; and realism was driven from the field.

D. E. BURNS.

2. Realism in modern thought.—Modern realism differs from its earlier connotation largely owing to this displacement of the centre of interest from the metaphysical to the psychological, and the introduction of a doctrine concerning the relation between cognition and the thing known. In its simplest form as the naive realism of the unphilosophical man it holds that the subject has immediate knowledge of the external world, that things are what they seem, and that they are independent of being known. The view that things are what they appear as, taken apart from the further supposition of independence, is variously called 'epistemological individualism,' 'simple character of immanence,' and 'phenomenalism.' The last term is a survival from, and represents the antithesis of, an earlier meaning of the 'real' as contrasted with appearance. In this sense the real is that of which something is known, not what it is known as. The 'natural realism' of the Scottish school was of this substance type, and arose as a protest against the 'theory of ideas' of Berkeley and Hume (see art. SCOTTISH PHILOSOPHY). Cartesian dualism had asserted that we can have no knowledge of external things by which our mind can represent external objects, and led to a subjectivism which Reid was anxious to avoid. He argued that, since the qualities of a body do not themselves constitute the body, there can be no question of their remaining mere ideas through the uncertainty of the external things underlying body. This argument as against ideas is curious; for, in sharply distinguishing between a body and its qualities, the possibility is introduced that in all cognition what is known is never the object itself but only an idea representing that object. And it was precisely this dualism in knowledge that Reid wished to avoid; 2 indeed he claims, but nowhere substantiates, that cognition is immediate. In fact epistemological dualism is born of the belief that perception is a process of an original pure cognitive form (cf. below, § 3), and leads naturally, as in Hamilton and Spencer, to agnosticism regarding the 'real' object—thus being fatal to all naturalisms of substance. It remains to be shown how the epistemological monism put by Reid came to be recognized, as expressing a relational view of cognition.

2 'Impress and Human Mind, in Works , p. 1966.

realism and nominalism

'face to face perception.' A thing is what it is known as—a reality independent of the existence of a perceiving consciousness. Now, Berkeley licked his finger and removed the difficulties of epistemological dualism by denying it; and it was therefore of vital importance for realism to distinguish between his monism and his subjectivism so as to be able to avoid the latter and to assert independence. That is why 'The Refutation of Idealism' by G. E. Moore 2 cleared the way for future realist construction. Moore contends that a sensation is in reality a case of knowing or being aware of something. Therefore, when we know that the sensation of blue exists, the fact which we know is that it is so. 3 Or, analysis of the 'sensation of blue' is thus seen to include, besides 'blue,' both a unique element, awareness, and a unique relation of this element to blue. From this it follows that, when we know that the sensation of blue exists, we know blue—i.e., we are already outside the subjectivist's circle of his own ideas and sensations. This distinction between sensation and sense-data thus forms a step towards the generalized argument against subjectivism.

2 We find this difficulty diminished in T. L. Wiseman's article on "Realism and the Subjectivist," in The Journal of Philosophy, 1912, 12, 418, who argues that realism is supported by the choice of relations—a doctrine supported by the success of modern logic, since it merely expresses the justification of logical analysis. 4 New realist adherer to analysis is exemplified in the significant attack on subjectivism by Hume, in his Treatise of Human Nature, or, in more recent times, by B. Russell, 'The Philosophy of Common Sense,' in his essay, "The Nature and Reality of Knowledge," in the Journal of Philosophy, 1913, 10, 644, and the important study of relations by H. G. Broad, 'Realism and the Science of Mind,' in the Journal of the British Psychological Society, 1911, 9, 87.

3 But logical atomism, the search for 'piecesmeal, detailed, verifiable results,' 5 renders it difficult to give any adequate summary, in the crude unanalysed language of common discourse, of the positions gained, such as the accurate Scheuer utterance of logical entities (not only particular instances, but universals are required in order to sustain the monism), that if any knowledge is possible, mathematical and logical knowledge is, 6 without acknowledgment the priority of epistemology. 7

There is some difference between speaking roughly, American and English new realism; and this is due largely to William James, who has been to the one school what Hodgson was to the other. In his Essays in Radical Empiricism (London, 1912), James approved of the Meinongian things as what they are known as (p. 27), but insisted that they need not be known in order to be (p. 26). The divergence comes when he urges that there is no specific character of mental things, the difference between the logical and epistemological is one of context and arrangement (ib. p. 25). The origin of this lies far back in Hume's application of the argument from the ego-centric predication to the subject as object. Thus, if subjectivism is assumed, we reach the radical phenomenalism world of neutral elements in momentary being at the instant of perception. The further step of giving these elements independent existence apart from perception Hume mentioned 1 only to reject it because he thought that the so-called illusions of sense proved the dependence of ideas on the structure of our organs. But, on Hume's initial assumption, our organs have no permanent structure; they exist when somebody perceives them and not otherwise. 2 If we now retrace our steps, we have the following results: (1) since the argument based on relativity to sense-organs is inoperative, Hume's tentative step of assuming independence for the elements becomes a possible one; but (2) we were led to the necessity for this step by the argument from subjectivism. Thus (3) arises only if subjectivism is assumed, and this (4) has been refuted by Moore. Now American realists believe that they can retrace step (1) without retreatting further, and so find themselves in James's position of belief in absolute knowledge. 3

4 A detailed analysis of the nominalism is given by Russell. 4 Some important consequences follow from the theory; e.g., a mind which had only one experience would be a logical impossibility, since, according to it, a thing is mental in virtue of its external relations—a view which places the important realist claim of independence at the mercy of a thoroughgoing relativist like N. Wiener. 5 Furthermore, neutral monism unduly assimilates belief or judgment to sensation and presentation, thus leading to the view of error as belief instead of, as Smith and so on, to the admission of unreal things. 6 The problem of error must, however, be disentangled from that of 'sense-illusion.' The more complete avoidance of subjectivism by the English realists makes this easier, and renders the question of secondary qualities much more amenable. The objects of acquaintance cannot be illusory or unreal; 7 so, when a hot metal touches a cold spot on the skin, the 'coldness' is objective. 8 Though sensations are functions of the sense organs and the nervous system, this is not primitive knowledge, but cannot be part of the feeling.

6 Broad, p. 165.
7 We may note that S. Alexander holds that Berkeley in some passages avoids the confusion of mental act and what he calls 'internal objects,' but this is approved of in the view that and regards sensible things as independent presentations ('The Basis of Realism,' British Academy, vi. [1914]; cf. also J. Broad, 'Berkeley's Realism,' Mind, new ser., xiv. [1915] 369).

REALISM AND NOMINALISM

temological premises of epistemology. Further- more, the influence of colours tending the same plane at the same time has been noticed. T. P. Numn concluded that a wider idea of ‘thing’ must be constructed. The necessary logical work has been accomplished by Bertrand Russell, who showed that the difficulty over the phrase ‘in the same place’ arose from a too simple and unambiguous conception of space. It is obvious that much remains to be done; in the words of a keen critic of realism, ‘the new philosophy is not out of the wood, but it has cleared hopeful paths in it.’

The traditional logic of Aristotle and the Schoolmen was principally a collection of rules of syllogistic inference, and propositions were analyzed into attributing predicates to subjects. Leibniz, indeed, perceived that there could be valid syllogistic inferences, such as ‘Jesus Christ is God, therefore the mother of Jesus Christ is the mother of God,’ and ‘If David is the father of Solomon, Solomon is the son of David.’ The logic of relations which was indicated by Leibniz was cultivated with not much success by Johann Heinrich Lambert, and with great success in the middle of the 19th cent. by Augustus de Morgan. In his work on quite different lines from that of George Boole, whose symbolism for logic was ultimately based on the Aristotelian logic, De Morgan’s work was published in the Transactions of the Cambridge Philosophical Society from 1850 to 1865, and in his Syllabus of a Proposed System of Logic (London, 1860). This part of de Morgan’s work may be shortly indicated by saying that it was a successful attempt to fulfill a certain recommendation expressed by Sir William Hamilton:

Whatever is operative in thought must be taken into account and consequently be overtly expressible in logic; for logic must be as to be is processes, an unexclusive reflex of thought, and not merely an arbitrary selection—a series of elegant extracts—out of the forms of thinking.

But modern logic proper may be said to begin with Gottlob Frege’s first work, Begriffsschrift, eine der arithmetischen nachgebildete Formelsprache des reinen Denkens (Halle, 1879), should be read in connection with his second work, Die Grundlagen der Arithmetik, eine logisch-mathematische Untersuchung über den Begriff der Zahl (Bréslan, 1884). For the purpose of coming to a decision as to the nature (synthetic or analytic, a priori or a posteriori) of the concept of number, Frege devised an extraordinarily effective, though rather clumsy, symbolism for expressing with great precision the methods and methods of deduction in logic; and this symbolism and analysis were developed in the years 1879–1903. Frege’s final statement of his whole theory is in his Grundgesetze der Arithmetik begriffsschriftlich abgeleistet (Breslau, 1903–1903). Philosophically speaking, Frege’s point of view is clearly expressed in his criticism of the psychological logic of Benno Erdmann’s Logik (Halle, 1882):

It seems to me that different conceptions of the truth are the origin of the controversy. I took upon the truth as something objective and independent of the person who judges. It is not so according to the psychological logicians. What is realism, according to Kant? It is the mind of the judge, an act of judgment proceeding from those who judge, and which therefore is not independent of them but may change with their mental state. Every mental act is dependent on the mind which is not a part of actual things; while the psychological logicians, without more ado, look upon the non-actual as subjective.

In many of his works Frege carried on a sometimes ironically expressed polemic against the thesis that the subject-matter of arithmetic is the actual symbol and not the universals denoted by the symbol. Even Meinong, though nominalist in some respects, as H. L. F. Helmholtz, L. Kronecker, H. E. Heine, J. Thomae, O. Stolz, A. Pringsheim, H. Schubert, and many others maintained, in most cases quite explicitly, this form of nominalism. Frege succeeded in showing quite satisfactorily that the numbers used in arithmetic belong to a domain which is both non-actual and non-mental. The logical work of Giuseppe Peano began to be published nine years after that of Frege, but was quite independent of Frege, and the foundations of Peano’s logical system were much more in conformity with those of Boole and his successors, but Peano used a very convenient and ingenious symbolism and attempted with great success the symbolic analysis of arithmetic and the whole of analysis. Peano’s system included already symbolized mathematical deductions.

Peano laid stress on the fact that his symbolism was a true ‘ideography’ and thus did not make use of anything expressed in ordinary language. According to this Peano’s analysis was greatly inferior to that of Frege, and Peano had the merit of being the first explicitly to point out the fact that the two propositions ‘Socrates is mortal’ and ‘All men are mortal’ are different in form. This distinction, which seems to have been well known to Frege also, though it was not explicitly expressed by him until after Peano had done so, was and is unfamiliar to most other logicians, including some symbolic logicians, because of the use of verbally the same copula (‘is’ or ‘are’) in both cases. The philosophical aspect of this distinction has been thus expressed by Russell:

This [corresponding] confusion . . . obscured not only the whole system of philosophy (set theory) but also the relations of things to their qualities, of concrete existence to abstract concepts, and of the world of sense to the world of Platonic ideality.

The work of Bertrand Russell began with the completion of Peano’s system by the addition of a correspondingly symbolized logic of relations, and advanced, by the independent discovery of many of Frege’s subtle distinctions as well as by unanticipated discoveries, to a very satisfactory combination and development of the results of Frege in logic, Georg Cantor’s results in the theory of transfinite numbers, and Peano’s symbolism. The more philosophical discussion formed the subject of The Principles of Mathematics (vol. i. Cambridge, 1903), and a detailed symbolical exposition of the theory of A. N. Whitehead and B. Russell was given in Principia Mathematica (3 vols., Cambridge, 1910–13).

The philosophical bearing of modern logical work has been particularly emphasized by Russell. Broadly speaking, proper names stand for particulars, while other substantives, adjectives, propositions, and verbs stand for universals. Pronouns and some adverbs stand for particulars, but are ambiguous. Only those universals which are named by adjectives or substantives have been much or often recognized by philosophers, while those named by verbs and prepositions have

REALITY

usually been overlooked. Speaking generally, adjectives and common nouns express qualities or properties of single things, whereas prepositions and verbs tend to express relations between two or more things. Thus the neglect of prepositions and verbs, which is due to the fact that, in practical life, we dwell only upon those words in a sentence which stand for particulars, led to the belief that they could be reduced to mere relations between two or more things. Hence it was supposed that ultimately there can be no such entities as relations, and this leads either to the monism of Spinoza (q.v.) and Bradley or to the monadism of Leibniz (q.v.). The belief just referred to gives rise to redactions of much the same kind as the one of Hamilton and de Morgan mentioned above.

It seems that most philosophers have been less anxious to understand the world of science and daily life than to convict it of unreality in the interests of a super-sensible 'real' world either revealed to mystical insight or consisting of unchanging entities. We find ourselves attributing such things as Parmenides, Plato, Spinoza, Hegel, and this is at the bottom of the idealist tradition in philosophy. However, it is not true that all relations can be reduced to properties of supre-sensible forms. Here we may refer to § 2 above and to Principes, p. viii; cf. p. 448.

Another of the grounds on which the reality of the sensible world has been questioned by philosophers is the supposed impossibility of infinity and the denial of the possibility of a world which assumes infinity and continuity is much easier and more natural, but from the time of Zeno, whose paradoxes were invented to support indirectly the doctrine of Parmenides, the supposed contradictions of infinity have played a great part in philosophical speculation. Some of the problems of infinity were well treated by Bernard Bolzano; but it was the mathematician, Georg Cantor, who, about 1882, first practically solved the difficulties. In fact, it is not essential to the existence of a collection, or even to knowledge and reasoning concerning it, that we should be able to pass its terms in review one by one; but infinite collections may be known by their characteristics although they cannot be explicitly conceived. Such collections can be given all at once by their defining concepts. Thus, an unending series may form a whole, and there may be new terms beyond the whole of it. Because of the fact that infinite collections are not self-contradictory, the reasons for regarding space and time as unreal have become inoperative, and one of the great sources of metaphysical constructions is dried up. 

LITERATURE.—See the works quoted throughout the article.

PHILIP E. B. JOURDAIN.

REALITY.—The words 'real' and 'reality' are used in a variety of different senses; it is therefore impossible to give a single satisfactory definition of them. Moreover, in the most fundamental sense in which they are used they are indefinable. Their meaning is best made clear by considering certain correlative expressions in which they are commonly met (e.g., reality and appearance) and by discussing their relations to certain other notions with which they are very closely connected (e.g., existence).

1. Existence and reality.—In the ordinary philosophic use of reality it would seem that a distinction is drawn between it and existence; for some things which would be asserted to exist would be denied by the same philosopher to be real, and vice versa. If this is the case, then reality is denied to exist. The two words, therefore, cannot be reasonably regarded as having the same intension, and any one who says that their extension is identical is called upon to give some proof of his hypothesis. The most important distinction drawn by philosophers appears to be between things as real and as unreal, but it seems hardly possible to deny that they exist. When I see a colour or hear a sound, I am aware of something, and not of nothing. Also I am aware of something different in the two cases, and the difference seems to be between the objects of which I am aware, and not merely between my two awarenesses as mental acts.

Sounds and colours then may be said to exist, at any rate so long as any one is aware of them; but they are not real, and this is the same as denying something the absence of which is compatible with their existence in the above sense. The two words are not, however, used consistently, and it would perhaps be as much in accordance with usage to say that colours are real but do not exist. At any rate, this example shows that reality and existence differ in intension; and we shall see reasons for preferring to say that colours exist even though they be unreal rather than that they exist, though they do not exist.

The fact that reality and existence differ in intension can also be shown from another side. Many philosophers hold that such things as the number 3 are real; but hardly any one would say that 3 exists, though of course certain collection of three things may exist—e.g., the Estates of the Realm and the Persons of the Trinity. As a foundation for setting up a consistent terminology, we have the following two facts about the common use of words: (a) hardly any one would think it appropriate to say that such things as numbers exist, but many would say that they are real; and (b) there are two kinds of things which almost every one would agree to exist if they be real—physical objects and minds with their properties. Mind and physical objects may proceed to deal with the more doubtful cases of such objects as sounds and colours. We note that the two kinds of objects which are said without hesitation to exist if they be real are particular individuals; i.e., they are terms which can be subjects of propositions but not predicates. Minds and physical objects clearly stand in this position. Objects which are said to be real but are seldom naturally said to exist are universals, whether qualities or relations—i.e. terms which can be subjects of propositions but can also occupy other positions in them. The number 3 is an example; for we can say both that 3 is an odd number and that the Persons of the Trinity are three. We may therefore lay it down as a general rule that objects are most naturally said, not merely to be real, but also to exist, when they are real and have the logical character of particular individuals.

When a man says that he sees a colour, he means that he is aware of an extended coloured object and not merely of a quality. This coloured object—e.g., a flash of lightning—is a particular, and therefore, if real, exists. When we say that red exists, we mean two things: (1) that there are red objects, and (2) that these are particulars. The first part of our meaning corresponds to the
The primary sense at certain times (viz. when we were directly aware of them). But we know what we mean by 'God' and 'the complex universal' in the definition or description of what we mean by the word 'God'? We can see that, if there be an instance of the complex universal involved in the primary sense, it must be a particular; so that, if there be one, it must be real and existent.

We may now turn to those objects that commonly would be said to be real but not to exist. It would seem that every simple universal of which we are immediately aware must be real in the primary sense, and also (a) in a secondary sense which involves the already-mentioned secondary sense of existent as a special case. If we are directly aware of a universal, it is the object of a thought, and is clearly something real in the same sense in which a particular flash of light is real: when it is the object of our senses. It does not, however, exist in the primary sense, because it is not a particular. Again, to be aware of a simple universal, it is necessary to have been aware of some instance of it. Thus any simple universal that we are directly aware of must have instances. It must therefore exist in the mathematical sense. It need not, however, exist in the philosophical sense, because its instances may not be particulars; e.g., we are directly aware of the universal colour, but the instances of colour are red, yellow, etc., which are themselves universals. Thus it seems more natural to say that colours exist than that colour exists.

Nevertheless this is largely a matter of mere usage. We cannot become aware of a simple universal of a higher order unless we are aware of one of the next lower grade, and so on till we come to the lowest universals in the hierarchy—those whose instances are particulars. Thus, to become acquainted with colour, we need to become acquainted with colours; to become acquainted with colours, we need to be acquainted through our senses with particular coloured objects. So we may fairly say that every simple universal of which we are directly aware either exists in the secondary sense, or else there are instances of some universals that are instances of it and themselves exist in the secondary sense.

It follows that the only universals about the reality of which questions can reasonably be asked are either (1) those which are not directly cognized by us, but are described in terms that we understand, or (2) complex universals. The questions that can be asked about the reality of such universals are closely connected; e.g., it may reasonably be doubted whether any one is directly acquainted with the number twelve million and forty-nine. But we all know this number perfectly well under the description of 'the number which is represented in the decimal scale of notation by the figures 12 000 000.' We are acquainted with all the terms involved in this description and with the significance of their mode of combination in it. It is then open to ask: Is there really such a number? This question involves that we may be asked whether any number is dictated or incoherent in the description, as there would be if a number were described as that represented in the decimal scale by a bow and arrow. But (b) if the description be self-consistent and intelligible, it is not really in question whether the number is real and existent. If both these questions can be answered in the affirmative, the number will be said to be real in the primary sense. We can then go on to ask

It is clear that every immediate object of our senses both exists and is real in the primary meaning of these terms so long as we remain aware of the object. For it seems to be a synthetic a priori proposition that anything of which we can be directly aware by our senses is both real and particular; and what is real and particular exists in the primary sense, and must exist. In a secondary meaning of reality, such objects may be called unreal if they give rise instinctively to judgments asserting the continued existence of the same or similar objects when unperceived, whereas in fact nothing of the kind can be perceived. Questions as to the reality of any particular, whether it has its primary sense, can arise only if that particular be not an object of direct awareness. Thus we ask, Does God really exist? or, Are atoms real? The meaning of such questions is as follows: God and atoms are not the direct objects of our minds at any time; if they were, there could be no doubt of their existence and reality in the primary sense at certain times (viz. when we were directly aware of them). But we know what we mean by 'God' and 'the complex universal' in the definition or description of what we mean by the word 'God'? We can see that, if there be an instance of the complex universal involved in the primary sense, it must be a particular; so that, if there be one, it must be real and existent.

It follows that the only universals about the reality of which questions can reasonably be asked are either (1) those which are not directly cognized by us, but are described in terms that we understand, or (2) complex universals. The questions that can be asked about the reality of such universals are closely connected; e.g., it may reasonably be doubted whether any one is directly acquainted with the number twelve million and forty-nine. But we all know this number perfectly well under the description of 'the number which is represented in the decimal scale of notation by the figures 12 000 000.' We are acquainted with all the terms involved in this description and with the significance of their mode of combination in it. It is then open to ask: Is there really such a number? This question involves (a) whether the number is dictated or incoherent in the description, as there would be if a number were described as that represented in the decimal scale by a bow and arrow? But (b) if the description be self-consistent and intelligible, it is not really in question whether the number is real and existent. If both these questions can be answered in the affirmative, the number will be said to be real in the primary sense. We can then go on to ask
the question: Is there any collection of particulars that has this number? If so, we can add that the number exists in the secondary philosophic sense in which existence can be predicated of universals.

Very similar questions arise over complex universals, e.g., a golden mountain. It would seem that complex universals which involve no internal incoherence must be real in the primary sense if their constituents be real. Thus the universal 'golden mountain' is real even though there are as a matter of fact no golden mountains. And if it should turn out that the universal has no instances, it will exist neither in the mathematical nor in the philosophic sense; if it has instances which are not particular—as, e.g., the complex universal 'perfect number'—it will exist in the mathematical but not in the philosophic sense. But very difficult questions arise as to the reality of complex universals which involve a contradiction or some other a priori incoherence—e.g., a 'round square.' Can we say that such universals are in any sense real?

This question has been discussed very fully and acutely by Meinong and his pupils. The following are arguments for supposing that such universals are in a sense real. These incoherent universals appear to be propositional, and, as such, are real. For instance, as such a proposition as 'A round square is round' and 'A round square is impossible,' the proposition is the object of an act of judgment, and, as such, is real. But the proposition is a complex, and, to understand it, its elements must also be the objects of acts of presentation. Hence the universal 'round square' must exist as a mental act, and it therefore cannot be nothing, and must have primary reality. It will be seen that the question discussed here is similar to that raised by Plato in the Sophist: In what sense, if any, can not-being be?

Meinong and his school have been led to the view that there is a most primitive form of being that applies to all objects about which assertions or denials can be made, whether they be internally coherent or not, and exist or not exist. It is the view that Meinong has put forward that existence is a property of what is true, and existence a species of reality. We may agree that anything that really or objectively exists is true in the primary sense, and we may call such things real for the purpose of Meinong's views, whether they be of a complex or a simple form. Meinong assumes that all mental acts concerned with propositions are founded on an act in which the proposition is before our minds as sense-data and universals are when we are directly aware of them. If so, propositions which we judge, whether they be true or false, have exactly the same links to primary reality as a red patch that we see or the quality of redness that we cognize. Yet it is very difficult to believe that every false proposition that any one has ever judged is real; whilst, if we reject the reality of false propositions, we can hardly save that of true ones.

The general means of meeting Meinong's difficulty depends on recognizing the fact that, in the language of his propositional forms which stand for propositions, the word or phrase that counts as grammatical subject cannot be regarded always as the proper name of the logical subject of the proposition. In the sentence 'Red is a colour' the grammatical subject 'red' is the proper name of the logical subject of the proposition, and therefore the universal red is real; but it does not follow that in the grammatically similar form of words, 'A round square is round,' the phrase 'a round square' is the name of anything. In fact two other possibilities remain open: (1) that the sentence 'A round square is round,' though it has the same verbal form as some sentences which do stand for propositions—e.g., 'A penny is round'—does not stand for any proposition, and (2) that the sentence does stand for some proposition, the proposition for which it stands can be analyzed into a combination of several in none of which a single object whose name is 'round square' appears as subject.

Both these alternatives may be used for dealing with the reality of round squares. In the first place, we may suggest that a sentence like 'A round square is round' seems to stand for a proposition only because of its similarity in grammatical form to certain sentences which do stand for genuinely genuine propositions. We may call these marks or bear the corresponding sounds, we do not think of any proposition whatever. And likewise, when we say that it is necessary that a round square should be round, we mean only that sentences in which the name of a part of the grammatical subject appears as the grammatical predicate stand for necessary propositions if they stand for propositions at all. On the other hand, the statement 'A round square is contradictory' itself does seem to stand for the proposition that there is a proposition about an object denoted by the phrase 'round square.' The proposition really is: 'If an object be round, it cannot be square, and conversely.' This proposition does not contain a complex term denoted by 'round square,' but asserts a relation of incompatibility between roundness and squareness. Hence its reality, truth, and intelligibility do not imply the reality of a complex universal 'round square.'

Before leaving this subject, a word must be said about the reality of objects that involve an a priori incompatibility, but in which the incompatibility is not obvious without proof as in the case of 'round' and 'square.' Does the phrase, 'an algebraical equation of the second degree one of whose roots is imaginary,' stand for a proposition for it involves a priori incompatibilities. But we must not say that sentences with this phrase as their grammatical subject as used by most people are in the same position as 'A round square is round.' This is because the same missing a priori incompatibility as these sentences may stand for propositions, though they cannot be about any object of which the phrase in question is the name.

3. Appearance and reality.—The question of the reality of propositions would lead us into problems connected with Bertrand Russell's theory of judgment and G. E. Moore's doctrine of real possibilities which would carry us too far afield. We will
therefore pass at once to the opposition between reality and appearance, with which is connected the doctrine that there are degrees of reality.

The simplest and most obvious case of this opposition is what is known as the contrast between sensible appearances and physical realities. A cup is believed to be round, yet from all points of view but those which lie in a line through the centre of the circle and at right angles to its plane it appears elliptical. But if we suppose that various points of view are called the 'sensible appearances' of the cup, and are contrasted with its real shape. It must be noticed that the opposition between sensible appearance and physical reality is not simply that between two facts, but that a tendency to use certain qualities of the one that belong only to the other.

The last point is of considerable importance with reference to the statement that Reality is a harmonious whole, and that appearances are contradictory because of their internal incoherence or contradiction. Reality is here used as a concrete substantive, and means the whole system of what really exists. But presumably it is also true that anything that is real, and therefore any part of Reality, must be internally coherent. Now, sensible appearances are real, as we have tried to show; hence they must be internally consistent. There is no internal inconsistency in a red elliptical patch seen by any one, and the person who calls this an appearance does not do so because of any self-contradiction, if any, there is about it. The incoherence arises when the elliptical red patch is taken to be identical with some other part of Reality (e.g., a colourless circle) whose qualities are incompatible with its own. The elliptical red patch is 'real,' but the colourless circle may very well be real; the former is called an appearance, and the latter a reality, because objects of the latter kind are of much greater practical interest and importance as obeying the laws of nature, and as involving the intimate relations between the two are liable to cause us to make the mistake of identifying the qualities of the two where they really differ. Reality—the whole system of all that exists—must include both the elliptical red patch and the colourless circle, if both be real; and their precise nature and relations are a matter for further philosophical investigation.

This seems obvious enough when we consider only the contrast between sensible appearance and physical reality, and that the eminent philosophers use the contrast in many cases where what they call the appearance is not an object of sense-perception. F. H. Bradley, e.g., argues that the self and goodness and relations are not objects of sense-perception, and that the self has incompatible characteristics. This is very different from the kind of false judgment connected with sensible appearances. (1) As we saw, no kind of false judgment need be made there, and if it be made and corrected, the sensible appearance continues to exist. (2) There is nothing self-contradictory in the predicate that is wrongly ascribed to physical reality through confusing it with sensible appearance. The judgment that is false is this: 'This cup is elliptical,' but because it is incompatible with the circularity that the physical cup is supposed to possess. On the other hand, if the self be an appearance in Bradley's sense, the assertion 'Socrates is a self' is false, because the predicate is self-contradictory;
it is like saying 'Socrates is both tall and short.'
The quality of being a self can be truly ascribed 
of nothing, while that of being epilcical can be 
true asserted at least of the sensible appearance.
There is thus a great difference between what is 
meant by calling the seen ellipse an appearance and 
calling the self an appearance.
When this difference is recognized, we see that, 
whilst it is obvious that sensible appearances are 
contaned in Reality, it is not at all obvious in 
what sense such appearances as the self can be con-
ained in it; for these would seem to be in the 
position of round squares. This brings us to the 
doctrine that there are degrees of reality. It is 
held that all appearances are internally incoherent, 
but that some are more coherent than others. As 
a corollary to this, it is maintained that no appear-
ance is as such contained in Reality; on the other 
hand, as Bradley puts it, 'appearances are trans-
mitted' in order to be contained in Reality, and 
the one-sidedness of one appearance cancels out 
with and is corrected by that of others. This 
doctrine seems to be closely connected with that 
others: (a) Reality as a whole being a harmonious 
system, it is assumed that, the more an appear-
ance needs to be modified and supplemented in 
in order to take its place in Reality, the less coherent 
and the more deviant in form it is, the lesser is its 
truth largely dependent on the view that all appearance 
is connected with the peculiar position of finite 
minds, which can know Reality only fragmentarily 
and from an individual angle; lastly (c) it is held 
that nothing of Reality can be correctly comprehended 
in abstraction from its relation to the rest of 
Reality. We may trace the development of this 
view in Spinoza's doctrine of the three kinds of 
knowledge and in the Hegelian dialectic to its 
corresponding Bradley's position.

It is clear that both (a) and (c) are needed if it is 
to be assumed that Reality is the only harmonious 
system. And this is assumed; for very often 
something is condemned as appearance, not so 
much because of any internal incoherence that can 
be directly detected in it as because it obviously 
cannot be predicated of Reality as a whole. It is 
possibility to give a fair and adequate criticism of 
suffice and elaborate a doctrine here. But the 
four points mentioned above are now considered.

(1) Either Reality can be correctly regarded as 
possessing parts or not. If so, it would seem that 
there must be some propositions that are true 
about the parts and not about the whole (e.g., that 
they are parts). And again, if the parts be real, 
they must be as internally harmonious as the 
whole. It may be perfectly true that what we 
take as one self-substantial differentiation of Reality 
is often neither one nor self-substantial, but a mere 
fragment whose limits do not correspond with 
those of any single differentiation (cf. here 
Spinoza's distinction between the hierarchy of 
infinite and eternal modes and the finite modes, 
and his closely connected theory of error). But 
even Reality has something and has a nature 
of its own, and perfectly true propositions must be 
possible about it. We may of course make 
erroneous judgments if we ignore the fact that it 
is a fragment, and if we make assertions about 
its parts which are based on its relations to what is 
outside it. But we do not have the absolute 
right to make assertions about what we are talking about is not the whole; 
e.g., when we say that Socrates is a self, we are 
perfectly aware that Socrates is only a part of 
reality, and that our statement may be false of 
the whole and true of the parts only. Such assertions about a fragment must depend for their 
truth on what is outside the fragment (cf. here Spinoza's 
doctrine of the function of the notiones communes 
in passing from imaginative to rational knowledge).

If, on the other hand, we suppose that Reality 
cannot be correctly regarded as having parts, the 
question arises: What precisely is it that is called 
an appearance, and what precisely is supposed to 
be 'transmitted and supplemented' in Reality? 
Something must be transmitted and supplemented; 
it cannot be Reality as a whole; what can it be 
unless Reality has real parts? Bradley has seen 
these difficulties perhaps more clearly than any 
other philosopher of his general way of thinking; 
but it is hard to believe that his doctrine that 
Reality is a supra-relational unity, and that all 
predication involves falsification is a satisfactory 
solution. Indeed, it perhaps comes to little more 
than a re-statement of the theological position that 
the nature of God can be described only in negative 
terms which at least ward off error.

(2) Sensible appearances, which, as we have 
seen, differ in important respects from others, are 
also held to exhibit what may be called degrees 
of reality in a special sense. As we know, these 
realities are called appearances and unreal only 
with respect to their relations to a supposed 
physical reality about which they are held to be 
an indispensable source of information. Yet, 
who that deny the physical reality of secondary 
qualities would be inclined to say that the colours 
and the shapes are in reality, if not another 
and that are seen at the same time, and more real 
than the colours and shapes seen in dreams, delirium, 
or illusions. We may usefullo compare here Kant's 
distinction between Schein, Erscheinung, and Ding-
aus-Sich in his example about the rainbow to that 
between the colours and shapes of dreams, the 
realities of wakening life, and the qualities of physical 
objects (it is not of course suggested that Kant had 
in mind precisely the distinctions which we are now 
considering). But the four points mentioned above are now considered.

As far as can be seen, the ascription of degrees 
of reality to sensible appearances simply depends 
on how intimately their qualities are supposed to 
be connected with those of a corresponding physical 
reality. To a man who takes the position of 
Locke and of most natural scientists the elliptical 
shapes seen in waking life (to revert to our old 
example) are the most real of appearances, because 
the corresponding physical reality actually has a 
shape, and we may suppose that in a world where 
the one be in any way connected by simple laws with 
that of the appearance. The colours seen in waking life are less real 
appearances because it is not believed that any 
physical object has colour, though it is held that the 
colour seen is correlated with the internal structure 
of the corresponding object. And the shapes and 
colours of dreams or hallucinations are held to 
have the lowest degree of reality, because, while it 
is admitted that they are correlated with distinc-
tions that exist somewhere in the physical world, it 
is held that these distinctions exist in the brain or 
in the medium rather than in any object that can 
be regarded as specially corresponding to the 
appearance in the way in which the round physical 
cup corresponds to the elliptical visual appearance 
seen in waking life.

4. Ethical sense of the term.—It remains to 
otice one more use of the words 'real' and 'reality.' 
They are sometimes used in an ethical sense to 
stand for what ought to be as distinct from what 
It would be interesting to discuss the two senses 
both more generally and by the various authors. Often we contrast real and ideal, and say that 
what actually exists is real, whilst what ought to exist 
but does not is ideal. Yet some ethical 
writers use the word 'real' for 'ideal,' and others use the word 'ideal' for 'real.' It often?
that ought to be as contrasted with that which 
now is. This use of terms is generally connected 
with metaphysical theories of ethics such as 
Kant's or Green's, which hold that the self that 

REALITY
ought to be really exists and has a higher degree of reality than what would commonly be called the self as it really is.

**REALITY** (Buddhist)

This trend in Buddhist teaching was not due to the absence of theories concerning the nature of being in the early days of Buddhism. There were views maintained very similar both to that of the Parmenides and to that of Anuruddha. The universe was a plenum of fixed, permanent existents; and to the other extreme as maintained by Gargas and other Sophists—that 'nothing is'. These Indian views, probably antedating those of Parmenides, were set forth to the Buddha by his 'middle theory' of conditioned or causal becoming. His brief discourse is given in the Sutta of the Sanguttavaka, and is cited by a disciple in another Sutta nearly adjacent to that containing the similes referred to above. And we hear no more of the extremist views till we come to the book purporting to be the latest in the canon—the Kathavatthu. There among the first, presumably the earliest compiled, arguments of the work we find that the positive theory—'everything exists' (i.e. continues to exist)—so far from being generally rejected among Buddhists, was maintained by a school which attained to great eminence not only in North India, especially in Kashmir, but also in Eastern India, especially in the south-eastern islands—the school of Sarvastivādins (q.v.; Pali, Sabbpavādins), or 'All-believers'.

The attitude taken up in the Theravāda, or mother-church, towards what might now be called reality, developed along a different line. This confronts us in the very first line of the Kathavatthu: 'Is the person (self or soul) known in the sense of a real and ultimate fact?' In other words (as is rightly supposed) in the process of the long series of arguments, does the term 'person,' conventionally used as a convenient label for the composite phenomenon of a living human being, correspond to any irreducible and permanent entity, non-meno, ego, soul, immanent in that phenomenon? This distinction between the current names in conventional usage and the real nature 'behind,' or 'above,' what is designated by them is anticipated already in the earlier books of discourses and dialogues ascribed to the Buddha. A man's personal sense of selfhood as being real, or a fact (sacca) to him at any given moment, albeit the word expressing that personality is but a popular label, and is not paralleled by any equally fixed entity in man. But, in the inquiry which the problem of philosophical thought is posed to the world, in a lute in a lute, to a lute in a lute, and to conjuring directly. The world is compared to a bank of bubbles: one bubble is not meant to convey the lower denacter Indian Buddhist and Vedāntist sense of the ontological unreality of the objects and impressions of sense. The similes convey on the hand a repudiation of the distinction between the substantial and the phenomenal substance or soul, and on the other a depression of any genuine satisfying value in the spiritual life to be found in either 'the pride of life' or 'the lust of the world.'

1. Therigāthi, 206.
2. Dh. 394.
3. Sāyuttīya, iii. 141.
of this aspect of reality for Buddhists is visible in the writings of Ledi Mahāthāra.1

In his discussion of the terms paramattha and aseva S. Z. Aung quotes medieval philosophical works, which are practically at one in interpreting paramattha as meaning either a sense datum or a thing per se (abhāva) which is veritably exist-
tent to the extent of irreversibility or inaffability. Such ultimately real things, referred to by Anuruddha in a ‘fourfold category’ may also be distinguished under two heads — as unconditional and condition-
dered. Under the former head, meaning ‘whatever is not causally related to anything else,’ Buddhist philosophy refers its metaphysical conception of nibbāna (nirvāṇa), i.e. its hypo-
thetical state which is not life, in that there is no birth or death, the essentials of life. Under the conditioned are comprised all the elements (not the compound phenomena) of matter and mind. In the former the elements, abstractions from earth, water, fire, air, are, respectively, that which extends itself, coheres, burns, moves. Mind is ultimately conceived as consciousness plus a number of what the present writer has called mental co-
efficients (Pāṭ, cetoska-dhammā, ‘mentals’), such as feeling, perception, understanding. All these conditioned elements, though ultimately real, are in a perpetual state of change, i.e. of genesis and cessation, wherein there is always a causal series, one momentary state arising because of its prede-
cessor and transforming itself into its successor. Nothing is causal or fortuitous. All is in a state of causally determined becoming. In the ultimate constituents of conditioned things, physical and mental, Buddhism has never held that the real is necessarily real in a word, goes beyond the inarticulate. Writing of this anticipa-
tion, Bertrand Russell is now asking modern philosophy to concede no less.2

LITERATURE.—See works referred to in the article.

C. A. F. RHY'S DAVIDS.

REAL PRESENCE.—See Eucharist.

REASON.—I. Definition.—In the most generalized sense, all reason might be defined as the relational element in intelligence, in distinction from logical and emotional.

Such a definition could justify itself by etymology: both λόγος and ratio, from which the word as a philosophical term descends historically, have sometimes the meaning simply of ‘relation.’ This is the case, e.g., in the use of the word logismos, λόγισμος, in the New Testament. We must seek for something more limited.

At the beginning of the search we are met by an ambiguity. Man is defined as the ‘rational animal’; yet the ‘reason of animals,’ at a level below the human, is currently spoken of. The explanation of this ambiguity will point out the definition which we require.

It is true that the lower animals have ‘reason,’ as well as ‘instinct’ (which may be defined as the direction, physiical as well as physical, of actions to ends, without knowledge of their purpose). Sensational emotion, in the sense that they, in varying degrees, direct their actions intelligently to desired ends; but not even the animals nearest to man have the power of thinking in general terms, expressed in language. Man has this; and, in the traditional definition of man, it is this that is distinguished by the name of ‘reason.’ The subject may thus be dealt with either psychologically or epistemologically,—i.e., ways may be considered the origin and growth of con-
ceptual thought; or we may consider it as actually exercised in the discovery of true propositions.

Psychologically it has been dealt with under the head of INTELLECT. In the present article we shall consider reason, not further in relation to the classification of the mental powers, and not primarily in the technical sense, but rather in relation to the philosophical discussions on the validity of scientific knowledge, of moral precepts, and of metaphysical beliefs.

2. The term in Greek philosophy.—(a) The pre-
Socratics.—Reason, of course, was used by man long before the use of it was reflected on, and long before it was appealed to as the ground of knowledge or belief. When it is thus appealed to, it comes to be set, along with experience, in antithesis to passively accepted custom or tradi-
tion; and the reason, more precisely, in antithesis to the particular facts known, as dis-
tinguished from the form and the generality of knowledge. The last stage was reached in the early philosophy of Greece—not at the very begin-
ning, but as early as Heraclitus and Parmenides. For the earlier period of the Hellenic world, as for the pre-
Hellenic world generally, the vague Homeric use of such words as νόος, φήσις, πράξης, in which reason is not clearly distinguished from sense, or the mental content of the organic procedure which goes with it physiologically, may be taken as characteristic. Something of this vagueness indeed always remains in literary and even in philo-
osophical usage;1 but there comes a time when language enables us to distinguish if we choose. The time when generalizing thought was con-
sciously recognized, in distinction from the sense or experience in which it is immersed, arrived when the deductive science of mathematics had begun as a distinct and original procedure, marking a step beyond the accumulation of ob-
servations and empirical formulae in the science of the ancient East. It was this, though perhaps neither thinker was fully aware of the source of his thought, that caused Heraclitus and Parmenides to begin the series of articulate statements of a philosophical criterion. Earlier thinkers had already started the series of doctrines, but with-
out a definite test of truth.

The balance, as a necessary consequence of the new departure in which the inquiry had its source, inclines at first to reason in its distinctive meaning as against the later-formulated criterion of experi-
ence. Heraclitus, indeed, appeals also to experi-
ence, but his criterion is a vague and vague.

The balance, as a necessary consequence of the new departure in which the inquiry had its source, inclines at first to reason in its distinctive meaning as against the later-formulated criterion of experi-
ence. Heraclitus, indeed, appeals also to experi-
ence, but his criterion is a vague and vague.134

This, however, is still vague philosophically. Par-
menides is more precise, and in his affirmation that reason is the criterion he is more exclusive: we are to ‘judge by argument’ (κρίνων λόγον [frag. 1. 30]). Anaxagoras returns to a kind of balance, making for a distinction between rational consideration (λόγος) and by experience (τρέχον), of course, of the fragment translated less determinately by Burnet:

So that we cannot know the number of the things that are

1 See Burnet, Early Greek Philosophy, p. 147, n. 2.

2 The meaning of λόγος in Heraclitus is still disputed; but, when most approximate to reason, it seems to mean a rational law of things and of the mind rather than a test applied by the mind to its knowledge of things (see art. Logos).
REASON

separated off, either in word or deed. And the atomists declared opinion (δόξα), not properly scientific because not dialectical or mathematical, which deals with more or less conjectural methods with the phenomena presented to sense-perception. On the dialectical side, what had been partially formulated by Plato was definitively formulated by Aristotle, who stated the axioms since known as the "laws of though," and made them the basis of his codified formal logic. Aristotle, on another side of his mind, was much more of a naturalistic inquirer into human nature; but, in his general view of the test or tests of truth, he remains faithful to the principles of his master. 

(c) Epicureans and Stoics.—The next period of Greek thought, occupied as it was with the effort to fill the void left by the loss of the old religious framework, was the cosmopolitan world for which the bond of the city-State had become a waning tradition, brought on the search for a more tangible reality than that of the metaphysics in which the Platonic and Aristotelian dialectics for their own completion. To arrive at some external reality in the most expeditious way was the theoretical problem. Then, without useless lingering over this, the philosophic learner could go on to the essential thing, which was practice. The great positive school of this period, the Epicureans and the Stoics (p. v.), while differing much in detail, solved this problem fundamentally in the same way. Going back to the earlier thinkers, they developed more consistently the naturalistic side of their doctrine. The rude rudiments could be found in them of theories which, in the explanation of mind, preceded from the physiological organs and made the senses psychologically fundamental. From these rudiments the new schools, with the long dialectical development of the intervening period behind them, worked out in considerable detail what we may call an experiential theory of knowledge. Not rational argument as such was the criterion, but a certain mode of experience. Epicurus, while taking for his ultimate account of reality the atomism of Democritus (with changes that were scientifically for the worse), completely inverted the position of Democritus with regard to the senses. For Epicurus, the sense-perception is primary; he defines it as "clear consciousness" and thus actively as they appear. This is formally stated by Sextus Empiricus, who was our authority for the precisely opposite affirmation of Democritus. Epicurus, he says, affirms that sense-perception is trustworthy in its hold of reality throughout. The part of λόγος in the Stoic system, like that of αύτος for Anaxagoras, is ontological. In one of its meanings λόγος is the law that runs through the world; but reason as the procedure of the mind in dealing with the general is not for the Stoic theory of knowledge the ultimate test of truth. The ultimate test for the Stoics, as for the Epicureans, is experience. 

(d) Sceptics.—The opposition that this doctrine had to meet came from the sceptics, especially those of the New Academy. That the most reasoned scepticism should have proceeded from the Academy (q. v.) reveals its essential nature. For a time the attempt to build a positive system from the points of view developed in Plato's Dialogues was abandoned, and his school threw itself into negative criticism. A system of confident dogmatism like that of the Stoics provided it with material exactly to the purpose. Carneades seems to have been the one to whom is known to give a true account by the sense of possession that goes with it and the absence of any opposing presentation. As Sextus puts it, λόγος καὶ τὴν ἀληθίνην τὴν κατολικὴν ἐπιστήμην μὴ μόνον ἐν τούτω ἀληθίνῳ εἴπερν τοῦ καπνίδε, ἀλλά καὶ ἐν τῷ ἐχθρίπτος ὑπὸ τοῦ ἐφιάλτος ἢ Ἴλιον ἠτακνόρα ἤ ἀνθρώποιν ἐκ τοῦ ἔγχρωμα. The part of λόγος in the Stoic system, like that of αύτος for Anaxagoras, is ontological. In one of its meanings λόγος is the law that runs through the world; but reason as the procedure of the mind in dealing with the general is not for the Stoic theory of knowledge the ultimate test of truth. The ultimate test for the Stoics, as for the Epicureans, is experience. 

1 See Republic, end of bk. vi., for an exact account.
which, arising independently, at length absorbed the Academy.

c. Neo-Platonists.—With a positive, and no less
constructive, aim, Platonius revived the
Platonic idealism, bringing into it more system
through the study of Aristotle, and turning it
against the Stoic materialism (see art. Neo-
Platonism). Even sense-perception, he
allowed, is inexplicable from the basis of mere
physiology; but, for the test of truth, he
turned away from sense and insisted on reason as that
which judges. Mysticism, though a distinctive
feature of his thought, does not furnish the
clue. For the mystic experience, being a
state beyond knowledge, seizing upon that which is
beyond mind, cannot be explained to one who has
not had it. The reasoned system points to it,
but does not include it as part of a completely
rational process; it is	tertio, a standing out of
system. The system itself consists of demonstra-
tions, and its criterion is reason. Thus, after
a long and fluctuating process, thought had
returned to the dialectic and logic of Plato and
Aristotle as offering the soundest principles of
knowledge yet discovered.

This was, however, more clearly brought out by
Proclus (A.D. 410-485) two centuries after Platonius
(394-270). For Platonius the ideal is reason, as
in the sphere of the abstract, reasoning against
the highest order of knowledge. Proclus does
not reject this, as he does not reject the more
distinctively mystical experience beyond it; but for
the definitive test of truth he selects a more generally
applicable, and at the same time more
rational approach (νοηματικα) which may
be useful in relation to different kinds of
subject-matter are many; but the soul is a unity
as well as a multiplicity; and there must be some
universal criterion for every soul. This he finds
to be neither pure intellect (νοημα) at one extreme
nor sense-perception (αισθητικα) at the other, but
discursive reason (λογικα). Here is the process
of explicit formulation by which the higher is
mediated to the lower and the lower to the higher.
The mind may start from the glimpses of intuitive
reason and rise to the more complex, as rational
processes; and thus the individual mind
progresses from the particular to the universal. But
the system of knowledge, it must be established
by a process of argument. The circumspicution
which he ascribes to Plato in assigning their proper
places to the various philosophical schools has
certainly to be found in the passage where he
gives this guarded expression to philosophical
rationalism:

ειλοιον της κριτικης ουσιως ηττων —οι δρας που τη θεωρηματικη
κριτικη επιθυμον — τη βοηθων ουσια και παθησιν, το κατοικον
ειν οντο απο τον το σοικο, και κατοικον τη εκδοσιαν και
καταδικην της ένδυσεν; διεκ δε οντο επιθυμον παθησιν

As first matter, or mere possibility, below the
limit of true knowledge, is seized by a kind of
bodily reasoning (νοον λεγειμαι in Plato's phrase),
so the One, at the other extreme above knowledge,
is seized by a kind of bodily intuition (νοον νοον).
Thus every text finally has a certain resemblance
in the model test of explicit reason. If the other
tests are to be regarded as having their own
validity, it must be shown by argument how they
can have it; though argument, of course, cannot
enable us to dispense with direct perceptions
whether of intellect or of sense.

Reason in its process may be called in the
philosophical sense 'rationalism' remained
finally supreme.

2. Medieval and modern use.—(a) Scholasticism.

—in the medieval schools rationalism (q.v.) be-
came a dominant influence. In this passage cited
above from Proclus might have been taken by
the Schoolmen of Western Christendom,
without its qualifications, as a text to prove the
exclusive value of their characteristic activity. It
was long after Proclus, and long after the suppres-
sion of the order of the Dominicans, that the
name of rationalism was lost to the liberal
thought that had the revival of philosophical
thought began in the West; but, when it came, it
gave evidence of continuity with the latest thought
of antiquity. Its first great movement was an
immense development of discriptive reasoning.
Precisely because the Middle Ages had lost the
freedom with which in classical antiquity ultimate
beliefs could be discussed, there was such an
discovery of formal method as had never been
known before. The value of this must not be
underrated. In a sentence from W. Hamilton's
Discussions in Philosophy which Mill prefixed to
the first book of his Logic it is put thus:
'To the schoolmen the vulgar languages are principally
indelible for what precision and analytic subtlety they possess.'

Croom Robertson says:

'All the world has heard of scholasticism as an oppressive
system of pseudo-inquiry, degenerating in a struggle of
reasoning to, and for, the revulsion of rationalism struggling to be' ('The English Mind,' Philo-

The reverse side of the case remains, of course,
that this rationalism was very limited. The
Schoolmen made a fine art of formal reasoning;
but the habit of accepting traditional authority
for facts and data was so fixed that the attempt
to break away from it, though a common
idea, was carried out in a sporadic way.
To get out of the circle of things taken for granted or assumed
discretely, a revolt against the School-philosophy
itself became necessary. The controversy about
the reality and abstracts was mainly ontological.
By their contention that only particulars are real,
and that the genus or species is only a name
indicating resemblance between the members of a
class, the nominalists might seem nearer to modern
empiricism than the realists, for whom class
definitions indicated a reality like that of the Platonic
ideas; but the methods of both were equally
dialectical. An aid to the imagination in forming a
notion of the time that it took new views about
method to emerge is to remember that there is a
long period between the time when Francis
Bacon go to experience and those of Francis
Bacon, than between the publication of the Novum
Ordoenum (1620) and the present date.

Roger Bacon is an isolated figure in the greatest
period of the School-philosophy. Another
great English thinker, William of Ockham, in
the next century, promoted by his dialectic the
disintegration of the imposing dogmatism of St.
Thomas Aquinas (q.v.) and John Duns Scotus (see
art. Scholasticism). Then came the beginnings
of the new movement of humanism (q.v.),
taking the form at first of a more literary interest in the
Latin classics. After the revival, in the 16th cent.,
of direct knowledge of Greek thought in its original
sources, followed by the setting up, in the 16th,
of older types of thinking, in conscious rivalry with
the whole medieval scheme of theology and phil-
osophy, the movement against Scholasticism took
a more systematic new departure.

(b) Experientialism and rationalism.—This,
in the 17th cent., expressed itself in the effort
to establish once for all the right 'method' of seeking
truth. The new aspiration for firm knowledge,
instead of barren disputes about insoluble ques-
tions, culminated in the time of the 17th cent.
reforms of Bacon and Descartes (qq.v.).
Bacon not only clothed in the most impressive
language the appeal to experience as the test by which every
claim to possess real knowledge must be verified,
but also gave an actual theory of induction, no longer unsystematic,
but rising by stages from particulars to generals, as
deduction descends from generals to particulars.
Descartes, himself a discoverer in geometry, set against the sterile formalism of medieval logic, which even in its best only that had been implicitly asserted, the real deduction of new truth in the mathematical sciences. This began the two great movements of philosophy known as English experientialism and Continental rationalism, but it is important to note that these were not so definitely rival as they had become later when Kant turned his critical thought on both at once. The great Continental rationalists, Descartes, Spinoza, and Leibniz (qq.v.), all took occasion in the way of the departure of the English in their appeal to experience. In all the English thinkers, on the other side, unreduced elements from the rationalism of ancient science and of the Scholastic tradition remain over. It would be easy to show this in the case of Bacon, Hobbes, Locke, and Berkeley (qq.v.). And Hume (q.v.), who carried farthest the effort to resolve all ‘principles of reason’ into derivatives of pure experience, treated his results not as ‘dogmatic’ but as ‘sceptical’, i.e. as suggesting problems for reconsideration; finally abandoning his first elaborate attempt to explain mathematics as an essentially empirical science. By Kant (q.v.), while the opposition with him arrived at the most explicit statement, the theory of reason as experience! The constituents of truth was most systematically attempted. Reason, according to Kant, does not merely enable us to arrive at ‘analytical’ judgments implied in what has been already said, but, in the very process of itself, yields genuine new truths in the form of ‘synthetic judgments a priori.’ Yet, while these are not given in mere experience, they have no valid application beyond all possible experience. All true science consists in carrying reason into the construction of nature so as to make it intelligible to thought. Even those highest principles that seem to go beyond this have value only as furnishing an ideal that the actually working system of science may try to approach and so gradually perfect itself.

(c) The Kantian rejection and the revival of experientialism.—If we were to stop here, it might seem that now, as at the end of ancient thought, the supreme place, though with circumspect, was assigned to reason. Kant, however, did not, even for a moment entertain any determinable group of thinkers. The problem became on the one side to develop him, on the other side to answer him. Hegel (q.v.) has been thought to have carried philosophical rationalism to the highest point. By a new logic, the whole order of the universe, he seemed to promise, was to be shown forth as a manifestation of reason. Yet, curiously, his power appears most in a strong grasp of experience intermittently attained, but unmediated by any method fitted to carry general conviction. The next representatives of experientialism, in contrast, were men of pre-eminently deductive minds, whose strength was in reasoned exposition, and who, in the days of Scholasticism, might have been famous as irreproachable doctors. For the complex period at which we have arrived it is more true than ever, in the phrase borrowed by Hegel himself from Anaxagoras, that things are not ‘cut in two with a latchet.’

Descartes himself lented much to a clear issue for the thinkers just alluded to had they known Kant at first hand; but they knew him only indirectly or very imperfectly. Coutte, who, like Descartes and Leibniz among modern philosophers, was the first to bring out the original power, thought that he could explain even mathematics philosophically as based in generalizations from pure experience (see art. POSITIVISM). J. S. Mill (q.v.), who succeeded in founding a valid inductive logic by deducing the actual tests of experimental science from a general principle, the uniform formula, fall back, for the proof of this, on the weakest mode of induction,—viz. that ‘induction by simple enumeration’ which the Baconian canons and his own had been devised to supersede. And this, in both cases, without any acknowledgement of Kant’s arguments for the necessity of a priori principles in the sciences of nature as in mathematics. It is not surprising that, both in France and in England, the two countries where the experientialists took shape from Locke had been strongest, there was a strong reaction against movement, as some put it,—in the Kantian direction. For the whole of Europe, however, it must be said that the predominant movement in the 18th cent., through the influence on philosophy of the enormous new developments in the sciences of experiment and observation, was greatly to enlarge the place given to experience as compared with that which it held in antiquity, and to reduce the principles of reason which science finds that it cannot do without to an attenuated form. The elaborate apparatus of Kant was not adopted by men of science; and in Germany the movement which took for its watchword ‘Back to Kant’ signified a return to the experiential side of Kant against a new era of all the successors of his successors (see art. NEO-KANTISM).

There is, however, it has also become clear, an element in scientific knowledge not explainable as a resultant of accumulating experience. The most general principle of logic, which forms the foundation of inductive reasoning, of mathematical deduction, or of the natural and humanistic sciences, remains more than any historical linking of ideas that can have their validity proved or disproved by their applicability to certain subject-matters. They are not in end more ‘working hypotheses’. There is in reason, as Kant with all his over-elaboration proved, an a priori factor in virtue of which we distinguish it from pure experience.

4. A priori.—This term has been dealt with in a separate article, but calls for a brief discussion in relation to the present subject. Its source, as has been shown, was Aristotelian. Aristotle distinguished between that which is first in relation to us and that which is first by nature. In knowledge, the former is known first to us, the latter is known first in relation to us, i.e. in the order of generation; but, since, in his view as in Plato’s, the formal essence (ēidos), expressed in a concept, is the determining reality of everything, the ideal of knowledge for the philosophically trained mind is to begin with the general and proceed to particulars. Thus the syllogism, into which all formal reasoning can be thrown if we need expressly to test its validity, is first by nature and has more in it of true cognition; but induction, which is the procedure from particulars to generals (ἡ ἀπὸ τῶν καθ᾽ ἐκαστὸν ἐκ τῆς καθαύνος ἔδοξος), is more persuasive and carries plainer evidence to the ordinary mind. Quite fitly, therefore, the term a priori was adopted by Kant as the technical expression for reason in its purity, proceeding, whether theoretically or practically, as something necessarily general and not to be derived from experience conceived as a sum of unrelated particulars presented in time without order. From this term the expression has become a kind of shorthand, understood without reference to its historical origin or to any distinctive system. Those who use it do not imply that they are reasoning from a formal cause, but that they are reasoning in the Aristotelian sense as being the real essence; nor even that they regard their general principles as transcendent in the Kantian sense, i.e. as not derived from ex-

1 See Top. l. 12, 106b 13, and Anal. Pr. l. 23, 63b 29.
5. Reason in ethics.—Morality may be considered as practically determined either by the notion of an end of action, a final good, or by the notion of a law to which action ought to conform. In later work, Seneca, on both reason and experience must be allowed a part in deciding what actual conduct shall be. For Greek and Roman antiquity moral philosophy was based on the whole dominated by the idea of an end or good (Scientiae Regni). Aristotle (Politics, ix. 7, 1275 b 16) [Roman] thought that Greek and Roman philosophers were to be judged from the metaphysical point of view that they had inherited from Plato and his ancient or Scholastic successors. A new departure was taken by Kant when he insisted that the only generally valid form of ethical truth is the expression of the moral law, obligatory without relation to ends; and that moral obligation is rationally determined by itself without reference either to experience or to any metaphysical propositions about the nature of a reality beyond experience. Ultimate moral judgments, stating what ought to be done, are determined by 'pure practical reason,' as the ultimate types of assertion about what is or may be real are determined by 'pure speculative reason.' This mode of ethical thought has since been added to by and modified with most originality by C. Renonvqier (Science de la Morale, 2 vols., Paris, 1869) and by E. Juvault (Il Vecchio e il Nuovo Problema della Morale, Bologna, 1914). For further details on moral law, moral obligation.

6. Reason versus understanding.—An antithesis has had considerable importance historically is that which was set up by Kant's distinction between reason in an eminent sense (Verstand) and understanding (Verstand). Understanding relates one thing to another within experience, but does not go forward to the ideal completion of experience in a total system. Such an ideal completion is wrought by the reason, which rises above the bounds of the natural or experience. In that sense the Platonic theory of the soul as a permanent being (the metaphysical idea), the world as a totality (the cosmological idea), and of God as the necessary being who is the cause of the whole (the theological idea) is derived. Thus reason, it is argued, is not demonstrably demonstrable; but neither are they they are not demonstrably demonstrable; and we have the intellectual right to assert them as postulates of the moral life. For, while this, being abstracted, in independent, as a philosophical doctrine, it does not simply rest in itself, but claims that it shall find its fulfillment in a universe ordered in relation to its demands. By Kant's idealist successors in Germany the antithesis of reason and understanding was often turned to account—in defiance of Kant's aim at limiting the pretensions
of the speculative reason—to claim the warrant of a higher faculty for their own utterances, all detailed criticism being treated as an affair of the 'nomenclature of things.' Owing, perhaps, to this reason, this procedure became familiar through its use by Coleridge and his disciples to discredit attacks on tradition, political or religious. The reason saw in this a deep meaning, placing it at once beyond the vulgar hostility of crass rationalism and the arid defences of conventional conservatism, both alike bound within the limits of the inferior pedestrian faculty. In Germany Schopenhauer (q.v.) made an attempt to turn the tables by contending that the understanding is a thing, reason, as merely conceptual, being only the means of preserving consistency—e.g., to be reasonable (vernünftig) is not necessarily to be moral; it may mean only consistency in pursuing well-understood self-interest; true morality implies a sympathetic insight that is not merely rational. Understanding no doubt includes what is below, but it also includes what is above, the process of logically connecting concepts—at once the instincts and perceptions of animals and the perception or 'instincts of sense.' Thus the means that Schopenhauer described as 'the dissolution of the self' is, as he could say, a 'ratiocination in and out of the self,' a dissolution of the unity of the self on the part of the understanding, a dissolution which is, like all of his other terms, a distinction in itself, and a dissolution by recognition that in some respects courageous and deeper insight than Bentham. And Comte, while maintaining the claim of his philosophy to complete positivity, found that, because it was philosophy and not merely science, the supreme place in it belonged to certain 'vues d'ensemble.' The problem of a truly philosophical reform must be to make the 'esprit d'ensemble' predominant over the 'esprit de détail.' "Dispersive specialist," when uncontrolled, becomes an aberration of the human mind, relatively justifying that conservative reaction which at least maintains the synthesis of the past and therefore recognizes that in the light of these testimonies, cannot be dismissed as a mere verbal trick. The problem is to find the right terms. Thus only can we hope to set ourselves free at once from arrogance and from confusion. The right terms for the day are readily found in Milton, who puts into the mouth of Raphael the declaration that the soul's being is reason, 'discursive, or intuitive,' 'differing but in degree, of kind the same.' Those terms, taken no doubt from a Scholastic source, go back to Plato and Aristotle. Intuitive reason is the ρός of the Platonic theory of knowledge; discursive reason is the διδος. The former corresponds to the reason of Kantianism; the latter to the understanding. These terms, 'intuitive' and 'discursive,' have the advantage of accurately rendering, without arbitrary specialization of meaning, a difference that really exists and is plain when it is pointed out. No difficult introspection is needed to see that there is a total grasp, a 'synoptic' view of things, and that there is also procedure from point to point. But it must always be borne in mind that, if the former is higher, it is unavailable till it has been meditated by the latter. The ideal of philosophic presentation is achieved by those who, like Locke and Berkeley, incline in a balance.

---

**REBELLION, REVOLUTION.**—Rebellion, in the sense of active resistance to established authority, is a phenomenon as old as political society; the doctrine that there is a right so to resist was proclaimed somewhat later, and after the Reformation it came into collision with the theory of divine right of kings. The question was settled to their own satisfaction by the champions of absolutism, but Locke asserts (Two Treatises of Government, London, 1690, bk. ii. § 90) that a monarchy such as they advocate, arbitrary and unlimited, is no form of civil government at all; and he shows that the question of a right of revolution is not so easily disposed of. Still popular judgment on the subject of the rightfulness or wrongfulness of insurrection is full of the ideas involved in the old theory of divine right (q.v.), that no fair conclusion can be formed without an examination of this theory, apart altogether from its political and historical importance.

All early government was monarchical, and the sovereignty of the ancient State was absolute. But this was not because of any belief in divine right, since on this and other kindred subjects men had not begun to hold theories at all; the reason was that they were not yet conscious of those rights as men and citizens which, by their very existence, limit the power of government. In more modern times, according to Bluntschli (Theory of the State, bk. vi. ch. viii.), among the Greeks and Germans, kings were regarded as being of divine extraction but not as being themselves gods or as superior to human laws. The Romans, again, chose their kings as a rule by election, and did not recognize a supernatural descent even for the kings of Rome by inheritance, although they acknowledged the right of the gods to direct the affairs of the State (ib. ch. ix.). It was in medieval times that it first became the custom to talk of a king as the viceroy or anointed representative of Christ on earth. As a rule of thumb, 'he is a king like Pepin regarded themselves as wearing their crown 'Dei gratia.' Such a claim as that of Louis XIV. to a monopoly in his own person of political rights could not find even outward justification except on the assumption that his power was divinely derived.

There is a sense in which this doctrine may be said to be based upon the teaching of the NT. It did not come from the Jews, whose chronicles show them to have been, as a nation, more rebellions than law-abiding, whose kings besides were in the strictest sense servants of Jehovah, subject in all their acts to the censorship of His prophets. Moreover, the God of the Hebrew people sometimes favoured insurrection, as we see in 2 K 18, whereas it is not supposed that the Lord was with Hezzen, the king of Judah, when 'he rebelled against the king of Assyria, and served him not.'

On the other hand, the early Christian Church taught what amounted practically to a doctrine of absolute, and not even conditional, obedience and submission to the supreme power be,' says St. Paul, 'are ordained of God' (Ro 13). And again we find: 'Submit yourselves to every ordinance of man for the Lord's sake: whether it be to the king, as supreme; or unto governors, as unto God.' The words were held, after the Reformation, to support the theory to which we have referred, that kings
RECAPITULATION (Biological).—The biological facts indicated by the terms, recapitulation, rudimentary organs, reversion, regression, regeneracy, rejuvenescence, and regression may be profitably discussed together.

1. Recapitulation.—All the higher organisms reveal in their development certain features which recall a distant ancestry. On each side of the neck of the embryo reptile, bird, and mammal there are branchial pouches comparable to those which have a respiratory function and may or do persist throughout life in fishes and amphibians. In reptiles, birds, and mammals these pouches are on the whole transient, like fleeting reminiscences. The first seems to persist as the eustachian tube, and the thymus gland is connected with another, but the rest pass away without persistent result. Similarly, the embryos of higher vertebrates show for a time a notochord—a primitive skeletal axis derived from the roof of the embryonic gut, and thus of endodermal origin. It persists throughout life in lancelets and lampreys, serving as the dorsal axis of the animal, as the forerunner of the backbone which, from fishes onward, develops from the notochord. The notochord does not become the backbone, though perhaps serving as a sort of tissue- scaffold for it, and every stage of the replacement of the one by the other is to be seen in fishes. Yet
2. Rudimentary organs.—The fact of recapitulation leads naturally to the occurrence of rudimentary or vestigial structures, which linger on in disused form long after they have ceased to be of use. Darwin compared them to the unsounded letters in some words, quite functionless, but telling us something of history. Some of the whales have deeply buried remnants of hip-girdle and hind-limb bones, not seen as such in the right oviduct; the skate has a minute remnant of a gill in its spiracle; man has a useless vestige of a third eyelid, occasionally with a supporting cartilage, and a large number of other historical relics of organs. In man, as in many other mammals, these definite structures which appear in the course of development in weak expression and disappear without leaving a trace. Thus the whale bone whale has two sets of tooth-rudiments which never cut the gum. But the list must not include those structures which, though not attaining their original expression or form, are diverted to some new line of development. Thus the spinnerets of spiders are morphologically equivalent to two or more independent appendages—much reduced when compared with the typical, but still there sense vestigial. The entaschiognathus tube, which leads from the tyrampanic cavity to the back of the mouth, is a transformed and persistent spiracle, but it should not be called a vestige. In fact, one of the great methods of organic change (p. 600) has been the invention of novel structures by the rehabilitation or transformation of what is really very old. The three-linked chain of ossicles which convey vibrations from the drum to the internal organ of hearing has taken on an entirely new form and has become the commonplace framework of the jaws. It is interesting to inquire whether there may not be vestigial functions and habits as well as vestigial organs and structure. Thus, according to Darwin, the dog that turns round and round on the heart before settling to sleep is making a comfortable bed in imaginary grass. Its needless activity is a vestigial survival of what its wild ancestors did to a purpose among the rough herbage. Similar interpretations may be given of "shyling" in horses and so on, but they must be considered critically.

When, because of some defect in nutrition or the like, there is an arrest of development, an organism may present an appearance which recalls that of the ancestral type. Thus the right whale, when its development, often due in mammals to some extrinsic cause affecting the mother. If, as the result of famine, war, over-work, poisoning, or other causes, infants are born markedly arrested in development, it would be justifiable to describe this as reversion. But it cannot be asserted that the offspring of these under-average individuals would in conditions of good nurture be under-average. Many reversionary conditions exhibited by individual organisms are due to modifications (indents), not to the action of new outcomes, and are not directly transmissible.

3. Reversion.—In the art, ATAVISM it has been pointed out that what may be described as a harking back to a more or less remote ancestor may not be due to the re-assertion or re-awakening of ancestral hereditary contributions which have lain for several generations latent or unexpressed, like dormant seeds in a garden. This must be emphasized, especially in the light of Mendelian experiment, for it seems probable that many domesticated races of animals (such as hornless cattle or tailless cats) have arisen by the dropping out of some item or items in the heritable complex of the wild species or its descendants. By taking advantage of the mysterious natural analysis or "unpacking" of the complex pelage of the wild rabbit, man has established many true-breeding colour-varieties or races of domestic rabbit. It may happen that a crossing of two of these races results in offspring resembling the wild wild rabbit. It is possible that this generation is the mysterious rehabilitation of a dormant "wild-rabbit character" but as a "re-packing" of what had been previously sifted out. This is the Mendelian interpretation of reversion, and it is corroborated by many experiments. On the other hand, the sudden appearance of stripes on the fore-quarters of a horse, or of a horned calf in a pure-bred hornless breed, may perhaps be due to the re-assertion of a particular "factor" which has lain latent for many generations.

4. Retrogression.—The term retrogression should be kept for cases where structures pass in the individual development from a higher to a lower grade of differentiation, or for cases where a similar reversal may be recognized, on presumptive evidence, in the development of the ascidian. It is a single-swimming creature, like a miniature tadpole, with a brain and a dorsal nerve cord, a brain-eye, and a notochord supporting the locomotor tail. In the course of the subsequent adaptation to life in the water, the nervous system is reduced to a single ganglion, the brain-eye disappears, and the tail is absorbed. As regards these structures the ascidian shows retrogression, though it must be clearly understood that the advanced organism is not the same as the larval organism than the larva. The respiratory pharynx, e.g., exhibits a high degree of differentiation. Individual retrogression is well illustrated in the life-history of many parasites. Thus the well-known Saccarinia, which is parasite in crabs,
starts in life as a free-swimming Nauplius-larva, with three pairs of appendages, a median eye, and a mouth opening, which gives the impression of the adaptation to parasitism. Similarly the thymus gland is relatively large in most young mammals, but undergoes regressive development as age increases, and this again suggests that regressive changes are influenced largely by any degeneration of the organism as a whole, but rather a re-adjustment to a changed mode of life. The gills of a tadpole exhibit regression and are entirely absorbed as the lung-breathing frog develops. But the frequency with which it is obviously on the structural plane than the tadpole. Regressive changes are sometimes exhibited seasonally, as in the swelling of the reproductive organs of birds after the breeding period; or at crises in the life-history, as in the extraordinary de-differentiation that occurs in the metamorphosis of insects; or after serious injuries when a process of dissolution and reduction often occurs before the reconstitution begins.

5. Regeneration.—Great interest attaches to the regenerative capacity exhibited by many animals and by most plants. It is exhibited in the repair of injuries, in the restoration of lost parts, and in the regrowth of a fragment into a whole. It is rarely exhibited in regard to internal organs by the removal of portions of the gills of a fish, they are removed along with a portion of the body as a whole; it is not common in relation to wounds that border on being fatal; it has a curious sporadic distribution among animals, and this, taken along with other considerations, points to its occurrence being adaptive. Weismann in particular sought to show that the regenerative capacity tends to occur in those animals, and in those parts of animals, which are, in the natural conditions of their life, peculiarly liable to a frequently recurring risk of injury, provided always that the part is of real value, and that the wound is not fatal. The facts of regeneration are very remarkable, such as a fragment of begonia-leaf or potato-tuber growing into an entire plant, a spoonful of minced sponge growing into an entire animal, one Hydra producing half a dozen when cut into pieces, a starfish arm forming a complete starfish, an earthworm growing a new head or a new tail, a lobster replacing a leg, a fish head growing a new head, a new lung in it forty times in succession, a newt’s eye making a new lens, a lizard regrowing a tail, and a stork repairing a great part of its jaw. It is difficult to avoid the conclusion that, in the process of differentiation that goes on in normal development, the essential constituents of the inheritance are distributed throughout the body in all the cells though only a few of them are expressed in each cell. If we think of the inheritance as a bag of diverse seeds, and of the cells of the body as the thousand beds of a garden (some small beds in number that number), differing greatly in exposure or stimulation, we can imagine that, although each bed gets a representation of all the different kinds of seeds, only a few will develop in each case. Under proper conditions, it might be possible to awaken in a particular set of beds a full representation of all the seeds, and it is something like this that occurs in regeneration. In some tissues the re-awakening is easy, as in the case of the regenerative capacity of lower simple worms; in other cases it is impossible, as in the supremely differentiated nervous tissue of higher animals which cannot even replace its own worn-out elements. It is not difficult to understand that this is the reason why it is not possible, thus a lobster, instead of growing an eye for an eye, may grow an antenna instead, and an earthworm that has lost its head may re-grow an anterior tail. Particularly instructive, linking regenerative processes back to regeneration, are two facts: (1) the regenerative capacity of some animals is very different from those of embryonic development, and (2) the final result, as in the case of a lizard’s tail or an insect’s foot, may be of some what simpler pattern compared with the original— may indeed be a definite fact which is very surprising.

The wide-spread distribution of the regenerative capacity among organisms is to be thought of in connexion (a) with the continual occurrence of recuperative processes that tend towards making good the wear and tear of life, and (b) that regeneration is this in a more thoroughgoing fashion; (b) with the frequent occurrence of asexual modes of multiplication, for it is impossible to draw a firm line between the development of a piece thrown off in the spasm of capture and the development of a piece separated off by more spontaneous autotomy. Many a starfish habitually surrenders an arm when that is seized by an enemy; as the creature has not a single nerve-ganglion in its body, there can be no question of calling its self-surrender deliberate; yet this reflex autotomy expresses the fact that the creature has organically learned the lesson that it is better that one member should perish than that the whole life should be lost. But there is at least one starfish which separates off arms as a mode of multiplication, as others do to effect escape.

6. Rejuvenescence.—It has been already mentioned that the process of re-growing a lost part, or of restoring a whole from a fragment, is frequently preceded by de-differentiation—a retreat preparatory to an advance. Thus regeneration is linked back to regression. But another fact of great significance has rewarded C. M. Child’s prolonged study of Planarian worms: the process of reconstitution of a fragment separated off either naturally or artificially, or of a form greatly reduced by starvation, is preceded by a period of rejuvenescence. By rejuvenescence is here meant that the fragment or starving shows a higher rate of metabolism than when it was part of the intact organism or was untampered with by starving. The rate of metabolism is gauged by the output of carbon-dioxide (measured by Tashiro’s ‘biometer’) and by the change in susceptibility or resistance to poisons, such as mercuric chloride; such inhibitions of rejuvenescence are discovered in the sexual multiplication of hyroids and some other relatively simple animals, and it seems very probable that senescence and natural death may be in this way indefinitely staved off. On Child’s view the process of differentiation necessarily involves a retardation of the rate of life and a diminution of vigour, because of the establishment of complexities of structure in the colloidal substratum which forms the framework of the chemico-physical basis of life. This complexity, so fearful in its ability to work great efficiency, but it also increases mortality. The very simple organism has practically perfect processes of rejuvenescence; in forms like the freshwater polyp rejuvenescence is never far behind senescence and it is certainly not the case that it may be special periods for rejuvenescence; in all the higher animals even this possibility is much restricted and senescence is inevitable. It may be that one of the several reasons why sexual reproduction is so restricted in extent is because the method of reproduction (and has been added to it or kept along with it in cases, like Hydra, where it is far from being the main means of multiplication) is that it affords opportunity for re-organization or rejuvenescence at a very state of the individual life—thus lessening the risk of the organism being ‘born old.’

Looking backwards over the various processes
brieﬂy discussed in this article, we see the possi-
bility of pathological variation or modiﬁcation at
every turn. (1) The degree of development de-
pends in some measure on the fullness of appro-
priate nurture; the absence of certain stimuli in
the nurture may inhibit the full expression of
the inheritance. In man’s case we know that this
fortunately works both ways, for changes of
nurture may hinder the opening of undesirable as
well as promising buds. (2) The rehabilitation of
a long latent ancestral character may spell mischief;
its unintended existence may be a cause of the
anomalous phenomena of this sort. (3) Rudimentary organs
often show a considerable range of variability, and
a disturbance of balance may be caused by the
unequal prominence or activity of a structure which
is normally dwindling away. (4) It seems impor-
tant to recognize that a great part of what is called
disease (apart from microbiotic disease) may be
described as metabolic processes which are occur-
rising out of place and out of time. What may be
advantageous in one organism may be harmful in
another life may be fatal in another. The involution or
regression which besets the thyroid is normal,
but, if it besets the thymus, it is likely to be fatal.
The process which separates off the stag’s antlers
every summer is the nature of such involution, if
it occurred elsewhere. With what would in
other cases be a pathological product of the kidneys
the male stickleback weaves the sea-weed into
a nest. The capacity which is normalized in one
animal’s effective function may lead to a danger-
ous neophism in another.

7. Regression.— ’Regression’ is a term applied
by Galton and Pearson to the tendency exhibited
by the offspring of the extraordinary members of a
species to revert towards the mean of their
stock. It probably holds only in regard to blend-
ing characters, such as stature, and not in regard
to Mendelian characters. It works both ways,
levying a succession tax on the highly gifted and
on those unusually defective. The mean height of
the sons of a thousand fathers of 6 ft. will be 5 ft.
19 8 in., approaching the mean of the general
population; the mean height of the sons of a thousand
fathers of 5 ft. 6 in. will be 5 ft. 8 in., again
approaching the mean of the general population of
sons, and the mean height of the sons of a thousand
fathers of 4 ft. 8 in. will be 4 ft. 9 in., a figure that
the ancestry of any ordinary member of a
human community is always a fair sample of the
general population. Here again we have an illus-
ration of the past living on in the present, the
thread uniting the various subjects treated of in
this article.

RECEPTIVITY.— ’Receptivity’ is a technical
term used by Kant and those inﬂuenced by his
philosophy, and is used exclusively in our deﬁni-
tion styles of coupled. Kant always talked about
’receptivity of impressions,’ and uses this expres-
sion to describe the sensuous faculty of the human
mind. Sense is to him a mere faculty of receiving
passive impressions from without, and is not
of the same order as it; it is thus distinguished from
understanding, which is a faculty in virtue of which
the mind originates the concepts necessary for the
scientiﬁc activity of thought.

The notion of sense being a receptive faculty
is ultimately derived from the Aristotelian phi-
losophy. But the Aristotelian theory of the nature of
the sensuous faculty differs markedly from
the Kantian. According to Aristotle, sense is a
faculty, and the sense-organ is an instrument, by
which we apprehend the material character-
istics which, taken together, constitute the form
or knowable nature of material objects; but,
while receptive, sense is at the same time discrimi-
native, i.e., it is able to distinguish the different
sensuous qualities and to combine them (when
they are not antagonistic) in a single perception.
Hence, according to Aristotle, sense manifests the
characters both of receptivity and of spontaneity,
features which Kant wished to assign to diverse
faculties of the soul.

RECHABITES.—Although the very existence of
the Rechabites as a clan or community distinct
from, and yet at least to some extent incorporated in,
Judah would have been unsuspected save for the
narrative of Jer 35, it is with some assurance we
may say that the language there used that Rechabite characteristics
were well known at the end of the 7th cent. B.C.
It was maintained by Jeremiah (2nd—) perhaps not
altogether justly, insomuch as the prophet did not
make allowance for the Canaanite elements in
Israel—that his own nation had shown a ﬁtness
in religion the like of which could be seen in
no other people; and, by way of contrast, he
showed the loyalty of the Rechabites to ancestral custom.
Although the literal meaning of Jer 35 is perhaps
not to be pressed, the natural inference from this
statement is that the Rechabites were not very
numerous, since ’the whole house’ (by which
phrase we should naturally understand at least the
adult male members) were taken by Jeremiah into
the chambers of the Temple, and there, in response to an invitation to drink wine, the
Rechabites are represented as saying:

‘We will drink no wine: for Jonadab the son of Rechab
our father commanded us, saying, Ye shall drink no wine;
either ye nor your sons shall ye build a vineyard, nor
take vineyard seed, nor plant vineyard, nor have any;
but all your days ye shall dwell in your tents, as ye may do
in the place wherein ye sojourn. And we have obeyed the voice
of Jonadab the son of Rechab our father in all that he charged
us, to drink no wine nor build vineyards, nor take vineyard
seed, nor plant vineyard; but we have dwelt in tents, and have
obeyed, and done according to all that Jonadab our father
 commanded us.’

The ’Jonadab the son of Rechab’ here referred to
is evidently the same who is mentioned in 2
Kings 10 as a supporter of John in his attack on Baal
worship. From the fact that he is called by the
Rechabites ’our father’ it might be inferred that
he was either the founder of a sect or gild or the
eponymous ancestor of a clan. Such an inference
is, however, improbable, since Jonadab himself
is described (2 K 10) as ’son of Rechab’; it
seems better, therefore, to understand the word
’father,’ as in Jg 17, as used of a religious teacher
or law-giver. It is not improbable that it was in
the days of John that the primitive Decalogue setting
out the regulations for the ritual worship of Israel was drawn up (see art.
Israel), and at the same time Jehonadab may
have given to his own clan the rule of life which
thenceforth for more than two centuries they held
fast.

The term ’Rechabite’ has frequently been re-
garded as equivalent to ’teetotaller,’ but it is to
be noted that abstinance from wine was but part
of the rule which Jehonadab imposed upon his
people, the sum total of which was insistence on the continuity of a nomadic life and on the repudiation of all Canaanite civilization. Jere-
